Waste Management Plan

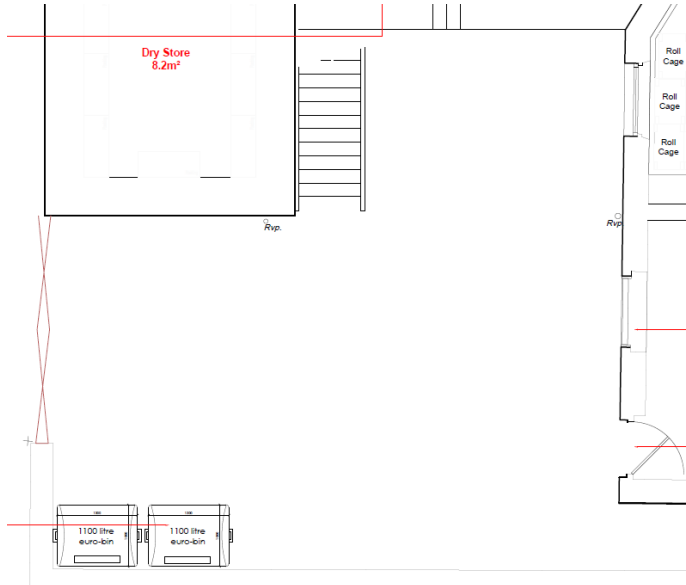

This Waste Management Plan has been prepared in support of a planning application for the following development at the above address:

“Change of use from vacant bank (Class E) to hot food takeaway (sui generis) with installation of extract and ventilation equipment and external alterations to the front and rear elevations.”

This document sets out the measures that will be put in place for the future use to ensure that the storage and collection of waste can be suitably controlled by condition.

Refuse

All waste will be bagged and taken to the rear yard where there will be two 1100l commercial bins. An extract from the Proposed Ground Floor Plan shows the location of the bin store.

One bin will be used for general waste, and one for mixed recyclables. Bins will be taken to the kerb for collection, and it is expected that they will be collected twice a week.

Litter

A waste bin will be provided within the customer waiting area for the disposal of litter by customers.

The pizza operation does not create a significant amount of litter with the pizzas being delivered or collected by customers for consumption at home and not on the street outside the premises and therefore there is not expected to be an increase in litter at or around the site.
