Do you wish your comments to be published on the website anonymously?	Yes
<p>I object to the proposal to build on our green belt land. The development would mean a loss of biodiversity in the area. The fields are home to wild life, deers, mice, a variety of bird life including owls and curlews and also bats. Destroying their home would have a devastating impact on the wild life in the area. Traffic would be massively affected. The road is already extremely busy and there are frequent accidents at the near by cross roads by the sovereign pub including fatalities. The housing estate would put the area under more risk of further accidents as the volume of traffic increases. The services to the near by villages would be placed under pressure for example the local villages all ready have issues with frequent burst water pipes Which cause yorkshire water to turn down water pressure to the village of lower cumberworth. This rather than repair the piping they chose to reduce pressure. Adding more houses will surely add more issues to an old water system which is already insufficient and failing for the existing residents. The green belt helps contributes to local adults and children's emotional well-being and mental well-being. Spending time in nature having nature around us is so important for our health and well-being.</p> <p>There are enough houses for sale in the local area already if people want to move to the area we can not justify destroying our beautiful precious green belt land. There is affordable housing Much more affordable than the prices vividly living charge for their properties. As a single person with children I would never be able to consider their prices affordable and I expect the average wage earner wouldn't either. New houses are not required I moved to the area three years ago and there was plenty of choice of different priced properties in different sizes. A google of current property for sale confirms this is still the case, destroying our green belt land for more homes can never be justified.</p>
