Wappy Spring Nano Park

Fence maintenance strategy.

The maintenance strategy for the fencing on this site between the M62 and the Nano Park will be in line with our other sites and also with the inspections carried out for the whole site.

Visual inspection of the fence will take place every 3 months as part of the quarterly site inspection visits. Special attention will be given to this fence as it forms an important boundary to the M62.

Any damage, defect or fault will be remedied immediately but at the longest, within 2 weeks of being identified.

The fence has been designed to be very durable and easy to maintain, but will be monitored as detailed above.
