Subject: 2025/92301 at location Land at, Windmill Lane, High Flatts, Huddersfield, HD8 8XU

Please see ecological commentary below:

Designations

No issue

Onsite habitats and species

Overall, I have no objection to the development.

No PEA has been provided, however given the worked I don't believe that it will be warranted.

As the hedgerow directly adjacent to the site (west) are to be retained – trees and hedgerows protection, and lighting strategy for bats and birds will be conditioned.

An informative for birds will be included.

BNG

The report and metric indicate a net loss of 0.25 habitat units. There is a deficit of 0.29 habitat units for a statutory 10% net gain.

It is noted that 0.17 habitats units are intended to be created post development.

We consider that the onsite element of the BNG proposal will not result in significant onsite gain as it would be delivered by. This does therefore not need to be secured for 30 years but could be secured by a simple landscaping condition, if appropriate, to ensure it is provided and maintained for an aftercare period.

If offsite gain is required, it will need to be secured with a section 106 agreement. If a section 106 agreement is needed, we recommend the applicant provides sufficient information for the heads of terms of an agreement prior to determination of the application

In addition to the information already provided, this information would comprise:

- A plan that follows the UK Habitat Classification showing the spatial locations of the habitats represented in the enhancement and/or creation tabs of the biodiversity metric (i.e. the target habitats).
- The georeferenced spatial data used to create both above plans (in either .shp or .gpkg format) and written permission to share this data with West Yorkshire Records Centre.
- A 30-year Habitat Management and Monitoring Plan (HMMP)

Reason: To ensure the development delivers a biodiversity net gain on site in accordance with Schedule 7A of the Town and Country Planning Act 1990

Suggested conditions

Lighting strategy

No works are to commence unless a detailed lighting scheme, developed in accordance with established guidance (e.g. Bat Conservation Trust and Institute of Lighting Professionals (2023) Bats and Artificial Lighting at Night), has been drafted and agreed with the council. The Sensitive Lighting Strategy will demonstrate that the proposed lighting will not impact upon ecological networks and/or sensitive features. Thereafter the agreed lighting scheme shall be implemented, subject to any variations approved in writing by the planning authority. All external lighting shall be installed strictly in accordance with the specifications and locations set out within the Lighting Strategy.

Reason: In the interests of biodiversity and in accordance with Policy LP30 and NPPF15

Tree protection

A Hedgerow and Tree Protection Plan detailing measures for the protection of trees and hedgerows during the works will be submitted to and approved by the LPA prior to the commencement of works on site, including site clearance and delivery of materials.

Hedgerow and tree protection measures will include temporary fencing for the protection of hedgerows in accordance with BS 5837:2012 Trees in relation to design, demolition and construction – Recommendations. Any alternative fencing type or position not in accordance with BS 5837:2012 will be agreed in writing by the LPA prior to the start of development.

The root protection fencing will define the works exclusion zone around hedgerows and trees. Activities liable to be harmful to hedgerows and trees are prohibited within this exclusion zone, unless agreed in writing with the LPA. The approved hedgerow and tree protection measures will remain in place until the completion of development or unless otherwise agreed in writing with the LPA.

Reason: In the interests of biodiversity and in accordance with Policy LP30 and NPPF15

Informatives

Birds

All works should be timed to occur outside nesting bird season (typically March to August, inclusive). If this is not possible all potential bird nesting opportunities must be checked by a suitably experienced ecologist within 24 hours prior to works. If any active nests are found, the ecologist should advise on suitable species-specific works exclusion zones. The exclusion zones should be regularly monitored by the ecologist and remain in place until the young have fledged the nest or the nests are otherwise deserted.

Reason: In order that the proposals are implemented in accordance with the Wildlife and Countryside Act 1981 (as amended).

Many thanks,
Katie
