

## CLIMATE CHANGE STATEMENT

---

Location	80 Marsh Lane, Shepley, Huddersfield, HD8 8AP
application	Demolition of existing Dwelling/Annex and construction of 3 no. detached dwellings with associated access and parking
client/applicant	Mr M Wright, Mr C Wright & Miss E Wright
job number	25/1273
date	December 2025

---

## Part 1: Applicant details

Name of applicant/agent	Paul Matthews ARCHITECTURAL - agent Mr M Wright, Mr C Wright & Miss E Wright - applicants
Site Address	80 Marsh Lane, Shepley, Huddersfield, HD8 8AP
Description of Development	Demolition of existing Dwelling/Annex and construction of 3 no. detached dwellings with associated access and parking

## Part 2: Climate Change Mitigation measures

Please respond to the following questions considering the measures set out in the Climate Change Guidance note:
Q1: What measures have been/will be taken to reduce the energy demand associated with your proposed development beyond the minimum required in Building Regulations? (See section 2)
<p>This proposed dwellings go above and beyond the baseline/minimum requirements of the building regulations in relation to the conservation of fuel and power along with the carbon footprint of the dwelling.</p> <p>Numerous low carbon aspects have been integrated into the proposals, such as, but not limited to;</p> <ul style="list-style-type: none"><li>• Smart energy metering</li><li>• LED lighting to be installed</li><li>• Materials to be sourced locally where possible</li><li>• Local contractors to be preferred for the development (reducing carbon emissions)</li><li>• EV charging facilities to be installed to each dwelling</li><li>• Soft landscaping within the application site to help minimise surface water run-off</li><li>• Solar panels to each dwelling.</li><li>• Provision of ASHP to each dwelling.</li><li>• Rainwater harvesting</li><li>• Mechanical Heat recovery system to all 3 proposed dwellings</li><li>• High levels of thermal insulation</li><li>• Well sealed buildings with low levels of air leakage, closely designed Passivhaus design standards.</li></ul> <p>Building Regulations applies to this application, subject to a formal approval a Building Control application will be prepared, this will require formal compliance with the Building Regulations.</p>

Q2: What measures have been/will be taken to limit the carbon consumed through the implementation and construction processes, e.g. by reusing existing on-site materials or sourcing materials locally? (See section 3)

Masonry, resulting from demolition, will be set aside for reuse within the development (crushed brickwork/blockwork to save the importation and transport of crushed stone).

All proposed materials (stone, slate, timber, glass, concrete etc) are all fully recyclable.

Q3: What measures have been/will be taken to utilise renewable or low carbon energy sources? (See section 4)

EVCP is proposed to each dwelling as part of the proposals.

Surface water will be harvested for reuse.

Air source heat pumps are proposed to provide heat for the well insulated proposed dwellings.

Solar arrays are proposed to each of the properties.

Each property will have smart energy metering

LED lighting to be installed throughout reducing the electric demand/consumption.

Materials to be sourced locally where possible

Local contractors to be preferred for the development (reducing carbon emissions)

Mechanical Heat recovery system to all 3 proposed dwellings

High levels of thermal insulation with well sealed dwellings with low levels of air leakage, closely designed Passivhaus design standards.

Q4: What measures have been/will be taken to ensure the building design and layout has been optimised to energy efficiency beyond the minimum requirements in Part L of the Building Regulations ? (See section 5)

As noted within Q1 – The proposals goes above and beyond the minimum requirements of the Building Regulations in relation to the DTER (Dwelling Target Emission Rate). The integration of renewables will result in allow carbon property with a very good thermal efficiency/Energy Performance Certificate).

Q5: What measures have been/will be taken to reduce potential impacts of flooding associated with your proposed development? (See section 6)

Flooding does not apply to this proposal.

Q6: What measures have been/will be taken to reduce water stress associated with your proposed development? (e.g. Water retention and minimisation measures) (See sections 7 and 8)

Surface water will be harvested on site for reuse, reducing the reliance of fresh water.

All appliances will have restricted flows to reduce the water consumption of the proposed dwelling in relation to and achieving compliance with the Building Regulations.

Q7: What measures have been/will be taken to provide biodiversity net gains? (See section 8)

The PEA accompanying the application demonstrates the current low value of the site and existing buildings (dwelling and annex). Enhancements are suggested and have been incorporated with in the development.

Q8: What measures have been/will be taken to reduce air pollution associated with your proposed development? (See section 9)

EVCP are proposed to each new dwelling, this will promote the use of an electric vehicle as opposed to current traditional petrol/gas vehicles.

Locally sourced materials will receive preference.

Local contractors will be used wherever possible/practical.

## **Appendix B – Further information**

### **Kirklees Local Plan**

The development plan for the Kirklees Council area ([www.kirklees.gov.uk/localplan](http://www.kirklees.gov.uk/localplan))

### **Planning applications guidance and advice notes**
