<p>Dear sirs, it has been noted that the design levels shown along the sites south eastern boundary, adjacent to the existing properties. Stand quite substantially higher, than that of the existing. As does the new road layout behind these. Please could some sectional elevations be provided here. Further level information also appears to be a miss within this latest submission.</p> <p>I would also like to highlight that per the FRA there has been no resubmitted plans, outlining preventative measures that take into account the likelehood of overland flooding to the existing properties. Either during the construction phase or upon completion. Please could this be sought.</p>
