1. INTRODUCTION

- 1.1 TPS Transport Consultants Ltd (TPS) has been instructed by Newett Homes to prepare a Transport Assessment Addendum (TAA) in support of a planning application for a residential development of up to 50 dwellings on land north east of Shepley Road, Stocksmoor, Huddersfield, HD4 6XW.
- 1.2 A highways consultation response has been received from Kirklees Council (KC), pursuant to planning application ref: 2024/91242 (KC Responding Ref: 12-33/18). The full consultation response, dated 14th October 2024 is attached at **Appendix A**.
- 1.3 A Transport Assessment and Travel Plan were prepared by AMA and submitted in support of the planning application. Whilst this Transport Assessment Addendum responds directly to the highways consultation response received, it should be read in line with the previously submitted information, where appropriate.
- 1.4 In line with the highways consultation response received, this TAA has been broken down into the following sections:
 - Site Access, Road Safety and Operation;
 - Accessibility and Travel Plan;
 - Traffic Assessment; and
 - Summary and Conclusions.
- 1.5 This TAA has been prepared following the receipt of the highways consultation response and further dialogue with Adam Darwin, Group Engineer – Highways Development Management, to further understand the comments raised, and provide Newett Homes with an opportunity to consider revised proposals. This has been undertaken via both email and through meetings, both on-site and online.

2. SITE ACCESS, ROAD SAFETY AND OPERATION

Site Access

2.1 Kirklees Council provided a number of comments in relation to the site access, which have been broadly summarised below, whilst the full comments are attached at **Appendix A**. The access has been designed specifically to overcome the challenges identified in the consultation response, as follows:

- *The speed survey data was collected in the immediate vicinity of the site access, on the apex of the bend rather than on approach to the proposed junction;*
- *HDM have rechecked junction visibility splays and the required forward visibility around the bend based on the 41m SSD requirement. This indicated that adequate visibility could be achievable horizontally, but this needs to be confirmed by the applicant on revised plans and also checked vertically. It is noted that the forward visibility requirement (measured 1.5m from carriageway edge) should extend to the south by a minimum of 41m from the rear of a waiting righting vehicle into the access and 41m to the northwest of the drivers eye position of a waiting right turner;*
- *Long section information is limited in detail and does not include gradient or vertical alignment information to enable HDM to assess the feasibility of the proposals. The gradient of Shepley Road within the vicinity of the site access should not exceed 1:12 within the full limits of the junction bellmouth and it's immediate approaches, otherwise suitable crossfall gradients on the site access minor arm are unlikely to be achievable (these should not exceed max 4% as per the highway design guide SPD);*
- *The proposed carriageway alignment on the southeast side of the bend appears to show the edge of the proposed carriageway immediately adjacent to the highway boundary. This should be amended to ensure that min. 600mm clearance is maintained;*
- *Block paving has been proposed in the inside of the realigned bend to protect the forward visibility splay envelope. The provision of a hard paved surface is welcomed, which should ensure that adequate visibility is maintained. However, a tarmac surface is likely to be preferred, to reduce the costs of future maintenance. The final detail of the paving type could be agreed at the S278 detailed design stage. However, the current paving proposals taper down to nothing at either end, which*

is not appropriate, and should be amended to provide to a minimum width of 600mm and include edging kerbs;

- It is expected that improved signage and road markings are provided at the 30mph/NSL transition to the south of the site access, which should include a replacement 30mph roundel and improved terminal signage on yellow backing boards. These should be shown on the proposal plans;
- Dropped pedestrian crossings with tactile paving should be provided at the site access, which should be shown on the plans. It should also be confirmed that adequate gradients are achieved at the crossing points; and
- Swept path analysis is required to confirm that a large vehicle can pass a light vehicle on the widened bend (passing by large vehicles will be infrequent and only a minimum level of clearance (e.g. 250-500mm) is expected to be demonstrated).

2.2 Given the previous comments relating to the undertaking of the speed survey by AMA, which was in the incorrect location, revised speed survey data has been collected via Automatic Traffic Counts, at locations and during a time period, agreed with KC via email correspondence. The ATC survey data is attached at **Appendix C**. The surveys were undertaken between Friday 13th December and Thursday 19th December, outside of the school holiday and at a time when temperatures were above freezing and, therefore, driver behaviour was not influenced by icy road conditions.

2.3 As can be seen in the attached ATC data for sites 1 and 2, located west and east of the proposed access, respectively, 85th percentile speeds are below 30mph. The 85th percentile speeds are set out in **Table 2.1** below.

Table 2.1 – 85th percentile speeds

Direction	Speed (mph)
	85 th Percentile
Southbound	27.2mph
Northbound	24.4mph

2.4 As can be seen in **Table 2.1**, 85th percentile speeds along Shepley Road, in the vicinity of the proposed site access, are 27.2mph southbound and 24.4mph northbound. Manual for Streets (MfS) “provides guidance on stopping sight distances (SSDs) for streets where the 85th percentile speeds are up to 60km/h”. Paragraph 7.5.2 sets out that:

“The stopping sight distance (SSD) is the distance within which drivers need to be able to see ahead and stop from a given speed. It is calculated from the speed of the vehicles, the time required for a driver to identify a hazard and then begin to brake (the perception-reaction time), and the vehicle’s rate of deceleration.

2.5 The basic formula for calculating SSD (in metres) is: $SSD = vt + v^2 / 2d$

Where:

V = speed (m/s)

T = driver perception-reaction time (seconds)

D = deceleration (m/s^2)”.

2.6 **Table 2.2** below, summarises the Stopping Sight Distances identified in MfS.

Table 2.2: SSD identified in MfS

Design Speed	Kph	16	20	24	25	30	32	40	45	48	50	60
	Mph	10	12	15	16	19	20	25	28	30	31	37
SSD (m)		9	12	15	16	20	22	31	36	40	43	56
SSD adjusted for bonnet length		11	14	17	18	23	25	33	39	43	45	59

(Source: MfS Table 7.1)

2.7 As can be seen in the **Table 2.2**, it identifies benchmark speeds and required SSDs. In reference to the observed 85th percentile speed of vehicles travelling along Shepley Road, as identified in the **Table 2.1**, they fall between the 25-28mph benchmark for southbound vehicle movements and the 20-25mph benchmark for northbound vehicle movements, respectively.

2.8 Therefore, in order to calculate the appropriate visibilities, based on the observed 85th percentile speed measurements, as permitted in Paragraph 7.5.2 of MfS, reference has been made to the SSD calculation. **Table 2.3**, overleaf, summarises how the visibility splays were derived.

Table 2.3: SSD Calculation

	Southbound	Northbound
Mph	27.2	24.4
v	12.2	10.9
t	1.5	1.5
d	4.41	4.41
SSD + Bonnet	37	32

- 2.9 During the undertaking of the speed surveys, it was brought to KC's attention that building works were taking place to the west of the proposed site access which were likely affecting the recording of data, for eastbound vehicles. However, this is not considered to be detrimental to the visibility splay assessment, as it can be demonstrated that visibility to the west can be achieved in excess of the posted 30mph speed limit.
- 2.10 It was confirmed in email correspondence from KC that given that heavy vehicles were below 10% of the overall traffic volume, a deceleration rate of 0.45g can be used, in line with MfS. With this in mind, it was suggested by KC that a visibility splay of 43m can be used for the southbound approach (in line with the posted 30mph speed limit) and a visibility splay of 38m for the northbound approach (and around the inside of the realigned bend) can be utilised. With this in mind, the drawings attached at **Appendix B** demonstrate visibility splays from the access, in a horizontal and vertical alignment, in line with the above. The drawings also demonstrate forward visibility, towards a vehicle turning right into the site, in line with the suggested 38m visibility on the northbound approach.
- 2.11 A revised package of information has been prepared and is attached at **Appendix B**, following discussions with KC. A summary of the changes are provided below:
- The horizontal and vertical alignment models of the proposed site access have been updated to address comments raised in the KC consultation response and further comments provided via email. The bend has been widened to better accommodate the swept path analysis of a refuse vehicle passing a car waiting to turn right into the site. There is 0.389m clearance between the refuse vehicle and the car;

- The 3D modelling of the junction has been updated to provide the requested vertical and horizontal geometry at the access;
- On the inside of the realigned bend, it is proposed to provide a 1m area of hard surfacing and then the remaining area which forms part of the adopted highway would be dug out and new topsoil and seed provided, rather than having an extensive area of hard surfacing;
- The road markings at the junction and south of the access, where the speed limit changes would be refreshed. New change of speed limit signs would be provided on yellow backing boards, with exact location and specifications to be provided as part of the S278; and
- Dropped kerbs and with tactile paving are provided across the site access junction.

Stone Wood Lane Improvements

- 2.12 The consultation response from KC suggested that the development will generate a significant level of additional traffic along Stone Wood Lane, leading to Shepley, approximately 1km further east, which could result in highways safety issues. A trip generation and distribution exercise has been undertaken and is summarised in **Section 4** of this report which provides some context to the scale of the impact on Stone Wood Lane.
- 2.13 It is recognised that Stone Wood Lane currently has a number of physical constraints, which include it being single track width in sections, having restricted forward visibility, lacking adequate passing places and no pedestrian provision. It should be recognised that this is an existing issue, not dissimilar to many locations across Kirklees. Given this, drawings have been prepared which look to overcome some of the forward visibility constraints and provide some passing places, as a betterment to the existing route and in line with the scale of the impact of the development.
- 2.14 The drawings attached at **Appendix D** provide an overview of the existing arrangement, along with photographic evidence of the existing makeup of the route, which should be considered in line with the proposals attached at **Appendix E**.
- 2.15 As set out in the consultation response, there is limited recent guidance relating to the provision of passing places. However, the TRL guidance from the 1970s is considered to be

relevant. The TRL guidance provides advice on the requirements for passing places on single track roads, which is dependent on traffic volumes and states:

“for two-way flows of up to 100 vph, two passing places within 180m (i.e. separation of 60m, centre-to-centre are sufficient. For higher flows of up to two-way total of 300vph, three passing places are probably necessary (separation of 45m, centre-to-centre).”

- 2.16 KC recognise that *“whilst the additional development traffic may not increase peak hourly traffic flows above 100vph, it is clear that the passing provision on Stone Wood Lane is inadequate, and the additional development traffic will adversely impact on the operation of the highway, which is of greatest concern due to the impact on pedestrians and cyclists using this important route between Stocksmoor and Shepley”.*
- 2.17 ATC data is attached at **Appendix C** which demonstrates the 85th percentile speeds of vehicles on Stone Wood Lane, recorded at locations as agreed with KC. As can be seen in the ATC data, the maximum recorded two-way flow on Stone Wood Lane was 77 two-way vehicles in any hour period, occurring between 17:00-18:00 on Monday 16th December 2024, whilst the virtual 7-day period suggests an average of 55 two-way vehicle movements. With this in mind, it is considered that passing places with separation distance of 60m centre-to-centre should be provided. It should be noted that in coming up with the improvements on Stone Wood Lane, the above has been borne in mind, but improvements are offered where it is physically possible to provide an improvement, rather than solely concentrating on aligning with the above guidance.
- 2.18 Reference is made to Figure 7.1 of Manual for Streets which identifies what various carriageway widths can accommodate. This is provided at **Figure 2.1**, below.

Figure 2.1 – Extract from MfS – Figure 7.1

Figure 7.1 Illustrates what various carriageway widths can accommodate. They are not necessarily recommendations.

- 2.19 As can be seen in **Figure 2.1**, two cars can pass at 4.1m, albeit with limited space between vehicles. A carriageway width of 4.1m does facilitate a car or HGV being able to pass a cyclist. A carriageway width of 4.8m allows for two cars to pass comfortably. With this in mind, where improvements are proposed to be provided, they have been so, in line with the above, to try and provide as a minimum 4.8m to allow two cars to pass comfortably, whilst also providing improvements to forward visibility along the route.
- 2.20 Speed survey information was collected during the same period of the ATCs at the site access, Friday 13th December to Thursday 19th December 2024 along Stone Wood Lane to establish the existing 85th percentile speed of vehicles along this route. The position of the ATCs was agreed with KC, prior to the undertaking of the surveys. This demonstrated 85th percentile speeds of up to 30.2mph (SSD just over 43m). With this in mind, it was suggested by KC that the highest speed reading be utilised to consider what forward visibility improvements may be beneficial.
- 2.21 Forward visibility along the route has been considered in line with the recorded speeds, however, it should be recognised that there are some bends on this route, where it would not be expected that vehicles would travel at this speed, owing to approaching bends. With regard to the drawings attached at **Appendix D**, showing the existing arrangements along Stone Wood Lane, the following should be borne in mind when reviewing the existing situation.

2.22 The drawings appended at **Appendix D** have been prepared by undertaking a site visit which gathered the following information:

- Identifying any areas where widening of the route would be beneficial and can be achieved within the limits of the adopted highway;
- Obtaining a photo record of the route which can be geo-located to specific areas along the route, in order to build up a picture of the existing situation;
- Points of interest to shown with chainage, which can be referenced to the overview drawing;
- Taking any required on-site measurements; and
- Consideration of areas where vegetation removal would be detrimental to the improvements proposed, for example in areas where vegetation is helping to provide structural support to the boundary wall adjacent the route.

2.23 Following the undertaking of the site visit, the existing infrastructure drawings were prepared showing a general arrangement of the route, with dimensions and reference with photos from the site visit.

2.24 The above scope of works has informed a series of improvements along Stone Wood Lane:

- **Section A-B** – The carriageway is 4.8m at chainage 890.000 and there is a line of sight to chainage 830.000 where the carriageway is again in excess of 4.8m wide. With this in mind, no improvement is required here as there is adequate intervisibility between passing places, located 60m apart;
- **Section B-C** – The carriageway through this area is already in excess of 4.8m, significantly so in places with good intervisibility between passing places. Where it does reduce below 4.8m at chainage 750.000 there is a clear line of sight east towards chainage 730.000 (5.2m carriageway width) and chainage 800.000 (7.1m carriageway width);
- **Section C-D** – It has been agreed with highways officers at KC that there is little which can be done through this section to improve carriageway width or forward visibility. This is owing to the banking on the south side of the carriageway having a significant slope down to the carriageway and in places the tree roots in the banking are holding this together. To make changes here by providing widening into the banking could have a potential detrimental impact on the structural integrity of the banking. Notwithstanding this, there is a good line of sight between C and D for drivers to be able to see an oncoming vehicle;

- **Section D-E** – There is a short section between chainage 580.000 to chainage 560.000 where little can be done to improve the existing situation, due to a wall to one side of the road and a steep banking to the other. In this area, as occurs at present, should a vehicle be travelling eastbound and they encounter a vehicle travelling westbound, the westbound vehicle can reverse over a short distance back to the vicinity of chainage 550.000 where there is a 4.9m carriageway width. From chainage 550.000, heading east, the carriageway begins to widen to 4.8m, allowing sufficient space for two vehicles to pass, up to chainage 530.000. There is intervisibility between chainage 520.000 and 450.000, between two areas where it is proposed to provide 4.8m carriageway width. It is recognised that this is 10m in excess of the requirement for passing bays every 60m, however, there is no place between these points to provide further widening;
- **Section E-F** – There is limited scope to improve this section from chainage 430.000 to chainage 340.000 owing to the existing constraints of the highway boundary. It is proposed to provide a small area of widening at chainage 390.000 (where signs of vehicle overrun are visible) to provide a betterment for a vehicle passing a pedestrian/cyclist. In the vicinity of the existing field gate at chainage 340.000 it is proposed to formalise this area to provide a space for two vehicles to pass, with the westbound vehicle being able to get further forward than existing to improve forward visibility. Further improvements are proposed between chainage 320.000 and 300.000 to formalise existing areas where overrun is taking place and also provide the opportunity for eastbound vehicle to get as far forward as possible at a point with a 4.8m carriageway width, to allow two vehicles to pass;
- **Section F-G** – Vehicles would be expected to wait in the approximate vicinity of chainage 300.000 (heading eastbound) and chainage 230.000 (heading westbound) to pass a vehicle travelling in the opposite direction, owing to the constraints between these two chainages. At chainage 230.000 it is proposed to provide widening in the vicinity of the field gate, to enable a westbound vehicle to be as far forward as possible and be able to see through to chainage 300.000, the next available passing place. There is a passing place at chainage 220.000 and then intervisibility from here to chainage 190.000 where vehicles can pass. It is proposed to widen to the north side of the carriageway, to enable vehicles to be as far left as possible to see towards vehicles ahead;

- **Section G-H** – There is a clear line of sight from chainage 10.000 to chainage 130.000 so that vehicles can see an approaching vehicle. Through this area there are no improvements which can be made owing to the constraints of the adopted highway, however there is a clear sight line between places of sufficient width for passing.

- 2.25 With regard to the proposed improvement drawings attached at **Appendix E**, alongside the technical notes, they also provide a colour coded system to show areas which meet or exceed the MfS guidance on acceptable widths (dark green dashed line), areas of proposed widening and improvements (green hatching), forward visibility (light blue dashed line) and areas which cannot be widened due to existing constraints (peach dashed line), however justification is provided as to why this is considered to be acceptable.
- 2.26 As can be seen within the notes on the drawings attached at **Appendix E**, vegetation will be cleared where necessary and achievable, without impacting on boundary walls, to improve sight lines. It is considered that the improvements proposed provide a significant betterment to the existing situation, particularly when considered in tandem with the proposed areas of widening.
- 2.27 It is recognised that there may still be instances where vehicles have to reverse over short distances, such as in the vicinity of chainage 570.000, 420.000 and 360.000 where there are limitations which cannot be fully overcome. However, by improving forward visibility by removing vegetation and providing more passing places, it is expected that the frequency of these occurrences would reduce and would provide a material benefit to the existing situation, not only for prospective residents of the proposed development but for existing drivers utilising this route. In addition, reference should be made to note 10 on the improvement drawings, which identifies that the road surface is in varying condition and that consideration should be given to surface dressing the road with new road markings throughout. This can be agreed as part of the package of S278 works.

3. ACCESSIBILITY AND TRAVEL PLAN

- 3.1 It is recognised that the majority of facilities which prospective residents are likely to access on foot are located in Shepley, some 1.1km walking distance to the east of the site. With this in mind, the improvements to the route along Stone Wood Lane, set out in **Section 2**, are expected to provide a betterment to the existing situation, whilst also recognising that the distance to these facilities for some people would be too far to allow them to walk and there are significant topographical challenges and, thus, the propensity for people to choose to walk along this route is expected to be limited.
- 3.2 Where passing places are proposed, this will provide a safer place for a vehicle to pass another vehicle, but also provide for a vehicle passing a pedestrian or cyclist.
- 3.3 KC have stated that the Travel Plan submitted in support of the application should include the provision of either the Residential MCard scheme or Residential Travel Plan Fund (RTPF) to the same value. With this in mind, Newett Homes are committed to providing funding for the Residential MCard scheme, for bus and rail travel at a cost of £795.74 per dwelling, which would allow prospective residents to access Huddersfield and Shepley, by bus or rail without navigating the topographical challenges of Stone Wood Lane and Shepley Road.
- 3.4 The Travel Plan previously set out a Travel Plan target to reduce single occupancy car trips for commuter journeys by 5%. A revised target is for a 10% reduction in single occupancy car trips for all journeys, which will be set out in the Travel Plan, which will be secured via condition. A Travel Plan monitoring fee will be secured through the S106 agreement, for a value of **£10,000**, which includes for **£2,000 per year for five years**, which will be referenced in the Travel Plan to be provided via condition. Finally, the S106 will also include the funding for the Residential MCard, **£795.74 per dwelling** and will be set out in the Travel Plan, to be submitted via condition. In addition, Newett Homes are happy to enter into negotiations with the Council to consider a cycle scheme for residents to further reduce the reliance on single occupancy car journeys.
- 3.5 The Travel Plan will also include a Public Awareness Campaign to educate prospective residents and the wider community about the improvements on Stone Wood Lane and safe practices for pedestrians and cyclists.

4. TRAFFIC ASSESSMENT

Trip Generation

- 4.1 KC have suggested that the TA should assess the trips that will be generated by the development, by all transport modes, rather than just by the private car. In addition, it has been suggested that the previous trip generation assessment, prepared by AMA, has not been undertaken in line with best practice and the vehicle trips derived are considered to be too low.
- 4.2 With this in mind, revised trip generation rates have been obtained from the TRICS database, taking into account the specific locational characteristics of the proposed development and also the scale of development proposed. The revised trip generation rates are set out in **Table 4.1** below, whilst the full TRICS output is attached at **Appendix F**.

Table 4.1: Residential Dwellings – Privately Owned (50 dwellings)

	AM			PM		
	Arrival	Departure	Two-Way	Arrival	Departure	Two-Way
Total Person Trip Rates	0.238	0.749	0.987	0.558	0.318	0.876
Total Person Trip Generation	12	37	49	28	16	44
Vehicle Trip Rates	0.166	0.352	0.518	0.333	0.183	0.516
Vehicle Trip Generation	8	18	26	17	9.15	26

(Source: TRICS)

- 4.3 As can be seen above, based on more up-to-date trip generation rates obtained from the TRICS database, the development could be expected to generate 26 two-way vehicle trips in the morning and evening peak hour.
- 4.4 It is recognised that the site does have low levels of accessibility, on foot and by bike, however, it has been acknowledged by Kirklees Council that the nearby rail station is likely to be the primary non-car mode for utility and commuting trips by residents.
- 4.5 The trip generation rates are broadly comparable to those set out in the AMA Transport Assessment. In order to provide a robust assessment, taking into account the likely low levels of walking and cycling, a sensitivity test vehicle trip rate of 0.7 in the morning and evening peak hour has been assumed. This has been broken down as 0.2 arrivals and 0.5 departures, in the AM peak hour and 0.5 arrivals and 0.2 departures in the PM peak hour. Using this higher

sensitivity test trip rate, the development would generate 35 two-way vehicle trips in the AM and PM peak hour.

Trip Distribution

- 4.6 With regard to the distribution of vehicles at the access, KC questioned that only 3.8% of development traffic would utilise Stone Wood Lane, as set out in the AMA Transport Assessment. It is noted in the consultation response that residents have undertaken surveys of local people (120 respondents), which suggest that when travelling to Shepley 85% of people would use Stone Wood Lane. This is not disputed and this would likely be the route people would use, rather than the previously suggested route through Stocksmoor.
- 4.7 It is noted in the highways consultation response received from Kirklees Council that between 08:00-08:59 and between 15:00-15:59, 54% and 47% of trips, respectively, would be in relation to travel to education or to escort to education. Taking into account the peak hour trip generation of 35 two-way trips, this would account for 19 two-way trips in the AM peak hour and 16 two-way trips in the PM peak hour. With this in mind, it is worth considering where children from the proposed development would most likely go to school to consider where these trips would distribute to.
- 4.8 Attached at **Appendix G** is the education service response to the planning application which requests that the development should provide contributions to Thurstonland Endowed (VC) First School and Kirkburton Middle School. In addition, from reviewing the priority admissions areas for the proposed site, this suggests that children from the site would have priority admission to the following schools:
- Primary School – Thurstonland Endowed (VC) First School;
 - Middle School – Kirkburton Middle School; and
 - Secondary School – Shelley College, A SHARE Academy.
- 4.9 The location of each of these schools, relative to the proposed site location is attached at **Appendix H**. In order to understand the route those travelling to school might take, **Figures 4.1 to 4.3** set out the predicted route for vehicles travelling to each of the above schools. These routes have been based on Google Maps routing, based on an average weekday between 08:00 and 09:00.

Figure 4.1 – Route to Thurstonland Endowed (VC) First School

Figure 4.2 – Route to Kirkburton Middle School

Figure 4.3 – Route to Shelley College

- 4.10 As can be seen in **Figures 4.1 to 4.3**, the primary vehicle routes for travelling to each of the education establishments where it is predicted prospective residents would travel to, is west from the site, away from Stone Wood Lane. It is recognised that an alternative route to travelling west and then north to Thunder Bridge, for accessing Shelley College, is to travel along Stone Wood Lane. However, this journey could be expected to take up 17% longer, when comparing the 12 minute journey time via Thunder Bridge and the 14 minute journey time utilising Stone Wood Lane.
- 4.11 With the above in mind, it is not expected that education trips would be to/from Shepley and, therefore, the undertaking of these trips would have limited impact on this route. Therefore, even if all other trips were to/from Shepley for other purposes, including commuting, shopping, 'other work, other escort or personal business', visiting friends, entertainment and sport, this would only represent 16 two-way trips in the AM peak hour and 19 two-way trips in the PM peak hour.
- 4.12 Industry standard methodologies for quantifying the impact of additional trips are limited owing to their having not being any up-to-date guidance issued since Guidance on Transport Assessments in March 2007. Given this is the most up-to-date guidance, it is worth noting that this suggests that 30 two-way peak hour vehicle trips could give rise to an impact. It states at paragraph 2.11 that, *"whilst there is no suggestion that 30 two-way peak hour vehicle trips would, in themselves, cause a detrimental impact, it is a useful point of reference from which to commence discussion"*. With this guidance in mind, the predicted level of trips along Stone Wood Lane would not meet the threshold for giving rise to an off-site highway impact.
- 4.13 The predicted peak hour trip generation represents less than one additional vehicle every 3 minutes. Taking this into account and the improvements proposed in **Section 2** of this report, the impact of the development on Stone Wood Lane is expected to be negligible and through delivering the improvements as set out in the drawings attached at **Appendix E**, will offer a significant benefit to highway safety, when compared to the existing arrangements.

5. EXISTING HIGHWAY SAFETY RECORD

- 5.1 Kirklees Council have highway safety concerns in relation to the intensification of the use of Stone Wood Lane, from the site to/from Shepley. As has been demonstrated in the previous sections of this note, it is not expected that all development traffic would route along Stone Wood Lane and improvements are proposed to Stone Wood Lane to better provide for two-way vehicle flows and improve forward visibility.
- 5.2 In light of the road safety concerns identified by Kirklees Council, it is important to understand if there are any recorded collisions along Stone Wood Lane which would give rise to their being highway safety concerns. With this in mind, the record of recorded personal injury collisions along Stone Wood Lane over the latest 10 year period (2014-2023) has been obtained from www.crashmap.co.uk. The record of this can be seen in **Figure 5.1**, below.

Figure 5.1 – Personal Injury Collision Record

- 5.3 As can be seen in **Figure 5.1** there have been no recorded personal injury collisions along Stone Wood Lane in the latest ten year period, suggesting that there are no existing highway safety concerns which would be exacerbated by the development proposals, particularly in light of the predicted trip generation along this route and the improvements proposed.

6. SUMMARY AND CONCLUSIONS

- 6.1 TPS Transport Consultants Ltd (TPS) has been instructed by Newett Homes to prepare a Transport Assessment Addendum (TAA) in support of a planning application for a residential development of up to 50 dwellings on land north east of Shepley Road, Stocksmoor, Huddersfield, HD4 6XW.
- 6.2 A package of revised access arrangement drawings has been prepared which demonstrate that the required visibility can be achieved from the site access, in line with the level agreed with Kirklees Council and, therefore, the arrangement is considered to be safe. However, it should be noted that a Stage 1 RSA of the proposals will be undertaken, once a design has been agreed upon.
- 6.3 A package of off-site mitigation has been proposed to mitigate the vehicle trips generated by the development, which includes the introduction of a number of passing places along Stone Wood Lane. Stone Wood Lane is a typical rural road where no accidents have been recorded over the latest 10 year period. This suggests that driver behaviour has been adjusted somewhat to drive the route with caution and the additional number of plots proposed and predicted trip generation in the peak hours, would not exacerbate this.
- 6.4 Improvements are proposed in 9 separate locations along Stone Wood Lane, to improve the situation for vehicles being able to pass other vehicles and vehicles passing pedestrians/cyclists, as well as improvements to forward visibility. It should also be noted that the scheme would involve the cutting back of vegetation along the route and grubbing out existing areas of highway verge which are overgrown, something which Kirklees Council are not currently undertaking, further improving the route for existing and prospective users of the route.
- 6.5 It should be noted that the assessments undertaken by AMA and TPS have been based on 50 plots being delivered on the site, however, owing to needing to accommodate forward visibility within the site, the proposals have been reduced from 50 to 49 dwellings. With this in mind, the assessment undertaken is considered to be particularly robust.
- 6.6 Given the constrained nature of this route, it is recognised that the improvements do not perfectly align with relevant design guidance, however, they provide a significant betterment to the existing arrangements along this route.
- 6.7 Newett Homes are happy to agree to funding required, related to the Travel Plan, which can be included within the S106, as set out in **Section 4**. A number of measures are proposed

in the Travel Plan, including the funding to be agreed as part of the S106 which will further assist in reducing the overall vehicle trip generation of the site.

- 6.8 A revised trip generation assessment and sensitivity test has been undertaken which suggests that the development could be expected to generate 35 two-way vehicle trips in the peak hour. Based on the priority admission areas for the site, it is expected that cars would route via Stocksmoor and not Shepley. Given this, it is unlikely that any trips associated with travel to education would take place along Stone Wood Lane. Therefore, the development would generate 19 and 16 two-way trips along Stone Wood Lane, in the AM and PM peak hours, respectively.
- 6.9 Taking into account all of the above improvements and betterment to the existing situation and that the marginal increases in vehicle trips associated with the development, along Stone Wood Lane would have a negligible impact, it is considered that the development will not adversely impact on the operation of the highway.
- 6.10 It is therefore considered that the impact of the development is not severe, the test as set out in the NPPF.

Appendix A

Highways Consultation Response

Consultation Response from KC, Highways Development Management (HDM)
2024/91242 Land north east of Shepley Road, Stocksmoor, Huddersfield, HD4 6XW
Erection of residential development (up to 50 dwellings) with associated access, parking, public open space, landscaping and infrastructure
Date Responded: 14/10/24 Responding Officer: A.Darwin Responding Ref: 12-33/18

RECOMMENDATION: HDM are unable to support the development proposals as this time in their current form.

Development Overview:

The site is approximately 2.5 hectares of greenfield land located to the east of Stocksmoor; and is bound by a railway line to the north, woodland to the east, Shepley Road to the south, and existing residential properties to the south-east and west. The site is designated as Safeguarded Land within the adopted Kirklees Local Plan (Ref. SLS30).

Access to the site is currently via a field gate on to Shepley Road, which is a single carriageway two-way road that is subject to a 30mph speed limit along the site frontage and to the west leads to the main residential area of Stocksmoor. Immediately to the south of the south frontage, the speed limit on Shepley Road changes to National Speed Limit (NSL = 60mph in this location) and the road name changes to Stone Wood Lane, which leads to Shepley village circa 1.1km travel distance to the east.

The proposed development includes the following:

- 6 x 1-bed dwellings, of which 2 are affordable;
- 10 x 2-bed dwellings, of which 4 are affordable;
- 23 x 3-bed dwellings, of which 4 is affordable;
- 6 x 4-bed dwellings; and
- 5 x 5-bed dwellings.
- Total 49 No. dwellings.

The development proposals were subject to a pre-application consultation with the Local Planning Authority in early 2024, and comments were provided by HDM that have been taken into consideration (to some extent) in the planning submission.

- Proposed Site Access Design drawing (AMA/20547/SK002-P05 Included in TA Appendix B);
- Proposed Long Section (Shepley Road) drawing (AMA/20547/SK006 Included in TA Appendix C);
- Swept Path Analysis drawings (AMA/20547/ATR006/1.4-P01, 2.4P01, 3.4P01 4.4P01 Included in TA Appendix D).

Policy:

Local Plan Policies – LP5, LP19, LP20, LP21, LP22, LP23, LP24; Kirklees Highway Design Guide SPD, Housebuilder Design SPD, NPPF (See Link: <https://www.kirklees.gov.uk/beta/planning-policy/adopted-supplementary-planning-documents.aspx>).

Reference should also be made to the Council's latest 'Waste Management Design Guide for New Developments' (See Link: <https://www.kirklees.gov.uk/beta/planning-applications/guidance-and-advice-notes.aspx> and other S38 design guidance documents and standard details that provide detailed requirements relating to the highway and development layout (See Link: <https://www.kirklees.gov.uk/beta/regeneration-and-development/highways-guidance-and-standards.aspx>).

Site access, road safety and operation:Site Access

Access to the site is proposed via a new priority junction on Shepley Road, as shown on AMA drawing AMA/20547/SK002-P05. This access has been designed taking into consideration some of the concerns raised by HDM at the pre-application stage, and includes the following:

- A new priority junction access, which includes a 5.5m wide carriageway, 2m wide footways on both sides and 6m junction radii;
- As the site access is on a bend that has restricted forward visibility due to vegetation on the inside of the bend, the bend is proposed to be realigned to improve forward visibility. To protect the forward visibility splay around the bend it is proposed to hard pave the verge area on the inside of the bend with block paving.
- The carriageway is proposed to be widened on the bend to enable vehicles to pass, including southbound vehicles passing a vehicle waiting to turn right into the site access;
- A new footway is proposed along the site frontage, connecting the site to the existing footway network to the west and extending as far south as possible within land/highway boundary constraints.
- Vegetation is to be cleared along the site frontage, including a number of large trees, to enable the site access to be delivered and to achieve the junction visibility splays.

The principle of the site access arrangements are considered appropriate. However, there are a number of issues that need to be addressed before the arrangements can be accepted, which are as follows:

- Additional swept path analysis is required to confirm that a large vehicle (e.g. refuse vehicle) can pass a light vehicle on the widened bend (e.g. passing a stationary car waiting to turn right into the access). This may result in some additional carriageway widening being necessary (in addition to the widening to 6m as currently proposed). It is noted that Shepley Road is signed as being unsuitable for heavy vehicles. As such, passing by large vehicles will be infrequent and only a minimum level of clearance (e.g. 250-500mm) is expected to be demonstrated by this additional swept path analysis.
- The speed data included in the TA confirms that 85th percentile speeds on Shepley Road were recorded as 24.0mph southbound (e.g. exiting the village) and 27.5mph northbound (See section 4.2 of TA), and that the junction visibility splays and forward visibility splays at the bend have been provided in accordance with these speeds. However, following further information provided by the transport consultant who produced the TA, it has been confirmed that the speed survey was undertaken within the immediate vicinity of the site proposed access (e.g. on the apex of the bend) rather than on approach to the proposed junction. Therefore, the approach speeds to the junction may be slightly higher than those recorded by this speed survey. HDM have checked the detailed speed data results that also include approximate vehicle classifications, which suggest that the proportion of larger vehicles (e.g. OGV1, OGV2 and PSV) are at times over 10%. Therefore, the Stopping Sight Distance (SSD) should be based on a deceleration rate of 0.375g, rather than the 0.45g deceleration rate that has currently been used. Based on the higher recorded 85th percentile speed of 27.5m (northbound) and the deceleration rate of

0.375g, this equates to a SSD requirement of 41m. Therefore, in accordance with good practice, it is expected that the 41m SSD requirement is applied to all visibility splays at the junction and forward visibility around the bend, which should be clearly demonstrated on the plans.

- Some long section information has been provided in Appendix C of the TA, showing what appears to be the revised alignment of Shepley Road following the realignment works. This long section has then been used to seek to demonstrate that the visibility splay requirements are achieved vertically. However, the long section information is very limited in detail and does not include gradient or vertical alignment information to enable HDM to assess the feasibility of the proposals. It is noted that the gradient of Shepley Road (as amended by the revised alignment) within the vicinity of the site access should not exceed 1:12 within the full limits of the junction bellmouth and its immediate approaches, otherwise suitable crossfalls gradients on the site access minor arm are unlikely to be achievable (these should not exceed max. 4% as per the Highway Design Guide SPD). Based on HDMs check of the limited information provided on the long section, it appears that the site access may need to be relocated further to the west where the carriageway gradient would be reduced. Further level information is required, included detailed long section information on Shepley Road that clearly shows the proposed carriageway gradients, including tie-ins to the wider carriageway vertical alignment, together with more detailed vertical alignment/levels information within the minor arm of the junction to ensure that suitable crossfall gradients can be achieved.
- The proposed carriageway alignment on the southeast side of the bend appears to show the edge of the proposed carriageway immediately adjacent to the highway boundary. This should be amended to ensure that min. 600mm clearance is maintained.
- Block paving has been proposed in the inside of the realigned bend to protect the forward visibility splay envelope. The provision of a hard paved surface is welcomed, which should ensure that adequate visibility is maintained. However, a tarmac surface is likely to be preferred, to reduce the costs of future maintenance. The final detail of the paving type could be agreed at the S278 detailed design stage. However, the current paving proposals taper down to nothing at either end, which is not appropriate, and should be amended to provide to a minimum width of 600mm and include edging kerbs.
- It is expected that improved signage and road markings are provided at the 30mph/NSL transition to the south of the site access, which should include a replacement 30mph roundel and improved terminal signage on yellow backing boards. These should be shown on the proposal plans.
- Dropped pedestrian crossings with tactile paving should be provided at the site access, which should be shown on the plans. It should also be confirmed that adequate gradients are achieved at the crossing points.

HDM have rechecked the junction visibility splays and the required forward visibility around the bend based on the 41m SSD requirement, as shown on the sketch below (note this will change once the required adjustments to be carriageway alignment have been made). This indicated that adequate visibility could be achievable horizontally, but this needs to be confirmed by the applicant on revised plans and also checked vertically. It is noted that the forward visibility requirement (measured 1.5m from carriageway edge) should extend to the south by a minimum of 41m from the rear of a waiting righting vehicle into the access (as shown in green on the sketch) and 41m to the northwest of the drivers eye position of a waiting right turner.

Subject to the revised information adequately addressing the above issues and a preliminary layout being agreed, this will then need to be subject to a Stage 1 Road Safety Audit (RSA), alongside the S38 works. It is noted that the RSA Brief must be agreed in advance with HDM, and a draft version of the brief provided in editable format with the further submission for review, including CV's for the proposed independent RSA Team.

Road safety and operation

HDM raised concerns at the pre-application stage that the development will generate a significant level of additional traffic along Stone Wood Lane, which leads to Shepley circa 1km to the east, with this route being attractive to development users due to the amenities available in Shepley (school, shops, medical facilities etc) and for onward journeys to the south. However, this road has a number of physical constraints, which include it being single track width for long sections, having restricted forward visibility, lacks adequate passing places, and has no pedestrian provision etc. The road also forms part of National Cycle Network (NCN) Route 627 (Kirkburton to Millhouse Green).

Therefore, the applicant was advised that Stone Wood Lane was not consider suitable for any further intensification in use from the development without improvement, which does not appear to be deliverable within the highway boundary (e.g. additional passing places may require third party land acquisition). As such, HDM could not support the proposed residential development at this site.

The applicant has not proposed any improvements to Stone Wood Lane as part of the proposals to address the existing deficiencies, and has sought to down play the problems by suggesting that development users are unlikely to use this route to access facilities in Shepley, and would instead travel the longer route to Shepley via Thunderbridge. HDM do not accept this (see further comments below regarding the traffic assessment) and consider the intensification of use of this route would adversely affect it's operation, both for drivers, but more importantly for pedestrians and cyclists (on this NCN route), who would be at increased risk of collisions with passing and reversing vehicles.

It is noted that HDM have undertaken multiple site visits along Stone Wood Lane, and on a number of occasions have encountered a vehicle approaching in the opposite direction. This has resulted in one of the drivers having to yield and then reverse back for a substantial distance to reach a point where vehicles can pass, at the sub-standard passing places that are available. This problem is then compounded when other vehicles arrive during these occurrences. Depending on the locations where vehicles meet, this can require multiple vehicles to reverse

back beyond the first informal passing point they reach, as there is insufficient space for the other vehicle to pass multiple vehicles.

HDM are not aware of any recent guidance/research on the detailed requirements for passing places on single track roads. However, TRL carried out research on this matter in the 1970's, which is set out in TRRL advice note TSN29R (Studies of delays to traffic on single-lane carriageways with passing places). This was then used to underpin various design guidance, including Design Bulletin 32 (and its companion guide), which was national guidance that was in place for many years prior to the adoption of 'Manual for Streets' in 2007. As Manual for Streets does not provide any further detailed advice on this matter, the TRRL advice note is still understood to be the most up to date research. The TRRL advice note provides various advice on the requirements for passing places on single track roads, which is dependant on traffic volumes and states:

'.....for two-way flows up to 100 vph two passing places within 180m (i.e. a separation of 60m, centre-to-centre) are sufficient. For higher flows of up to a two-way total of 300vph three passing places are probably necessary (separation of 45m, centre-to-centre).'

The research also includes various diagrams to identify what are regarded as suitably sized passing bays and their required separation, which have been reproduced below (the diagram shows the required 45m passing place separation for hourly flows up to 300vph):

To enable the passing places to work affectively, it is also necessary that there is adequate intervisibility between passing bays, otherwise this will result in vehicles needing to reverse if they encounter a vehicle approaching in the opposite direction once they have exited the passing bay.

HDM have undertaken a high level review of the passing opportunities that are available on Stoney Wood Lane, and it is apparent that they do not comply with the minimum standards recommended in TSN29R. This includes a section of circa 700m where the passing places are inadequate (in terms of frequency, size and/or forward visibility).

Therefore, whilst the additional development traffic may not increase peak hourly traffic flows above 100vph (although the TA does not quantify this), it is clear that the passing provision on Stone Wood Lane is inadequate, and the additional development traffic will adversely impact the operation of the highway, which is of greatest concern due to the impact on pedestrians and cyclist using this important route between Stocksmoor and Shepley.

As such, HDM remain of the view that improvements to Stone Wood Lane should be provided by the development, to address some of these existing deficiencies, and safely accommodate additional development traffic (by all modes) along this route.

Site Layout/Servicing/Waste Collection:

It is expected that the internal road layout shall be built to adoptable standards, as set out in the Kirklees 'Highway Design Guide SPD' and 'Highways Guidance Note – Section 38 Agreements for Highway Adoptions' March 2019 (version 1). Reference should also be made to the Councils latest 'Waste Management Design Guide for New Developments' (See Link: <https://www.kirklees.gov.uk/beta/planning-applications/guidance-and-advice-notes.aspx> and other S38 design guidance documents and standard details that provide detailed requirements relating to the highway and development layout (See Link: <https://www.kirklees.gov.uk/beta/regeneration-and-development/highways-guidance-and-standards.aspx>).

At the pre-application stage various advice was provided regarding the site layout proposals, including the recommendation to provide a loop road system to minimise the need for turning heads. Many of the points raised have been incorporated into the site layout, which is considered to be acceptable in principle.

However, following a review by HDM and the S38 team, it has been identified that there are a number of issues with the layout that need to be addressed and the layout is not currently suitable for adoption. A summary of these matters are as follows:

- To enable the streets to be considered for adoption, they need to comply with the Councils Highway Design guide SPD and other S38 guidance documents. However, it is apparent some of the criteria do not comply with the SPD, including some of the critical dimensions. This includes forward visibility that is not provided in full accordance with the SPD (e.g. 17m SSD shown on the shared surface loop road, which must be a minimum of 23m and contained within the highway to be considered for adoption, as per Table 1 of the SPD). Therefore, the applicant should undertake a full compliance check to confirm that all critical dimensions and highway features are to an acceptable standard. This includes the key geometric features identified in Table 1 of the SPD.
- To enable highway adoption, swept path analysis is required to demonstrate that a 11.85m refuse vehicle can pass an oncoming or parked family car throughout the layout, which is likely to require bend widening to accommodate these manoeuvres. This has not currently been demonstrated.
- Whilst full long section information has not been provided, it appears that the section of shared surface street and turning head to the east of the site has a gradient of 1:12, which is not acceptable as shared surface streets should not exceed 1:20. Therefore, either the gradient of this section of street should be reduced to 1:20, or the street should be amended to a standard estate roads (Type 2 Street identified in the SPD).
- The proposed turning head at the end of the shared surface street appears to have been checked with swept path analysis using stationary steering, which is not acceptable. Therefore, this needs to be rechecked without the use of stationary steering, which is likely to require the turning head to be enlarged (typically turning heads need to be circa 30m long to accommodate the Councils design refuse vehicle).
- At the end of the steep shared surface cul-de-sac (which is not currently acceptable due to the gradient) and turning head, there is proposed to be a steep (1:3) embankment, which is then supported at its base by a tall retaining wall. This is a significant concern, as if a driver loses control (e.g. skids in wet/icy conditions) and leaves the carriageway at the end of the turning head, the vehicle would then travel down the embankment and retaining wall, which is likely to result in a severe incident. This problem is compounded by the steep gradient along the approach. Therefore, a vehicle restraint system will be necessary and must be incorporated into the proposals, with the submission drawings confirming how this can be incorporated (this should be shown indicatively on the plans, and is likely to require a level plateau/berm at the top of the embankment). It is noted that the level strategy plans indicate a 300mm high kerb at the end of the turning head, which may have been intended to address this issue, but this is not considered to be an adequate solution.
- The total no. of visitor parking bays accords with Council guidance (10 in highway area + 2 on private drive). However, there is no provision within the vicinity of the site access and the LAP, which could result in blocking of the refuse vehicle. Therefore, it is recommended that 2 additional parallel layby spaces are provided on the east side of the carriageway adjacent to the LAP.

- The private drive serving Plots 44-47m is too long (at 50m), so the max. bin carry distance of 25m is exceeded. The bin presentation point also needs to be relocated to the back edge of the highway. The turning head on this private drive also needs checking to ensure it can accommodate a fire tender.

The above issues should be addressed in a revised layout, and should be supported by the additional swept path analysis and long section information. For clarity, the final package of preliminary design information that is required is as follows (some of which has been provided, but will require updating):

- Long sections, cross-sections and contours;
- Dimensioned plans, including street widths, centre line radii, junction stagger distances, junction radii, visibility splays and forward visibility sight-lines;
- Kerbing details, surface treatments and ramp details;
- Pedestrian crossing arrangements;
- Street tree details, including proposed root protection measures;
- Swept Path Analysis (SPA) of Kirklees Design Refuse vehicle to be provided for entire site layout, including turning heads and passing cars at bends/junctions, and fire tender and light van turning on private drives;
- Preliminary information relating to Vehicle Restraint System (VRS);
- Extent of proposed highway adoption and unadopted communal areas to be confirmed. Details regarding the maintenance of unadopted communal areas/facilities is also required. These area need to be clearly annotated on a plan, which include confirmation that unadopted streets will be maintained by the Management Company (this will need to include any street not designed in accordance with the Highway Design SPD).

Any retaining features affecting the highway will require formal technical approval by the Council as the Highway Authority. We would recommend providing details of all proposed retaining features and underground storage facilities (including pipes) to my colleague Farhad Khatibi (Team Leader) in the structures section at the earliest opportunity, who will be able to advise of the necessary requirements in more detail.

Parking:

The TA confirms that car parking has been provided in full accordance with the Councils Highway Design Guide SPD, which includes 1 space for the single bedroom dwellings, 2 spaces for the 2-3 bedroom dwellings and 3 spaces for the 4+ bedroom dwellings. Some of the dwellings include garages, which have been confirmed to comply with the minimum internal dimensions of 3m x 6m. Therefore, the off-street car parking proposals are acceptable.

12 no. visitor parking spaces are provided in laybys, which are welcomed and are generally acceptable. However, as mentioned above, 2 additional spaces are sought adjacent to the LAP to ensure blocking at the site access does not occur. It may also be necessary to provide 2 additional spaces, should the proposed layby spaces be lost on the short section of shared surface street (e.g. if the gradient cannot be reduced to 1:20 and needs to be converted to a Type 2 street).

The 'secured by design' plan confirms that all dwellings that do not benefit from a garages (that can be used for cycle parking) will be provided with a secure cycle shed in the rear garden, which are accessible by external routes. This provision is acceptable, with the final details of the provision secured by planning condition.

The site layout plan includes EV charging facilities in the key. However, these appear to have been omitted from the plan. Therefore, these need to be incorporated, in accordance with building regulation requirements.

Accessibility and Travel Plan:

The supporting TA and Travel Plan includes a high level review of the accessibility of the site by non-car modes. However, the review is very basic, and does not assess in any detail how residents would access key local services, including schools. The TA does mention some facilities such as two pubs and a hairdresses that can be

accessed on foot, located in Thunderbridge and Shelley. However, the TA ignores that fact that the closest and most useful facilities are located within Shepley, including the nearest primary school, medical centre and convenience store.

The most direct and convenient route to the nearest facilities in Shepley are within walking distance (1.1km) of the site. However, to access these facilities, pedestrians (and cyclists) would need to use Stone Wood Lane, which is currently unattractive due to the constraints that have been previously identified (e.g. lack of adequate passing places and forward visibility for drivers, which results in frequent reversing of vehicles, in conflict with non-motorised users in the shared surface road).

The TA suggests the site is served by a bus service that operates on an hourly basis. This is not correct, as the bus frequency (to/from Huddersfield) is generally every two hours. However, the site is located close to Stocksmoor Railway station, so the site is reasonably well served by public transport, which is likely to be the primary non-car mode for utility trips by residents.

Therefore, given that no improvements have been proposed by the development to improve conditions for all highway users on Stone Wood Lane, it is considered that walking levels are likely to be low. This includes parents escorting children to primary schools, which is likely to be all by car.

A Travel Plan has been provided in support of the proposals. However, at the pre-application stage, it was identified that this should include the provision of either the Residential MCard scheme or Residential Travel Plan Fund (RTPF) to the same value. Neither of these measures has been incorporated into the Travel Plan, which is not acceptable. Given that the site is well located to the railway station, it is expected that the Residential MCard scheme would be for bus and rail (the Bus and Rail Zone 2-5 pass that enables travel to Huddersfield currently costs £795.74 per dwelling, and the Zone 1-5 pass that enables travel to Leeds costs £1,139.33 per dwelling).

It is also noted that the Travel Plan includes a target to reduce single occupancy car trips for commuter journeys by 5%. This is not considered to be an ambitious target, nor is it adequate as it only relates to commuter trips, which will only account of a minority of journeys to/from the site.

Therefore, the Travel Plan is not acceptable and should be amended to confirm that the residential MCard scheme will be introduced (or an RTPF, should this be the applicants preferred approach).

Kirklees Council will require a Travel Plan monitoring fee to be secured as part of the S106 agreement. For a development of this scale (classed as a 'small major' residential development) the fee is £10,000 (£2,000 per year for 5 years).

Traffic Assessment:

The supporting TA includes an assessment of the peak hour traffic generations and distribution. HDM do not accept these findings, with comments as follows:

Trip Generation

Based on good practice guidance, the TA should assess the trips that will be generated by the development by all transport modes, to ensure that adequate provision for all users is available. However, this has not been done, with the TA only including an assessment of vehicle trips.

The weekday peak hour vehicle trips have been derived using the TRICS database, as shown in the table below:

Table 5-1 Proposed Vehicle Trip Rates and Generation (50 dwellings)

	AM Peak Hour (08:00-09:00)		PM Peak Hour (17:00-18:00)	
	Arrivals	Departures	Arrivals	Departures
Trip Rate	0.154	0.360	0.318	0.159
Trips	8	18	16	8

The TA confirms that the TRICS search has included 'houses privately owned' and excludes sites in greater London and Ireland. However, no attempt appears to have been made to further interrogate the database for sites that are representative of this site, including taking into account the sites low level of accessibility for pedestrians and cyclists. Therefore, the TRICS assessment has not been undertaken in accordance with best practice, and the vehicle trip rates that have been derived are considered to be too low.

As such, a revised assessment should be undertaken that takes into account the specifics of the site and it's accessibility levels. This could involve a 'first principle' assessment that takes account of the anticipated mode split (for all trips and not just journeys to work), applied to a robust 'person trip' generation (typically, a residential development could be expected to generate in the region of 1 trip per dwelling during peak periods).

Development Traffic Distribution

Development traffic distribution has been derived using method of travel to work data from the 2011 census. Based on this approach, the TA suggests that only 3.8% of weekday peak hour development traffic would use Stone Wood Lane.

The TA also suggests that residents are unlikely to use Stone Wood Lane at peak times due to the likelihood of delays (due to it's constrained nature) and would instead travel via Penistone Road/Abbey Road. This assumption is not accepted, as this alternative route is significantly longer and is also not an easy route with it's own constraints, and is also subject to delay at peak times. It is also noted that local residents have undertake surveys of local people (120 responses), which suggest that when travelling to Shepley, 85% of people would use Stone Wood Lane, which appears to be a sensible and realistic estimate.

Whilst the TA's approach to traffic distribution is often used for traffic distribution purposes, it is better suited to employment related development, particularly when assessing weekday network trips. This is due to the majority of weekday peak hour trips associated with residential development not being commuter trips. This is demonstrated by data obtained from the 2022 National Travel Survey, that includes weekday trip start time and journey purpose, which is summarised in the table below:

Trip start time by trip purpose (Monday to Friday only) in England (Source NTS0502a)									
Start time	Commuting (%)	Business (%)	Education (%)	Escort education (%)	Shopping (%)	Other work, other escort and personal business (%)	Visiting friends, entertainment and sport (%)	Holiday, day trip and other (%)	All purposes (%)
0700 to 0759	42	4	16	6	3	14	4	12	100
0800 to 0859	17	2	28	26	4	13	3	6	100
0900 to 0959	9	4	3	5	22	24	15	20	100
1500 to 1559	8	1	25	22	11	13	10	10	100
1600 to 1659	22	3	8	5	14	19	16	14	100
1700 to 1759	30	2	3	2	12	19	20	11	100
All day	17	2	10	8	15	17	17	14	100

As can be seen from the above, during weekday peak periods, commuter trips only represent a minority of trips, ranging between 8-42%, with education trips representing the majority of trips (54%) during the 0800-0900 time period.

It is concluded that the traffic distribution approach that has been used in the TA significantly underestimates the trips that are likely to head toward Shepley via Stone Wood Lane, which includes a range of local amenities, including a primary school, medical centre and shops etc.

The TA goes on to suggest that even if 20% of weekday peak hour development traffic were to use Stone Wood Lane, this would only equate to 5 vehicle trips. This is still considered to be a significant under-estimate, which is based on a traffic generation rate and distribution methodology that are not robust, contrary to the assertion in the TA.

Therefore, it is concluded that a realistic assessment of the traffic impact on the local highway network has not been undertaken, including the assessment of impact on Stone Wood Lane, which is not considered to be suitable to accommodate additional development traffic without improvement.

Conclusion:

HDM are unable to support the development proposals as this time in their current form.

130 - 135	Speed bin totals 130 - 135 mph
135 - 140	Speed bin totals 135 - 140 mph

Heading	Description
>PSL	Greater than the posted speed limit
>PSL%	Greater than the posted speed limit as a percentage
>SL1 ACPO	Greater than ACPO (Association of Chief Police Officers) standard. ACPO is PSL x 10%+2mph
>SL1% ACPO	Greater than ACPO displayed as a percentage
>SL2 DfT	Greater than DfT (Department For Transport) standard. DfT is PSL plus 15mph.
>SL2% DfT	Greater than DfT displayed as a percentage
Mean	Average speed
Vpp 85	85th percentile speed

120 - 125	Speed bin totals 120 - 125 mph
125 - 130	Speed bin totals 125 - 130 mph
130 - 135	Speed bin totals 130 - 135 mph
135 - 140	Speed bin totals 135 - 140 mph

Heading	Description
>PSL	Greater than the posted speed limit
>PSL%	Greater than the posted speed limit as a percentage
>SL1 ACPO	Greater than ACPO (Association of Chief Police Officers) standard. ACPO is $PSL \times 10\% + 2\text{mph}$
>SL1% ACPO	Greater than ACPO displayed as a percentage
>SL2 DfT	Greater than DfT (Department For Transport) standard. DfT is PSL plus 15mph.
>SL2% DfT	Greater than DfT displayed as a percentage
Mean	Average speed
Vpp 85	85th percentile speed

Proposed improvements to Stone Wood Lane

-

KEY:

- PROPOSED WIDNING LOCATIONS INCORPORATING FULL DEPTH CARRIAGEWAY CONSTRUCTION
- CARRIAGEWAY WITH NO PROPOSED WORKS, REFER TO ANNOTATION ON PLAN
- EXISTING CARRIAGEWAY A MINIMUM OF 4.8m ACCOMMODATING 2 WAY MOVEMENTS
- FORWARD VISIBILITY
- 4.698 PROPOSED DIMENSIONS

- NOTES:**
1. ALL DIMENSIONS IN METRES UNLESS OTHERWISE STATED.
 2. PRIOR TO COMMENCING WORKS THE CONTRACTOR SHOULD INVESTIGATE AND LOCATE AS NECESSARY ANY STATUTORY UNDERTAKERS EQUIPMENT WITHIN THE EXTENTS OF THE WORKS AND DISCUSS ANY PERCEIVED ISSUES WITH THE CLIENT AND/OR ENGINEER.
 3. DRAWINGS BASED UPON PROVIDED TOPOGRAPHIC SURVEY.
 4. SITE VISIT AND WALK THROUGH UNDERTAKEN 13.03.25 TO ASSESS LOCATIONS.
 5. EXISTING ROAD MARKINGS TO BE REFRESHED, WHERE WIDENING IS PROPOSED, EXISTING ROAD MARKINGS SHALL BE REMOVED AND REPLACED WITH NEW MARKINGS TO EDGE OF CARRIAGEWAY. SUBJECT TO DETAILED DESIGN.
 6. ROAD EDGES SHALL BE MADE GOOD.
 7. SHRUBBERY SHALL BE CUT BACK ALONG THE ROAD.
 8. GENERAL TIDY UP OF THE ROUTE WITH TREE AND SHRUBBERY LOOSE IN THE VERGES CLEARED.
 9. VERGES WITH SHEEL TRACKS SHALL BE REINSTATED WITH VERGE TOPSOIL AND SEED TO ROAD LEVELS.
 10. ROAD SURFACE IN VARYING CONDITION. CONSIDER SURFACE DRESSING FOR ROAD WITH NEW ROAD MARKINGS THROUGHOUT.
 11. PROPOSED ARRANGEMENT SUBJECT TO DETAILED DESIGN FOR ROAD LEVELS, ROAD GRADIENTS, CONSTRUCTION MATERIALS AND SETTING OUT AND THE MINIMUM.
 12. FOR CROSS SECTIONS REFER TO TPS DRAWING 24071-LE-00-ZZ-DR-D-0201

TRICS Output

Calculation Reference: AUDIT-640801-250128-0143

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : A - HOUSES PRIVATELY OWNED
MULTI-MODAL TOTAL VEHICLES

Selected regions and areas:

02	SOUTH EAST	
	CT CENTRAL BEDFORDSHIRE	1 days
	HC HAMPSHIRE	1 days
	WS WEST SUSSEX	1 days
04	EAST ANGLIA	
	NF NORFOLK	3 days
07	YORKSHIRE & NORTH LINCOLNSHIRE	
	NY NORTH YORKSHIRE	1 days
09	NORTH	
	IM ISLE OF MAN	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Northern Transport Planning LEEDS WEST YORKSHIRE

Licence No: 640801

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: No of Dwellings
Actual Range: 44 to 92 (units:)
Range Selected by User: 20 to 100 (units:)

Parking Spaces Range: All Surveys Included

Parking Spaces per Dwelling Range: All Surveys Included

Bedrooms per Dwelling Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/16 to 18/09/24

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	1 days
Tuesday	3 days
Wednesday	2 days
Thursday	1 days
Friday	1 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	8 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Edge of Town	8

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	6
Out of Town	1
No Sub Category	1

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Inclusion of Servicing Vehicles Counts:

Servicing vehicles Included	7 days - Selected
Servicing vehicles Excluded	21 days - Selected

Secondary Filtering selection:**Use Class:**

C3	8 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order (England) 2020 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:

All Surveys Included

Secondary Filtering selection (Cont.):

Population within 1 mile:

1,001 to 5,000	2 days
5,001 to 10,000	3 days
10,001 to 15,000	3 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	3 days
25,001 to 50,000	2 days
50,001 to 75,000	2 days
100,001 to 125,000	1 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	1 days
1.1 to 1.5	6 days
1.6 to 2.0	1 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	6 days
No	2 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	8 days

This data displays the number of selected surveys with PTAL Ratings.

Total Rates:			2.318			2.333			4.651

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work.  0
 6
 4

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

Notes

Projected numbers forecast for 2026/27

The sixth form contributes the equivalent of 0.63 full years

The Department for Education expects the capacity of an academy to be based on what is recorded in the school's funding agreement.

Section 106 education contributions are calculated upon priority admission area schools in accordance with the Kirklees policy. It is not always possible to expand the places of the specified schools to meet the impact of additional demand generated by the development for a number of reasons including but not limited to; the value of the contribution is too small to be practically used on its own to expand places, site specifics make expansion impractical at some schools and adding numbers of places outside sustainable school delivery models is also impractical (e.g. class size legislation). Contributions from more than one development may need to be joined together to provide effective mitigation of the impact of more than one development. For this reason, contributions are required to be used in the geographical vicinity of a development rather than specified to individual schools.

Total Contribution
£25,681

Appendix H

Priority Admission Areas

Postal code, Name or Address

📍 X: 418411 Y: 410697

See on map

This address is in the Priority Admission Area for:

Primary school(s):
Thurstonland Endowed (VC) First School

Secondary school(s):
Shelley College, A SHARE Academy

Middle school(s):
Kirkburton Middle School

There may be other schools close to where you live that do not have a Priority Admission Area as part of their admission policy (indicated on the map by the symbol ). Please click on the school name for more information.

Nearby primary schools without a PAA:
No primary schools without PAA near this area
Nearby secondary schools without a PAA:
No secondary schools without PAA near this area

Priority Admission Areas (PAAs)

All community and controlled schools, along with some academies, trust schools and voluntary aided Church of England schools, have a defined Priority Admission Area (PAA) as part of their admission policy. It has this name because children living there normally have priority for admission over children who live elsewhere.

Some other academies, voluntary aided Catholic or voluntary aided Church of England schools do not have a PAA as part of their admission policy. You can view these schools using [Where's my nearest](#), which will show all
