Dear Mr Milner,

Please find my recommendation in relation to my site visit last week at 8 Cliffe Side Shepley
Huddersfield HD8 8DE:

T3 Acer pseudoplatanus (Sycamore) located roadside top of driveway

Tree 3 recommendation to remove and re plant due to:

Tree has been in decline and now showing serious need for action

Dryads Saddle present – Dryads Saddle (Cerioporus squamosus fungus) causes white rot decay
breaking down the lignin and cellulose affecting the structural integrity of the tree. Tree is
susceptible to branch snapping and failure of the entire tree.
