PRELIMINARY CONTAMINATION AND MINING RISK ASSESSMENT ON LAND AT FOLLY HALL, HUDDERSFIELD

1 INTRODUCTION

FWS Consultants Ltd (FWS) carried out a Preliminary Contamination and Mining Risk Assessment on land at Folly Hall, Huddersfield (the 'site') for Folly Hall Residential Ltd (the 'Client') to provide information for the renovation of pre-existing structures to construct 32 residential student bedsits, two commercial units and ground floor communal areas. The site location is shown on Drawing 4363OD01, Appendix 1.

This Preliminary Contamination Risk Assessment has been undertaken in accordance with the principles of current guidance including BS10175:2011+A2:2017 "Code of Practice for the Investigation of Potentially Contaminated Sites" (Ref. 1) and BS 5930:2015+A1:2020 "Code of Practice for Ground Investigations" (Ref. 2). This risk assessment forms the Preliminary Risk Assessment in accordance with Environment Agency guidance document Land Contamination: Risk Management Guidance 2023 (Ref. 3), the NHBC "Guidance of Land Quality" (2021) (Ref. 4) and DEFRA "Environmental Protection Act 1990: Part 2A, Contaminated Land Statutory Guidance" (2012) (Ref. 5).

The objectives of this desk study for the mixed commercial and residential development were to:-

- assess the historical land use, geological and hydrogeological setting;
- assess the likelihood and impact of subsurface mining
- assess the potential for contamination and ground gas;
- provide a qualitative contamination risk assessment and preliminary comment on mitigation measures;
- provide preliminary comment on ground conditions in relation to foundation design; and,
- provide recommendations on further investigations.

The following sources of information were utilised in the preparation of this report:-

- Historical Ordnance Survey Maps (Appendix 2)
- British Geological Survey, Sheet SE11NW Huddersfield west, 1:10,000, Solid and Drift Edition. 1:50,000 Geological Sheet 77 (Huddersfield) (Ref. 6)
- Envirocheck Report (Appendix 3)
- Coal Authority Consultants' Mining Report, dated 29 April 2024 (Appendix 4)
- Site Walkover Inspection undertaken on 1 May 2024 (Selected photographs included in Appendix 5)
- BRE, 2023 Edition. Radon: Guidance on protective measures for new buildings (including supplementary advice for extensions, conversions and refurbishment projects) (Ref. 7).
- Radon risk viewer at https://www.ukradon.org/radonmaps(Ref. 8)
- Zetica viewer of UXO risk at https://zeticauxo.com/downloads-and-resources/risk-maps/ (Ref. 9)

2 SITE LOCATION AND DESCRIPTION

The 0.03 ha site at National Grid Reference 414240E, 415890N is situated 1 km from Huddersfield town centre as shown in Drawing 4363OD01 (Appendix 1). A plan showing the current site features and locations of selected photographs is presented as Drawing 4363D02 (Appendix 1).

The site is generally flat with an elevation of approximately 73 to 74 m AOD, with a slight slope down to the east. The main structure comprises a sandstone block-built two storey former restaurant with a third storey present in the northern end of the building, the main wall of which (and potentially the third storey) is of brick construction. The upper floor was formerly a club. Both premises were reportedly fire damaged in 2013 and 2016, and the site is presently disused.

A metal staircase is present on the southern side of the building leading to a metal platform to enter the upper floor(s). Evidence of collected wind-blown rubbish/debris and trespass was observed. Due to structural and safety concerns, the FWS Consultants engineer did not enter the building during the site walkover and, therefore, the interior features could not be observed.

The site boundaries comprise metallic sheet fencing to the southwest, abutting the southeastern wall of the building is a large factory engineering building and car parking area, and the northern and northwestern site boundaries open onto the pavement and main road (A616 Folly Hall).

No trees, vegetation or evidence of invasive species were identified on site.

3 HISTORICAL DEVELOPMENT OF THE SITE

The site is recorded as a public house since at least 1890 and the building footprint has remained largely unchanged except for a slight southern extension in the 1960s. Prior to 2016 the site was operating as a restaurant although the change in use date from public house is unknown.

Prior to 1851 the surrounding area was largely industrial including an ironworks adjacent to the southeastern site boundary and a colliery 250 m to the southeast. Folly Hall (road) has been present on the northwestern boundary since before 1851. The River Holme tributary of the River Calder is present 40 m to the southeast of the site, and the River Calder is present approximately 60 m to the north. Other industrial premises close to the site in the late 1800s and early 1900s include woollen mills 80 m to the north and 100 m to the south and southeast, two worsted mills 90 m to the northwest, a foundry 110 m to the northeast and a cotton mill 120 m to the south. Residential development was present approximately 20 m to the west across Folly Hall (terraced houses demolished by 1960 and replaced by larger semi-detached properties).

By the late 1950s and 1960s the surrounding industrial premises were labelled ‘mills’ and ‘works’, the former iron works adjacent to the site now an ‘engineering works’ and a garage present 40 m to the southwest. Prior to 1990 the works buildings to the south close to the garage were demolished, presumably to be replaced by the hardstanding now present surrounding the existing garage to the south, and an industrial estate was developed on the site of the former woollen and cotton mills to the southeast across the River Holme. There have been no other significant changes since.

4 ENVIRONMENTAL SETTING

4.1 Geology

4.1.1 Made Ground and Superficial Geology

Made ground is anticipated beneath the site, potentially up to 2 m thick associated with the former history as a public house with cellar. Below ground structures may also be present associated with the former site use.

The site is underlain by superficial deposits of alluvium (typically clay, silt, sand and gravels) to an anticipated depth of around 5 m bgl.

4.1.2 Solid Geology

The site is shown to be underlain by the Soft Beds Flags member of the Pennine Lower Coal Measures Formation (sandstones and mudstones with occasional coal seams) that dips to the east at an angle of <5°.

4.2 Mining and Quarrying

The table below provides a summary of the Coal Authority Mining Report (Appendix 4) and the principal coal mining legacy issues.

Table 1: Summary of Mining Legacy Issues

COAL MINING ISSUE	YES	NO	SUMMARY RECORDS
Underground coal mining (recorded at shallow depth)		✓	The property is not in the likely zone of influence of present underground coal workings.
Underground coal mining (probable at shallow depth)		✓	The site is not within a zone likely to be influenced from ancient (unrecorded) workings. No unrecorded workings are anticipated beneath the site.
Mine entries (shaft or adits)		✓	There are no reported mine entries on or within 100 m of the site boundary.
Coal mining geology (fissures)		✓	There are no geological structures recorded on or within distance of the site boundary.
Record of past mine gas emissions or potential		✓	There is no record of a mine gas emission requiring action by the Coal Authority within the boundary of the site.
Recorded coal mining surface hazard		✓	The Coal Authority has no records of any subsidence claim within 500 m of the property boundary. There are no records of any request to carry out preventative works before coal is worked and the site has not been subject to remedial works by, or on behalf of, the Coal Authority. The Coal Authority has no records of coal mining surface hazards relating to the site or immediate surrounding area.
Surface mining (opencast workings)		✓	The site is not located within the boundary of a historical opencast site, and does not lie within 200 m of a current opencast site, nor within 800 m of a known future opencast site.
Other potential shallow worked minerals		✓	There is no evidence of quarrying having been carried out on or around the site.

Based on the Coal Authority records above, the site is not considered to be at risk from mining instability associated with recorded or unrecorded past shallow workings or mine entries and a very low risk of mine gas emissions.

4.3 Hydrology and Flooding

The nearest surface water body is the River Holme located 40 m to the southeast of the site, a tributary of the River Colne which is located 60 m northeast of the site. The River Holme is reported to be of 'B' quality and the River Colne to be of 'C' quality.

There are 23 recorded surface water abstractions within 500 m of the site, although the majority are related to the nearby former textile industry and are therefore no longer active. The closest entry likely to be active is 80 m south of the site relating to abstraction from the river Holme, held by the Taylor & Lodge cloth company.

There are two active discharge consents within 250 m of the site boundaries. The closest is located 180 m to the north of the site held by Kirklees College relating to trade discharge of cooling water.

There have been six pollution incidents to controlled waters within 100 m of the site, classified as Categories 2 and 3 (Significant and Minor Incidents) relating to oils, sewage and industrial effluent. None of the pollution incidents reported were associated with the site, and the nearest incident was recorded to be 55 m to the east.

The site falls within an area categorised as flood zone 2 and has a medium probability of flooding from rivers and sea. A flood risk assessment (FRA) will be required.

4.4 Hydrogeology

It is anticipated that shallow perched groundwater may be present within the made ground.

A groundwater table is expected to be present at shallow depth within the alluvium with a hydraulic gradient towards the Rivers Holme and Colne to the east. A deeper groundwater table may be present within the bedrock strata.

The Environment Agency classify the Superficial Deposits as a Secondary A Aquifer.

The Environment Agency classify the Pennine Lower Coal Measures bedrock as a Secondary A Aquifer.

There are three groundwater abstraction licences within 250 m of the site; it is not clear whether these are still active. The nearest unrevoked licence is located 185 m northeast of the site operated by Ska Textiles Ltd abstracting water from the Coal Measures bedrock.

There are no groundwater Source Protection Zones within 1 km of the site.

4.5 Licenced Authorisations, Health & Safety Executive/Planning Department Information and Fuel Stations

There are no active Licenced Authorisations and H&S Executive/Planning Department Information entries within 1 km that could impact the development site.

The site is located within a mixed industrial and residential area and there are no fuel stations within 250 m of the site. The two closest active Contemporary Trade Directory Entries are located 25 m to the north and 40 m to the northeast of the site and relate to a gate manufacturers and a metal fabricators, respectively. There is also a car showroom and forecourt adjacent to the southern site boundary.

4.6 Landfill Sites

The Envirocheck Report indicates that there are no recorded landfill sites within 1 km of the site, however, there have been two waste management facilities within 200 m, to the south and west of the site (now revoked and surrendered).

4.7 Radon

Current guidance (Ref. 7 & 8) on protective measures for new buildings indicates that the site falls within an area for which basic radon protection measures should be provided. The property is in a low to medium probability radon area, as 1-3% of buildings are above the action level.

4.8 Ecological Receptors and Sensitive Landuse

There is one local nature reserve; Gledholt Woods, located 1 km northwest of the site boundary.

4.9 Unexploded Ordnance

The Zetica website records that the site is in an area at low risk from unexploded ordnance.

5 PREVIOUS INVESTIGATIONS

No records of previous ground investigations are available for this site.

6 ENVIRONMENTAL ASSESSMENT AND CONCEPTUAL SITE MODEL

6.1 Conceptual Site Model

The approach to contamination risk assessment is detailed in Appendix 6. Presented below is a Preliminary Conceptual Site Model (CSM) for the proposed development, as shown on Client's Drawing FLH-PL-002 Proposed Plans, Appendix 1, that has been prepared in accordance with current guidance (Ref. 3). A schematic CSM of the site is presented in Drawing 4363OD03, Appendix 1.

Development

The site is currently a disused former restaurant / club and is proposed to be re-developed for mixed commercial (ground floor) and residential (first to fifth floors) use. This will entail redeveloping the existing two to three storey building into two ground floor commercial units and leisure/service facilities for the residents and the upper floors into 32 student bedsits with as shown in Drawing FLH-PL-002, Appendix 1. No parking or garden or landscaped areas are proposed.

Previous Land Use and Potential Contamination

The site has been developed as a public house, restaurant and club comprising a two to three storey building within a former industrial area. Potential contamination may be present relating to made ground below the site, the adjacent former ironworks and from the recent fire damage, but the site itself has remained relatively unchanged over the past 100+ years.

Potential contaminants identified by this desk study are summarised in the table below and are illustrated in the schematic conceptual site model Drawing 4363OD03, Appendix 1:-

Table 2: Potential Contamination Sources

Source of Potential Hazard/Pollutant			Potential Contaminants
Onsite	H1	Made Ground	Heavy metals, hydrocarbons, PAH and ash (from fire damage), asbestos, pH, sulphate. Ground gas; carbon dioxide and methane.
	H2	Bedrock <5m depth	Radon
	H3	Alluvium (organic material)	Soil gas: carbon dioxide and methane.
Offsite	H4	Previous and existing industrial and commercial uses, ironworks, engineering works, car showroom	Heavy metals, asbestos, PAHs, fuels, oils, ferrous residues, pH, sulphates, vapours.

Ground and Groundwater Conditions

Made ground of up to 2 m thick is expected beneath the site associated with the former site use as a public house (with potential cellar). The superficial deposits underlying the site comprise alluvium (clay, silt, sand, gravel) which are expected to extend to a depth of around 5 m bgl. Bedrock is expected to comprise sandstone and mudstone of the Pennine Lower Coal Measures.

It is anticipated that shallow perched groundwater may be locally present within the made ground, and a shallow water table may be present within the superficial deposits associated with the River Holme to the southeast. The main water table is expected at depth within the underlying bedrock.

Environmental Considerations

The superficial deposits and bedrock below the site are classed as Secondary A Aquifers.

There are no surface water courses within the site boundary with the nearest is the River Holme located 40 m southeast of the site.

There are no Groundwater Source Protection Zones within 1 km of the site.

6.2 Receptor Characterisation

The following potential receptors are anticipated for the proposed development, as illustrated in the schematic CSM Drawing 4363OD03, Appendix 1:-

Table 3: Receptor Characterisation

Part 2A Classification	Group		Receptor
Part 2A Receptors	R1	Human Health	Future site end users
	R2	Property	Proposed mixed commercial and residential development (Drawing FLH-PL-002) with no gardens or landscaped areas

Part 2A Classification	Group		Receptor
	R3	Controlled Waters	River Holme located 40 m to the southeast of the site flowing northeast. River Colne located 50 m to the northeast of the site flowing to the east.
	R4		Superficial deposits classified as a Secondary A Aquifer. Pennine Lower Coal Measures Formation classified as a Secondary A Aquifer. Groundwaters are likely to be of poor quality with a history of industry in the area.
Non Part 2A Receptors	R5	Construction workers	

6.3 Pathway Characterisation

This desk study has identified the following potential pathways, which are illustrated in the schematic CSM Drawing 4363OD03, Appendix 1:-

Table 4: Pathway Characterisation

Pathway		Receptor
P1	Inhalation, ingestion and dermal contact	Human Health
P2	Soil gas or soil vapours pooling within the structures	Buildings, Property and Services
	Contact with aggressive or acidic soils or hydrocarbon contaminated soils	
P3	Leaching of contaminants from the soil migrating vertically or laterally to groundwater	Controlled Waters
	Movement of contaminants via groundwater to surface water bodies	

7 PRELIMINARY CONTAMINATION RISK ASSESSMENT

Based on the CSM presented above and illustrated in Drawing 4363OR03, Appendix 1, the following potential contaminant linkages and unacceptable risks have been identified:

- Potential risk to end users from radon gas in confined spaces
- Potential risk to end users from soil gas or vapours from the made ground and alluvium
- Potential risk to construction workers from contaminants within the made ground
- Potential risk to in-ground concrete from aggressive ground conditions

Therefore, further action is recommended as detailed in Section 9.

8 PRELIMINARY COMMENTS ON ENGINEERING DESIGN

8.1 Foundation Design

Made ground is expected across the site footprint of up to 2 m depth overlying superficial deposits of alluvium (clay, silt, sand, gravel) to around 5 m bgl. Bedrock comprises sandstone and mudstone of the Pennine Lower Coal Measures. It is likely that the existing structure includes normal shallow strip foundations taken to the Alluvial soils. As the current structure is to be refurbished and additional floors added this will significantly increase the permanent structural loading and the temporary loading conditions and, therefore, it would be recommended that the foundation construction and bearing strata condition is confirmed. Based on the available records, it is possible that a basement is present across much of the footprint of the current building and this will need to be considered in relation to the proposed final design.

It is recommended that a structural engineer be consulted to determine whether the existing foundations are capable of supporting the required loads with the addition of multiple storeys to the building.

The site is not in an area that could be potentially affected by shallow mine workings, entries, or opencast workings.

9 RECOMMENDATIONS FOR GROUND INVESTIGATION

The following investigations are proposed to address the potentially significant risks identified in this report and also provide geotechnical information for design purposes.

- Carry out gas and vapour monitoring of the made ground and alluvial soils.
- Prove the depth to competent founding strata and confirm the existing foundation construction and bearing strata for the structure to be retained.
- Undertake chemical testing of the made ground or founding strata to confirm whether there may be a risk to in-ground concrete.

Envirocheck®

LANDMARK INFORMATION GROUP®

Yorkshire

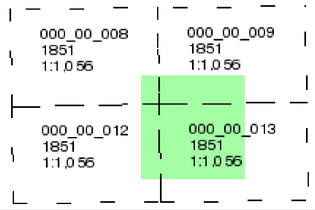

Published 1851

Source map scale - 1:1,056

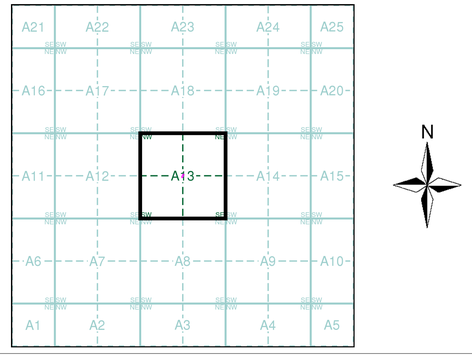

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Source map scale - 1:500

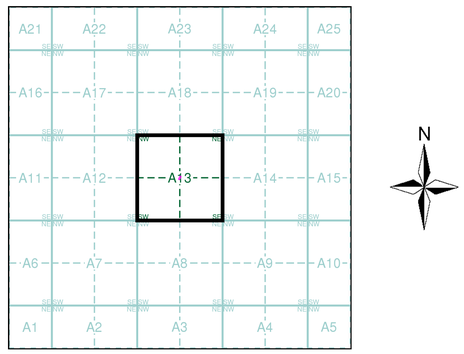

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Large-Scale National Grid Data

Published 1993

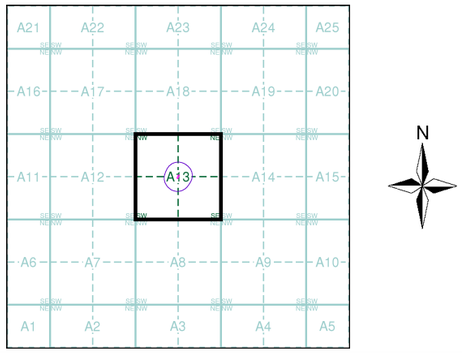

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Published 1993 - 1994

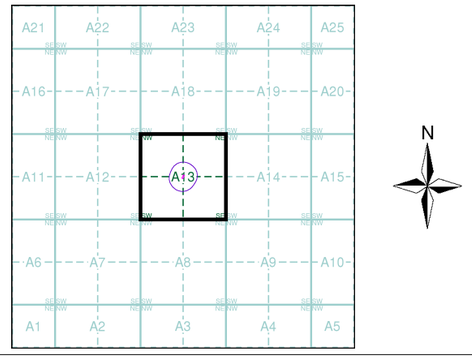

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Published 1908

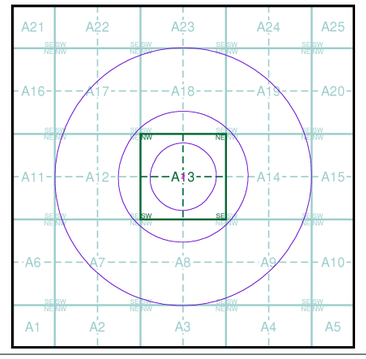

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 2000

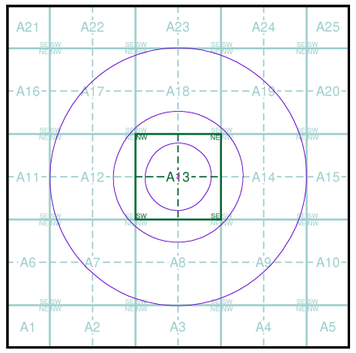

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey`s 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Section 1 – Mining activity and geology

Past underground mining
No past mining recorded.

Probable unrecorded shallow workings
None.

Spine roadways at shallow depth
No spine roadway recorded at shallow depth.

Mine entries
None recorded within 100 metres of the enquiry boundary.

Abandoned mine plan catalogue numbers
The following abandoned mine plan catalogue numbers intersect with some, or all, of the enquiry boundary:

5599		

Please contact us on 0345 762 6848 to determine the exact abandoned mine plans you require based on your needs.

Outcrops
No outcrops recorded.

Geological faults, fissures and breaklines
No faults, fissures or breaklines recorded.

Opencast mines
None recorded within 500 metres of the enquiry boundary.

Coal Authority managed tips
None recorded within 500 metres of the enquiry boundary.

Copyright © 2024 The Coal Authority

Section 2 – Investigative or remedial activity

Please refer to the 'Summary of findings' map (on separate sheet) for details of any activity within the area of the site boundary.

Site investigations
None recorded within 50 metres of the enquiry boundary.

Remediated sites
None recorded within 50 metres of the enquiry boundary.

Coal mining subsidence
The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

Mine gas
None recorded within 500 metres of the enquiry boundary.

Mine water treatment schemes
None recorded within 500 metres of the enquiry boundary.

Copyright © 2024 The Coal Authority

Section 3 – Licensing and future mining activity

Future underground mining
None recorded.

Coal mining licensing
None recorded within 200 metres of the enquiry boundary.

Court orders
None recorded.

Section 46 notices
No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

Withdrawal of support notices
The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

Payments to owners of former copyhold land
The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Copyright © 2024 The Coal Authority

Section 4 – Further information

Based on the responses in this report, no further information has been highlighted.

Future development

If development proposals are being considered, technical advice relating to both the investigation of coal and former coal mines and their treatment should be obtained before beginning work on site. All proposals should apply specialist engineering practice required for former mining areas. No development should be undertaken that intersects, disturbs or interferes with any coal or coal mines without first obtaining the permission of the Coal Authority.

MINE GAS: Please note, if there are no recorded instances of mine gas within 500m of the enquiry boundary, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded. Developers should be aware that the investigation of coal seams, mine workings or mine entries may have the potential to generate and/or displace underground gases. Associated risks both to the development site and any neighbouring land or properties should be fully considered when undertaking any ground works. The need for effective measures to prevent gases migrating onto any land or into any properties, either during investigation or remediation work, or after development must also be assessed and properly addressed. In these instances, the Coal Authority recommends that a more detailed Gas Risk Assessment is undertaken by a competent assessor.

Copyright © 2024 The Coal Authority

Section 5 – Data definitions

The datasets used in this report have limitations and assumptions within their results. For more guidance on the data and the results specific to the enquiry boundary, please **call us on 0345 762 6848** or **email us at groundstability@coal.gov.uk.**

Past underground coal mining

Details of all recorded underground mining relative to the enquiry boundary. Only past underground workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination, will be included.

Probable unrecorded shallow workings

Areas where the Coal Authority believes there to be unrecorded coal workings that exist at or close to the surface (less than 30 metres deep).

Spine roadways at shallow depth

Connecting roadways either, working to working, or, surface to working, both in-seam and cross measures that exist at or close to the surface (less than 30 metres deep), either within or within 10 metres of the enquiry boundary.

Mine entries

Details of any shaft or adit either within, or within 100 metres of the enquiry boundary including approximate location, brief treatment details where known, the mineral worked from the mine entry and conveyance details where the mine entry has previously been sold by the Authority or its predecessors British Coal or the National Coal Board.

Abandoned mine plan catalogue numbers

Plan numbers extracted from the abandoned mines catalogue containing details of coal and other mineral abandonment plans deposited via the Mines Inspectorate in accordance with the Coal Mines Regulation Act and Metalliferous Mines Regulation Act 1872. A maximum of 9 plan extents that intersect with the enquiry boundary will be included. This does not infer that the workings and/or mine entries shown on the abandonment plan will be relevant to the site/property boundary.

Outcrops

Details of seam outcrops will be included where the enquiry boundary intersects with a conjectured or actual seam outcrop location (derived by either the British Geological Survey or the Coal Authority) or intersects with a defined 50 metres buffer on the coal (dip) side of the outcrop. An indication of whether the Coal Authority believes the seam to be of sufficient thickness and/or quality to have been worked will also be included.

Geological faults, fissures and breaklines

Geological disturbances or fractures in the bedrock. Surface fault lines (British Geological Survey derived data) and fissures and breaklines (Coal Authority derived data) intersecting with the enquiry boundary will be included. In some circumstances faults, fissures or breaklines have been known to contribute to surface subsidence damage as a consequence of underground coal mining.

Copyright © 2024 The Coal Authority

Opencast mines
Opencast coal sites from which coal has been removed in the past by opencast (surface) methods and where the enquiry boundary is within 500 metres of either the licence area, site boundary, excavation area (high wall) or coaling area.

Coal Authority managed tips
Locations of disused colliery tip sites owned and managed by the Coal Authority, located within 500 metres of the enquiry boundary.

Site investigations
Details of site investigations within 50 metres of the enquiry boundary where the Coal Authority has received information relating to coal mining risk investigation and/or remediation by third parties.

Remediated sites
Sites where the Coal Authority has undertaken remedial works either within or within 50 metres of the enquiry boundary following report of a hazard relating to coal mining under the Coal Authority's Emergency Surface Hazard Call Out procedures.

Coal mining subsidence
Details of alleged coal mining subsidence claims made since 31 October 1994 either within or within 50 metres of the enquiry boundary. Where the claim relates to the enquiry boundary confirmation of whether the claim was accepted, rejected or whether liability is still being determined will be given. Where the claim has been discharged, whether this was by repair, payment of compensation or a combination of both, the value of the claim, where known, will also be given.

Details of any current 'Stop Notice' deferring remedial works or repairs affecting the property/site, and if so the date of the notice.

Details of any request made to execute preventative works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991. If yes, whether any person withheld consent or failed to comply with any request to execute preventative works.

Mine gas
Reports of alleged mine gas emissions received by the Coal Authority, either within or within 500 metres of the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission. Please note, if there are no recorded instances of mine gas reported, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded.

Copyright © 2024 The Coal Authority

Mine water treatment schemes
Locations where the Coal Authority has constructed or operates assets that remove pollutants from mine water prior to the treated mine water being discharged into the receiving water body.

These schemes are part of the UK's strategy to meet the requirements of the Water Framework Directive. Schemes fall into 2 basic categories: Remedial – mitigating the impact of existing pollution or Preventative – preventing a future pollution incident.

Mine water treatment schemes generally consist of one or more primary settlement lagoons and one or more reed beds for secondary treatment. A small number are more specialised process treatment plants.

Future underground mining
Details of all planned underground mining relative to the enquiry boundary. Only those future workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination will be included.

Coal mining licensing
Details of all licenses issued by the Coal Authority either within or within 200 metres of the enquiry boundary in relation to the under taking of surface coal mining, underground coal mining or underground coal gasification.

Court orders
Orders in respect of the working of coal under the Mines (Working Facilities and Support) Acts of 1923 and 1966 or any statutory modification or amendment thereof.

Section 46 notices
Notice of proposals relating to underground coal mining operations that have been given under section 46 of the Coal Mining Subsidence Act 1991.

Withdrawal of support notices
Published notices of entitlement to withdraw support and the date of the notice. Details of any revocation notice withdrawing the entitlement to withdraw support given under Section 41 of the Coal Industry Act 1994.

Payment to owners of former copyhold land
Relevant notices which may affect the property and any subsequent notice of retained interests in coal and coal mines, acceptance or rejection notices and whether any compensation has been paid to a claimant.

APPENDIX 6

PRINCIPLES OF CONTAMINATION RISK ASSESSMENT

PRINCIPLES OF CONTAMINATION RISK ASSESSMENT

The Environmental Protection Act 1990, Part II A Contaminated Land (Section 57 of the Environment Act 1995) and the Contaminated Land Regulations 1999 provide a basis on which to determine the unacceptable risks and liabilities presented by a contaminated site. Contaminated Land is defined within Section 78A(2) and in all those Sections mentioned as:-

"Any land which appears to the local authority in whose area it is situated to be in such a condition, by reason of substances in, on or under the land that-

a) **SIGNIFICANT HARM** is being caused, or there is significant possibility of such harm being caused; or

b) **SIGNIFICANT POLLUTION OF CONTROLLED WATERS** is being caused, or there is a significant possibility of such pollution being caused."

Section 57 of the Environment Act 1995 requires that any site identified as being "contaminated" by the Local Authority will be registered by them and remediation will be required to render the site fit for use.

The presence of contamination is not the sole factor for deciding whether a site is contaminated. Relevant parties should identify site-specific unacceptable risks and provide objective, cost-effective methods to manage the contamination in a manner which satisfies the proposed end-use.

The Environment Agency "Land contamination and Risk Management" guidance defines "risk" as the combination of:-

PROBABILITY OF RISK: or frequency, of occurrence of a defined hazard; and

MAGNITUDE/POTENTIAL SEVERITY: (including the seriousness) of the consequences.

A risk-based approach, which takes both technical and non-technical aspects into consideration when making decisions on contamination resulting from past, present or future human activities, is advocated.

The assessment of unacceptable risks generally relies on the identification of three principal elements forming a 'contaminant linkage':-

SOURCE: is a contaminant or pollutant that is in, on or under the land and that has the potential to cause harm or pollution

RECEPTOR: something that could be adversely affected by a contaminant eg. a person, controlled waters, an organism, an ecosystem, or Part 2A receptors such as buildings, crops or animals

PATHWAY: a route by which a receptor is, or could be, affected by a contaminant

In the absence of any one of these elements, on any given site, there is no risk. Where all three elements are present, a risk assessment is required to determine the significance of the harm or pollution that is being or may be caused. During the risk assessment phase, 'potential contaminant linkages' are used, until they are confirmed. Once confirmed, they are referred to as 'relevant contaminant linkages'. As outlined above, the terms of the Contaminated Land regime specify that remediation need only be implemented where a site is causing, or there is a significant possibility that it will cause, significant harm, or that pollution of controlled waters is being, or is likely to be caused.

Development of contaminated land is usually addressed through the application of planning and development legislation and guidance (i.e. Planning Guidance Note PPS23 Planning and Pollution Control in England). The suitable for use approach is seen as the most appropriate basis to deal with contaminated land, taking account of

environmental, social and economic objectives. The assessment is made in the context of the proposed land use (e.g. residential, commercial, industrial and public open-space).

Definition of Severity of Consequence

The risk assessment has been undertaken by assessing the severity of the potential consequence, taking into account both the potential severity of the hazard and the sensitivity of the target, based on the categories given below.

Category	Definition
Severe	Acute risks to human health, catastrophic damage to buildings/property, major pollution of controlled waters
Medium	Chronic risk to human health, pollution of sensitive controlled waters, significant effects on sensitive ecosystems or species, significant damage to buildings or structures
Mild	Pollution of non-sensitive waters, minor damage to buildings or structures
Minor	Requirements for protective equipment during site works to mitigate health effects, damage to non-sensitive ecosystems or species

Definition of Probability of Occurrence

The likelihood of an event (probability) takes into account the linkage between a hazard and target and the integrity of this pathway, and has been assessed based on the categories given below.

Category	Definition
High Likelihood	Pollutant linkage may be present, and risk is almost certain to occur in long term, or there is evidence of harm to the receptor
Likely	Pollutant linkage may be present, and it is probable that the risk will occur over the long term
Low Likelihood	Pollutant linkage may be present, and there is a possibility of the risk occurring, although there is no certainty that it will do so
Unlikely	Pollutant linkage may be present, but the circumstances under which harm would occur are improbable

Risk Matrix

The potential severity of the consequence and the probability of the occurrence have been combined in accordance with the following matrix in order to give a level of risk for each potential hazard.

		Severity of Consequence			
		Severe	**Medium**	**Mild**	**Minor**
Probability of Occurrence	**High Likelihood**	Very high	High	Moderate	Low
	Likely	High	Moderate	Low	Very Low
	Low Likelihood	Moderate	Low	Very Low	Negligible
	Unlikely	Low	Very Low	Negligible	Negligible

NOTES ON LIMITATIONS

NOTES ON LIMITATIONS

1 FWS Consultants Ltd ("FWS") has prepared this report solely for the use of the client and/or his agent (the "Client") on the basis of exchange(s) of written proposals and instructions, and FWS accepts no responsibility or liability:-

a) for use of this report by any party other than the person for whom it was commissioned, or;

b) for the consequences of the report being used for any purpose other than that for which FWS was instructed to prepare it.

Should any third party wish to use or rely upon the contents of the report, written approval from FWS must be sought.

2 All information supplied by the Client, the Client's staff and professional advisers, local authorities, other statutory bodies, investigation agencies and publicly accessible databases, shall be provided to FWS in writing, and is accepted as being correct unless otherwise specified in writing by the discloser of the information.

3 The conclusions and recommendations in this report represent the professional opinions of FWS derived from currently accepted industry practices, and through the exercising of reasonable skill and care to be expected of a professional geosciences and environmental consultancy of similar size and experience. The assessments and judgments given in this report are directed by and limited to both the finite data on which they are based and the proposed works to which they are addressed.

4 Environmental and geotechnical desk studies comprise a study of available information obtained from various identified sources, authorities and parties. The information reviewed cannot be exhaustive and has been accepted in good faith as providing representative and true data pertaining to site conditions. For clarity, no independent verification of this data is carried out by FWS and it is accepted at face value. Any identified risks in desk study reports are perceived risks based on the information available at the time. Actual risks can only be assessed after carrying out a thorough physical investigation of the site that serves to validate such identified risks.

5 Data acquisition during site investigations is subject to the limitations of the methods of investigation used, site conditions and access constraints. Exploratory holes undertaken during fieldwork, particularly boreholes and/or trial pits, investigate a small volume of ground in relation to the size of the site and thus can only provide an indication of site conditions. The opinions provided and recommendations given in this report are based on the desk study information and ground conditions apparent at the site of each of the exploratory holes. There may be ground conditions elsewhere onsite that have not been disclosed by the investigation and which therefore have not been taken into account in this report. FWS will take all due care and make commentary on the adequacy of data collection and therefore the ability to highlight the presence or otherwise of exceptional conditions.

6 Owing to the natural variation of the systems that are being investigated, and the anthropological impact similarly changing through time, the findings and opinions in this report are relevant to the dates of the site works and should not be relied upon to represent conditions after a reasonable passing of time. Site conditions will change over time due to natural variations and human activities. The comments made on groundwater, surface water and soil gas conditions are based on observations made at the time that the site work was carried out. It should be noted that these conditions will vary owing to seasonal, tidal and meteorological effects. Variation in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, or subsequent developments or activities on the site or adjacent area.

7 The scope of the investigation, as agreed between FWS and the Client, was undertaken based on the specific development proposals of the Client and may be inappropriate to another form of development or scheme.

8 The opinions expressed in this report regarding contamination, geotechnical and/or waste assessments are based on simple statistical analysis and comparison with available guidance values. No liability can be accepted for the retrospective effects of any changes or amendments to these values.
