☒ Yes

☐ No

There is currently limited suitable agricultural buildings on the farm for the storage of feedstuffs, hay and straw, machinery is partly stored outside on the land.

Demand for hay and straw is very high in the area due to poor harvests and increasing demands from expanding livestock farms, hay cannot be stored outside without being wrapped in plastic which is both costly and damaging to the environment. Straw which is stored outside can experience waste of up to 30% due to rain damage and rot. By storing the farms hay and straw inside there will be a significant increase in its feed value and reduced wastage.

There is also a need for a dry store for the safe storage of the farms other feedstuffs.

Is the proposed development designed for the purposes of agriculture?

☒ Yes

☐ No

If yes, please explain why

The steel portal frame design allows for quick and easy construction and provides a good storage area clear of internal divides. The use of concrete panels allows for a strong supporting structure which can both contain materials and exclude people and livestock. Concrete is easily cleaned to allow for hygienic conditions.

Yorkshire board timber cladding allows for ventilation while preventing much of the prevailing weather entering the building. The construction is cost effective and provides secure storage.

The use of fibre cement roof sheets allows for cost effective construction which provides a long lasting strong material suitable for agricultural storage.
