| <p>I came to visit the repair cafe, one Saturday at Holmfirth technical college. Someone told me that there was a public car park at the back. I set off to park there.</p> <p>When I arrived at the entrance to the car park, we had to wait for a car to pull out onto the main road before we could use the entrance, as it was only just wide enough for one car.</p> <p>We managed to squeeze past all the parked cars, into the bigger parking area. There were no empty spaces. The surface was bumpy and pooled with water. There was a spiky iron fence that looked like it was about to fall down. It took us ages to turn around, as there was no space to do so, There were kids running around, it was chaos.</p> <p>We finally got to the exit and set off, up the steep road. A car came from the other direction. We had to reverse back, into private property, to let the car past.</p> <p>We set off up the steep road again. We had to reverse, again, for another car entering. There were too many vehicles for too few spaces and no one was controlling it. It wouldn't have taken many more cars for the area to become completely grid locked.</p> <p>The car park needs work doing to it to make it safe to use, as per condition seven. The amount of traffic needs reducing, as per condition two, again for safety.</p> <p>The council needs to put these conditions in place because, from my experience, if this is how the car park is to be run, there could be a serious accident in the near future.</p> | |
