

Roof hook UK Plain tiles/slates **HIGH LOAD (without wood screw)**

Part No: REN-420184 Mounting - Roof Anchor- Tile & Slates

Renusol have created roof hooks specifically for the UK market. This New roof hook can be used with Slate tiles, where higher snow loads capacity is required, and is compatible with the VarioSole product range.

This brand-new version of the roof hook is both thicker and manufactured using stronger steel, offering a higher load capacity for areas with more snow.

This is the UK Plain Tile HL (please note 'HL' stands for 'high load').

The primary benefit of this new hook is the sizeable gain in the load capacity compared to the existing UK plain roof hook: 130% increase for suction loads (wind), 112% increase for pressure loads (self-weight and snow) and 53% more capacity for combined loads.
