This report has been prepared by Jones Hargreaves UK Limited, with all reasonable skill, care and diligence within the agreed scope and terms of contract with the client, incorporation of our General Terms and Condition of Business and taking account of the resources devoted to us by agreement with the client.

We disclaim any responsibility to the client and others in respect of any matters outside the scope of the above.

This report is confidential to the client, and we accept no responsibility of whatsoever nature to third parties to whom this report, or any part thereof, is made known. Any such party relies on the report at its own risk.

The advice and opinions in this report should be read and relied on only in the context of the report, taking account of the terms of reference agreed with the client. The findings are based on the information made available to Jones Hargreaves (UK) Limited at the date of the report (and will have been assumed to be correct) and on current UK standards, codes, technology, and practices as at that time. They do not purport to include any manner of legal advice or opinion. New information or changes in conditions and regulatory requirements may occur in future, which will change the conclusions presented here.

Where necessary and appropriate, the report represents and relies on published information from third party, publicly and commercially available sources which is used in good faith of its accuracy and efficacy. Jones Hargreaves (UK) Limited cannot accept responsibility for the work of others.

## Appendices

**Appendix 1. Historical Mapping**

**Appendix 2. Supporting Information**

**Appendix 3. Report Limitations**

## 1. Executive Summary

### 1.1 Scope of the Report

- 1.1.1 Jones Hargreaves (JH) was instructed by Wakefield Acoustics Limited (the Client) to provide a Phase 1 Environmental Site Assessment (Desk Study) for Land at St Peg Lane, Cleckheaton BD19 3SA (the Site). Instruction to proceed in accordance with the JH proposal.
- 1.1.2 This report presents records of desk study research, which is in-turn used to develop a conceptual site model and inform a preliminary environmental risk assessment.
- 1.1.3 The report identifies key potential land quality risks and uncertainties associated with the ground conditions which may require further assessment and/or risk management in due course.
- 1.1.4 This report is written strictly for the benefit of the Client and bound by the conditions presented in Appendix A.

### 1.2 Site Information

- 1.2.1 Grid Reference: 419440, 425150
- 1.2.2 Site Area: 2.52Ha

#### Current Site Status

- 1.2.3 The site houses a former industrial unit which has been demolished leaving the floor slabs exposed. Other site coverage includes former external yard surfaces, roadway and soft landscaping with concrete wall boundary fencing and gated entrances from St Peg Lane and off Bradford Road. Water and electricity supplies are connected to the site.

#### History

- 1.2.4 The northern part of the Site was first developed in the 1800's as a mill while the southern half of the site was partly occupied by a foundry. By the early 1900's the southern half of the site was occupied by an electricity works. By the 1950's mapping indicated that the site was occupied by an asbestos works and sheet metal works, while the southern half was occupied in part by an engineering works and electricity works which existed until the early 1990's. All buildings were removed from site sometime between 2006-23. It is likely that the past uses of the site have led to a degree of impact to land underlying the site.
- 1.2.5 The land surrounding the site, particularly to the east and south has been subject to industry such as various works, gas works and other facilities such as mills. It is therefore likely that contamination of surrounding land has undoubtedly occurred to varying degrees, though this is not thought to be significant in the case of the subject site and its continued use.
- 1.2.6 The site itself and the surrounding area have been subjected to uses of a potentially contaminative nature and therefore there is a risk that historical contamination within the soils underlying the site may be present.
- 1.2.7 It is however considered the presence of hardstanding across the site provides a level of mitigation between the potentially impacted material and site users and as such for the continuation of the external storage use this is not of significant environmental concern.
- 1.2.8 It can be said that the ground conditions and land quality beneath the site are likely to be impacted by contamination, although this is thought to be the responsibility of the landowner with respect to management of risk and any residual liability (as opposed to the leaseholder). Based on the information reviewed, we do not anticipate that the site is being impacted significantly by ongoing sources of contamination in its current use.

## Geology

- 1.2.9 A review of the British Geological Survey information indicates that the site is underlain by Alluvium - Clay, silt, sand and gravel.
- 1.2.10 The Envirocheck report denoted that the site is underlain by bedrock strata consisting of Pennine Lower Coal Measures Formation and South Wales Lower Coal Measures Formation (Undifferentiated).

## Hydrogeology

- 1.2.11 The superficial and bedrock aquifers underlying the site is classed as a secondary A aquifer of medium vulnerability.

## Hydrology

- 1.2.12 According to the Environment Agency database, the eastern and central parts of site falls within an area of land assessed as having a high risk which means that this area has a chance of flooding of greater than 3.3% each year. This considers the effect of any flood defences in the area. These defences reduce but do not completely stop the chance of flooding as they can be overtopped or fail. The remainder of the site (central norther areas and southern part) are considered to have a medium risk means that this area has a chance of flooding of between 1% and 3.3% each year. This considers the effect of any flood defences in the area. These defences reduce but do not completely eradicate the chance of flooding as they can be overtopped or fail.
- 1.2.13 The site predominantly falls within an area of land assessed as having a 0.1% to 1% (low risk) annual probability of flooding from surface water and small watercourses. Flooding from surface water is difficult to predict as rainfall location and volume are difficult to forecast. In addition, local features can greatly affect the chance and severity of flooding. This is illustrated in the flood mapping obtained in respect of the variance in risk presented, particularly across the south of the site.

## Environmental Sensitivity

- 1.2.14 The superficial and solid geological deposits are classified as a Secondary A aquifer. The site is not situated within a groundwater Source Protection zone however, it is situated within close proximity to the River Spen. Based on the above, the site location is considered to be of Moderate to High environmental sensitivity.

## Previous Report

- 1.2.15 No previous reports have been made available, although a search on Kirklees Council planning portal did reveal documents relating to the demolition of the site and also the development of the school nearby. Where relevant, we have reviewed these documents to inform our understanding of the site and the area surrounding the site.

## Regulatory Enquiries

- 1.2.16 We understand the site is not currently listed as Contaminated Land under the EPA 1990. This is supported by the Envirocheck report which identifies that there are no Contaminated Land Register Entries and Notices recorded on site.
- 1.2.17 Based on available information, it is the opinion of Jones Hargreaves that there is an absence of significant source-pathway-receptor pollutant linkages as such it is unlikely that the site would be investigated under the Contaminated Land Regime.

## 1.3 Conclusions

### Conclusion

- 1.3.1 The historical assessment has identified that the previous site uses are likely to have resulted in contamination of underlying strata from activities associated with the sheet metal and asbestos works in the

northern half of the site, and the electricity and engineering works in the south of the site. The area to the east and south has also been subjected to uses of a potentially contaminative nature.

- 1.3.2 The proposed use of the site as a storage yard presents a low risk and the extensive coverage of hardstanding across the site would act as a capping layer breaking current and future pollutant linkages associated with site users. The presence of this hardstanding in conjunction with drainage infrastructure, limits surface water infiltration, thereby restricting the potential for contaminant mobilisation and migration to Controlled Waters.
- 1.3.3 Significant thicknesses of made ground are thought to be present under the site which could give rise to concerns regarding ground gas generation potential. That said, the site is devoid of buildings / structures, so it is thought that the risk from ground gas to site users is deemed to be low. Information from the planning authority at the time of construction of the school nearby indicated that ground gas monitoring did not record elevated concentrations of ground gases.
- 1.3.4 As such for the continuation of the current site use (being leased as a storage yard) this is not of significant environmental concern.
- 1.3.5 Based on the information obtained during the desk study it is concluded that the environmental risk arising from the ground condition at the subject site when taking into account the sites current status and usage is **LOW TO MODERATE**.

## Recommendations

- 1.3.6 Following the completion of this report, we recommend that the client undertakes the following action:
- Should any groundworks be required in order to facilitate the use of the site as a storage yard then careful consideration would be required with respects to Health and Safety and Environmental controls applied to excavation works. This is to ensure that site workers are not exposed to contaminated soils that are likely to exist beneath the site. The hardstanding present across the site should be maintained where possible.
  - It is recommended that a flood risk assessment (FRA) is requested from the landowner to further evaluate the flood risk at the site.
  - It is recommended that the landowner provides assurances with respect to the management of identified Japanese Knotweed on site.
  - In the event of redevelopment, an intrusive ground investigation would be required to allow for the collection of geo-environmental and geotechnical data, to be used to inform future foundation design and to obtain environmental samples from soils to confirm the absence of a significant risk to human health or sensitive receptors.

## 2. Instructions

### 2.1 Client Instruction

- 2.1.1 Jones Hargreaves ("JH") received instructed by Wakefield Acoustics Limited ("the Client") to provide a Phase 1 Environmental Site Assessment (Desk Study) for Land at St Peg Lane, Cleckheaton BD19 3SA ("the Property"). Part of the Services included the production of this document ("the Report").
- 2.1.2 JH understands that the Client is considering purchase of the above-mentioned Property, it is understood that this is to be on freehold. The primary objective of the Report was therefore to identify any environmental issues that had the potential to affect the value or future use or may lead to regulatory intervention. The Report would also comment on the suitability of the Property for purchase from an environmental perspective.
- 2.1.3 The Services have been carried out in accordance with the Proposal and JH's Terms and Conditions of Engagement, (together "the Agreement") as accepted by the Client.

### 2.2 The Report

- 2.2.1 The Report has been prepared in accordance with the Agreement and is subject to all terms contained therein.
- 2.2.2 The Report is addressed to and is for the sole use and reliance of the Client. JH do not accept any liability for:
- any use of or reliance upon the Report by the Client other than in accordance with the Agreement; and
  - any use of or reliance upon the Report by any third party who is not a party to the Agreement.
- 2.2.3 This report presents records of desk study research, which is in-turn used to develop a conceptual site model and inform a preliminary environmental risk assessment.
- 2.2.4 The report identifies key potential land quality risks and uncertainties associated with the ground conditions which may require further assessment and/or risk management in due course.
- 2.2.5 The Report, unless otherwise stated, is based upon:
- information provided by the Client.
  - database information obtained from regulatory bodies, including but not limited to:
  - Environment Agency
  - Local Authority
  - the Envirocheck Report (314748493\_1\_1) purchased from Landmark.
- 2.2.6 A specific environmental site walkover was not undertaken by JH as part of this report.
- 2.2.7 This report is written strictly for the benefit of the Client and bound by the conditions presented in Appendix 3.

### 3. Site Location

3.1 The following section collates and presents available information pertinent to the Site and its local environs.

Figure 1: Site location plan (location shown in red is indicative only)

Figure 2: Site layout plan (boundaries shown are indicative only)

## 4. Description

4.1 The following table provides a summary of site conditions

Issue	Description
Site Name	Storage Land at St Peg Lane
Address	St Peg Lane, Cleckheaton BD19 3SA
National Grid Reference	419440, 425150
Site Area (Ha)	2.52
Building Area (sq ft)	N/A
Tenure	Leasehold
Occupancy	Vacant
Site description and activities	Newly formed external storage compounds secured with substantial concrete wall boundary fencing and gated entrances from St Peg Lane and off Bradford Road. Securely fenced, tarmac scalped surface, with water and electricity supplies connected.
Surrounding land uses	The site is located on the periphery of Cleckheaton town centre, accessible from St Peg Lane and Bradford Road. Ease of access to junction 26 M62 (Chain Bar) approximately 1 mile distant via Bradford Road.
Site Gradient	Shallow gradient from north to south.
Proposed site use	Falling within Classes B1, B2 and B8 of the Town & Country Planning (Use Classes) Order 1987, as amended. It is proposed that the site is utilised for outdoor (external) storage purposes.

## 5. Site Use

### 5.1 Asbestos Survey

5.1.1 No survey has been presented for review as part of this assessment as there are no existing buildings on site.

### 5.2 Site Services

5.2.1 As part of this assessment, JH are not in receipt of information relating to the condition or capacity of the power, drainage and communication infrastructure serving the site.

5.2.2 Should further information be required, further enquiries would be needed.

### 5.3 Above/Below Ground Tanks

5.3.1 Based on available information, JH are unaware of any significant above or below ground fuel/oil storage tanks situated on site.

### 5.4 Chemical Storage

5.4.1 JH are unaware of any significant volumes or quantities of chemicals being stored or utilised on site.

### 5.5 Waste Management Practices

5.5.1 No Waste Management Audit has been undertaken as part of this exercise.

### 5.6 Invasive Plants

5.6.1 The Wildlife and Countryside Act 1981 (as amended) is the principal legislation which regulates the release of non-native species. Section 14(2) prohibits the release of certain invasive non-native plants into the wild in Great Britain; it is an offence under Section 14(2) to “plant or otherwise cause to grow in the wild” any plants listed on Part II of Schedule 9.

5.6.2 The most common plant species found on brownfield and urban sites in the UK include Japanese Knotweed, Giant Hogweed and Himalayan Balsam.

5.6.3 JH were not appointed to undertake an ecological survey at the site.

## 6. Historic Development

### 6.1 Documents Reviewed

6.1.1 A review of the historical Ordnance Survey (OS) mapping obtained through the Envirocheck report has been undertaken. A summary of pertinent information and observations, within 250m (i.e., aligned to the planning consultation zone), are shown in chronological order in the table below with relevant maps in Appendix 1.

Source	Site	Surroundings
Pre 1894 – pre-1907	The earliest mapping (1894) indicates that the northern half of the site was occupied by St Peg <b>Mills</b> , while the southern part of the site was occupied (in part) by Marsh Mills <b>Foundry</b> . The central portion of the site is undeveloped. By 1907, a <b>electricity works</b> and <b>destructor</b> are shown occupying the southern half of the site.	To the north, the site borders a road (St Peg Lane) beyond which lies Spen <b>Mills</b> (corn). A <b>wire works</b> is situated 80m to the east. Marsh <b>dye works</b> is situated 100m southeast and a <b>chemical works</b> 150m in the same direction. A <b>gas works</b> is shown 60m south of the site, and a <b>card works</b> is situated 150m south beyond the road. Undeveloped land to the west gives way to residential properties 100m away from site.
Pre 1922 – pre-1938	The site remains occupied by the <b>mills</b> to the north and <b>electricity works</b> to the south. <b>Tanks</b> are shown on the eastern boundary of the site near to the river Spen.	<b>Tanks</b> are shown on the opposite side of the river to the east (within 30m). A rectangular reservoir is shown to the east of the site, adjacent to the river. The wire works to the east is shown as a <b>spinning mill</b> . Marsh <b>mills</b> occupying part of the site and the southern boundary is shown as a <b>textile machinery</b> and the <b>gas works</b> is now shown as disused. A number of other <b>works</b> are present to the south of the site.
Pre 1957 – pre-1989	During this period the northern part of the site is occupied by an <b>asbestos works</b> and <b>sheet metal works</b> (latter of which has extended southwards). The entire southern half of the site is occupied by an <b>electricity depot</b> and partially by an <b>engineering works</b> .	Spen <b>mills</b> and a <b>millpond</b> are shown to the north, whilst the <b>mills</b> are still present to the east. The land south of the site is now entirely occupied by three <b>engineering works</b> . Beyond 80m, south of Bradford Road is a large <b>wire works</b> . By the end of this mapping period, a larger <b>works</b> appears on mapping 50m east of the site (north of the mills).
Pre 1992 – pre-1999	By 1992, the main building in the northern half of the site is simply labelled as an unnamed <b>works</b> . The southern half of the site would now appear to be occupied by a dairy. Aerial imagery dated 1999 appears to show that the buildings in the southern half of the site have been largely demolished.	There is little notable change within the area surrounding the site.
Pre-2000 – pre-2023	It is not until sometime between 2006-2023 that all buildings on site are demolished.	A school has been built immediately west of the site between 2006-23. A number of the industrial buildings to the east and south remain, although the <b>engineering works</b> which encroached on to site is no longer shown.

\* Potentially contaminative land uses in bold italic

## 6.2 Summary - Potential for Historical Contamination

- 6.2.1 The northern part of the Site was first developed in the 1800's as a mill while the southern half of the site was partly occupied by a foundry. By the early 1900's the southern half of the site was occupied by an electricity works. By the 1950's mapping indicated that the site was occupied by an asbestos works and sheet metal works, while the southern half was occupied in part by an engineering works and electricity works which existed until the early 1990's. All buildings were removed from site some time between 2006-23. It is likely that the past uses of the site have led to a degree of impact to land underlying the site.
- 6.2.2 The land surrounding the site, particularly to the east and south has been subject to industry such as various works, gas works and other facilities such as mills. It is therefore likely that contamination of surrounding land has undoubtedly occurred to varying degrees, though this is not thought to be significant in the case of the subject site and its continued use.
- 6.2.3 The site itself and the surrounding area have been subjected to uses of a potentially contaminative nature and therefore there is a risk that historical contamination within the soils underlying the site may be present.
- 6.2.4 It is however considered the presence of hardstanding across the site provides a level of mitigation between the potentially impacted material and site users and as such for the continuation of the external storage use this is not of significant environmental concern.
- 6.2.5 It can be said that the ground conditions and land quality beneath the site are likely to be impacted by contamination, although this is thought to be the responsibility of the landowner with respect to management of risk and any residual liability (as opposed to the leaseholder). Based on the information reviewed, we do not anticipate that the site is being impacted significantly by ongoing sources of contamination.

## 7. Previous Reports

### 7.1 Data Room

7.1.1 No access to a data room has been provided.

### 7.2 Planning History

7.2.1 A number of planning records were available to view on the Kirklees Council's online planning portal. These have been summarised below:

7.2.2 Prior Notice of Demolition, Application number: 2017/N/91875/E submitted in July 2017 by Tesco Stores Limited.

- Works comprise of the demolition of the existing structures on site. Work items detailed within the GBM UK method statement submitted to Kirklees Council include.
  - Asbestos removals to all buildings.
  - Soft strip to buildings to be demolished.
  - Demolition of the existing structures.
  - The existing foundations and slabs are to remain.
- Japanese Knotweed was identified in the southeast corner of the site, this area will be fenced off to ensure this vegetation is not disturbed.
- All concrete, brickwork and blockwork were sorted and crushed to provide MOT Type 1, 6F2 or similar recycled construction aggregates, for use in the later construction works.

7.2.3 Planning Application number: 2012/62/90944/E submitted in March 2012 by BarhaleWSP. Erection of GRP kiosk for new storage tank to alleviate internal/external flooding to properties located along St Peg Close and St Peg Lane with vent stack (Control Kiosk number 2).

7.2.4 Jones Hargreaves also note the original planning application for the school (Ref. 2006/48/95401/E1) positioned off the western border of the site. This application contained a full suite of planning documentation dating back to 2006 when the application was first submitted. Some useful information was gained from both the Intrusive Ground Investigation and the Flood Risk Assessment (both completed by 3E Consulting Engineers).

- Ground Contamination: elevated heavy metals, PAHs and petroleum hydrocarbons were identified in made ground. Thought to be related to the historical landfilling of the site with locally derived materials comprising ash, cinder, and clinker. Natural soils beneath the site did not exhibit the same levels of elevated contaminants. Asbestos was not identified within samples taken. The only elevated concentrations within groundwater recorded were for ammonium. No remediation was recommended.
- Ground Gas: no elevated recordings of ground gases were noted, and no protection measures were recommended.
- Invasive Species: Japanese Knotweed was noted within the northeastern corner of the site (on the boundary with the site subject to consideration in this assessment).
- Drainage: Yorkshire water provided a map indicating a sewer runs north to south underneath the property boundary subject to consideration in this assessment (along the western perimeter of the site).

## 8. Geological Setting

### 8.1 Generally

8.1.1 According to British Geological Survey (BGS) 1:50,000 scale mapping, the general geological sequence underlying the Site is as follows:

### 8.2 Made Ground

8.2.1 The Envirocheck report has not provided information with regards to the likelihood of made ground. A review of the British Geological Survey information does however indicate that the site is underlain by some made ground, predominantly consisting of reworked natural materials with locally derived materials comprising ash, cinder, and clinker. It is likely this varies locally and within the site boundary.

### 8.3 Drift Geology

8.3.1 A review of the British Geological Survey information indicates that the site is underlain by Alluvium - Clay, silt, sand and gravel.

### 8.4 Bedrock Geology

8.4.1 The Envirocheck report denoted that the site is underlain by bedrock strata consisting of Pennine Lower Coal Measures Formation and South Wales Lower Coal Measures Formation (Undifferentiated).

### 8.5 BGS Borehole Logs

8.5.1 As general summary of ground conditions from the 3E Consulting Engineers report for the nearby school development site is provided below:

Depth below Ground Level (mBGL)	Summary of Strata
0.40 – 5.00 (maximum)	Granular made ground comprising ash, cinder and clinker
5.00m+	Cohesive and granular alluvium soft to firm becoming stiff clays with depth.
7.00m+	Weak mudstone deepening towards eastern boundary.

### 8.6 Economic Geology

8.6.1 The nearest BGS recorded mineral (mining) records was the Mount Pleasant opencast (sandstone), situated 184m east of the site. The nearest recorded deep coal mining site is referenced as Woodside and was situated 530m to the southwest. The Envirocheck report states that the site is In an area which may be affected by coal mining activity and a Coal Authority Report has been procured accordingly.

8.6.2 Owing to the history of coal mining in the area, Jones Hargreaves have procured a Coal Authority CON29M Coal Mining Report to further examine the potential risks from historical coal mining activity at the property. A factual summary of the Coal Authority Report (provided in full in Appendix 2), is provided below:

- The property is in a surface area that could be affected by underground mining in 1 seam of coal at 50m to 60m depth, and last worked in 1887.

- There are no recorded coal mine entries known to the Coal Authority within, or within 20 metres, of the boundary of the property.
- The Coal Authority has no record of a mine gas emission requiring action.
- According to the official mining information records held by the Coal Authority at the time of this search, evidence of, or the potential for, coal mining related features have been identified. It is unlikely that these features will impact on the stability of the enquiry boundary.

## 8.7 Ground Stability

- 8.7.1 The potential for ground stability hazards relating to running sand, collapsible, compressible, landslide or dissolution events is rated very low to low.

## 8.8 Ground Gas

- 8.8.1 The property is in an Intermediate probability radon area (1 to 3% of homes are estimated to be at or above the Action Level). No radon protective measures are necessary in the construction of new dwellings or extensions.
- 8.8.2 Significant thicknesses of made ground are thought to be present under the site which could give rise to concerns regarding ground gas generation potential. That said, the site is devoid of buildings / structures, so it is thought that the risk from ground gas to site users is deemed to be low. Information from the planning authority at the time of construction of the school nearby indicated that ground gas monitoring did not record elevated concentrations of ground gases.

## 9. Hydrogeology

### 9.1 Overview

- 9.1.1 The superficial aquifer underlying the site is classed as a secondary A aquifer of medium vulnerability. These rocks can provide modest amounts of water, but the nature of the rock or the aquifer's structure limits their use.
- 9.1.2 The bedrock aquifer is classified as a Secondary A aquifer, also.

### 9.2 Groundwater Source Protection Zone

- 9.2.1 The site is not situated within a Source Protection Zone (SPZ).
- 9.2.2 The site is situated within a designated nitrate vulnerable zone (NVZ).

### 9.3 Groundwater Abstraction Licences

- 9.3.1 There are no groundwater abstraction records situated within 1km of the site.

## 10. Hydrology

### 10.1 Surface Watercourses

10.1.1 The following surface water features have been identified within the vicinity of the subject site:-

Watercourse	Type	GQA Class	Distance & Direction (Approximately)
Syke Beck	Inland river	Not Specified	onsite
Spenn River	Inland river	E	2m

### 10.2 Culverted Watercourses

10.2.1 We are unaware of any culverted watercourses being present at the property. Should clarification on this point be required, it would be necessary to undertake an intrusive drainage survey to trace the location of the drainage infrastructure.

### 10.3 Surface Water Abstractions

10.3.1 Based on information presented within the Envirocheck Report, there are no surface water abstraction licences recorded on or within 1km of the subject site.

### 10.4 Flood Risk

10.4.1 According to the Environment Agency database, the eastern and central parts of site falls within an area of land assessed as having a high risk which means that this area has a chance of flooding of greater than 3.3% each year. This considers the effect of any flood defences in the area. These defences reduce but do not completely stop the chance of flooding as they can be overtopped or fail. The remainder of the site (central norther areas and southern part) are considered to have a medium risk means that this area has a chance of flooding of between 1% and 3.3% each year. This considers the effect of any flood defences in the area. These defences reduce but do not completely stop the chance of flooding as they can be overtopped or fail.

10.4.2 The site predominantly falls within an area of land assessed as having a 0.1% to 1% (low risk) annual probability of flooding from surface water and small watercourses. Flooding from surface water is difficult to predict as rainfall location and volume are difficult to forecast. In addition, local features can greatly affect the chance and severity of flooding. This is illustrated in the flood mapping obtained in respect of the variance in risk presented, particularly across the south of the site.

10.4.3 Lead local flood authorities (LLFA) are responsible for managing the flood risk from surface water and may hold more detailed information. The LLFA is Kirklees council.

10.4.4 There is unlikely potential for reservoir flooding or groundwater flooding to occur at the surface of the site.

## 11. Environmental Sensitivity

- 11.1.1 The superficial and solid geological deposits are classified as a Secondary A aquifer. The site is not situated within a groundwater Source Protection zone however, it is situated within close proximity to the River Spen. Based on the above, the site location is considered to be of **Moderate to High** environmental sensitivity.

## 12. Regulatory Databases

### 12.1 Review

12.1.1 From a review of Envirocheck Report presented in Appendix 2, the following regulatory authorisations, consents and permits have been identified within 250m (i.e., in the planning consultation zone).

Record	On Site	Within 250m Radius	Details
Discharge Consents (Active)	0	4	Yorkshire Water Services Ltd operate a CSO and Storm Tank just off the eastern boundary of the site.
Environmental Permits (Active)	0	0	No active environmental permits are recorded. There is record of one historical permit (now revoked) for the coating of metals and plastics.
Pollution Incidents	1	10	There are six historical pollution incidents associated with the River Spen (all placed within 200m of the site). These relate to predominantly spillage of oils and lubricants into the river. There are also four incidents within close proximity to the site relating to sewerage spillage and also natural ochre.
Landfill Sites	0	3	Three records attributed to former works, a dam and land at spen lane. Nearest is situated 80 northeast of the site.
COMAH Sites	0	0	No records noted within Envirocheck dataset
Potentially Infilled Land	0	5	Unknown Filled Ground (Pond, marsh, river, stream, dock etc) nearest record is 25m south of the site (from 1854).
Local Nature Reserves/Protected Sites	0	2	Two areas of adopted and unadopted green belt situated 40m east of the site.

### 12.2 Unexploded Ordnance Risk Assessment (UXO)

12.2.1 A Zetica Unexploded Bomb Risk Map for the area was not procured as part of this due diligence exercise

## 13. Regulatory Enquiries

### 13.1 Contaminated Land

- 13.1.1 We understand the site is not currently listed as Contaminated Land under the EPA 1990. This is supported by the Envirocheck report which identifies that there are no Contaminated Land Register Entries and Notices recorded on site.
- 13.1.2 Based on available information, it is the opinion of JH that there is an absence of significant source-pathway-receptor pollutant linkages as such it is unlikely that the site would be investigated under the Contaminated Land Regime.

## 14. Preliminary Conceptual Site Model

14.1.1 The following section draws together the findings of the desk study to develop a preliminary conceptual site model. The relationship of identified sources, viable pathways and identified environmental receptors is considered and used as a technical basis to inform a qualitative assessment of risk to human health and the wider environment posed by the proposed ground conditions based on the continued use of the Site for commercial/industrial purposes.

### 14.2 Risk Exposure

14.2.1 The key identified potential contaminant **sources** are summarised as follows and covered within the risk assessment table.

14.2.2 On-site source potential:

- Infilled land: Potential contamination associated with Made Ground.
- Historical Contamination: resulting from the use of the site as a mill, asbestos works, sheet metal works, engineering works and electrical works.

14.2.3 Off-Site source potential

- Gas works, engineering works: Surrounding areas to the east and south were subjected to extensive industrial activity and are likely to have seen varying degrees of impact from historical contaminative activity.

14.2.4 For the purposes of this risk assessment, it is assumed that the relevant **pathways** comprise:

- Direct contact with sub-surface materials (dermal soil/ leachate contact, soil ingestion and dust ingestion/ inhalation);
- Leaching of contaminants to groundwater and surface water receptor (River Spen);
- Migration of dissolved phase contamination in groundwater;
- Preferential flow through the drainage system; and,
- Migration of gas and/ or vapours through preferential pathways and/ or permeable sub-surface materials.

14.2.5 The key identified potential environmental **receptors** are summarised as follows and covered within the risk assessment table below.

14.2.6 Human Health

- Site users.

14.2.7 Environmental

- River Spen.

14.2.8 A summary of the potential contaminant linkages associated with the Site is presented in the table below, alongside an assessment of the risks posed by each linkage. The contaminant linkages have been assessed using the risk assessment methodology described in CIRIA C552 (2001). As such, risk is considered to be a function of both the probability (likelihood) of contamination occurring at the study site and also the potential severity (consequence) of the environmental impacts associated with any such contamination.

Source	Risk	Justification
<b>Likelihood of Contamination</b>		
Significant on-site contamination	Moderate	The historical assessment has identified that the previous site uses are likely to have resulted in some contamination of underlying strata. The surrounding area in part, to the south and east has also been subjected to uses of a potentially contaminative nature although these are unlikely to have impacted the site directly. The occupation of the site by a sheet metal works and asbestos works and electrical works is considered to qualify as potentially contaminative activity. Extensive hardstanding provides a level of mitigation between the potentially impacted material and site users and the current end use is considered to be low risk (storage yard) and as such for the continuation of the current site use this is not of significant environmental concern.
Contamination migration off site	Moderate	Should residual contamination be present beneath the site, the extensive coverage of hardstanding in conjunction with site drainage infrastructure would restrict surface water infiltration thereby reducing the mobility of sub-surface contaminants.
Contamination migration on site from off-site source	Low	Former industry situated off site to the east and south are thought to be downgradient of the site and therefore are unlikely to have impacted the site directly where contamination is concerned. The hardstanding across the site and the surrounding area would likely inhibit the migration of contamination and protect current and future site users.
<b>Environmental Impacts</b>		
Risk of pollution of Controlled Waters	Moderate	The nearest surface water feature is the River Spen, which borders the site to the east. The presence of hardstanding across the site would restrict surface water infiltration thereby reducing the mobility of sub-surface contaminants (if present).
Risk of damage to property	Low	Current structures and site operations are not considered to be at a significant risk from ground movement or ground instability issues.
Risk of harm to human health	Low to Moderate	The extensive coverage of hardstanding across the site and limited exposure duration of site users (due to the sites use as a storage yard) would mitigate against the risk to human health.
<b>Future Risk</b>		
Risk of liability for owner	Low to Moderate	No significant pollutant linkage has been identified. Therefore, there is no significant risk of liability to the leaseholder. In any event, responsibility for land quality at the site should rest with the landowner.
Likelihood of designation as Contaminated Land under EPA 1990	Low	As part of this assessment, no significant source-pathway-receptor pollutant linkage has been identified in relation to the continued use of the site. As such the site is unlikely to fall within the definition of Contaminated Land under Part IIA of the EPA.
Potential for 'Significant' Abnormal Costs	Low	For continuation of the site's current use as a storage yard, the potential for abnormal ground conditions generating significant costs is considered to be low.

Source	Risk	Justification
Likelihood of a future purchaser requesting further investigations	Low to Moderate	No further contamination assessment works are considered necessary for continued use as a storage yard.
<b>Overall Risk Assessment</b>		<b>Low to Moderate</b>

## 15. Conclusions

- 15.1.1 The primary objectives of this report were to identify those environmental issues which have the potential to affect value, future use or may lead to regulatory intervention and to provide comment on the suitability of the property from an environmental perspective.
- 15.1.2 The historical assessment has identified that the previous site uses are likely to have resulted in contamination of underlying strata from activities associated with the sheet metal and asbestos works in the northern half of the site, and the electricity and engineering works in the south of the site. The area to the east and south has also been subjected to uses of a potentially contaminative nature.
- 15.1.3 The proposed use of the site as a storage yard presents a low risk and the extensive coverage of hardstanding across the site would act as a capping layer breaking current and future pollutant linkages associated with site users. The presence of this hardstanding in conjunction with drainage infrastructure, limits surface water infiltration, thereby restricting the potential for contaminant mobilisation and migration to Controlled Waters.
- 15.1.4 Significant thicknesses of made ground are thought to be present under the site which could give rise to concerns regarding ground gas generation potential. That said, the site is devoid of buildings / structures, so it is thought that the risk from ground gas to site users is deemed to be low. Information from the planning authority at the time of construction of the school nearby indicated that ground gas monitoring did not record elevated concentrations of ground gases.
- 15.1.5 As such for the continuation of the current site use (being leased as a storage yard) this is not of significant environmental concern.
- 15.1.6 Based on the information obtained during the desk study it is concluded that the environmental risk arising from the ground condition at the subject site when taking into account the sites current status and usage is **LOW TO MODERATE**.
- 15.1.7 With regard to environmental considerations, the site is considered suitable for its proposed use as a storage yard.

## 16. Recommendations

16.1.1 Following the completion of this report, we recommend that the client undertakes the following action:

- Should any groundworks be required in order to facilitate the use of the site as a storage yard then careful consideration would be required with respects to Health and Safety and Environmental controls applied to excavation works. This is to ensure that site workers are not exposed to contaminated soils that are likely to exist beneath the site. The hardstanding present across the site should be maintained where possible.
- It is recommended that a flood risk assessment (FRA) is requested from the landowner to further evaluate the flood risk at the site.
- It is recommended that the landowner provides assurances with respect to the management of identified Japanese Knotweed on site.
- In the event of redevelopment, an intrusive ground investigation would be required to allow for the collection of geo-environmental and geotechnical data, to be used to inform future foundation design and to obtain environmental samples from soils to confirm the absence of a significant risk to human health or sensitive receptors.

16.1.2 Limitations of this report are presented in Appendix 3.

## Appendix 1. Historical Mapping

**Site Details**  
 St. Peg Lane, CLECKHEATON, BD19 3SA

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

**Yorkshire**  
**Published 1938 - 1948**  
**Source map scale - 1:10,560**

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

## Leeds

Published 1972

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

## VectorMap Local

Published 2023

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

## Supply of Unpublished Survey Information

**Published 1974**

**Source map scale - 1:1,250**

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

## Large-Scale National Grid Data

Published 1992 - 1993

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

### Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

## Appendix 3. Report Limitations

## Report Conditions & Limitations

This report has been prepared by Jones Hargreaves UK Limited (Jones Hargreaves) Environmental, Social and governance (ESG) Team in their professional capacity as environmental specialists, with reasonable skill, care and diligence within the agreed scope and terms of contract with its client and is provided by Jones Hargreaves solely for the internal use of its client.

The advice and opinions in this report should be read and relied on only in the context of the report, taking account of the terms of reference agreed with the client. The findings are based on the information made available to Jones Hargreaves at the date of the report (and will have been assumed to be correct) and on current UK standards, codes, technology and practices as at that time. They do not purport to include any manner of legal advice or opinion. New information or changes in conditions and regulatory requirements may occur in future, which will change the conclusions presented here.

Where necessary and appropriate, the report represents and relies on published information from third party, publicly and commercially available sources which is used in good faith of its accuracy and efficacy. Jones Hargreaves cannot accept responsibility for the work of others.

This report is confidential to the client. The client may submit the report to regulatory bodies, where appropriate. Should the client wish to release this report to any other third party for that party's reliance, Jones Hargreaves may, by prior written agreement, agree to such release, provided that it is acknowledged that Jones Hargreaves accepts no responsibility of any nature to any third party to whom this report or any part thereof is made known. Jones Hargreaves accepts no responsibility for any loss or damage incurred as a result, and the third party does not acquire any rights whatsoever, contractual, or otherwise, against Jones Hargreaves except as expressly agreed with Jones Hargreaves in writing. Jones Hargreaves reserves the right to withhold and / or negotiate the transference of reliance on this report, subject to legal and commercial review.

## Risk Classification

In line with current UK LCRM guidance, the Environmental Assessment has been undertaken using a risk-based approach, with the potential environmental risk assessed qualitatively using the 'source-pathway-receptor' scenario. In consideration of the information gathered an overall risk rating has been provided for the site based on the following definitions:

- **Low Risk:** The site is considered suitable for present use and environmental setting. It is unlikely that any issues will arise as a liability/cost for the freehold owner of the site.
- **Medium Risk:** The site may not be suitable for present use and environmental setting. Contaminants are probably or certainly present and are likely to have an unacceptable impact on the identified receptors. It is possible that the issue(s) could arise as a liability/cost for the freehold owner of the site. Further work is usually required to clarify the risk.
- **High Risk:** The site is not suitable for present use and environmental setting. Contaminants are probably or certainly present and are very likely to have an unacceptable impact on the identified receptors. It is likely that the issue(s) will arise as a liability/cost for the freehold owner of the site. Further work is urgently needed.

**Jones Hargreaves**
