<p>This application has been refused twice and with good reason!The latest application has done nothing to address the concerns surrounding the last applications and should be rejected again for the same reasons.The site is not suitable for development due to the large amount of coal it contains and the removal of this will in effect create an open cast mine in the centre of the village and is surrounded by housing. This is not acceptable in any circumstances and will lead to irreversible damage to the surrounding environment and ecology and even peoples health.It will lead to air pollution and noise mess and dust for months on end as well as increased heavy goods vehicles travelling through the village leaving mess and dirt on the roads especially in poor weather.The long term affects of this mining and any subsequent problems that could arise during it must also be fully considered We no longer have coal mining in the UK because of its implications the damage it creates and we certainly should not have this allowed in the middle of a densely populated village.The developer has not and cannot address these problems and chooses to use vague statistics and information as a smokescreen.This application is not green not eco friendly and not permissible in 2025</p>
