This document has been prepared by Geol Consultants Limited (GEOL) for the titled project and should not be relied upon by any other third party or used for any other project without written authorisation being obtained from GEOL. This report was prepared for the sole use of the Client named above, and shall not be relied upon or transferred to any other party without the express written authorisation from GEOL. The findings and opinions provided in this document are given in good faith and are subject to the limitations and constraints imposed by the methods and information sources described in this report. Factual information, including, where stated, a visual inspection of the site, has been obtained from a variety of sources. GEOL assumes the third-party information to be reliable, but has not independently confirmed this, therefore, GEOL cannot and does not guarantee the authenticity or reliability of third-party information it has relied upon. The findings and opinions presented in this report are also relevant to the dates when the assessment was undertaken but should not necessarily be relied upon to represent conditions at a substantially later date. Further information, ground investigation, construction activities, change of site use, or the passage of time may reveal conditions that were not indicated in the data presented and therefore could not have been considered in the preparation of the report. Where such information might impact upon stated opinions, GEOL reserves the right to modify the opinions expressed in this report. Where opinions expressed in this report are based on current available guidelines and legislations, no liability can be accepted by GEOL for the effects of any future changes to such guidelines and legislation.

## 1.0 Introduction

Geol Consultants Limited (GEOL) were instructed by Carbon Limited to undertake a Phase I Preliminary Contamination Risk Assessment (PCRA) to facilitate the demolition of a disused commercial building and the construction of a residential building. The site is located along Chapel Lane in Moldgreen, Huddersfield and currently comprises 1 no. disused commercial unit and an associated car park. Proposals have been made to demolish the existing building on site and construct 1 no. four-storey building comprising 31 no. residential apartments with an associated courtyard. A proposed development layout plan has been provided by Carbon Limited, project no. 2917, drawing no. (SK)04, dated December 2024 and can be seen attached in Appendix I. The OS National Grid Reference for the centre of the site is 415590, 416330. The purpose of this PCRA is to provide information relating to the following.

- ▼ Identify the environmental setting and likely ground conditions for the site, including details relating to the deeper geology, hydrogeology, hydrology, mining and mineral safeguarding
- ▼ Identify the sites previous development history, usage, and activities with a view to determining any potential contaminants associated with the recorded site history and to assess the impacts from those contaminants towards the future site end-users (Human Health) and nearby sensitive receptors (Controlled Waters)
- ▼ Assess all potential sources of hazardous ground gas generation
- ▼ Establish a preliminary Conceptual Site Model (CSM) and to identify all potential source, pathway, and receptor linkages
- ▼ Determine the scope of any further investigation works required for the site prior to commencing with the proposed development

As part of this PCRA, a reconnaissance (walkover) survey was undertaken which involved an inspection of the site and immediate surrounding area. Site photographs taken during this survey can be seen in Appendix I and all relevant observations are noted in the Site Details section on the following page.

A review of currently available information from the following data sources has been undertaken to assist in the completion of this technical report.

- ▼ British Geological Survey (BGS); geological maps & historical borehole records, where applicable
- ▼ Landmark Information Group, Envirocheck Report; including Ordnance Survey (OS) maps
- ▼ The Mining Remediation Authority; Online Viewer, Consultants Coal Mining Report
- ▼ Environment Agency / GOV.UK
- ▼ Relevant guidance documents, these are listed within the report text, where applicable

## 2.0 Site Details

All relevant details and descriptions relating to the proposed development area (site) have been summarised in the Table below.

| Detail                     | Description  |
|----------------------------|--|
| Site address and access    | Land at Chapel Lane, Moldgreen, Huddersfield, HD5 9BG  |
| NGR                        | 415590, 416330   |
| Shape and approximate size | Roughly rectangular shaped parcel of land, occupying an area of 0.06Ha   |
| Current site use           | The site comprises 1 no. disused commercial unit with an associated car park   |
| Proposed site use          | Proposals have been made to demolish the existing building and construct 1 no. four-storey building comprising 31 no. residential apartments with an associated courtyard  |
| Surrounding land uses      | The site is situated along Chapel Lane in the district of Moldgreen, Huddersfield with commercial units directly to the east, woodland to the north and east, and Wakefield Road to the south  |
| Site topography            | The site is generally flat with a slight slope to the south. The land directly north of the site slopes steeply towards the south with a retaining wall comprising breeze blocks and brick between the slope and the site. Another retaining wall was noted along the eastern site boundary with the adjacent commercial premises. Both retaining walls were noted to be bulging / leaning   |
| Additional features        | Overhead lines are present crossing over the southern site boundary along with underground services entering the site. Therefore, prior to undertaking any future investigation or construction works it would be prudent to obtain all existing utility / service plans, to avoid any unnecessary damage to any live services which may pass below the site. Given the age of the existing building, it is possible that the roofing may contain asbestos |

## 3.0 Site Geology

In accordance with available BGS data and published maps, reference; Sheet SE11NE, 1:10,000 scale, dated 1999, the site lies within an area where superficial (drift) deposits are absent and bedrock deposits are present at or close to the surface, i.e. area of solid outcrop. Archive BGS boreholes sunk near to the site show bedrock deposits as shallow as 1.10m bgl comprising shale. The bedrock deposits beneath the site are shown to comprise the Pennine Lower Coal Measures Formation, consisting of mudstone, sandstone and siltstone, deposited between 318 and 319 million years ago during the Carboniferous Period.

### 3.0 Site Geology (Cont'd)

No structural geological faults are recorded below the site within the bedrock geology.

Whilst no artificial deposits are recorded over the site area in accordance with available BGS mapping, given the current site use, made ground deposits are to be expected below the site, associated with the original construction of the existing development.

Ground stability hazards on the site are listed in the Landmark Information Group, Envirocheck Report Datasheet as no hazard, very low and low.

### 4.0 Coal Mining Risk Assessment (CMRA)

The site lies in a Coalfield Consultation Area. The Mining Remediation Authority (MRA) has divided the coalfield into two areas, referred to as development high risk areas (DHRA's), and development low risk areas (DLRA's). The DHRA forms 15% of the coalfield area, where coal mining risks could be present at shallow depth which could have the potential to affect new developments. The DLRA forms 85% of the coalfield where past coal mining activity has taken place at such depth that it poses a low risk to new development. In accordance with the MRA database, the site is shown to lie within a DLRA but close to the boundary of a DHRA associated with the 36 Yard coal seam which is conjectured to subcrop to the west of the site.

For completeness, a Consultants Coal Mining Report, reference 51003480626001, was procured from the MRA, the findings of which can be seen summarised in Appendix III. The relevant coal mining related information contained within this report has been summarised in the Table below and on the following page.

| Data Type                                  | Details  |
|--|--|
| Past underground mining                    | No past mining recorded                          |
| Probable unrecorded shallow workings       | None   |
| Spine roadways at shallow depth            | No spine roadways recorded at shallow depth      |
| Mine entries                               | None recorded within 100m from the site boundary |
| Geological faults, fissures and breaklines | No faults, fissures or breaklines recorded       |
| Mine gas                                   | None recorded within 500m from the site boundary |
| Opencast mines                             | None recorded within 500m from the site boundary |

## 4.0 Coal Mining Risk Assessment (CMRA) (Cont'd)

| Data Type              | Details   |
|------------------------|---|
| Coal mining licensing  | None recorded within 200m from the site boundary  |
| Coal mining subsidence | The Mining Remediation Authority has not received a damage notice or claim for the subject property, or any property within 50m of the site boundary, since 31 <sup>st</sup> October 1994 |

The information provided within the table above and on the previous page concludes that the site is not underlain by past recorded or probable shallow coal workings associated with the 36 Yard coal seam or any other coal seams beneath the site.

In accordance with the decision support tool for mine gas risk assessment (MGRA) contained within the CL:AIRE Publication 'Good practice for risk assessment for coal mine gas emissions', dated 2021, the following risk assessment has been determined.

- ▼ The site is located within a Mining Remediation Authority defined Coal Mining Reporting Area and has been determined to lie in a DLRA
- ▼ There are no mine entries within 100m from the site boundary
- ▼ The Coal Authority report obtained for this site has recorded no coal workings present beneath the site
- ▼ The site is not underlain by geological faulting which could represent a potential pathway connecting the surface to deeper workings if present
- ▼ Reference to the Mining Remediation Authority Interactive viewer indicates the site is not in an area of probable shallow workings

Based on the above information the site has been assessed to lie within a negligible-risk zone, and therefore a detailed mine gas risk assessment will not be required for the site.

## 5.0 Historical Map Review

Copies of OS maps covering the site and adjacent land are contained within the Landmark Information Group, Envirocheck Report attached in Appendix II. The information contained within the Table on the following page has been based on available OS maps and the observations noted during the reconnaissance (walkover) survey completed.

## 5.0 Historical Map Review (Cont'd)

| OS map date  | Site  | Adjacent land  |
|--------------|---|--|
| 1851 to 1854 | In the 1851 OS mapping, the site is occupied by buildings   | By 1851, buildings have been constructed all around the site, as a part of Moldgreen, likely a mixture of residential and commercial properties. A road is mapped running directly south of the site, aligned east to west   |
| 1893 to 1938 | The clearer OS mapping in 1893, shows several buildings to be present across the site area  | Inn the 1893 OS mapping, Moldgreen Gas Works is present c.80m southwest of the site as well as Moldgreen Chemical Works c.170m southwest. There are 4 no. Mill Ponds mapped c.100m and 200m southeast, c.150m southwest and 100m south of the site. By 1907, the Moldgreen Gas Works and nearby Mill Pond have been demolished and infilled. |
| 1948 to 1961 | By 1948, the buildings in the eastern site area have been demolished and replaced with 1 no. larger building labelled as a Bakery while the buildings in the western site area have been labelled as Ruin | The area to the south of the site still generally comprises commercial and industrial units labelled as Works and Mills. By 1956, all of the Mill Ponds have been infilled   |
| 1975 to 1978 | The buildings labelled as Ruin have been demolished and 1 no. small building has been constructed in the western portion of the site  | The area directly east of the site has been labelled as a Builder's Yard. An Electric Substation has been constructed c.50m east of the site. A Scrap Yard is also now labelled c.90m northwest of the site  |
| 1989 to 1995 | The building in the western portion of the site has been demolished   | By 1989, some of the larger commercial and industrial buildings south of the site have been demolished   |
| 2000 to 2024 | Aerial photography of the site shows the building in the eastern site area to still be present while the western portion of the site is overlain by hardstanding  | Aerial photography of the area around the site shows trees present directly to the north, east and south. The areas to the south and west of the site still comprises commercial and industrial units with more residential dwellings present to the east and north  |

The OS mapping indicates the site has historically been developed with multiple buildings since the earliest published mapping (1851). During the late 20<sup>th</sup> century, there was only 1 no. building present on site, in the eastern area, reflecting the present-day (2025) layout of the site.

## 5.0 Historical Map Review (Cont'd)

A reconnaissance (walkover) survey was undertaken by GEOL, during February 2025. The survey involved walking over the site and the surrounding area, recording all observed information which may be relevant to the project. Photographs taken during the reconnaissance (walkover) survey can be seen attached in Appendix I.

## 6.0 Environmental Setting

### 6.1 Surface Mineral Extraction / Quarrying

Based on OS maps dating from 1851 to 2024, there is no evidence of historical surface mineral extraction or quarrying features recorded within a plausible, lateral migration distance (<250m) from the site.

### 6.2 Hydrogeology

The bedrock deposits underlying the site are designated as a Secondary A Aquifer with a high vulnerability. Secondary A Aquifers comprise permeable layers that can support local water supplies, and may form an important source of base flow to rivers. When considering the anticipated ground conditions below the site, groundwater is anticipated to be present at depth within the bedrock deposits. Minor water strikes may occur at shallow depths within completely weathered deposits, originating from perched / trapped water within granular layers.

The Landmark Information Group, Envirocheck Report records 2 no. Water Abstractions both located 156m southeast of the site, relating to W T Johnson & Sons (Huddersfield) Ltd and abstracted for Textiles And Leather: General Use (Medium Loss). No other Water Abstractions are recorded within 500m of the site.

No Source Protections Zones (SPZ's) are recorded within 500m of the site according to the Envirocheck Report. When considering the recorded site history, the site is not considered to represent a significant risk to groundwater or drinking water supplies / abstractions.

### 6.3 Hydrology

The nearest surface water feature is recorded 298m southwest of the site. The site lies within a Flood Zone 1, an area with a low probability of flooding with <1 in 1000 chance of fluvial flooding occurring (<0.1%), and therefore this site is unlikely to be at significant risk from future flooding.

## 6.0 Environmental Setting (Cont'd)

### 6.3 Hydrology (Cont'd)

According to the GOV.UK Long Term Flood Risk Information Interactive Map, the site is shown to lie within an area at very low risk (<0.1%) of surface water (pluvial) flooding occurring. Appropriate surface water management will need to be adopted to deal with the future management of positively drained surface water, when considering the future development of this site.

During the reconnaissance (walkover) survey there were no significant areas of standing surface water noted.

### 6.4 Landfill & Waste

The Landmark Information Group, Envirocheck Report identifies 1 no. Licensed Waste Management Facility (Locations) located 88m west associated with Metal Recycling Sites (Mixed) and 1 no. Registered Waste Treatment or Disposals Site situated 109m west associated with a Scrapyard. No other Landfill Sites, Waste Management Facilities or Waste Transfer Sites are recorded within a plausible migration distance (<250m) from the site boundaries.

The Landmark Information Group, Envirocheck Report identifies 1 no. record of Potentially Infilled Land (Non-water) within 250m of the site, located 187m northwest. No other records of potentially infilled land (water nor non-water) are recorded within 250m of the site.

### 6.5 Radon Assessment

The BRE Digest, BR211 (2015 & 2023) Radon: Guidance on protective measures for new buildings, indicates the site to lie within a clear grid square (1km) where no radon protective measures will be required for new structures. Reference to the UKRadon.org mapping indicated the site is located in a band of radon potential where less than 1% of homes at or above the Action Level. The Landmark Information Group, Envirocheck Report records the site to lie in a lower probability radon area, where less than 1% of homes are estimated to be at or above the Action Level in accordance with data held by the BGS, and their assessment also indicates that no radon protection measures are necessary in the construction of new dwellings or extensions.

## 6.0 Environmental Setting (Cont'd)

### 6.6 Site Ecology

The Landmark Information Group, Envirocheck Report records no areas of sensitive land-use within a 500m radius of the site.

During the reconnaissance (walkover) survey completed, there was no obvious evidence to suggest the site is affected by the presence of invasive weed species (i.e. Japanese Knotweed).

## 7.0 Regulatory Database

The information given in the Table below has been obtained from a commercially available database and is contained within the Landmark Information Group, Envirocheck Report attached in Appendix II. The information presented in the Table only includes records not otherwise detailed in the report.

| Data type  | 0 – 250m | 251 – 500m | Details  |
|--|----------|------------|--|
| Discharge Consents                                 | 13       | 14         | There are 5 no. records situated 195m west of the site, all associated with Yorkshire Water Services Limited with a discharge type of Sewage Discharges – Storm Overflow                           |
| Integrated Pollution Prevention and Control        | 1        | 0          | The record is located 88m southeast of the site, associated with W.T.Johnson & Sons (Huddersfield) Limited with an activity described as Pre-treating or dyeing fibres or textiles >10 tpd         |
| Local Authority Pollution Prevention and Controls  | 3        | 4          | The closest record is located 108m west of the site, associated with Spring Petroleum Ltd and described as PG1/14 Petrol filling station   |
| Pollution Incidents to Controlled Waters           | 0        | 12         | The nearest record is situated 366m west of the site, occurring in November 1992. The incident involved rubbish entering a freshwater stream, and was categorised as a Category 3 – Minor Incident |
| Active Contemporary Trade Directory Entries (CTDE) | 32       | 33         | There is 1 no. active record on site named M Thornton Engineering Ltd  |
| Fuel Station Entries                               | 1        | 1          | The closest record is 4m northwest of the site, associated with Mold Green Service Station and has a status of Obsolete  |

## 8.0 Contamination and Ground Gas Risk Assessment

The risks posed towards Human Health or environmental receptors (i.e. Controlled Waters) is based on an assessment of one or more source-pathway-receptor linkages. The source is any substance which has the potential to cause significant harm to a relevant receptor and the pathway is any route by which contamination may travel to impact on a receptor. The preliminary Conceptual Site Model (CSM) summarises the principal contaminant sources, pathways and receptors for this site and the likelihood of the existence of a pollutant linkage.

The significance of the potential source-pathway-receptor linkages identified within the preliminary CSM can be assessed using the following criteria.

- ▼ LOW risk – not likely to cause significant harm to Human Health or Controlled Waters. Remedial measures are not likely to be required
- ▼ MEDIUM risk – it is possible that significant harm to Human Health or Controlled Waters could occur depending on site specific circumstances. Remedial measures may be required to mitigate potential risks
- ▼ HIGH risk – it is likely that significant harm to Human Health or Controlled Waters will occur unless appropriate remedial measures are incorporated into the development

The potential pollutant linkages pertaining to the site and the assessed significance are summarised in the preliminary CSM Table on the following page.

In accordance with OS maps, the site area has been developed with multiple buildings, including a bakery, since the earliest published mapping (1851).

Given the historical site use and the land-use of the surrounding area, the risk of significant contamination being present on this site is LOW to MEDIUM.

Consideration may need to be given to the protection of new service pipes which are to be incorporated into the new development, and therefore a supplementary suite of contamination testing (UKWIR suite) may be required to meet the requirements of the Utility service providers to satisfy their own pipe selection risk assessment (PSRA) once the location and depth of future services have been determined.

The risk of hazardous ground gases from on-site and off-site sources is considered LOW, due to the lack of hazardous ground gas sources within a plausible migration distance (<250m) of the site's boundaries. Therefore, a detailed ground gas risk assessment is not required for the proposed development.

## 8.0 Contamination and Ground Gas Risk Assessment (Cont'd)

| Potential source     | Pathway   | Receptor  | Pollutant linkage / assessed risk |
|----------------------|---|---|-----------------------------------|
| Made Ground Deposits | Dermal contact and ingestion / inhalation of contaminated soil and dust                             | Human site users - Construction workers and end-users               | LOW risk                          |
|                      | Air – Inhalation of vapours (indoor & outdoor)  |   | LOW risk                          |
|                      | Plant uptake, consumption of homegrown vegetables   | End-users   | No pathways present               |
|                      | Migration through services  | End-users   | LOW risk                          |
|                      | Direct contact with building materials  | Building materials (concrete)                                       | LOW to MEDIUM risk                |
|                      | Surface run-off, vertical and lateral infiltration / leaching, and migration of mobile contaminants | Potential shallow groundwater within superficial deposits           | LOW to MEDIUM risk                |
|                      | Contaminated soils  | Flora and Fauna in soft landscaping on completion of building works | LOW to MEDIUM risk                |
| Ground gas           | Lateral & vertical migration  | End-users (Asphyxiation, fire & explosion)                          | LOW risk                          |
| Radon gas            | Lateral & vertical migration  | End-users (Carcinogenic)  | LOW risk                          |

At this stage, made ground deposits are initially expected to be present over the site area. It would be prudent to assess the levels of contamination present within the made ground deposits present over the site to determine the suitability for their intended change of end-use. Representative samples of soil can be screened for standard metals and semi-metals including As, Cd, Cr (III & VI), Cu, Hg, Ni, Pb, Se, Zn, CN, as well as Polycyclic Aromatic Hydrocarbons (PAH's – 16 USEPA Specification), Petroleum Hydrocarbons (Aliphatic / Aromatic split) and Asbestos screening. Laboratory testing should also be undertaken on samples of natural and made ground soils for naturally aggressive chemicals (pH value and soluble sulphate) which could have a potential effect on buried concrete.

## 9.0 Geotechnical Risk Assessment

The ground conditions below the site are expected to comprise made ground, overlying bedrock deposits comprising the Pennine Lower Coal Measures Formation. The anticipated ground profile for this site has been summarised in the Table on the following page.

## 9.0 Geotechnical Risk Assessment (Cont'd)

| Strata type                           | Anticipated thickness | Groundwater  | Comments   |
|---------------------------------------|-----------------------|--|--|
| Made Ground                           | <1m                   | None anticipated although trapped pockets of water may be present  | Made ground deposits are expected, the type and thickness of which are unknown at this stage |
| Pennine Lower Coal Measures Formation | >50m                  | Groundwater levels within this formation are expected to be present at depth. These deposits have been designated as a Secondary A Aquifer | Rockhead is expected at shallow depth and comprise of mudstone, sandstone or siltstone       |

A summary of the anticipated potential risks associated with the geotechnical issues and hazards identified for this site can be seen in the Table below and on the following page.

The definitions for the allocated level of risk(s) are as follows.

- ▼ LOW risk – unlikely to impact on the proposed development
- ▼ MEDIUM risk – may have a significant impact on the proposed development
- ▼ HIGH risk – likely to have a significant impact on the proposed development

| Issue or hazard          | Level of potential risk | Comments  |
|--------------------------|-------------------------|---|
| Made Ground              | LOW to MEDIUM risk      | Made Ground deposits are expected across the site area  |
| Natural deposits         | LOW risk                | The natural deposits are expected to comprise the Pennine Lower Coal Measures Formation   |
| Shallow groundwater      | LOW risk                | Groundwater is anticipated to be present at depth within the bedrock deposits   |
| Stability of excavations | LOW risk                | Within future excavations, made ground and natural deposits could be unstable below depths of c.1.20m and adequate lateral support will be required |
| Sub-surface structures   | LOW to MEDIUM risk      | Any sub-structures encountered during the site works should be grubbed up and removed off site  |
| Shallow coal workings    | LOW risk                | The CMRA has concluded that the site lies in a DLRA, therefore shallow coal workings are not expected   |

## 9.0 Geotechnical Risk Assessment (Cont'd)

| Issue or hazard               | Level of potential risk | Comments   |
|-------------------------------|-------------------------|--|
| Mine entries (shafts / adits) | LOW risk                | No mine entries are recorded within 100m of the site   |
| Control of surface drainage   | LOW to MEDIUM risk      | Conventional SuDS (i.e. soakaways) may be viable for this site. Confirmatory testing should be completed to determine the true suitability |

Based on the various data sources reviewed, the foundation options given in the Table below are likely to be available for the proposed development.

| Foundation type                  | Anticipated depth to bearing stratum | Maximum allowable bearing pressure                   | Comments   |
|----------------------------------|--------------------------------------|--|--|
| Shallow conventional foundations | Between 1m and 2m                    | Between 75kN/m <sup>2</sup> and 150kN/m <sup>2</sup> | Where thin deposits of made ground are present over competent natural deposits, this foundation option would be the most feasible for the proposed development |
| Deep Trench Foundations          | Between 2m and 3m                    | >100kN/m <sup>2</sup>                                | Feasible where made ground deposits do not exceed beyond 3m in thickness, and competent natural deposits are present   |
| Raft                             | Up to 1m                             | 40kN/m <sup>2</sup> and 75kN/m <sup>2</sup>          | If the made ground and initial natural deposits are poor in nature, then a raft foundation may be considered   |

Prior to the commencement of the development, it is recommended that a programme of appropriate geotechnical intrusive investigation work is carried out across the site to determine the ground conditions with more certainty.

## 10.0 Further Recommendations

It is recommended that appropriate site-specific investigation works forming a detailed Phase II Ground Investigation be completed for this site, prior to commencing with the proposed residential development.

This investigation should include for the items listed on the following page or similar exploratory work.

## 10.0 Further Recommendations (Cont'd)

- ▼ Undertake a series of shallow percussion boreholes, including appropriate insitu geotechnical testing to help determine ground conditions with more accuracy
- ▼ Undertake appropriate geotechnical laboratory classification testing, dependant on the soils / deposits encountered below the site area, and pH and soluble sulphate testing
- ▼ Undertake appropriate confirmatory contamination screening on selected samples of made ground recovered from site to confirm the suitability of these deposits to remain onsite given the proposed change of end-use to Residential with homegrown produce. The samples of soil collected should also be forwarded to a UKAS and MCERTS accredited laboratory
- ▼ Production of a Phase II Ground Investigation Report, to include a Ground Contamination Risk Assessment

Furthermore, prior to site investigation works commencing, all existing utilities / services should be identified and recorded, such that any potential damage to services crossing the site can be prevented, as well as ensuring the Health and Safety of all future site workers.

**Yorkshire**

**Published 1854**

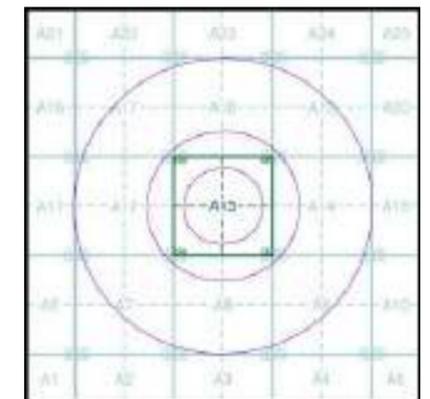

**Source map scale - 1:10,560**

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

## Huddersfield

Published 1984

Source map scale - 1:10,000

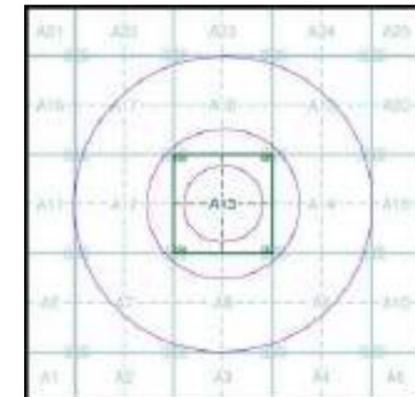

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

## 10k Raster Mapping

Published 2000

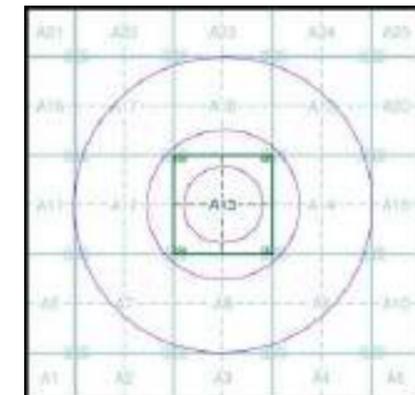

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

## VectorMap Local

Published 2024

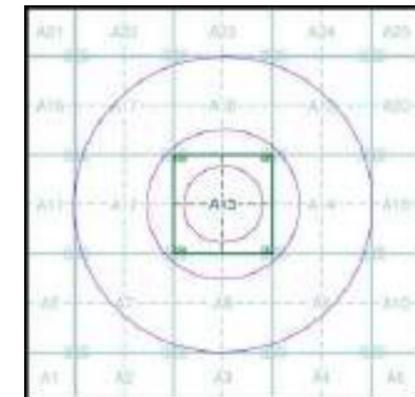

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Yorkshire

Published 1893

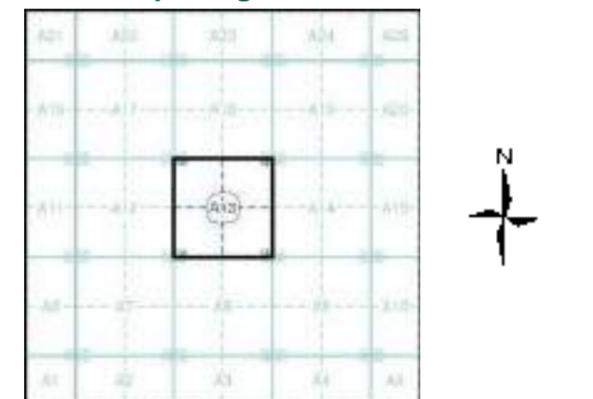

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

## Supply of Unpublished Survey Information

Published 1975

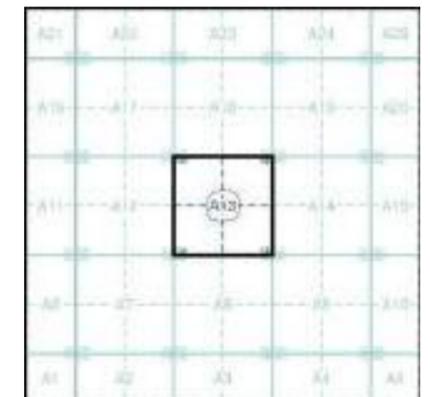

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

### Additional SIMs

Published 1983 - 1990

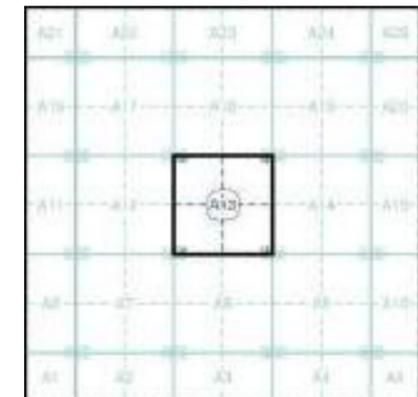

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

**Additional SIMs**

**Published 1988 - 1991**

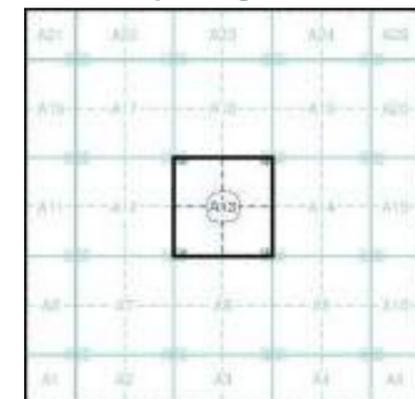

**Source map scale - 1:1,250**

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

## Large-Scale National Grid Data

Published 1993

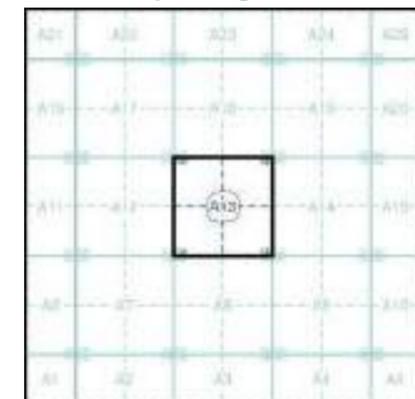

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

#### Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

#### Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

#### Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

#### Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

### Geology 1:50,000 Maps

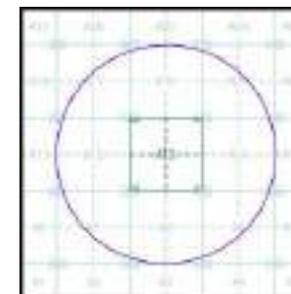

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

### Artificial Ground and Landslip

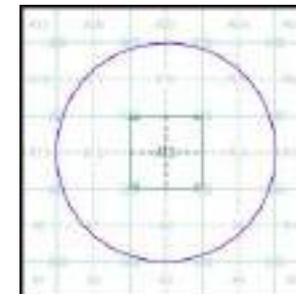

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

### Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

### Bedrock and Faults

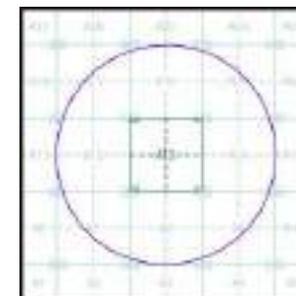

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

### Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

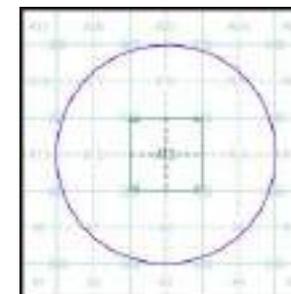

### Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

# Section 1 – Mining activity and geology

## **Past underground mining**

No past mining recorded.

## **Probable unrecorded shallow workings**

None.

## **Spine roadways at shallow depth**

No spine roadway recorded at shallow depth.

## **Mine entries**

None recorded within 100 metres of the enquiry boundary.

## **Abandoned mine plan catalogue numbers**

None available.

## **Outcrops**

No outcrops recorded.

## **Geological faults, fissures and breaklines**

No faults, fissures or breaklines recorded.

## **Opencast mines**

None recorded within 500 metres of the enquiry boundary.

## **Coal Authority managed tips**

None recorded within 500 metres of the enquiry boundary.

## Section 2 – Investigative or remedial activity

Please refer to the 'Summary of findings' map (on separate sheet) for details of any activity within the area of the site boundary.

### Site investigations

None recorded within 50 metres of the enquiry boundary.

### Remediated sites

None recorded within 50 metres of the enquiry boundary.

### Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

### Mine gas

None recorded within 500 metres of the enquiry boundary.

### Mine water treatment schemes

None recorded within 500 metres of the enquiry boundary.

## Section 3 – Licensing and future mining activity

### Future underground mining

None recorded.

### Coal mining licensing

None recorded within 200 metres of the enquiry boundary.

### Court orders

None recorded.

### Section 46 notices

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

### Withdrawal of support notices

The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

### Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

## Section 4 – Further information

Based on the responses in this report, no further information has been highlighted.

### Future development

If development proposals are being considered, technical advice relating to both the investigation of coal and former coal mines and their treatment should be obtained before beginning work on site. All proposals should apply specialist engineering practice required for former mining areas. No development should be undertaken that intersects, disturbs or interferes with any coal or coal mines without first obtaining the permission of the Coal Authority.

**MINE GAS:** Please note, if there are no recorded instances of mine gas within 500m of the enquiry boundary, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded. Developers should be aware that the investigation of coal seams, mine workings or mine entries may have the potential to generate and/or displace underground gases. Associated risks both to the development site and any neighbouring land or properties should be fully considered when undertaking any ground works. The need for effective measures to prevent gases migrating onto any land or into any properties, either during investigation or remediation work, or after development must also be assessed and properly addressed. In these instances, the Coal Authority recommends that a more detailed Gas Risk Assessment is undertaken by a competent assessor.

## Section 5 – Data definitions

The datasets used in this report have limitations and assumptions within their results. For more guidance on the data and the results specific to the enquiry boundary, please **call us on 0345 762 6848** or **email us at [groundstability@coal.gov.uk](mailto:groundstability@coal.gov.uk)**.

### Past underground coal mining

Details of all recorded underground mining relative to the enquiry boundary. Only past underground workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination, will be included.

### Probable unrecorded shallow workings

Areas where the Coal Authority believes there to be unrecorded coal workings that exist at or close to the surface (less than 30 metres deep).

### Spine roadways at shallow depth

Connecting roadways either, working to working, or, surface to working, both in-seam and cross measures that exist at or close to the surface (less than 30 metres deep), either within or within 10 metres of the enquiry boundary.

### Mine entries

Details of any shaft or adit either within, or within 100 metres of the enquiry boundary including approximate location, brief treatment details where known, the mineral worked from the mine entry and conveyance details where the mine entry has previously been sold by the Authority or its predecessors British Coal or the National Coal Board.

### Abandoned mine plan catalogue numbers

Plan numbers extracted from the abandoned mines catalogue containing details of coal and other mineral abandonment plans deposited via the Mines Inspectorate in accordance with the Coal Mines Regulation Act and Metalliferous Mines Regulation Act 1872. A maximum of 9 plan extents that intersect with the enquiry boundary will be included. This does not infer that the workings and/or mine entries shown on the abandonment plan will be relevant to the site/property boundary.

### Outcrops

Details of seam outcrops will be included where the enquiry boundary intersects with a conjectured or actual seam outcrop location (derived by either the British Geological Survey or the Coal Authority) or intersects with a defined 50 metres buffer on the coal (dip) side of the outcrop. An indication of whether the Coal Authority believes the seam to be of sufficient thickness and/or quality to have been worked will also be included.

### Geological faults, fissures and breaklines

Geological disturbances or fractures in the bedrock. Surface fault lines (British Geological Survey derived data) and fissures and breaklines (Coal Authority derived data) intersecting with the enquiry boundary will be included. In some circumstances faults, fissures or breaklines have been known to contribute to surface subsidence damage as a consequence of underground coal mining.

### **Opencast mines**

Opencast coal sites from which coal has been removed in the past by opencast (surface) methods and where the enquiry boundary is within 500 metres of either the licence area, site boundary, excavation area (high wall) or coaling area.

### **Coal Authority managed tips**

Locations of disused colliery tip sites owned and managed by the Coal Authority, located within 500 metres of the enquiry boundary.

### **Site investigations**

Details of site investigations within 50 metres of the enquiry boundary where the Coal Authority has received information relating to coal mining risk investigation and/or remediation by third parties.

### **Remediated sites**

Sites where the Coal Authority has undertaken remedial works either within or within 50 metres of the enquiry boundary following report of a hazard relating to coal mining under the Coal Authority's Emergency Surface Hazard Call Out procedures.

### **Coal mining subsidence**

Details of alleged coal mining subsidence claims made since 31 October 1994 either within or within 50 metres of the enquiry boundary. Where the claim relates to the enquiry boundary confirmation of whether the claim was accepted, rejected or whether liability is still being determined will be given. Where the claim has been discharged, whether this was by repair, payment of compensation or a combination of both, the value of the claim, where known, will also be given.

Details of any current 'Stop Notice' deferring remedial works or repairs affecting the property/site, and if so the date of the notice.

Details of any request made to execute preventative works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991. If yes, whether any person withheld consent or failed to comply with any request to execute preventative works.

### **Mine gas**

Reports of alleged mine gas emissions received by the Coal Authority, either within or within 500 metres of the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission. Please note, if there are no recorded instances of mine gas reported, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded.

### **Mine water treatment schemes**

Locations where the Coal Authority has constructed or operates assets that remove pollutants from mine water prior to the treated mine water being discharged into the receiving water body.

These schemes are part of the UK's strategy to meet the requirements of the Water Framework Directive. Schemes fall into 2 basic categories: Remedial – mitigating the impact of existing pollution or Preventative – preventing a future pollution incident.

Mine water treatment schemes generally consist of one or more primary settlement lagoons and one or more reed beds for secondary treatment. A small number are more specialised process treatment plants.

### **Future underground mining**

Details of all planned underground mining relative to the enquiry boundary. Only those future workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination will be included.

### **Coal mining licensing**

Details of all licenses issued by the Coal Authority either within or within 200 metres of the enquiry boundary in relation to the under taking of surface coal mining, underground coal mining or underground coal gasification.

### **Court orders**

Orders in respect of the working of coal under the Mines (Working Facilities and Support) Acts of 1923 and 1966 or any statutory modification or amendment thereof.

### **Section 46 notices**

Notice of proposals relating to underground coal mining operations that have been given under section 46 of the Coal Mining Subsidence Act 1991.

### **Withdrawal of support notices**

Published notices of entitlement to withdraw support and the date of the notice. Details of any revocation notice withdrawing the entitlement to withdraw support given under Section 41 of the Coal Industry Act 1994.

### **Payment to owners of former copyhold land**

Relevant notices which may affect the property and any subsequent notice of retained interests in coal and coal mines, acceptance or rejection notices and whether any compensation has been paid to a claimant.

The map highlights any specific surface or subsurface features within or near to the boundary of the site.

**Key**

Approximate position of the enquiry boundary shown
