

Silo Project Justification Statement

Polyseam was established in 1993, and has worked hard to build a solid reputation as an 'own brand' manufacturer of adhesives, sealants, fillers and passive fire protection products, as well as manufacturing for many well-known global brands. Our comprehensive manufacturing experience and capabilities, matched with dedicated research and development investment has allowed us to grow into a market-leading construction materials manufacturer.

In 2017 Polyseam moved into a new, purpose built, factory based in St Andrews Road, Huddersfield and in 2020 completed extension works to increase capacity further. During this time Polyseam has increased the number of staff, in all areas of the business, creating an additional 80 jobs.

Raw materials, that are currently bought in small sacks, are now restricting capacity. Buying raw materials in bulk, delivered into silos, will ensure Polyseam has capacity to meet future needs as well as reducing manual handling for its workforce, ultimately creating more jobs.

David Allen

Product and Process Development Director
