

Consultation Response from KC Waste Strategy
2025/91579 The Homestead, Hurst Knowle, Almondbury, Huddersfield, HD5 8SG
Demolition of the former Homestead care home and erection of 28 dwellings, comprising 20 apartments and 8 bungalows, with access from Hurt Knowle and associated external works including landscaping
Date Responded: 28/10/2025 Responding Officer: Alan Smith Responding Ref: WPS 25 050

1. Introduction

This response is provided by the Waste Collection Authority (WCA) and outlines operational requirements for waste storage and collection. These comments aim to support compliance with Kirklees Local Plan policies LP24 (d.vi), LP43, and the Highway Design Guide SPD. The aim is to achieve a safe and efficient waste collection service.

Section 45(1)(a) of the Environmental Protection Act 1990 places a duty on the Waste Collection Authority (WCA) to arrange for the collection of household waste within its area. Regardless of whether a private contractor is engaged, the WCA must ensure that there is adequate on-site waste storage capacity, suitable access for collection vehicles, and that, should the responsibility for collection revert to the WCA in the future, the process can be carried out efficiently.

The Council takes the issue of bin blight seriously and encourages developers to ensure that the street scene for new developments is not spoilt by the poor design for refuse storage and collection

2. Waste Storage Requirements

Bungalows:

A new drawing has been submitted, "*Dwg No. H24-HS – 003 Rev K*".

The drawing clearly shows storage capacity for three wheeled bins at each of the bungalows. The Bin Collection Point (BCP) for each property still needs to be marked on the drawing.

- **Bin Collection Point:**
 - No gradients steeper than 1:12 or steps from storage area to BCP
 - Located adjacent to an adoptable highway
 - Solid, smooth surface required, resistant to constant wear and tear

Apartments:

A revised drawing of the apartment bin store shows space for 7 x 1,100L bins, but the layout is smaller than originally proposed and requires bins to be stored end-on. This configuration prevents residents from identifying bin types, which is problematic, especially with upcoming Simpler Recycling legislation requiring further waste separation. Additionally, this configuration allows no provision for future food waste containers.

The bin store needs to be made larger so that waste containers can face forwards.

- **Bin storage location:**
 - No gradients steeper than 1:12 or steps
 - Located at least 6m away from fire exits, doors and windows
 - Not located underneath fire escapes
 - Where the containers cannot be located 6m away from a property then it is necessary that the adjacent structure is fire resistant, which has a resistance to fire of 30 minutes

3. Phased Development Considerations

For phased occupation:

- Temporary waste storage and collection arrangements must be approved prior to first occupation
- WCA will not collect from incomplete sites
- Developers must bulk order bins for residents via: trade.waste@kirklees.gov.uk

4. Refuse Collection Vehicle (RCV) Access

- The WCA will not enter:
 - Private drives
 - Roads not built to an adoptable standard
 - Active construction sites
- Road layout must:
 - Enable looped access (preferred over cul-de-sacs)
 - Where applicable, turning heads must be suitable for an 11.85m RCV
 - Turning areas must be made active to avoid them being used for additional parking
- Reversing distance for an RCV must not exceed 12m (WISH guidance)

5. Requested Planning Conditions

- **Pre-Occupation Waste Strategy**
Prior to commencement the developer must submit for approval details for bin storage, screening, BCPs, and RCV access. The approved details shall be provided before first occupation and shall be so retained thereafter.
- **Phased Occupation Waste Management**
Prior to commencement the developer must, where applicable, submit for approval temporary waste collection arrangements if the site becomes occupied prior to completion. The approved details shall be provided before first occupation and shall be so retained thereafter.

6. Policy Context

- **LP24 (d.vi)**: Requires unobtrusive, well-designed waste facilities
- **LP43**: Supports waste minimisation and recovery
- **National Planning Policy for Waste (5.8)**: Adequate storage facilities at residential premises
