

I go to my grandma and grandad's house often and play on the road to the left of the house but because of all the building that there might be an extra 200 cars and at Shepley Spring since it will be a one way system it wont be safe for me to play. Access down Lea Drive in winter will cause a giant hazard, maybe a crash.

I have a little brother who will want to learn to ride his bike, and the quiet roads will become unsafe for him to learn on. It will also become unsafe for me to play out with my friends who live on the streets near to my grandma. The school does bike ability classes and if there are over 200 cars more when they do it there is a chance that one student might get run over.

We should not be building on perfectly well farming land that can grow crops perfectly well that provides us food.

Up at the monument all of that land could be houses all around and by that point no one will want to be living in Shepley so the council will not be getting any money.

It is a threat to Shepley Spring's water supply when digging and making the houses. It could make the employees have to leave the business, and because of the bad water supply the business could be shut down.

Extra building will cause a giant loss of wildlife and habitat and because of this it could cause a mega bad thing so no animals will be able to live, so that will make it a disgusting place to live so even more people will want to leave. I think it should be saved for future generations or places like Arrunden and Shepley wont be as nice, so people that are being brought up in Shepley and Arrunden wont live as nice a life like us.

The Co-op is a small shop for people in Shepley and any more people will make the Co-op need to be bigger. The school is nearly full, what do other kids do because of this they will go to a different school further away and their parents might be late to work.

The main roads are already very busy, and another 200 cars will make it ridiculously busy and not even safe to cross the road if all of this happens
