

Measures to limit carbon emissions

We have reduced the carbon emissions from our homes by improving energy efficiency and switching to renewable energy sources. We have achieved this by

- **Insulation:**

The insulation in walls, roofs, and floors is designed to meet the current building regs, therefore lowering the amount of heat input needed.

- **Air tightness:**

The air pressure is designed to be less than 4m³/h.m²

- **Energy-Efficient Appliances:**

Replace old appliances with Energy Star-rated models, which use less energy and water.

- **Lighting:**

LED bulbs, which consume significantly less energy than traditional incandescent bulbs.

- **Heating and Cooling:**

Efficient boilers with time and temperature zone controls.

- **Solar Panels:**

All plots are provided with solar PV
