1.0 EXECUTIVE SUMMARY

The pertinent conclusions of the report are tabulated below. However, the information below is not exhaustive, and it is recommended the report is read in its entirety.

Proposed Development	Two commercial units with associated infrastructure and localised landscaping.
Site Description	Hardstanding associated with demolished structures in the west. Dense vegetation including mature trees across the whole site.
Site History	Glass and iron works with rail sidings in western third of site. Gravel pit at south centre of the site from 1909, later becoming a sludge bed. All buildings cleared and gravel pit infilled by the late 1980s.
Geology	Recent and Pleistocene Alluvium, overlying undifferentiated River Terrace Deposits. Mudstones and sandstones of the Lower Coal Measures underlie the superficial deposits.
Coal Mining	Further rotary investigation recommended, to investigate potential shallow coal workings.
Hazardous Gases	No radon protection measures required. CS ₂ gas protection measures required, unless further monitoring shows otherwise.
Ground Conditions	Made ground, mainly ranging in thickness between 0.3m and 3.5m. Deeper made ground (up to 4.8m thick) encountered within former gravel pit. Alluvium and river terrace deposits below, to 10.7m depth, resting upon Lower Coal Measure Strata. Water table likely to be present between 1m and 2m depth over most of site.
Contamination	Elevated concentrations of TPH, PAH, heavy metals, benzene and asbestos fibres within the soil. Elevated PAH compounds and ammoniacal nitrogen within groundwater. Asbestos cement sheeting fragments identified on site.
Contamination Remediation	Collect and dispose visible asbestos sheeting fragments. Treat any areas of Japanese Knotweed. Strip vegetation and any topsoil for

	off-site disposal (unless further testing of topsoil shows it may be re-used on site). Clean cover soils to be provided to all remaining soils, in landscaping.
Foundations	Traditional shallow strip/trench foundations not considered viable. Piled foundations likely to be most economical option.
Excavations	Natural granular residual soils and made ground liable to collapses. Groundwater anticipated at shallow depth.
Soakaways	Soakaway drainage not considered to be viable.
Road Pavement	<p>Most of proposed road, parking and yard areas may be excavated to a depth of 1m below proposed levels, proof rolled, then 6F2 placed and compacted to the underside of subbase level, with appropriate plate CBR testing. For any adoptable areas, this will be subject to the approval of the adopting authority.</p> <p>However, the former gravel pit contains deep soft material. At this location, further measures will be required, to be agreed with stakeholders.</p>

2.0 INTRODUCTION

- 2.1 Hebble Homes Ltd is considering developing the site at Forge Lane, Dewsbury with two commercial units with associated infrastructure including localised landscaping. It was considered appropriate to implement a desk study to provide information to aid the planning process, viability assessment, and design of any subsequent development.
- 2.2 ARP Geotechnical Ltd was appointed by Hebble Homes Ltd to implement the report, which involved a desk study assessment of the geological and coal mining aspects, site history, potential contamination sources and receptors, and other environmental aspects including radon gas and indicative flood risk.
- 2.3 The following reports prepared by Arcadis Consulting have been made available to ARP for review as part of this desk study.
- Phase II Environmental and Geotechnical Assessment and Generic Risk Assessment, dated June 2011, referenced 962340101
 - Detailed Quantitative Risk Assessment, dated September 2011, referenced 962340126_01
 - Ground Gas Monitoring Report, October 2011, 962340125_01
 - Assessment Findings Summary and Outline Constraints and Outline Remediation Strategy Summary (Issue 3), dated October 2011 reference 962340135_03
- 2.4 ARP Geotechnical Ltd does not accept any liability for errors, inaccuracies, or omissions of the third-party information.
- 2.5 This report has been prepared for the use and reliance of the Client only. The report shall not be relied upon or transferred to any other parties without the written agreement of ARP Geotechnical Ltd. For the avoidance of any doubt, where ARP Geotechnical Ltd enters into a letter of reliance for the benefit of a third party, that third party will be permitted to rely on the report. No responsibility will be accepted where this report is used, either in its entirety or in part, by any other party without ARP Geotechnical Ltd.'s consent.

- 2.6 Attention is drawn to the requirements of the Construction Design and Management Regulations 2015, and in particular the duties and obligation of the Client.
- 2.7 The report refers to, and includes, a copy of an indicative proposed layout. This is only for the purposes of generating a conceptual site model for the contamination risk assessment. Unless the proposed layout changes significantly, such that the conceptual model and risk assessment is affected, there is no requirement to re-issue this report when the layout is revised.

3.0 SITE DESCRIPTION

Site Location

- 3.1 The site, which is centred on Ordnance Survey Grid Reference 423750, 419750, is located off Forge Lane, in Dewsbury.
- 3.2 A site location plan and site plan are presented in Appendix A.
- 3.3 A walkover survey was conducted on 10th July 2025. Details obtained from the walkover are discussed below, and selected photographs are presented in Appendix B.

On-Site Features

- 3.4 The site has overall dimensions of approximately 155m (northeast - southwest) by 360m (northwest - southwest).
- 3.5 At the time of the Arcadis Consulting site investigation (2011) the western third of the site was predominantly covered by hardstanding, associated with demolished structures previously located in this part of the site. The remainder of the site was covered with rough vegetation, which was dense in several areas. A pond/marsh area was indicated to be present in the southern central portion of the site and a surface water ditch was also noted to be present in the eastern part of the site.
- 3.6 The Arcadis report also noted that a large stockpile was present towards the southcentral end of the site. Anecdotal evidence suggests that this material originated from the demolition of a local power station, including cooling towers.
- 3.7 Although not observed during the ARP site walkover, asbestos sheet fragments were identified in the west of the site. Furthermore, Japanese knotweed was noted to be present within the Arcadis Phase II report.

- 3.8 By the time of the ARP site walkover in 2025, dense vegetation including mature trees had spread across the whole site. The hardstanding was still visible in the western third of the site, however access across the remainder of the site was restricted due to the density of the vegetation. There was evidence of small-scale fly tipping/littering on site.
- 3.9 Forge Lane, along the western boundary, is at a higher elevation than the site. A steep slope is present along the boundary with Forge Lane, sloping down towards the site. The northwest corner of the site is set at a level of approximately 41m AOD, which is higher than the rest of the site. The rest of the site is generally level, sloping gently from 38.7m AOD in the west down towards the southeast at an approximate elevation of 37.3m AOD.

Site Boundaries and Surrounding Land Use

- 3.10 The site is bounded to the northeast by the Calder and Hebble Navigation canal, and to the northwest by Forge Lane. Allotment gardens and residential properties are present to the south and a recently constructed residential development is present to the east.

4.0 SITE HISTORY

4.1 Ordnance Survey archive maps were obtained for the site. Copies of the maps are included in Appendix C, and a summary of the findings is given below.

Map Date	On-Site	Off-Site
1855	Glass works with boiler on the west. Saw pit at northern boundary. East of site undeveloped.	Calder and Hebble navigation along the northern boundary. Colliery railway to the west of Forge Lane. Chemical works to the north of the river approximately 60m from site. Glass works and malt kiln to the east.
1893	Forge Lane inside western boundary. 'Thornhill Iron Works' and glass works with railway sidings in the west. Rail sidings extend towards the centre of site. Mooring pit inside the northern boundary. The east of the site is largely undeveloped.	Thornhill Junction 150m north of the site. Timber yard 150m east of the site. Clay pit within 'Providence Glass works' 300m east of the site. Chemical works to the north of the river now replaced with housing.
1907	Rail tracks extend towards the southeastern boundary. Gravel pit present in the southwest.	Evidence of reprofiling along western boundary associated with re alignment of Forge Lane beyond. Expansion of mineral railway to the west of Forge Lane. Spoil heaps approximately 190m west of the site.
1922	Expansion of gravel pit, now measuring 118m x 30m.	No significant change.
1937	Glass works in the west no longer present.	Further spoil heaps to the west. Empire works (electrical transformers) now present to the east of the site. Leather works to the east. Providence Glass Works to the east now replaced with housing.
1948	New large rectangular building towards the southwest.	Expansion of housing to the east.
1955	Significant expansion of iron works now occupying the western third of the site. Electrical substation in the northwest. Former gravel pit labelled slurry bed. Evidence of reprofiling towards the centre. Sports ground in the southeast.	Extensive spoil heaps to the west of the site. Evidence of reprofiling to the north of Calder and Hebble Navigation.

1964	Drain shown near northern boundary.	Spoil heap 100m west of the site. Several small refuse tips shown to the west of Forge Lane.
1976	Rail tracks no longer present. Large rectangular travelling crane pad present to the west of the main building. Slurry bed no longer present, with an area of marsh shown towards the south.	Mineral railway dismantled. Large rectangular works buildings immediately west of Forge Lane.
1992	All buildings associated with the iron works have been removed. Area of marsh shown towards the south. Watercourse shown towards the southeast flowing northwards before doglegging westwards.	No significant change.
1999 (Aerial Image)	Site has been fully cleared, with areas of hardstanding visible in the west. Dense vegetation across the rest of the site.	Industrial buildings at the eastern boundary of the site. Large industrial building immediately west of Forge Lane. Residential housing to the north of the Calder and Hebble Navigation. Extensive residential housing to the south.
2009 (Aerial Image)	Pond visible in the south-central portion of the site.	Industrial building along eastern boundary has been demolished and area striped right up to the site boundary.
2011 (Aerial Image)	Pond still visible.	New housing estate now constructed at eastern boundary at location of former works.
2023 (Aerial image)	Dense mature trees present across the whole site. Pond no longer visible. Areas of hardstanding still visible in the west.	No significant change.

4.2 In summary, the site has historically been split into two sections. The eastern part has been generally undeveloped, with embankments and earthworks taking place from the mid-20th Century to present. The western part of the site has been used for industrial purposes from before the mid-19th Century, when a glass works was present. The works expanded towards the centre of the site, and by 1908, a gravel pit was marked in the southern-central portion of site. By the 1920s, the northern portion of the glass works had been changed into

the "Thornhill Iron and Steel Works" with the gravel pit now marked as a pond feature. By the middle of the century, the glass works had been fully replaced by the iron and steel works, and the gravel pit was marked as a slurry bed. The main factory buildings underwent several changes until the late 1980s, when they were demolished.

- 4.3 Anecdotal evidence presented within the Arcadis Phase II report suggests that the slurry bed/pit was used for low grade coke coal. Cranes located on concrete pads adjacent to the slurry bed dredged out the slurry. The material dredged out was mounded up to the south of the pit to drain, forming the mounds that are still present on site now. It was also suggested that the mound of material present towards the south-central end of the site originated from the demolition of a local power station including cooling towers.

5.0 ENVIRONMENTAL SETTING

Geology

- 5.1 Extracts from the British Geological Survey 1:50,000 Series Geology Maps show most of the site to be underlain by undifferentiated strata (mudstones, siltstones and minor sandstones) of the Pennine Lower Coal Measures of the Carboniferous Period. The eastern margins of the site are shown to be underlain by Lepton Edge Rock (sandstone), also of the Pennine Lower Coal Measures. Superficial deposits of alluvium (usually poorly consolidated clay, silt, sand and gravel, sometimes with peat) are shown to overlie the bedrock geology, and river terrace deposits of sand and gravel are shown close to the site, which may underlie the alluvium. No faults are shown on or near the site.
- 5.2 Two coal seams are conjectured to sub crop on the site, both trending approximately north to south, turning west near/at the southern boundary. The eastern seam is shown to be the Green Lane/Middleton Little Coal, with a thickness of between 0.3m and 0.7m in the locality. The western seam is unnamed, with a thickness up to 0.4m.

Coal Mining

- 5.3 A CON29M Coal Mining Report was supplied to ARP by the client, and a copy is presented in Appendix D. The site is in the likely zone of influence of recorded workings in two seams of coal, at depths of between 110m and 240m, last worked in 1931. Associated ground movement should, by now, have ceased. In addition, the Coal Authority believes there is coal at or close to the surface that may have been worked at some time in the past (prior to the introduction of statutory mine plan reporting, so there are no records).
- 5.4 The site is not affected by any present, or future proposed, underground coal mining. The report refers to reserves in the locality that could be worked at some time in the future. However, given the effective abandonment of the coalfields, any future workings are considered highly unlikely.

- 5.5 There are no recorded mine entries on or within 20m of the site. However, there is a slight risk of unrecorded mine entries.
- 5.6 The site is unaffected by any past, present, or future proposed, opencast coal mining.
- 5.7 A Coal Mining Risk Assessment by ARP, referenced HBB/01/JRjcl1, dated 17th April 2025 concluded that the Green Lane/Middleton Little Coal and the unnamed coal that are conjectured to sub crop on the site pose a risk to ground stability, if worked. In the light of the above, a rock drilling investigation will need to be carried out to check for any evidence of underground coal workings, and determine the depths, seam thicknesses, and extraction thicknesses.

Coal Recovery

- 5.8 There are no seams beneath the site at depths which could be worked by open excavation. There should be no arisings from natural coal seams during proposed development works, and it will not be possible to win any coal from the site before development.

Hydrogeology

- 5.9 The Landmark Envirocheck Report, included in Appendix E, indicates the Bedrock Aquifer Designation to be " Secondary A ". The overlying superficial deposits are also designated as "Secondary A" Aquifer. These Aquifers comprise "permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers ".
- 5.10 There are eight active groundwater abstractions within 1km of the site, at between 677m to the northeast and 801m to the northwest. The nearest is for textiles and the furthest for laundry. None of the abstractions are down hydraulic gradient of the site and none are for potable use.

5.11 The site is not within a groundwater Source Protection Zone.

Hydrology

5.12 The general area slopes to the southeast. There are two surface water features present on site: - a pond located towards the south and a ditch towards the southeast. The surface water ditch enters the site at the southern boundary, flowing northwards before turning westwards, then entering a culvert which flows beneath the canal at the northern boundary. The Calder and Hebble Navigation forms the northeastern boundary of the site. The River Calder is located approximately 500m to the west of the site at its nearest point.

5.13 The site is in an area at risk of extreme flooding from rivers or seas without defences (Flood Zone 2). BGS data indicates the general area has "potential for groundwater flooding to occur at the surface".

5.14 There are 16 active surface water abstractions within 1km of the site. The nearest abstractions are 386m north of the site and are associated with mineral washing at Forge Mill Quarry. All other abstractions are over 500m from the site and are for general industrial use, textiles or laundry. None of the abstractions are down gradient from the site and should be unaffected by any activity on the site.

Other Environmental Data

5.15 The Landmark Envirocheck Report, included in Appendix E, contains information on numerous environmental aspects. A summary of the pertinent findings, not already covered, with additional comments, is given below.

5.15.1 There are five Pollution Control Authorisations within 500m of the site. The nearest is 125m to the west of the site associated with blending, packing, loading and use of bulk cement.

- 5.15.2 There is one discharge consent registered to the site. However, the location of the consent is likely to be erroneous, as the consent is for sewage from a single domestic farmhouse. There are no current or historical farmhouses on site.
- 5.15.3 There is one historical landfill registered on the site. The landfill was operational between December 1947 and 30th June 1989 and was licensed to receive inert, industrial and commercial waste. Based on the dates of operation, the landfill is likely to be associated with the infilling of the gravel pit in the southwest of the site. There are no other landfills registered within 250m of the site.
- 5.15.4 No radon protective measures are stated to be necessary on the site.
- 5.15.5 There are no contemporary trade directory entries relating to any activities likely to have significant impact on the site.
- 5.15.6 There are no fuel station entries within 250m of the site.

6.0 REVIEW OF THIRD-PARTY INVESTIGATIONS

- 6.1 Several third-party geo-environmental companies, including Arcadis Consulting, have investigated the site and assessed the contamination status and geotechnical properties of the underlying soils and rock. In October 2011, Arcadis Consulting assessed all the existing information, including third party reports, and the site proposals, to produce an "Assessment Findings Summary & Outline Development Constraints and Outline Remedial Strategy" (Issue 3). The assessment undertaken by Arcadis was done on the basis of a proposed residential development, as opposed to the new proposal of commercial units.
- 6.2 The most recent investigation by Arcadis Consulting, reported in "Phase II Environmental and Geotechnical Site Assessment and Generic Risk Assessment", dated June 2011, was undertaken between the 14th and 25th February 2011 and included the following
- 25 trial pits.
 - 20 windowless sample boreholes.
 - Four cable percussive boreholes.
 - Five dynamic probes to delineate the extent of the gravel pit.
 - Five rotary probe holes to a maximum depth of 39m depth to investigate potential historic mine workings.
 - Soil, groundwater and surface water sampling.
 - Geotechnical and environmental laboratory testing.
 - Gas monitoring of 27 monitoring wells comprising a combination of monitoring wells installed by Arcadis and during those installed during previous investigations.
- 6.3 The site investigation identified made ground, overlying Alluvium and River Terrace Deposits, resting upon Lower Coal Measures strata. The made ground was found to be a mixture of materials and, across the majority of the site, ranged in thickness between 0.3m and 3.5m, generally absent in the east. In the area of the backfilled gravel pit, deeper made ground was identified, comprising very soft black clay and silt to a depth of 4.8m. The Alluvium extended to depths of between 1.0m and 4.0m, and comprised soft to firm clay, silty clay, and clay/silt with occasional plant matter and gravel. The River Terrace Deposits

were generally medium dense or dense granular deposits, although occasional clay layers were noted. The River Terrace Deposits extended to depths of between 7.0m and 10.7m. Near the surface, the Lower Coal Measures strata were described as firm to stiff brown clay with occasional gravel and cobbles. With increasing depth, this graded into mudstone with occasional sandstone units and coal seams.

- 6.4 Soil, leachate, sediment, surface water and groundwater samples were analysed during the site investigations, for a broad range of potential contaminants. A number of elevated determinands were identified in soils at the site. In addition, elevated concentrations of PAH compounds in groundwater, sampled from the western part of the site, and ammoniacal nitrogen in groundwater from the site and from a canal water sample were recorded. Generally, the soil leachate and groundwater results indicated no significant linkage between elevated concentrations in soils leaching to groundwater. From testing on sediments sampled from the pond, there is no evidence of a significant risk to the pond (or from exposure to the pond) based on the understanding that the pond is unlikely to be used for recreational purposes or fishing. The potential for human health receptors to come into regular contact with either the sediments or surface water is minimal.
- 6.5 Gas monitoring was undertaken by Arcadis Consulting on six occasions between the 3rd March and 3rd June 2011 during a variety of atmospheric pressures, including three visits in periods of falling pressure. The atmospheric pressures on the day of reading ranged between 1009mb and 1036mb.
- 6.6 The monitoring showed maximum concentrations, of CH₄ and CO₂, of 0.5%, and 4.8%, respectively, along with oxygen levels of a minimum of 7.5% (all results measured in percentage by volume). A maximum flow rate of 1.0 l/hr was detected.
- 6.7 The Arcadis report concluded that the provisional ground gas assessment placed the site into CS1. However, it also stated that the gas monitoring conducted (to October 2011) was not sufficiently robust to suitably characterise the ground gas risk and the results recorded were not considered representative of "worst case conditions". As a conservative assessment, in the absence of further gas monitoring results, Arcadis recommended that CS2 gas protection measures should be applied to the proposed development.

6.8 Five rotary boreholes were drilled, to depths of between 32m and 40m, and these indicated a significant seam between 1.1m and 1.8m thick, which in the southwest of the site, did not have the required 10 times seam thickness of rock cover to protect the proposed development against any void migration from possible workings (only 9.8m of rock cover was present at one location, where 14m would need to be present). Although there was no indication that the seam had been worked (and workings are considered unlikely, as the challenges of working the seam would be significant for shallow, early history coal mining), five boreholes does not provide sufficient confidence that workings are not present, and further rotary boreholes are recommended.

7.0 CONTAMINATION RISK ASSESSMENT, CONCEPTUAL MODEL, AND CONTAMINATION REMEDIATION

7.1 Part II A of the Environmental Protection Act (EPA) 1990 became effective from 1st April 2000. The Regime was introduced by the Contaminated Land (England) Regulations 2000 (SI 2000, No. 227) along with the associated DEFRA Circular February 2000.

7.2 Section 78A (2) of the Act defines "Contaminated land is any land in such a condition, by reason of substances in, on or under that land that –

(a) significant harm is being caused or there is a significant possibility of such harm being caused; or

(b) pollution of controlled waters is being caused, or there is a significant possibility of such pollution being caused".

From S78A (4) "Harm" : means harm to the health of living organisms or other interference with the ecological systems of which they form part and, in the case of man, includes harm to his property.

Controlled waters are defined as "...the waters in any relevant lake or pond, or of so much of any relevant river or watercourse as is above the freshwater limit, and ground waters, that is to say, any waters contained in underground strata". From the 1st October 2004, the definition of groundwater in relation to Part IIA was amended, by the Second Water Act Commencement Order SI 2004 No 2528. This makes clear that "ground waters" does not include waters above the saturation zone, i.e. does not include any soil water and pore water present in the unsaturated zone.

7.3 The objectives of the regime are to ensure that risks associated with contaminated land are reduced to an acceptable level, having regard to the costs of doing so. The costs should be proportionate, manageable and economically sustainable.

- 7.4 In assessing risk, it is necessary to consider the probability, or frequency, of occurrence of the hazard and the magnitude/seriousness of the consequences. Consequently, for land to be classified as contaminated, it must have, or be very likely to have, a detrimental effect on humans or the environment before it can be classified as contaminated land.
- 7.5 In establishing risk, the concept of the pollutant source/pathway/receptor linkage model, based on current and proposed site use, is to be considered. Therefore, for a site to be deemed contaminated under the Regime, all three linkages must be in place i.e. the site must not only contain harmful substances, but the substances must have a pathway by which to leak out and cause significant harm to a receptor.
- 7.6 The Environment Agency has published guidance on contaminated land, in the form of online documents referred to as LCRM "Land Contamination Risk Management". The documents are intended to provide the technical framework for structured decision making about land contamination, and to assist all those involved in "managing" the land, in particular landowners, developers, financial service providers, planners and regulators. As the documents currently provide the framework for best practice, the general principles are, therefore, followed in conducting the assessment below.
- 7.7 The categorisations of risk adopted in this report are adapted from CIRIA Report C552 (Contaminated Land Risk Assessment: A Guide to Good Practice, 2001). This approach assesses the potential severity of any pollution event and the probability of the event occurring, to arrive at a risk category, for the various potential source - pathway - receptor linkages. The relevant tables used, with the definitions, are presented in Appendix F.

Conceptual Site Model

- 7.8 It is known that the site is proposed for two commercial units with localised areas of landscaping. An indicative proposed site layout is included in Appendix G. The site is shown to be underlain by made ground, up to 4.8m deep, overlying alluvial deposits and River Terrace deposits over Coal Measures. The solid strata beneath the site are designated a

Secondary A Aquifer, and the overlying superficial deposits are designated a Secondary A aquifer. There are no sensitive groundwater abstractions within 1km downgradient of the site. The nearest surface water is an open drainage ditch towards the southern end of the site, and the Calder and Hebble Navigation along the northern boundary. There are no sensitive active surface water abstractions within 1km downstream of the site.

7.9 The western third of the site has been occupied by a glass works, an iron and steel works and rail sidings. A gravel pit was present on site by 1908, later becoming a slurry pit, before being infilled by the late 1980s. An historical landfill was registered on site, likely to be associated with the infilled gravel pit. Based on the findings of the Arcadis Phase II investigation and the updated desk study review, the following contamination sources have been identified:

7.9.1 Made ground associated with historical land use as iron works and glass works - Elevated TPH, PAH, heavy metals and asbestos fibres.

7.9.2 Made ground associated with infilled gravel pit – benzene, heavy metals, total petroleum hydrocarbons (TPH) and polyaromatic hydrocarbons (PAH).

7.9.3 Stockpile of made ground potentially comprising material from demolition of local power station – TPH, PAH, Asbestos Containing Materials (ACMs).

7.9.4 Ground gases associated with infilled gravel pit onsite/historical landfill: - methane, carbon dioxide and depleted oxygen.

7.10 The conceptual model needs to consider sources of contamination, pathways along which contaminants could migrate and the receptors, which may become exposed. Guidance published by the Environment Agency has been consulted with regard to pathways and receptors. The potential sources, pathways, and receptors, applicable to the proposed development are identified on the table below. Any pathways in italics are deemed not to be viable, and the reason given.

Potential Source - Pathway - Receptor Matrix (Finished Development)

Contamination Sources	Pathways	Receptors	Severity of Consequence	Probability of Event	Risk
<p>Made ground from historical land use: - metals, TPH, PAH.</p> <p>Made ground associated with infilled gravel pit: - Heavy metals, TPH, PAH and benzene.</p> <p>Stockpile of potentially imported material – TPH, PAH</p> <p>Elevated PAH and Ammoniacal Nitrogen in groundwater</p>	<ul style="list-style-type: none"> Inhalation, ingestion and dermal contact with soil and dust 	Humans: - <ul style="list-style-type: none"> Future site users Maintenance workers Adjacent residents and general public 	Medium	Low Likelihood	Moderate/Low
	<ul style="list-style-type: none"> <i>Fruit and vegetable intake, with soil – no not applicable to the proposed site use</i> 	Humans (as above)	N/A		
	<ul style="list-style-type: none"> Vapour inhalation outdoor 	Humans (as above)	Medium	Low Likelihood	Moderate/Low
	<ul style="list-style-type: none"> Vapour inhalation indoor 	Humans (as above)	Medium	Low Likelihood	Moderate/Low
	<ul style="list-style-type: none"> Migration in surface water 	<ul style="list-style-type: none"> Surface water (on site). No sensitive abstractions within 1km. 	Medium	Low Likelihood	Moderate/Low
	<ul style="list-style-type: none"> Migration in groundwater 	<ul style="list-style-type: none"> Groundwater (Secondary A Aquifer, no sensitive abstractions within 1km) 	Medium	Low Likelihood	Moderate/Low
	<ul style="list-style-type: none"> Root uptake 	Vegetation: - <ul style="list-style-type: none"> Landscape areas 	Mild	Low Likelihood	Low
	<ul style="list-style-type: none"> Migration 	Services/Utilities: - <ul style="list-style-type: none"> Potable water supply 	Mild	Low Likelihood	Low
<p>Onsite landfill/infilled gravel pit: - methane and carbon dioxide</p>	<ul style="list-style-type: none"> Asphyxiation Explosive risk 	<ul style="list-style-type: none"> Construction/de-molition workers Future site users Buildings 	Severe	Low Likelihood	Moderate
<p>Asbestos within made ground and cement sheeting fragments on surface in the west</p>	<ul style="list-style-type: none"> Inhalation 	<ul style="list-style-type: none"> Future site users Maintenance workers Adjacent residents and general public 	Severe	Low Likelihood	Moderate

7.11 The above matrix indicates there are several potential source – pathway – receptor linkages applicable to the proposed development, ranging from moderate to low risk.

Contamination Remediation

- 7.12 Based on the risk assessment carried out by third parties and ARP, the following contamination remedial measures should reduce risks from the contaminants on site to acceptable levels. However, the proposals will be subject to the agreement of the Regulatory Authorities:
- 7.12.1 Where possible, asbestos cement sheeting fragments should be collected and removed from site by appropriately licensed contractors. Material originating from the area of the site where asbestos cement sheeting was observed should not be used in the cover layer. Any areas of Japanese Knotweed should be appropriately treated at this time.
- 7.12.2 The mounds to the south and north of the pond should not be re-used in a cover blanket without further testing.
- 7.12.3 It should be assumed that all materials present on the site require either placement or retention below hardstanding or building footprints, or placement beneath an uncontaminated cover blanket in soft landscaped areas.
- 7.12.4 The cover blanket to be provided in soft areas on the site should be free of all foreign matter.
- 7.12.5 If any material is disposed from site to a licenced facility, a Waste Acceptance Criteria (WAC) analysis will need to be undertaken in a UKAS accredited laboratory before removal from site.
- 7.13 However, there are aspects which need to be assessed further, and recommendations are provided within Section 9.0 of this report (Recommended Further Work).

8.0 GEOTECHNICAL ASSESSMENT

Coal Mining

- 8.1 The Coal Mining Risk Assessment indicates there is a risk of shallow underground coal workings that could adversely affect ground stability on the site. The site investigation undertaken by Arcadis in 2011 identified a coal seam within insufficient rock cover. Although there was no evidence of workings within the seam, a further rotary investigation is recommended to confirm whether or not any workings in this seam may pose a significant ground stability risk to the proposed development.
- 8.2 There will be no significant arisings of coal during proposed development works.

Foundations

- 8.3 The existing made ground across the site, the alluvium and the peat deposits, are not considered suitable for support of foundation loads. To reach suitable founding strata (the terrace gravels or weathered coal measures), foundation excavations would be deep and at significant risk of water ingress and instability. In addition, areas on the east of the site are being raised by around 1.5m. It may be possible to re-engineer materials to provide raft foundations, or utilise ground improvement techniques such as vibro stone columns, but there are drawbacks and geotechnical risks with such methods, such as the timescales involved, disturbance of contamination and potential for excessive total and differential settlements from soft clay and peat. It is considered likely that the use of piled foundations across the site will provide a more reliable and economical solution. The advice of a piling specialist should be sought, and allowance may need to be made for pre-drilling through localised obstructions.

Gas Protection

- 8.4 No radon protection is required for the site.
- 8.5 There is one landfill registered on site which is likely to be associated with the infilling of a gravel pit in the southwestern end of the site. As a conservative assessment, CS₂ gas protection measures are recommended based on ground gas monitoring results. Therefore, low level gas protection of buildings, against carbon dioxide, is required.

Behaviour of Excavations

- 8.6 Excavation faces are likely to be unstable within made ground and the terrace sand and gravels. Therefore, trench support is likely to be required, in accordance with the prevailing statutory guidance. The water table was recorded at approximately 36.6m AOD, correlating to a depth of around 1m to 2m over most of the site. Within granular deposits below the water table, a system of dewatering is also likely to be required.
- 8.7 Excavations into the natural subsoils will probably be readily achieved using conventional hydraulic plant. However, a breaker may be required for any buried foundations, structures or obstructions in the made ground.

Road Pavement Construction

- 8.8 It is suggested that proposed roads and yard/parking areas should be excavated to a depth of 1m below proposed levels, proof rolled, then granular material (ideally 6F2 grading) placed and compacted to the underside of subbase level. Plate CBR testing at the reduced level, and underside of subbase level, should be carried out to confirm compliance with design criteria. For any adoptable areas, the above will be subject to the approval of the adopting authority.

- 8.9 There is an area of backfilled former gravel pit which contains a significant thickness of soft material. At this location, a formation for adoptable road pavement on natural strata is likely to be impractical. There are several potential solutions for this situation, including complete excavation of the made ground to natural strata, and placement of engineered fill to controlled specification, partial excavation and replacement, with or without layers of geogrid, or the use of vibro stone columns overlaid by a geogrid reinforced stone blanket. On any adoptable areas, the proposed measures will need to be agreed with the adopting authority.

Flooding and Soakaways

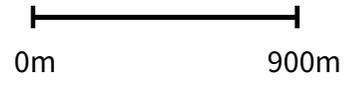

- 8.10 The site is within an area at risk from river flooding. It would be prudent to consult with the Environment Agency with regard to proposed finished floor levels on the site, and a specialist flood risk assessment report may be required.
- 8.11 BGS data indicates the general area has the "potential for groundwater flooding of property at surface level".
- 8.12 The disposal of surface water using soakaways is not considered to be feasible on the site.

9.0 RECOMMENDED FURTHER WORK

- 9.1 A supplementary rotary borehole investigation should also be carried out, to confirm that no workings are present within the coal seam identified during the Arcadis investigation, and their potential impact on the proposed development.
- 9.2 Based on a review of aerial imagery over the last ten years and the recent site walkover, there is no indication that the site conditions have changed since the Arcadis investigation undertaken in 2011. Although environmental guidance has changed since the publication of the report, the findings are unlikely to be altered significantly if reviewed against current standards. However, it should be noted that the assessment undertaken by Arcadis was for a residential development as opposed to the new proposal of commercial units. Therefore, additional site investigation and soil testing is not considered essential.
- 9.3 Further gas monitoring would be advisable to potentially reduce the gas characteristic situation to CS1. However, in the absence of further gas monitoring or a Details Gas Risk Assessment, it is considered to be suitably conservative to apply CS2 protection measures to the development. Furthermore, the new proposed development comprising commercial units is of low sensitivity.

APPENDIX C

ORDNANCE SURVEY ARCHIVE MAPS

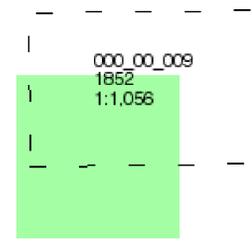

Yorkshire
Published 1852
Source map scale - 1:1,056

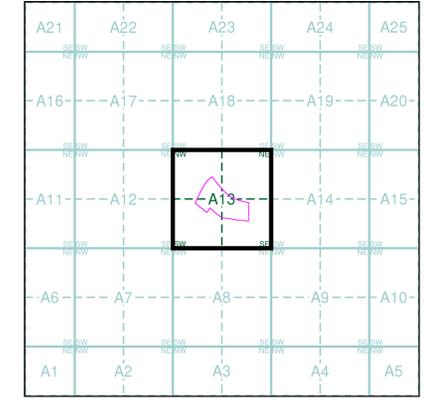

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Supply of Unpublished Survey Information

Published 1973 - 1975

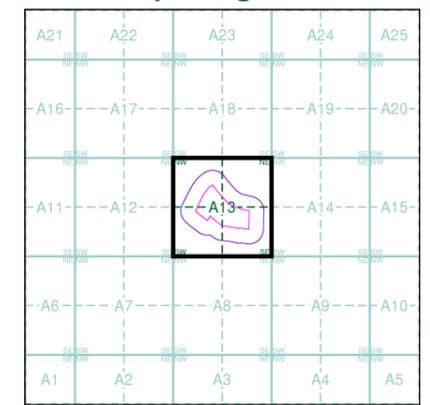

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Map Name(s) and Date(s)

SE2320SE 1973 1:1,250	SE2420SW 1973 1:1,250
SE2319NW 1973 1:1,250	SE2319NE 1975 1:1,250

Additional SIMs
Published 1984 - 1990
Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data Published 1992 - 1993 Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Yorkshire
Published 1855
Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Yorkshire
Published 1948
Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Batley
Published 1983
Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

VectorMap Local

Published 2024

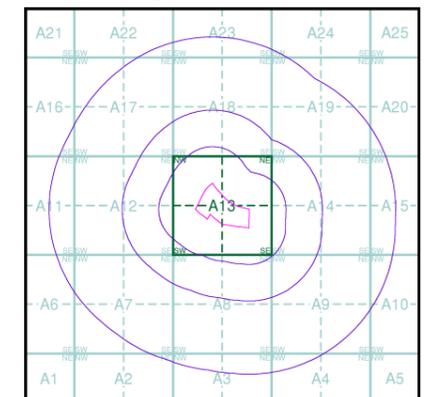

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

COAL MINING REPORT

The Coal
Authority

CON29M

coal mining report

EDGED RED, LAND AND BUILDINGS, ON THE SOUTH EAST SIDE OF FORGE
LANE THORNHILL LANE, DEWSBURY

Known or potential coal mining risks

Past underground coal mining	Page 4
Future underground coal mining	Page 4
Mine entries	Page 5

Further action

No further reports from the Coal Authority are required. Further information on any next steps can be found in our Professional opinion.

For more information on our reports please visit www.groundstability.com

Professional opinion

According to the official mining information records held by the Coal Authority at the time of this search, evidence of, or the potential for, coal mining related features have been identified. In view of the coal mining circumstances we would recommend that any planned or future development should follow detailed technical advice before beginning work on site. Please see **page 3** for further details on **Future development**.

This report is prepared in accordance with the latest Law Society's Guidance Notes 2018, the User Guide 2018 and the Coal Authority's Terms and Conditions applicable at the time the report was produced.

Accessibility

If you would like this information in an alternative format, please contact our communications team on 0345 762 6848 or email communications@coal.gov.uk.

Professional opinion

Future development

If development proposals are being considered, technical advice relating to both the investigation of coal and former coal mines and their treatment should be obtained before beginning work on site. All proposals should apply specialist engineering practice required for former mining areas. No development should be undertaken that intersects, disturbs or interferes with any coal or coal mines without first obtaining the permission of the Coal Authority. Developers should be aware that the investigation of coal seams, mine workings or mine entries may have the potential to generate and/or displace underground gases. Associated risks both to the development site and any neighbouring land or properties should be fully considered when undertaking any ground works. The need for effective measures to prevent gases migrating onto any land or into any properties, either during investigation or remediation work, or after development must also be assessed and properly addressed.

If you are looking to develop, or undertake works, within a coal mining development high risk area your Local Authority planning department may require a Coal Mining Risk Assessment to be undertaken by a qualified mining geologist or engineer. Should you require any additional information then please contact the Coal Authority on **0345 762 6848** or email cmra@coal.gov.uk.

Detailed findings

Information provided by the Coal Authority in this report is compiled in response to the Law Society's CON29M Coal Mining enquiries. The said enquiries are protected by copyright owned by the Law Society of 113 Chancery Lane, London WC2A 1PL.

The Coal Authority owns the copyright in this report and the information used to produce this report is protected by our database rights. All rights are reserved and unauthorised use is prohibited. If we provide a report for you, this does not mean that copyright and any other rights will pass to you. However, you can use the report for your own purposes.

1 Past underground coal mining

The property is in a surface area that could be affected by underground mining in 2 seams of coal at 110m to 240m depth, and last worked in 1931.

Any movement in the ground due to coal mining activity associated with these workings should have stopped by now.

In addition the property is in an area where the Coal Authority believes there is coal at or close to the surface. This coal may have been worked at some time in the past. The potential presence of coal workings at or close to the surface should be considered, particularly prior to any site works or future development activity, as ground movement could still be a risk. Your attention is drawn to the Professional opinion sections of the report.

2 Present underground coal mining

The property is not within a surface area that could be affected by present underground mining.

3 Future underground coal mining

The property is not in an area where the Coal Authority has received an application for, and is currently considering whether to grant a licence to remove or work coal by underground methods.

The property is not in an area where a licence has been granted to remove or otherwise work coal using underground methods.

The property is not in an area likely to be affected from any planned future underground coal mining.

However, reserves of coal exist in the local area which could be worked at some time in the future.

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

4 Mine entries

There are no recorded coal mine entries known to the Coal Authority within, or within 20 metres, of the boundary of the property.

This information is based on the information that the Coal Authority has at the time of this enquiry.

Based on the Coal Authority's knowledge of the mining circumstances at the time of this enquiry, there may be unrecorded mine entries in the local area that do not appear on Coal Authority records.

5 Coal mining geology

The Coal Authority is not aware of any damage due to geological faults or other lines of weakness that have been affected by coal mining.

6 Past opencast coal mining

The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

7 Present opencast coal mining

The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.

8 Future opencast coal mining

There are no licence requests outstanding to remove coal by opencast methods within 800 metres of the boundary.

The property is not within 800 metres of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.

9 Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

10 Mine gas

The Coal Authority has no record of a mine gas emission requiring action.

11 Hazards related to coal mining

The property has not been subject to remedial works, by or on behalf of the Coal Authority, under its Emergency Surface Hazard Call Out procedures.

12 Withdrawal of support

The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

13 Working facilities order

The property is not in an area where an order has been made, under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

14 Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Statutory cover

Coal mining subsidence

In the unlikely event of any coal mining related subsidence damage, the Coal Authority or the mine operator has a duty to take remedial action in respect of subsidence caused by the withdrawal of support from land or property in connection with lawful coal mining operations.

When the works are the responsibility of the Coal Authority, our dedicated public safety and subsidence team will manage the claim. The house or land owner ("the owner") is covered for these works under the terms of the Coal Mining Subsidence Act 1991 (as amended by the Coal Industry Act 1994). Please note, this Act does not apply where coal was worked or gotten by virtue of the grant of a gale in the Forest of Dean, or any other part of the Hundred of St. Briavels in the county of Gloucester.

If you believe your land or property is suffering from coal mining subsidence damage and you need more information on what to do next, please use the following link to our website which sets out what your rights are and what you need to consider before making a claim.

www.gov.uk/government/publications/coal-mining-subsidence-damage-notice-form

Coal mining hazards

Our public safety and subsidence team provide a 24 hour a day, 7 days a week hazard reporting service, to help protect the public from hazards caused by past coal workings, such as a mine shaft or shallow working collapse. To report any hazards please call **01623 646 333**. Further information can be found on our website: www.gov.uk/coalauthority.

Glossary

Key terms

adit - horizontal or sloped entrance to a mine

coal mining subsidence - ground movement caused by the removal of coal by underground mining

Coal Mining Subsidence Act 1991 - the Act setting out the duties of the Coal Authority to repair damage caused by coal mining subsidence

coal mining subsidence damage - damage to land, buildings or structures caused by the removal of coal by underground mining

coal seams - bed of coal of varying thickness

future opencast coal mining - a licence granted, or licence application received, by the Coal Authority to excavate coal from the surface

future underground coal mining - a licence granted, or licence application received, by the Coal Authority to excavate coal underground. Although it is unlikely, remaining coal reserves could create a possibility for future mining, which would be licensed by the Coal Authority

mine entries - collective name for shafts and adits

payments to owners of former copyhold land - historically, copyhold land gave rights to coal to the copyholder. Legislation was set up to allow others to work this coal, but they had to issue a notice and pay compensation if a copyholder came forward

shaft - vertical entry into a mine

site investigation - investigations of coal mining risks carried out with the Coal Authority's permission

stop notice - a delay to repairs because further coal mining subsidence damage may occur and it would be unwise to carry out permanent repairs

subsidence claim - a formal notice of subsidence damage to the Coal Authority since it was established on 31 October 1994

withdrawal of support - a historic notice informing landowners that the coal beneath their property was going to be worked

working facilities orders - a court order which gave permission, restricted or prevented coal mine workings

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Agency & Hydrological					
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes	Yes	n/a
Contaminated Land Register Entries and Notices					
Discharge Consents	pg 3	1	1	5	29
Prosecutions					
Enforcement and Prohibition Notices					
Integrated Pollution Controls	pg 12				5
Integrated Pollution Prevention And Control	pg 13			2	20
Local Authority Integrated Pollution Prevention And Control	pg 18				1
Local Authority Pollution Prevention and Controls	pg 19		2	1	15
Local Authority Pollution Prevention and Control Enforcements					
Nearest Surface Water Feature	pg 21	Yes			
Pollution Incidents to Controlled Waters	pg 21		1	1	20
Historical Prosecutions					
Registered Radioactive Substances					
Substantiated Pollution Incident Register	pg 25				4
Water Abstractions	pg 26			4	23 (*21)
Water Industry Act Referrals					
Groundwater Vulnerability Map	pg 38	Yes	n/a	n/a	n/a
Groundwater Vulnerability - Soluble Rock Risk			n/a	n/a	n/a
Groundwater Vulnerability - Local Information			n/a	n/a	n/a
Bedrock Aquifer Designations	pg 38	Yes	n/a	n/a	n/a
Superficial Aquifer Designations	pg 38	Yes	n/a	n/a	n/a
Source Protection Zones					
Extreme Flooding from Rivers or Sea without Defences	pg 38	Yes	Yes	n/a	n/a
Flooding from Rivers or Sea without Defences	pg 52	Yes	Yes	n/a	n/a
Areas Benefiting from Flood Defences				n/a	n/a
Flood Water Storage Areas	pg 53		Yes	n/a	n/a
Flood Defences				n/a	n/a
OS Water Network Lines	pg 53	3	2	14	41
Water Framework Directive - Catchment	pg 59	Yes			Yes
Water Framework Directive - Groundwater	pg 60	Yes			
Water Framework Directive - Surface Waters					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Waste					
BGS Recorded Landfill Sites	pg 61				1
Historical Landfill Sites	pg 61	1			4
Integrated Pollution Control Registered Waste Sites					
Licensed Waste Management Facilities (Landfill Boundaries)	pg 62			1	1
Licensed Waste Management Facilities (Locations)	pg 62			2	6
Local Authority Landfill Coverage	pg 64	1	n/a	n/a	n/a
Local Authority Recorded Landfill Sites					
Potentially Infilled Land (Non-Water)	pg 64	2		2	12
Potentially Infilled Land (Water)	pg 65	1	1	2	2
Registered Landfill Sites	pg 65	1		1	2
Registered Waste Transfer Sites	pg 67				3
Registered Waste Treatment or Disposal Sites	pg 68				1
Hazardous Substances					
Control of Major Accident Hazards Sites (COMAH)					
Explosive Sites					
Notification of Installations Handling Hazardous Substances (NIHHS)					
Planning Hazardous Substance Consents					
Planning Hazardous Substance Enforcements					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Geological					
BGS 1:625,000 Solid Geology	pg 69	Yes	n/a	n/a	n/a
BGS Estimated Soil Chemistry	pg 69	Yes	Yes	Yes	Yes
BGS Recorded Mineral Sites	pg 73			2	12
BGS Urban Soil Chemistry					
BGS Urban Soil Chemistry Averages					
CBSCB Compensation District			n/a	n/a	n/a
Coal Mining Affected Areas	pg 75	Yes	n/a	n/a	n/a
Mining Instability	pg 75	Yes	n/a	n/a	n/a
Man-Made Mining Cavities					
Natural Cavities					
Non Coal Mining Areas of Great Britain				n/a	n/a
Potential for Collapsible Ground Stability Hazards	pg 75	Yes	Yes	n/a	n/a
Potential for Compressible Ground Stability Hazards	pg 76	Yes	Yes	n/a	n/a
Potential for Ground Dissolution Stability Hazards				n/a	n/a
Potential for Landslide Ground Stability Hazards	pg 76	Yes	Yes	n/a	n/a
Potential for Running Sand Ground Stability Hazards	pg 76	Yes	Yes	n/a	n/a
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 77	Yes	Yes	n/a	n/a
Radon Potential - Radon Affected Areas	pg 77	Yes	n/a	n/a	n/a
Radon Potential - Radon Protection Measures			n/a	n/a	n/a
Industrial Land Use					
Contemporary Trade Directory Entries	pg 78		13	24	173
Fuel Station Entries	pg 96			1	2
Points of Interest - Commercial Services	pg 97		1	8	52
Points of Interest - Education and Health					
Points of Interest - Manufacturing and Production	pg 102		14	7	28
Points of Interest - Public Infrastructure	pg 106		4		34
Points of Interest - Recreational and Environmental	pg 109		2	2	3
Underground Electrical Cables					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Sensitive Land Use					
Ancient Woodland					
Areas of Adopted Green Belt	pg 111			1	1
Areas of Unadopted Green Belt	pg 111			1	1
Areas of Outstanding Natural Beauty					
Environmentally Sensitive Areas					
Forest Parks					
Local Nature Reserves	pg 111				1
Marine Nature Reserves					
National Nature Reserves					
National Parks					
Nitrate Sensitive Areas					
Nitrate Vulnerable Zones	pg 111				1
Ramsar Sites					
Sites of Special Scientific Interest					
Special Areas of Conservation					
Special Protection Areas					
World Heritage Sites

APPENDIX F

RISK CATEGORISATION TABLES

Severity of Consequence

Severe	Short term (acute) risks to human health, likely to result in significant harm. Major pollution of (watercourses or groundwater)
Medium	Long-term (Chronic) damage (significant harm) to human health. Pollution of sensitive water resources.
Mild	Pollution of non-sensitive water resources.
Minor	Non-permanent health effects easily prevented by use of personal protective equipment during site works.

Probability of Risk Event Occurring

High Likelihood	There is a pollutant linkage and an event that either appears very likely in the short term, almost inevitable in the long term, or there is evidence of harm or pollution at the receptor.
Likely	There is a pollution linkage and all the elements are present and in the right place, so that a risk event is possible in the short term and likely over the long term.
Low Likelihood	There is a pollution linkage and circumstances are possible under which a risk event could occur. However, it is not certain that such an event would take place even over a longer period, and even less likely in the short term.
unlikely	There is a pollution linkage, but circumstances are such that it is improbable that an event would occur even in the very long term.

Comparison of Probability Against Severity of Consequence

		Severity of Consequence			
		Severe	Medium	Mild	Minor
Probability	High Likelihood	Very High Risk	High Risk	Moderate Risk	Moderate/ Low Risk
	Likely	High Risk	Moderate Risk	Moderate/ Low Risk	Low Risk
	Low Likelihood	Moderate Risk	Moderate/ Low Risk	Low Risk	Very Low Risk
	Unlikely	Moderate/ Low Risk	Low Risk	Very Low Risk	Very Low Risk

Risk Categories - Definitions

Very High Risk	High probability that severe harm could arise to a receptor, or there is evidence that severe harm is already occurring. Urgent investigation is required and urgent remediation is likely to be required.
High Risk	Harm is likely to arise to a receptor. Urgent investigation is required and remediation may be necessary in the short term and likely over the longer term.
Moderate Risk	Possible that harm could arise to a receptor, but low likelihood that such harm would be severe. Harm is likely to be mild. Investigation normally required to clarify risk. Some remedial works may be required in the long-term.
Moderate/ Low Risk	Possible that harm could arise to a receptor, but where a combination of likelihood and consequence results in a risk that is above low, but is not of sufficient concern to be classified as mild. Limited further investigation may be required to clarify the risk. If necessary, remediation works are likely to be limited in extent.
Low Risk	Possible that harm could arise to a receptor. Such harm, at worst, would normally be mild.
Very Low Risk	Low possibility that harm could arise to a receptor. Such harm is unlikely to be any worse than mild.

APPENDIX G

INDICATIVE PROPOSED SITE LAYOUT

Do not scale from this drawing. If in doubt please contact the architect.
 F 16/09/2024 CS Red line boundary adjacent to canal relocated 150m away from canal.
 G 10/10/2024 CS Footpath widened to 3m. Disabled parking spaces shown.
 H 31/03/2025 CS Surface water compensation area updated to match drawing 13A.
