Please redact my name and address. The proposed buffer is completely insufficient to protect an ancient woodland. 15m is not enough to protect the woodland from the damage caused by construction, and later habitation. As per the government website, it states 15m is the bare minimum and a larger buffer zone is required where the site is close to a residential area. Additionally this buffer zone needs to consist of semi natural habitats so more clarity is needed on the hedging, use of plants etc.
