**Description Overhead lines application for
replacement of existing open wire
conductors in favour of Aerial
Bunched Conductor**

Recommending Officer John Holmes

DECISION – NO OBJECTIONS

**I hereby authorise no objections to this application for the reasons set
out in the officer's report and recommendation annexed below in
respect of the above matter.**

Kirsty Nicholls

AUTHORISED OFFICER

Date: 07-May-2026

Application no: 2026/90843

Preamble

Northern Powergrid have notified Kirklees Council, as Local Planning Authority, of their intention for replacement of existing open wire conductors in favour of Aerial Bunched Conductor.

AT land at, Hill Top Bank, New Mill, Holmfirth, HD9 7DN

It is stated that the works required are to erect an Aerial Bunched Conductor (ABC) along the route of the existing overhead electric line. It is proposed to erect 685 meters of Aerial bunched Conductor.

The accompanying letter and information provide details, in plan form, of the location of the ABC and also the typical design.

Under section 37 of the Electricity Act 1989, the Secretary of State's consent is generally required before electric lines may be installed above ground. Under the Overhead Lines (Exemption) (England and Wales) Regulations 2009, certain minor works involving the installation of such lines are exempted from the requirement of consent under section 37. This allows, for example, the upgrade of an existing overhead line, subject to the Local Planning Authority determining that no 'significant adverse environmental impact' is likely.

The simplified procedure of this notification is where the applicant submits a notification to the relevant planning authority for proposed works. The relevant planning authority will screen notifications and respond to the applicant within six weeks advising if they have no objections or wish to invoke the full section 37 process for that proposal. Full section 37 applications for overhead lines are made to the Secretary of State for Department for Business, Energy and Industrial Strategy. The section 37 regime enables views to be gathered on any particular overhead line proposal before the Secretary of State makes a decision to grant consent. Views are obtained by the applicant from the relevant planning authority on behalf of the local community, and from statutory bodies with responsibilities for environmental and heritage protection.

Holme Valley Parish Council: Confirm they raise no comments and defer to Kirklees Officer.

Assessment

The revised overhead line would comprise one single strand conductor 'aerial bunched conductor' or ABC conductor in place of the existing two-strand and four strand lines along this section. No other alterations are proposed to the line, poles or supporting structures.

The proposed alteration would have no material impact on the visual amenities of the area. Although it is recognised that ABC conductors comprise a thicker strand of 'cable', this is offset by the neater appearance of a single strand as opposed to two/four strands of conductor.

The land on which the pole would be sited is designated Green Belt within the Kirklees Local Plan. The site is also within Landscape Character Area no.8 of the Holme Valley Neighbourhood Development Plan (LCA 8 - Settled Slopes of the Holme Valley).

Impacts:

Would the overhead line works have a 'significant adverse impact' on natural beauty?

The proposed alteration would have no significant impact on the visual amenities of the area and would be read in the context of the existing site and development already in place. The proposal is not considered to be significantly greater than that of the existing infrastructure.

Would the overhead line works have a 'significant adverse impact' on the conservation of flora, fauna and geological or physiographical features of special interest?

No, there are no trees protected by TPO that would be affected by this change. The nearest protected trees are to the south of the site and whilst close to the development (within 1 – 2 metres) the nature of the proposal is not such that it would affect these trees. Minor works to trees along the route might be required to facilitate the works. However, going forward there would be less conflict with trees arising from one-strand cable than the existing 2-4 strands.

The overhead line would not impact on habitat significantly more than the existing infrastructure and replacement of 2 / 4 strand wires with a single bunched connector is not considered to have a significant impact in terms of wildlife roosting / foraging potential.

Would the overhead line works have a 'significant adverse impact' on protected sites, buildings and objects of architectural, historic or archaeological interest?

The nearest listed building is approximately 160m to the west of the site. Given the nature of the proposal it is considered it would not have a significant impact in this regard which is greater than that of the existing development.

Recommendation

It has been assessed that no 'significant adverse environmental impact' is likely as a result of the replacement of existing open wire conductors in favour of Aerial Bunched Conductor at land at, Hill Top Bank, New Mill, Holmfirth, HD9 7DN

It is recommended that Northern Powergrid be informed that Kirklees Council Local Planning Authority:
