***DISCLAIMER:** This document was prepared by MTS Environmental Ltd solely on behalf CWT Building Consultants Ltd. MTS accepts no responsibility or liability for any use that is made of this document other than the purpose for which it was originally commissioned and prepared.

This report has been produced solely based on the results provided and further testing may be required to confirm the classification depending on the intended use/disposal. This has been produced to the best knowledge and available guidance at the time of writing this report

Lines of Evidence Comments

This classification is purely based on the sample laboratory data from I2 Analytical (Certificate No.: 23122705), within the Murray Rix ground investigation report for the development of a site at 2 Huddersfield Rd, Mirfield WF14 9DQ.

A total of 8 samples of made ground were analysed in December 2023, taken from depths between 0.10 - 0.20 mbgl. These were tested with I2 Analytical for a chemical analysis suite consisting of metals and 16-EPA PAHs. Sampling procedures have been conducted following WM3 Technical Guidance, further details about the site and sampling methodology are included within the GIS report.

The material has been described as 17 05 04 – Soils and stones other than those mentioned in 17 05 03*. This is a mirror non-hazardous code so chemical analysis is required to confirm that it can be classed as non-hazardous and is not the mirror hazardous code 17 05 03*.

Any determinands which were highlighted as potentially hazardous are discussed below, any other determinands have been shown to be below the respective hazardous thresholds and therefore can be regarded as non-hazardous.

Lead has been reported at elevated concentrations in samples from HP01 and HP05 (884.8 mg/kg and 533.9 mg/kg respectively). The lead species was downgraded from the worst case, lead chromate, due to the total chromium concentrations reported by the lab, to represent lead compounds likely to be found on industrial sites as listed on HazWasteOnline™. The concentration of lead in all 8 samples was found to be below the most stringent hazardous threshold of 1,000 mg/kg under the ECHA CLP and therefore this can be regarded as non-hazardous.

Zinc was also initially highlighted as hazardous due to being associated with the worst case, zinc chromate, this was downgraded as per the above reasoning. Zinc sulphates and chlorides are listed as the next worst-case species; these are of high solubility and therefore would not persist in samples of made ground. Therefore, zinc bis(orthophosphate) has been selected. The concentration of zinc in all eight samples is below the hazardous threshold of 1,271 mg/kg and therefore the zinc concentration can be regarded as non-hazardous.

The pH has not been tested for these 8 specific samples, however within the GIS, it is reported that 3 samples of made ground were analysed and reported pH values of 7.8-9.5; these fall within the non-hazardous range in WM3 guidelines ($2 < \text{pH} < 11.5$) and therefore can be regarded as non-hazardous.

Asbestos was tested in all 8 samples, of which none was detected. However, a previous report by G&M dated November 2022 noted 2 out of 6 analysed samples had tested positive for asbestos. Further sampling was conducted by a Murray Rix Senior Engineer in June 2025 around the area of TP2 as a delineation exercise. Asbestos was noted in 4 out of 6 samples tested at depths of 0.8, 0.9, 1.00 & 1.10 mbgl, with a maximum quantification of 0.003%. It has been stated by CWT Building Consultants, that samples contaminated with asbestos, have been isolated and removed from the site separately.

As can be seen in the Haz Waste Online report based on chemical analyses, and after considering the source of the material and site history, materials from the Mirefield site can be classed as the mirror non-hazardous code 17 05 04 – soils and stones other than those mentioned in 17 05 03*.

This classification is based solely on the supplied data within which certain determinands have not been analysed, which could influence the classification of the material. These include

- TPH
- BTEX and MTBE

It is recommended that any future testing considers these determinands to add certainty to this classification.

A Waste Acceptance Criteria (WAC) test has not been conducted to assess the materials suitability for inert landfill. Under the Waste Framework Directive (WFD), non-hazardous wastes are suitable for non-hazardous landfill without the need for additional WAC testing.

Waste Classification Report

HazWasteOnline™ classifies waste as either **hazardous** or **non-hazardous** based on its chemical composition, related legislation and the rules and data defined in the current UK or EU technical guidance (Appendix C) (note that HP 9 Infectious is not assessed). It is the responsibility of the classifier named below to:

- understand the origin of the waste
- select the correct List of Waste code(s)
- confirm that the list of determinands, results and sampling plan are fit for purpose
- select and justify the chosen metal species (Appendix B)
- correctly apply moisture correction and other available corrections
- add the meta data for their user-defined substances (Appendix A)
- check that the classification engine is suitable with respect to the national destination of the waste (Appendix C)

JT2NC-P3HXO-KMJEX

To aid the reviewer, the laboratory results, assumptions and justifications managed by the classifier are highlighted in **pale yellow**.

Report is invalid if pages are removed.

Appendix A: Classifier defined and non GB MCL determinands

• lead compounds with the exception of those specified elsewhere in this Annex (worst case)

GB MCL index number: 082-001-00-6

Description/Comments: Worst Case: IARC considers lead compounds Group 2A; Probably carcinogenic to humans; Lead REACH Consortium, following MCL protocols, considers lead compounds from smelting industries, flue dust and similar to be Carcinogenic category 1A

Additional Hazard Statement(s): Carc. 1A; H350

Reason for additional Hazards Statement(s):

20 Nov 2021 - Carc. 1A; H350 hazard statement sourced from: IARC Group 2A (Sup 7, 87) 2006; Lead REACH Consortium www.reach-lead.eu/substanceinformation.html (worst case lead compounds). Review date 29/09/2015

• acenaphthylene (EC Number: 205-917-1, CAS Number: 208-96-8)

Description/Comments: Data from C&L Inventory Database

Data source: <http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database>

Data source date: 17 Jul 2015

Hazard Statements: Acute Tox. 4; H302 , Acute Tox. 1; H330 , Acute Tox. 1; H310 , Eye Irrit. 2; H319 , STOT SE 3; H335 , Skin Irrit. 2; H315

• acenaphthene (EC Number: 201-469-6, CAS Number: 83-32-9)

Description/Comments: Data from C&L Inventory Database

Data source: <http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database>

Data source date: 17 Jul 2015

Hazard Statements: Eye Irrit. 2; H319 , STOT SE 3; H335 , Skin Irrit. 2; H315 , Aquatic Acute 1; H400 , Aquatic Chronic 1; H410 , Aquatic Chronic 2; H411

• fluorene (EC Number: 201-695-5, CAS Number: 86-73-7)

Description/Comments: Data from C&L Inventory Database

Data source: <http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database>

Data source date: 06 Aug 2015

Hazard Statements: Aquatic Acute 1; H400 , Aquatic Chronic 1; H410

• phenanthrene (EC Number: 201-581-5, CAS Number: 85-01-8)

Description/Comments: Data from C&L Inventory Database

Data source: <http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database>

Data source date: 06 Aug 2015

Hazard Statements: Acute Tox. 4; H302 , Eye Irrit. 2; H319 , STOT SE 3; H335 , Carc. 2; H351 , Skin Sens. 1; H317 , Aquatic Acute 1; H400 , Aquatic Chronic 1; H410 , Skin Irrit. 2; H315

• anthracene (EC Number: 204-371-1, CAS Number: 120-12-7)

Description/Comments: Data from C&L Inventory Database

Data source: <http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database>

Data source date: 17 Jul 2015

Hazard Statements: Eye Irrit. 2; H319 , STOT SE 3; H335 , Skin Irrit. 2; H315 , Skin Sens. 1; H317 , Aquatic Acute 1; H400 , Aquatic Chronic 1; H410

• fluoranthene (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database

Data source: <http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database>

Data source date: 21 Aug 2015

Hazard Statements: Acute Tox. 4; H302 , Aquatic Acute 1; H400 , Aquatic Chronic 1; H410

• pyrene (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014

Data source: <http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database>

Data source date: 21 Aug 2015

Hazard Statements: Skin Irrit. 2; H315 , Eye Irrit. 2; H319 , STOT SE 3; H335 , Aquatic Acute 1; H400 , Aquatic Chronic 1; H410

• indeno[123-cd]pyrene (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database

Data source: <http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database>

Data source date: 06 Aug 2015

Hazard Statements: Carc. 2; H351

• benzo[ghi]perylene (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015

Data source: <http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database>

Data source date: 23 Jul 2015

Hazard Statements: Aquatic Acute 1; H400 , Aquatic Chronic 1; H410

■ **asbestos fibres detected (Yes/No)** (CAS Number: ACM_FIBRES)

Description/Comments: not classified, information only

Data source: N/A

Data source date: 15 Jan 2020

Hazard Statements: None.

Appendix B: Rationale for selection of metal species

arsenic {arsenic trioxide}

Reasonable case CLP species based on hazard statements/molecular weight and most common (stable) oxide of arsenic. Industrial sources include: smelting; main precursor to other arsenic compounds (edit as required)

cadmium {cadmium oxide}

Reasonable case CLP species based on hazard statements/molecular weight, very low solubility in water. Industrial sources include: electroplating baths, electrodes for storage batteries, catalysts, ceramic glazes, phosphors, pigments and nematocides. (edit as required) Worst case compounds in CLP: cadmium sulphate, chloride, fluoride & iodide not expected as either very soluble and/or compound's industrial usage not related to site history (edit as required)

chromium in Cr(VI) compounds {chromium (VI) compounds, with the exception of barium chromate and of compounds specified elsewhere in this Annex}

Worst case species based on hazard statements/molecular weight (edit as required)

copper {dicopper oxide; copper (I) oxide}

Reasonable case CLP species based on hazard statements/molecular weight and insolubility in water. Industrial sources include: oxidised copper metal, brake pads, pigments, antifouling paints, fungicide. (edit as required) Worst case copper sulphate is very soluble and likely to have been leached away if ever present and/or not enough soluble sulphate detected. (edit as required)

lead {lead compounds with the exception of those specified elsewhere in this Annex (worst case)}

There is a limited amount of chromium in these samples and therefore the worst case lead species, lead chromate has been downgraded.

mercury {mercury dichloride}

Worst case CLP species based on hazard statements/molecular weight (edit as required)

nickel {nickel chromate}

Worst case CLP species based on hazard statements/molecular weight (edit as required)

selenium {nickel selenate}

Worst case CLP species based on hazard statements/molecular weight (edit as required)

zinc {trizinc bis(orthophosphate)}

There is not hexavalent chromium to produce hazardous amounts of the worst case zinc chromate. Zinc sulphates and chlorides are highly soluble and so wouldn't persist in excavated soil samples. Therefore the next worst case trizinc bis(orthophosphate) has been selected.

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.2.GB - Oct 2021

HazWasteOnline Classification Engine Version: 2025.225.6743.12238 (13 Aug 2025)

HazWasteOnline Database: 2025.225.6743.12238 (13 Aug 2025)

This classification utilises the following guidance and legislation:

WM3 v1.2.GB - Waste Classification - 1st Edition v1.2.GB - Oct 2021

CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
