

Appendix A – Climate Change Statement

Climate Change Statement for Planning Applications

Part 1: Applicant details

Name of applicant/agent	Liam Halliday
Site Address	23 Kew Hill Huddersfield HD3 3SY
Description of Development	Extension to rear of property/balcony/carport

Part 2: Climate Change Mitigation measures

Please respond to the following questions considering the measures set out in the Climate Change Guidance note:
Q1: What measures have been/will be taken to reduce the energy demand associated with your proposed development beyond the minimum required in Building Regulations? (See section 2)
The plan/proposal will not require any further energy consumption - it is an open structure, and such is using an existing opening for glas/window. Any further change we would consider negligible.
Q2: What measures have been/will be taken to limit the carbon consumed through the implementation and construction processes, e.g. by reusing existing on-site materials or sourcing materials locally? (See section 3)
The proposal/plan has been drawn and designed with the most minimal of construction and locally used materials such as Oak. This will be contracted to a registered company to construct/install. Whereas a fully enclosed structure could have been designed which required, stone, loss of light and power to.
Q3: What measures have been/will be taken to utilise renewable or low carbon energy sources? (See section 4)

Whilst the property does not currently allow for solar or other such renewables I would

Q4: What measures have been/will be taken to ensure the building design and layout has been optimised to energy efficiency beyond the minimum requirements in Part L of the Building Regulations ? (See section 5)

The proposal does not have any thermal efficiency requirements in our opinion as in an open structure.

Q5: What measures have been/will be taken to reduce potential impacts of flooding associated with your proposed development? (See section 6)

As there are no groundworks for the item other saddle stones being placed atop existing ground - the potential beyond what is already existing pre proposal will remain the same.

Q6: What measures have been/will be taken to reduce water stress associated with your proposed development? (e.g. Water retention and minimisation measures) (See sections 7 and 8)

As there are no groundworks for the item other saddle stones being placed atop existing ground - the potential beyond what is already existing pre proposal will remain the same. The structure will be created to correctly drain to the existing area which is already subject to usual water/rainfall.

Q7: What measures have been/will be taken to provide biodiversity net gains? (See section 8)

Due to the nature of the proposal - we see no change in the biodiversity metric of the property.

Q8: What measures have been/will be taken to reduce air pollution associated with your proposed development? (See section 9)

On consideration, this proposal creates no change in air pollution measures, as is currently on a back garden plot, of which is used for the same recreational means.
