

Good points

- + Completely recycled plastic
- + Humidity sensor and CO2 control
- + Airflow 368m³/h
- + Controllable with smartphone app

Vent-Axia Multihome advance CO2 368m³/h + humidity sensor, CO2 controller and euro plug - AEC

The Vent Axia Multihome is a quiet ventilation box with a very high air output and energy-efficient motor that is ideally suited for both new construction projects and renovation projects. Thanks to the aerodynamic snail housing, the ventilation unit manages to deliver a maximum air flow rate of 300m³/h at 150Pa (depending on the model).

This advance model of the Multihome is equipped with an internal humidity and CO2 sensor, but can also be additionally expanded with CO2, temperature and humidity control, ensuring you always have the desired indoor climate. A presence sensor can also be connected so that the fan automatically switches on when someone is present in the living room, bedroom or office.

Sustainable ventilation

Vent-Axia's Multihome fans are made entirely of recycled plastic so you ventilate not only energy-efficiently but also sustainably!
