<p>If standing on Heaton Rd looking at 56 Heaton Rd, property is to the right of no. 56. The retaining wall built to the rear garden at no. 56 is to the left of rear garden. This retaining wall has been built lower than the level of rear garden & therefore causing ground movement. land has slipped.</p> <p>greenhouse in rear garden and is located in the top left corner. greenhouse has been in this location for over 10 years with no previous issues. The base to greenhouse is masonry and the bricks have moved causing greenhouse to move. greenhouse is now on unstable ground and has moved.</p> <p>photos should you require.</p> <p>The height of the retaining wall built needs to be increased so it is level with the ground level of rear garden and the gap between the retaining wall and land needs to be back-filled & compacted with topsoil so it is the same height as land. This is required to stop further movement of land and further damage. said to the applicant previously this remedial works needs to occur & invited into back garden to view in person so it is disappointing the planning application makes no mention of the aforementioned works to stop further ground movement.</p>
