**Responding Date:  
4<sup>th</sup> October 2024**

**Responding Officer:  
SR**

**Responding Ref:  
WK202432054**

**Comments**

Following our earlier comments, dated the 7<sup>th</sup> of May 2024, we have been reconsulted to consider a Dust Management Plan by MWP Planning. The site manager has been designated as the responsible person on site and is tasked with monitoring the site. The report lists a range of dust management techniques and refers to the Institute of Air Quality Management (IAQM) guidance.

We acknowledge the additional information within the email dated the 4<sup>th</sup> of October 2024, which informs; a road sweeper is available on site and is currently operational 3-5 days per week.

We accept the information required and no longer recommend a condition in relation to dust management.

We take this opportunity to remind the applicant that the plant is subject to a permit to operate under the Environmental Permitting (England and Wales) Regulations 2016, permit number PPC E168. The permit contains conditions in addition to the supplied dust management plan.
