

WASTE MANAGEMENT PLAN

Proposed Shepherd's Hut Cross Lane Farm

1. Purpose

This Waste Management Plan has been prepared in support of the proposed shepherd's hut accommodation at Cross Lane Farm.

2. Waste and Recycling Arrangements

The shepherd's hut will be provided with:

- One small bin for non-recyclable waste.
- One small bin for recyclable waste.

These bins will be located within the shepherd's hut site for guest use.

3. Collection and Disposal

Waste and recyclable materials generated by guests will not be presented for collection at the site access.

Instead, the owners/managers of Cross Lane Farm will regularly empty the bins and transfer waste and recyclable materials to the existing refuse and recycling facilities serving Cross Lane Farm.

Collection and disposal will therefore take place through the farm's established waste management arrangements.

4. Conclusion

The proposed arrangements ensure that waste and recycling generated by the shepherd's hut can be managed effectively without the need for additional refuse collection infrastructure or collection from the proposed access point.
