

This will:

Block more light from nearby neighbours with the added dormer,
Increase noise,
Add more traffic and traffic noise,
Reduce privacy for nearby neighbours.

The nearby neighbours will suffer if this is approved.

The dormer especially will increase height of the building and will block a lot of the light from the nearby strip of houses from 1 to 7. The little light we get comes from above this building and this added height from the dormer will reduce light dramatically.

The houses nearby that have windows at the back will massively be impacted with loss of light.

We do not want even less light than we already have, let alone added traffic and noise from a house there.

This building impacts us enough and this will have a massive impact.

It is dark in the nearby houses early purely because of this building, and if this dormer is added, it will be massively worse than it is now.

The light we have mostly comes now from just above this building seeing as they already blocked enough light, and the dormer will reduce the little light we have left massively.

There will be more traffic from people living here as well as noise from them and from the added traffic.

It will change the area a lot too as the attractive part of this area is it is a side street with a green area, but they are turning it into a built up area instead.

Not sure if this matters, but the main road in back green is already in a poor state and the added traffic this will bring, will make it worse.

Please think of the neighbours.

The added reduction of light, added noise, added traffic, reduction of privacy as well as changing the area into a more built up area that a quiet little street with views of the greenery.

They already paved over a lot of the green land area to prepare for this before getting permission.

They also previously illegally converted this garage into a partial dwelling after they had planning permission denied two times in the past.
