

PROPOSED CAR PARK PLAN

Scale 1:100

----- New fence to car parking area

New parking area to be created for 4no cars including turning space and gate access into main field. Area to be gravelled. Hatched area shows area of land to be regraded for parking.

New fencing and gates around the car parking area. The new timber fence will be 1500mm high.

A new single gate will provide general access between the field area and the car parking area.

New double gate to be provided to allow tractor access into field area for periodical grass cutting.

The current track into the field is partly hardcore. The full track and car parking area will use matching hardcore to make the ground more durable.

There will only 2 cars at any one time. The space will allow adequate space to turn around for both cars. When the field is used for training there will be a need for 4 car spaces.

Existing banking to be fenced off from access and left to wild. A few native trees and plants will be planted to attract bees and insects, including bee and insect boxes and hedgehog houses. The shrubs are being donated by Holme Valley River Trust to help with their environmental project. These additions will create a sanctuary for small creatures encouraging biodiversity in the area and help maintain the local ecosystem's balance.

Existing gate opening to be widened to 6m. Existing gate to be re-used with additional new gate to match existing. Section of unstable dry stone walling to be rebuilt to accommodate new opening.

Main access gates will be left open when the facility is open.
