

BRITAIN'S LEADING SUPPLIER
OF NATURAL HARD YORKSTONE

Application ref: 2024/90357 Land Adj, Thewlis Lane, Crosland Hill, Huddersfield, HD4 7AB

Statement of Justification for removal of storage area (on land to the west of Thewlis Lane) from historic restoration scheme:

The Myers Group require this area of the site to store mineral, in both raw and finished form, from all of their extraction sites as well as other third party suppliers. This area therefore serves the wider quarry operation and not just Thewlis Lane quarry.

As the active quarries move away from the main production site, as Myers exhaust the closet deposits, it is critical that they have the ability to store raw material and finished product nearby. Having this buffer is essential when dealing with raw materials which vary so significantly, allowing Myers to select the most appropriate stone for each job so they can manufacture efficiently and sustainably. Myers also need the ability to store finished product to support customers working on the most challenging projects, where site restrictions impact their ability to take product in volume, of which we have a number of examples within Kirklees currently.

The area is therefore fundamental to the ongoing operation of the Myers Group quarry business for the foreseeable and therefore the Myers Group request that this area is removed from the restoration plans as formerly agreed.
