## **PHASE 1: DESK TOP STUDY AND COAL MINING RISK ASSESSMENT**

### **REPORT**

### **STUDIO G ARCHITECTURAL**

### **PROPOSED RESIDENTIAL BUILD**

### **LAND AT PARKTON GROVE**

### **HANGING STONE ROAD**

### **HUDDERSFIELD, HD4 7QU**

**Project No: 25-762**

Prepared By:

Paul Hopkins

Date: 05/12/2025

Approved By:

Darren McGrath

Date: 17/12/2025

The information and / or advice contained in this Phase 1: Desk Top Study and Coal Mining Risk Assessment Report is based solely on, and is limited to, the boundaries of the site, the immediate area around the site, and the historical use(s) unless otherwise stated. This 'Report' has been prepared to collate information relating to the physical, environmental and industrial setting of the site, and to highlight, where possible, the likely problems that might be encountered when considering the future development of this site for the proposed end use. All comments, opinions, diagrams, cross sections and / or sketches contained within the report, and / or any configuration of the findings is conjectural and given for guidance only and confirmation of the anticipated ground conditions should be considered before development proceeds. Agreement for the use or copying of this report by any Third Party must be obtained in writing from Arc Environmental Limited (ARC). If a change in the proposed land use is envisaged, then a reassessment of the site should be carried out.

## 1.0 Introduction

**December 2025**

Arc Environmental Limited were instructed by Studio G Architectural on behalf of Louie Cooper, to undertake a Phase 1: Desk Top Study (DTS) and Coal Mining Risk Assessment (CMRA) Report for land at Parkton Grove, Huddersfield, HD4 7QU, where the proposed development is to construct a residential property with associated areas of hardstanding and soft landscaping.

The primary objectives of this report are to assess the geological, geotechnical and potential ground contamination conditions on and beneath the surface of this site. This Phase 1: DTS and CMRA Report has been carried out generally in accordance with the EA (Environment Agency) guidance for Land Contamination Risk Management (LCRM: October 2020). Based on all the data reviewed, a preliminary Conceptual Site Model (CSM) has been developed to define the scope and extent of any further investigation works deemed necessary, prior to commencing with any future development works.

A site reconnaissance (walkover) survey was completed as part of this study with site photographs included within Appendix I, and all relevant observations noted in Section 2.1 below.

## 2.0 Physical Setting

### 2.1 Site Details: -

**Table 2.1**

<b>Site Name &amp; Address:</b>	Parkton Grove, Huddersfield, HD4 7QU.
<b>National Grid Reference:</b>	414100, 412890 (representative of the central part of the site).
<b>Description of Location:</b>	The site is located in a wooded area c.1.25km northeast of Honley Town centre, and c.3.75km south of Huddersfield town centre to the immediate northeast of Hanging Stone Road.
<b>Site Boundaries:</b>	N = Woodland, E = Parkton Grove & woodland, S = Hanging Stone Road, A616 (Woodhead Road) & woodland & W = Woodland and allotment gardens.
<b>Site Shape:</b>	The site is irregular in layout, occupying a total area of c.0.23 Hectares (Ha).
<b>General Topography:</b>	The site is generally sloping from northeast to southwest from c.115m to c.108m AOD.
<b>Site surfacing:</b>	The site surfacing comprises of predominantly vegetated land with areas of concrete surfacing and a compacted gravel drive in the southern portion of the site.
<b>Above Ground Structures:</b>	A brick wall, a utility pole and a rubble pile are recorded onsite.
<b>Sub-surface Structures &amp; Services:</b>	Services are anticipated to be present beneath the site in relation to the adjacent developments.
<b>Summary of Site History:</b>	The historical Ordnance Survey maps, Landmark Envirocheck Report and other environmental information reviewed indicates that the site was undeveloped from c.1854 until c.1892 when five buildings are recorded onsite. One building is no longer recorded (demolished) by c.1908, and a driveway is recorded onsite by c.1938. Three buildings are no longer recorded (demolished) by c.1961 and a utility pole, brick wall and rubble pile are recorded onsite at present day (c.2025).

## 3.0 Environmental Setting

### 3.1 Site Geology: -

The geological assessment for this site has been based on geological plans and digital online data published by the British Geological Survey (BGS). The following documents have been reviewed as part of this study: -

- Online BGS GeoIndex.
- BGS Sheet SE11SW, 1:10,000 scale, 2000.
- BGS Sheet 77, Huddersfield, Solid & Drift Edition, 1:50,000 scale, 2003.
- Online MRA Interactive Map Viewer.
- Mining Remediation Authority Consultants Mining Report Ref. 51003541985001.

---

## **3.0 Environmental Setting (Cont'd)**

### **3.1 Site Geology (Cont'd): -**

- Envirocheck Report Ref. 391434520\_1\_1.

#### **3.1.1 Made Ground: -**

In accordance with the published BGS maps, significant thicknesses of made ground are not shown to be recorded onsite, however made ground is anticipated to be present in relation to the previous onsite developments and is likely to comprise disturbed natural strata. A rubble pile was noted during the site reconnaissance.

#### **3.1.2 Superficial Deposits: -**

Published geological maps produced by BGS indicate that the site is located in an area where superficial deposits are thin or absent. Some limited superficial deposits or residual soils may be present associated with the weathering of solid geological deposits.

#### **3.1.3 Solid Geology: -**

According to published BGS data, the site is underlain by the Pennine Lower Coal Measures (PLCM). These deposits are typically comprised of interbedded grey mudstone, siltstone, pale grey sandstone and commonly coal seams. BGS maps record the solid geology to the immediate south of the site to consist of the Rough Rock Flags – Sandstone. These deposits typically comprise fine to medium grained, flaggy sandstone.

BGS Maps record the Subcrenatum Marine Band (SMB) is shown to outcrop within the site boundary dipping to the east.

### **3.2 Coal Mining Risk Assessment: -**

In accordance with the Mining Remediation Authority (MRA) Online Interactive Map Viewer, the site lies within a 'Coal Mining Reporting Area'. The site is not recorded to be in an area of defined 'Development High Risk Area' or 'Probable Unrecorded Shallow Workings'. The site is not recorded in an area of 'Past Shallow Coal Mine Workings' and there are no mine entries within the site boundary. The immediately southeast of the site is recorded to be within a defined 'Development High Risk Area' and an area of 'Probable Unrecorded Shallow Workings'.

In order to further assist with this coal mining risk assessment (CMRA) a Consultants Coal Mining Report (ref. 51003541985001) has been obtained from the MRA for this site, and a copy of which is attached in Appendix II. The report records no past workings beneath the site. The report states that there are no probable unrecorded shallow workings beneath the site.

In addition, the report states that there are no coal mine entries recorded within c.100m of the site. There are no spine roadways recorded at shallow depth, no recorded opencast workings, managed tips or gassing sites within c.500m, and no coal mining subsidence claims within c.50m of the site. There are no recorded gas incidents, that required investigation and remediation by the Mining Remediation Authority to mitigate the effects of the mine gas emission.

The Subcrenatum Marine Band (Shelly Mudstone) is recorded to outcrop on the southern portion of the site and is recorded at the base of the Pennine Lower Coal Measures (PLCM). The Rough Rock Flags (RF) are recorded beneath the PLCM, and this geological unit does not contain workable coal seams.

### **3.0 Environmental Setting (Cont'd)**

#### **3.2 Coal Mining Risk Assessment (Cont'd): -**

When reviewing the MRA and BGS information available for the site, it is felt that there is no risk from shallow coal mining activities, and it is felt that no intrusive investigation works are required in relation to potential shallow coal workings beneath the site.

In accordance with the new CL:AIRE guidance 'Good practice for Risk Assessment for Coal Gas Emissions (October 2021), Figure 13.1: Decision support tool for mine gas risk assessment, there is a negligible risk from hazardous ground gas.

#### **3.3 Surface Mineral Extraction:**

There are two extraction features recorded within c.250m of the site. EC Ref. 189 recorded c.75m northwest of the site relates to Hanging Stone Quarry (opencast) extracting sandstone. Status: Ceased. EC Ref. 190 recorded c.145m southeast of the site relates to Timinets (opencast) extracting sandstone. Status: Ceased.

The site does not lie within the Cheshire Brine Subsidence Compensation District, therefore there is no risk of subsidence due to brine extraction.

#### **3.4 Potential Geological Hazards: -**

**Table 3.1**

<b><u>Potential Hazard</u></b>	<b><u>Hazard Potential/Rating</u></b>
<b>Landslide:</b>	Low, very low & moderate hazard
<b>Shrinkable Soils:</b>	No hazard & very low hazard
<b>Collapsible Soils:</b>	Very low hazard
<b>Compressible Soils:</b>	No hazard
<b>Running Sand:</b>	No hazard
<b>Dissolution:</b>	No hazard

#### **3.5 Site Hydrogeology: -**

**Table 3.2**

<b><u>STRATA</u></b>	<b><u>Aquifer / Soil Leachability EA Classification</u></b>	<b><u>Comments</u></b>
<b>Groundwater Vulnerability:</b>	Secondary Bedrock Aquifer – High Vulnerability.	Productive bedrock aquifer / no superficial aquifer. High pollutant speed (300-550mm / year).
<b>Superficial Deposits:</b>	No superficial aquifer.	~
<b>Solid Geology: (Pennine Lower Coal Measures)</b>	Secondary Aquifer – A.	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers.
<b>Water Framework Directive: Solid Geology</b>	Secondary Aquifer – A.	Overall Rating – Poor.

- There are no Source Protection Zones (SPZ) on or within c.1km of the site.
- There are no water abstractions recorded on or within c.250m of the site. EC Ref. 64 recorded c.260m south of the site relates to a borehole extracting groundwater for general use (medium loss) at Cross Heights Truck Sales Ltd. EC Ref. 65 recorded c.266m south of the site relates to a spring at Benjamin Shaws & Sons Ltd.

### 3.0 Environmental Setting (Cont'd)

#### 3.6 Site Hydrology: -

Table 3.3

<u>SURFACE WATER FEATURE</u>	<u>Location</u>	<u>Comments</u>
<b>OS Water Network &amp; GQA Classified River:</b>	Eleven recorded within c.250m.	EC Ref. 74 – 84 relate to the River Holme closest recorded c.43m south of the site. EC Ref. 78 relates to a small lake recorded c.130m south of the site.
<b>Unclassified Watercourse(s), Canals, Ponds, Lakes &amp; Other Bodies of Water:</b>	One recorded onsite.	A small area of saturated ground from surface runoff is recorded in the northern portion of the site.
<b>Flooding from River or Sea: (Fluvial &amp; Tidal)</b>	The site doesn't fall within a designated flood zone II or III for fluvial flooding.	The EA considers the site to be in an area with a very low risk of fluvial flooding (0.1% annual chance).
<b>Surface Water Flooding: (Pluvial)</b>	The published EA data shows that the site is not at significant risk from pluvial flooding.	The EA considers the site to be at a very low risk (>0.1% annual chance) of surface water flooding.
<b>Groundwater Flooding at Surface (BGS):</b>	The site is in an area with the potential for groundwater flooding to occur.	Information obtained by landmark, including published maps indicating that the site has a potential for groundwater flooding to occur at the surface. This information is based on areas which may be potentially influence by geological factors
<u>RAINFALL</u>	<u>Measurements (mm)</u>	<u>Comments</u>
<b>Annual:</b>	1041.25	Based on 'station average' records from Huddersfield, Oakes dated from 1991-2020.
<b>Rainfall: Min (May)</b>	61.68	
<b>Rainfall: Max (Dec)</b>	119.41	

#### 3.7 Radon Assessment: -

The site is recorded to lie within a lower to intermediate probability radon area, with <1 - 10% of homes estimated to be at or above the action level, in accordance with the BGS, National Geoscience Information Service, and their assessment suggests that basic radon protective measures are necessary in the construction of new dwellings or extensions. This BRE Digest, BR211 (2015) Radon: Guidance on protective measures for new buildings, infers the site is situated within a clear grid square (1km), and therefore no radon protective measures are required for the site.

With reference to BGS / UK Radon mapping (dated December 2022), the site falls within a 1km grid squares where some parts are in a band of elevated radon potential of 5-10%. Therefore, a site-specific radon report should be obtained as part of any intrusive investigation works.

#### 3.8 Site Ecology: -

Table 3.4

<u>FEATURES</u>	<u>Location</u>	<u>Comments</u>
<b>Local Nature Reserves:</b>	None recorded within c.250m.	~
<b>Areas of Adopted Green Belt:</b>	One recorded onsite.	EC Ref. 279 relates to Kirklees Unitary Development Plan. Status: Adopted 01/03/1999.
<b>Areas of Unadopted Green Belt:</b>	One recorded onsite.	EC Ref. 280 relates to Kirklees Local Plan. Status: Submission Draft 25/04/2017.
<b>Sites of Special Scientific Interest:</b>	None recorded within c.250m.	~
<b>Nitrate Vulnerable Zone:</b>	None recorded within c.250m.	~

### 3.0 Environmental Setting (Cont'd)

#### 3.8 Site Ecology (Cont'd): -

**Table 3.4 (Cont'd)**

<u>FEATURES</u>	<u>Location</u>	<u>Comments</u>
Ancient Woodlad	One recorded within c.250m.	EC Ref. 274 relates to Park Wood recorded c.8m west of the site.

There was no visual evidence to suggest that the site is affected by the presence of invasive weed species such as Japanese Knotweed, Giant Hogweed or Himalayan Balsam, at the time of the recent site survey, although a site-specific survey has not been carried out. Therefore, site awareness during any future investigation works and during the construction phase for any potential invasive weed species would be considered prudent.

#### 3.9 Estimated Soil Chemistry: -

Data provided by the BGS in relation to estimated soil chemistry for a number of key metals and metalloid elements is summarised in Table 3.5 below.

**Table 3.5**

<u>Element</u>	<u>Soil Sample Type</u>	<u>Estimated Soil Concentrations (mg/kg)</u>
Arsenic	Rural Soil	<15 - 35
Cadmium	Rural Soil	<1.8
Chromium (total)	Rural Soil	40 – 90
Lead	Rural Soil	<100
Nickel	Rural Soil	<15 - 30

Note; the references to the anticipated background concentrations of contaminants, sourced from the BGS, should not be relied upon. They are not site-specific and do not represent the condition of the ground at the proposed development site.

### 4.0 Industrial Setting

#### 4.1 Site History: -

Copies of historical OS maps covering the site area & adjacent land are included in Appendix III and a summary of the site history based on these plans, is provided in Table 4.1 below and on the following page.

**Table 4.1**

Significant features / potential contamination sources highlighted in bold.

<u>Date</u>	<u>Site</u>	<u>Adjacent Areas</u>
c.1854	The site is recorded as undeveloped land.	A <b>railway</b> is recorded c.80m northeast of the site with a railway tunnel c.200m north of the site. A <b>sandstone quarry</b> is recorded c.50m northwest of the site. A <b>woollen mill</b> is recorded c.60m south of the site and an <b>old quarry (sandstone)</b> is recorded c.220m southeast of the site. The <b>Hanging Stone</b> is recorded c.150m northwest of the site, and <b>Steps Mill (woollen)</b> is recorded c.230m south of the site. A road is recorded immediately west of the site.
c.1892 - c.1894	A <b>building</b> is recorded in the western portion of the site. <b>Four small buildings</b> are recorded in the northeastern portion of the site.	<b>Parkton Grove</b> is recorded c.30m east of the site. A <b>pump</b> is recorded at the <b>Hanging Stone</b> , and a <b>reservoir</b> is recorded c.200m southwest of the site. <b>Tanks and a mill pond</b> are recorded c.50m south of the site associated with <b>Lower Steps Mill</b> . A <b>well</b> is recorded c.200m southeast of the site. An <b>area of infilled land</b> is recorded c.30m west of the site.

## 4.0 Industrial Setting (Cont'd)

### 4.1 Site History (Cont'd): -

**Table 4.1 (Cont'd)**

Significant features / potential contamination sources highlighted in **bold**.

Date	Site	Adjacent Areas
c.1906 - c.1908	The <b>building</b> in the western portion of the site is no longer recorded.	Grove Inn is recorded c.20m south of the site, and a <b>tank</b> is recorded c.200m southeast of the site. <b>Springs</b> are recorded c.250m east of the site, and no <b>quarries</b> are recorded.
c.1938 – c.1948	A <b>driveway</b> is recorded in the central portion of the site.	The Grove Inn is no longer recorded, and a <b>garage</b> is recorded c.200m southeast of the site.
c.1961 – c.1963	Three buildings are no longer recorded on site.	<b>Allotment gardens</b> are recorded c.20m northwest of the site.
c.1976	No significant changes to the site.	A <b>garage</b> is recorded c.50m east of the site.
c.2006	No significant changes to the site.	The <b>mill</b> to the south is recorded as <b>Magdale Industrial Park</b> , and <b>Steps Mill</b> is redeveloped as a <b>Business Park</b> .
Present Day c.2025	The site is recorded as vegetated land with a driveway, small rubble pile and occasional concrete surfacing, with a utility pole on site. A small area of wetland is recorded in the northern portion of the site,	The surrounding area remains consistent with the previous layout.

### 4.2 Landfill & Waste: -

The following information relating to landfill and waste has been obtained from the Envirocheck Report (attached in Appendix III) site walkover and published data;

- There are no Historical Landfill Sites, Local Authority Recorded Landfill Sites, Coal Authority Managed Tips, Registered Landfill Sites, Registered Waste Treatment or Disposal Sites, Potentially Infilled Land (Water) or Licensed Waste Management Facilities within c.250m of the site.
- There are two areas of Potentially Infilled Land (Non-Water) recorded within c.250m of the site. EC Ref. 161 (dated c.1984) recorded c.61m northwest of the site associated with a former quarry infilled in c.1906. EC Ref. 162 (dated c.1984) recorded c.106m southeast of the site also associated with an old quarry infilled in c.1906.

When considering the above and the proposed development, although areas of infilled land are recorded within c.250m of the site, these are associated with the infilling of former quarries and when considering the age of the infilling (c.119 years ago), it is considered that the site is not at risk from potential hazardous ground gas production / migration.

### 4.3 Statutory Requirements / Authorisations: -

**Table 4.2**

TYPE	Location	Comments
<b>Enforcement and Prohibition Notices:</b>	None recorded within c.250m.	~
<b>Integrated Pollution Prevention and Controls:</b>	None recorded within c.250m.	~
<b>Local Authority Pollution Prevention and Controls:</b>	Three recorded within c.250m.	EC Ref. 21 relates to Autonys Garage recorded c.175m southeast of the site. Status: Permitted. EC Ref. 21 relates to Arthur Foodstores Ltd recorded c.181m southeast of the site. Status: Permitted. EC Ref. 21 relates to Alpine Service Station recorded c.195m southeast of the site. Status: Permitted.
<b>Prosecutions Relating to Authorised Processes:</b>	None recorded within c.250m.	~

## 4.0 Industrial Setting (Cont'd)

### 4.3 Statutory Requirements / Authorisations (Cont'd): -

Table 4.2 (Cont'd)

<b>TYPE</b>	<b>Location</b>	<b>Comments</b>
<b>Registered Radioactive Substances:</b>	None recorded within c.250m.	~
<b>COMAH/Explosive/NI HHS Sites:</b>	None recorded within c.250m.	~
<b>Planning Hazardous Substances Consents / Enforcements:</b>	None recorded within c.250m.	~
<b>Contemporary Trade Entries:</b>	Twenty-eight recorded within c.250m.	Ten active entries are recorded. EC Ref. 208 relates to Jaw Engineering Ltd (Precision Engineers, Magdale Testing Station, Steps Garage, Tatchell Motors (Garage Services) & Auto Exige (Car Dealers – Used) recorded between c.66m to c.87m south/southwest of the site. EC Ref. 210 relates to Texaco Service Station, Asda Service Station (Petrol Filling Stations) & Gillys Retro Autos (Car Body Repairs) recorded c.184m southeast of the site.
<b>Fuel Station Entries:</b>	One recorded within c.250m.	EC Ref. 233 relates to Alpine Service Station recorded c.184m southeast of the site. Status: Open.
<b>Relevant Points of Interest:</b>	Twenty-three recorded within c.250m.	<b>Commercial Services</b> – EC Ref. 236 relates to Vehicle Repair, Testing & Servicing & Vehicle Cleaning Services recorded c.62m south of the site. EC Ref. 237 relates to Vehicle Repair, Testing & Servicing & Vehicle Cleaning Services recorded c.183m southeast of the site. <b>Manufacturing and Production</b> – EC Ref. 242 relates to Magdale Industrial Park recorded c.85m south of the site. <b>Public Infrastructure</b> – EC Ref. 258 relates Petrol & Fuel Stations recorded c.183m southeast of the site.

### 4.4 UXO Risk: -

According to the Unexploded Bomb Risk Map produced by ZeticaUXO, the site lies within a low-risk area in terms of unexploded ordnance (areas indicated as having 15 bombs per 1000 acre or less). As a result, a detailed UXO risk assessment should not be required for the proposed development. A copy of the ZeticaUXO Unexploded Bomb Risk Map can be seen attached in Appendix III.

### 4.5 Pollution Incidents and Discharge Consents: -

Table 4.3

<b>TYPE</b>	<b>Location</b>	<b>Comments</b>
<b>Discharge Consents:</b>	Four recorded within c.250m.	EC Ref. 1 relates to a Storm Tank discharging sewage c.166m south of the site. Status: Varied under EPR 2010. EC Ref. 1 relates to Suncharm Ltd discharging surface water effluent c.208m south of the site. Status: Not given. EC Ref. 2 relates to a Storm Tank discharging sewage c.203m south of the site. Status: New consent. EC Ref. 2 relates to Suncharm Ltd discharging trade effluent c.244m south of the site. Status: Not given.
<b>Prosecutions Relating to Controlled Waters:</b>	None recorded within c.250m.	~

## 4.0 Industrial Setting (Cont'd)

### 4.5 Pollution Incidents and Discharge Consents (Cont'd): -

Table 4.3 (Cont'd)

TYPE	Location	Comments
Pollution Incidents to Controlled Waters:	Four recorded within c.250m.	EC Ref. 24 relates to a Category 3 – Minor Incident at the Sewage Treatment Works dated 6 <sup>th</sup> June 1991 and recorded c.68m south of the site. EC Ref. 24 relates to a Category 2 – Significant Incident dated 30 <sup>th</sup> August 1989 and recorded c.72m south of the site. EC Ref. 25 relates to a Category 3 – Minor Incident dated 13 <sup>th</sup> March 1997 recorded c.113m southwest of the site. EC Ref. 26 relates to a Category 2 – Significant Incident dated 3 <sup>rd</sup> August 1993 recorded c.204m southwest of the site.
Substantiated Pollution Incident Register:	None recorded within c.250m.	~
Water Industry Act Referrals:	None recorded within c.250m.	~

## 5.0 Conceptual Site Model (CSM)

The Conceptual Site Model (CSM) is one of the primary planning tools that can be used to support the decision-making process of managing contaminated land and groundwater on any given site and allows a better understanding of what needs to be done to achieve risk management, and from this appropriate remediation techniques, if required for those risk management goals can be chosen.

This can be done by undertaking a *source-pathway-receptor* analysis of the site. The anticipated *sources*, *pathways* and *receptors* for this site are summarised in Table 5.1 below. A graphical representation of the CSM has been produced for the site and can be seen attached in Appendix IV, which also sets out the critical pollutant linkages of concern for this site.

Table 5.1

\*= Not included in the Human Health & Controlled Waters Risk Assessment.

	Sources (S)		Pathways (P)		Receptors (R)
S1	Made ground associated with the previous developments and rubble pile on the site.	P1	Ingestion & Dermal Contact.	R1	Human health - future end users and construction workforce. (Residential with homegrown produce).
		P2	Air – Inhalation of vapours and contact with dust generated through the construction works.		
S2	Potential radon gas (Site-specific radon report required).	P3	Plant Uptake and attached soil.	R2	Controlled Waters: Groundwater – anticipated within the underlying bedrock (PLCM) (Secondary Aquifer - A) and the River Holme c.43m to the south of the site.
		P4	Migration through existing service corridors.	R3	Adjacent sites.
		P5	Direct contact with building materials.	R4*	Building materials.
		P6	Surface runoff & Infiltration.	R5*	Flora and fauna.

The following potential geotechnical issues and hazards have been identified for this site. These issues should be considered if future development of the site is to take place;

## **5.0 Conceptual Site Model (CSM) (Cont'd)**

### **5.1 Geotechnical Considerations: -**

- Thickness, type, variability and condition of made ground (if present) on site.
- Geotechnical parameters of the natural deposits and depth to suitable load bearing founding strata across the site, particularly with respect to the design of foundations and hardstanding areas.
- Stability of excavations.
- The presence of possible underground services (i.e., gas, water, electricity, etc.).
- Chemical attack of buried concrete.

To determine the geotechnical considerations above with more certainty, it is recommended that intrusive geotechnical investigation works are undertaken with associated geotechnical testing to aid in assessing detailed foundation proposals.

The information reviewed indicates that the site can be considered as being located within a **LOW** geotechnical risk setting.

### **5.2 Sources of Contamination and Probable Contaminants**

The historical Ordnance Survey maps, Landmark Envirocheck Report and other environmental information reviewed indicates that the site was undeveloped from c.1854 until c.1892 when five buildings are recorded onsite. One building was no longer recorded (demolished) by c.1908, and a driveway is recorded onsite by c.1938. Three buildings are no longer recorded (demolished) by c.1961 and a utility pole, brick wall and rubble pile are recorded onsite at present day (c.2025).

#### **5.2.1 Soils – Human Health: -**

In consideration of the above, made ground may be present below the site, in order to determine the suitability of any made ground for reuse it would be prudent to test selected samples of any made ground from this site for the following analytes:

- Generic contamination suite, typically comprising; Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel, Selenium, Zinc, Total Organic Carbon, (TOC) and pH.
- Asbestos screening (and quantification if encountered).
- Speciated Polycyclic Aromatic Hydrocarbons (PAHs), Total Petroleum Hydrocarbons (TPHs & BTEX).

Waste Acceptance Criteria (WAC) testing may be required to aid with off-site disposal.

It is considered the level of risk posed to human health and local environ overall in connection with any future commercial development is below

The information reviewed indicates that the site can be considered as being located within a **LOW** ground contamination risk setting for Human Health.

Consideration should also be given to the protection of any new service pipes for the proposed development, and a suite of contamination testing (UKWIR suite) may be required in order to meet the requirements of the local utilities service provider for their 'pipe selection risk assessment' (PSRA), once the location and depth of future services have been determined.

## **5.0 Conceptual Site Model (CSM) (Cont'd)**

### **5.2 Sources of Contamination and Probable Contaminants (Cont'd)**

#### **5.2.2 Controlled Waters:**

The following issues have been taken into consideration when assessing the risks towards controlled waters;

- There are no Source Protection Zones (SPZ) on or within c.1km of the site.
- There are no water abstractions recorded on or within c.250m of the site.
- The River Holme is recorded c.43m south of the site.
- The solid geology beneath the site is a Secondary Aquifer – A (Pennine Lower Coal Measures).

The information reviewed indicates that the site can be considered as being located within a **LOW** ground contamination risk setting for Controlled Waters.

## **6.0 Recommendations for Phase 2: Ground Investigation Works**

The conclusions contained within this report have been based on a review of geological plans, historical plans and available environmental data relating to the site and nearby adjacent land and forms the basis of a preliminary risk assessment. The primary benefits of undertaking this report are as follows:

- (i) Identify the geotechnical and / or geo-environmental characteristics of the ground in sufficient detail to quantify the contamination risk at the site and for the economic design of any future site / proposed development, construction or associated remedial works.
- (ii) Minimise the risk of unforeseen ground conditions which might cause increased costs and / or programme (construction) delays later.

Therefore, it is recommended that a programme of Phase 2: Ground Investigation (intrusive investigation) works are completed for this site to provide an assessment of the geo-environmental characteristics of the site.

These intrusive investigation works should be completed prior to commencing with any future development works and should include for the following or a similar scope of investigation works:

- A series of windowless sampling boreholes (including insitu geotechnical testing (SPT testing, etc.) to aid with any future foundation design for the proposed development and to collect samples for subsequent laboratory testing.
- Laboratory geotechnical testing (i.e. PSD, liquid & plastic limit, pH & soluble sulphate testing etc).
- Laboratory contamination screening on selected soil samples recovered from the investigation positions for typical contaminants as detailed in Section 5.2 to determine risk to human health and suitability for reuse.
- Waste Acceptance Criteria (WAC) to aid in off-site disposal (if required).
- Site supervision and production of RAMS and an interpretive Phase 2: Ground Investigation Report, including a Ground Contamination Risk Assessment and Waste Classification of soils.

Prior to site investigation works commencing on site, all existing utilities / services should be identified and recorded, such that any potential damage to services crossing the site can be prevented, as well as ensuring the health and safety of future site workers.

# Section 1 – Mining activity and geology

## Past underground mining

No past mining recorded.

## Probable unrecorded shallow workings

None.

## Spine roadways at shallow depth

No spine roadway recorded at shallow depth.

## Mine entries

None recorded within 100 metres of the enquiry boundary.

## Abandoned mine plan catalogue numbers

The following abandoned mine plan catalogue numbers intersect with some, or all, of the enquiry boundary:

PO0		
-----	--	--

For assistance in identifying the specific abandoned mine plans relevant to your requirements, **please contact us at [InformationManagers@MiningRemediation.gov.uk](mailto:InformationManagers@MiningRemediation.gov.uk)**.

## Outcrops

No outcrops recorded.

## Geological faults, fissures and breaklines

No faults, fissures or breaklines recorded.

## Opencast mines

None recorded within 500 metres of the enquiry boundary.

## Coal Authority managed tips

None recorded within 500 metres of the enquiry boundary.

## Section 2 – Investigative or remedial activity

Please refer to the 'Summary of findings' map (on separate sheet) for details of any activity within the area of the site boundary.

### Site investigations

None recorded within 50 metres of the enquiry boundary.

### Remediated sites

None recorded within 50 metres of the enquiry boundary.

### Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

### Mine gas

None recorded within 500 metres of the enquiry boundary.

### Mine water treatment schemes

None recorded within 500 metres of the enquiry boundary.

## Section 3 – Licensing and future mining activity

### Future underground mining

None recorded.

### Coal mining licensing

None recorded within 200 metres of the enquiry boundary.

### Court orders

None recorded.

### Section 46 notices

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

### Withdrawal of support notices

The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

### Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

## Section 4 – Further information

Based on the responses in this report, no further information has been highlighted.

### Future development

If development proposals are being considered, technical advice relating to both the investigation of coal and former coal mines and their treatment should be obtained before beginning work on site. All proposals should apply specialist engineering practice required for former mining areas. No development should be undertaken that intersects, disturbs or interferes with any coal or coal mines without first obtaining the permission of the Coal Authority.

**MINE GAS:** Please note, if there are no recorded instances of mine gas within 500m of the enquiry boundary, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded. Developers should be aware that the investigation of coal seams, mine workings or mine entries may have the potential to generate and/or displace underground gases. Associated risks both to the development site and any neighbouring land or properties should be fully considered when undertaking any ground works. The need for effective measures to prevent gases migrating onto any land or into any properties, either during investigation or remediation work, or after development must also be assessed and properly addressed. In these instances, the Coal Authority recommends that a more detailed Gas Risk Assessment is undertaken by a competent assessor.

## Section 5 – Data definitions

The datasets used in this report have limitations and assumptions within their results. For more guidance on the data and the results specific to the enquiry boundary, please **email us at [reports@miningremediation.gov.uk](mailto:reports@miningremediation.gov.uk)**.

### Past underground coal mining

Details of all recorded underground mining relative to the enquiry boundary. Only past underground workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination, will be included.

### Probable unrecorded shallow workings

Areas where the Coal Authority believes there to be unrecorded coal workings that exist at or close to the surface (less than 30 metres deep).

### Spine roadways at shallow depth

Connecting roadways either, working to working, or, surface to working, both in-seam and cross measures that exist at or close to the surface (less than 30 metres deep), either within or within 10 metres of the enquiry boundary.

### Mine entries

Details of any shaft or adit either within, or within 100 metres of the enquiry boundary including approximate location, brief treatment details where known, the mineral worked from the mine entry and conveyance details where the mine entry has previously been sold by the Authority or its predecessors British Coal or the National Coal Board.

### Abandoned mine plan catalogue numbers

Plan numbers extracted from the abandoned mines catalogue containing details of coal and other mineral abandonment plans deposited via the Mines Inspectorate in accordance with the Coal Mines Regulation Act and Metalliferous Mines Regulation Act 1872. A maximum of 9 plan extents that intersect with the enquiry boundary will be included. This does not infer that the workings and/or mine entries shown on the abandonment plan will be relevant to the site/property boundary.

### Outcrops

Details of seam outcrops will be included where the enquiry boundary intersects with a conjectured or actual seam outcrop location (derived by either the British Geological Survey or the Coal Authority) or intersects with a defined 50 metres buffer on the coal (dip) side of the outcrop. An indication of whether the Coal Authority believes the seam to be of sufficient thickness and/or quality to have been worked will also be included.

### Geological faults, fissures and breaklines

Geological disturbances or fractures in the bedrock. Surface fault lines (British Geological Survey derived data) and fissures and breaklines (Coal Authority derived data) intersecting with the enquiry boundary will be included. In some circumstances faults, fissures or breaklines have been known to contribute to surface subsidence damage as a consequence of underground coal mining.

### **Opencast mines**

Opencast coal sites from which coal has been removed in the past by opencast (surface) methods and where the enquiry boundary is within 500 metres of either the licence area, site boundary, excavation area (high wall) or coaling area.

### **Coal Authority managed tips**

Locations of disused colliery tip sites owned and managed by the Coal Authority, located within 500 metres of the enquiry boundary.

### **Site investigations**

Details of site investigations within 50 metres of the enquiry boundary where the Coal Authority has received information relating to coal mining risk investigation and/or remediation by third parties.

### **Remediated sites**

Sites where the Coal Authority has undertaken remedial works either within or within 50 metres of the enquiry boundary following report of a hazard relating to coal mining under the Coal Authority's Emergency Surface Hazard Call Out procedures.

### **Coal mining subsidence**

Details of alleged coal mining subsidence claims made since 31 October 1994 either within or within 50 metres of the enquiry boundary. Where the claim relates to the enquiry boundary confirmation of whether the claim was accepted, rejected or whether liability is still being determined will be given. Where the claim has been discharged, whether this was by repair, payment of compensation or a combination of both, the value of the claim, where known, will also be given.

Details of any current 'Stop Notice' deferring remedial works or repairs affecting the property/site, and if so the date of the notice.

Details of any request made to execute preventative works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991. If yes, whether any person withheld consent or failed to comply with any request to execute preventative works.

### **Mine gas**

Reports of alleged mine gas emissions received by the Coal Authority, either within or within 500 metres of the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission. Please note, if there are no recorded instances of mine gas reported, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded.

### **Mine water treatment schemes**

Locations where the Coal Authority has constructed or operates assets that remove pollutants from mine water prior to the treated mine water being discharged into the receiving water body.

These schemes are part of the UK's strategy to meet the requirements of the Water Framework Directive. Schemes fall into 2 basic categories: Remedial – mitigating the impact of existing pollution or Preventative – preventing a future pollution incident.

Mine water treatment schemes generally consist of one or more primary settlement lagoons and one or more reed beds for secondary treatment. A small number are more specialised process treatment plants.

### **Future underground mining**

Details of all planned underground mining relative to the enquiry boundary. Only those future workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination will be included.

### **Coal mining licensing**

Details of all licenses issued by the Coal Authority either within or within 200 metres of the enquiry boundary in relation to the under taking of surface coal mining, underground coal mining or underground coal gasification.

### **Court orders**

Orders in respect of the working of coal under the Mines (Working Facilities and Support) Acts of 1923 and 1966 or any statutory modification or amendment thereof.

### **Section 46 notices**

Notice of proposals relating to underground coal mining operations that have been given under section 46 of the Coal Mining Subsidence Act 1991.

### **Withdrawal of support notices**

Published notices of entitlement to withdraw support and the date of the notice. Details of any revocation notice withdrawing the entitlement to withdraw support given under Section 41 of the Coal Industry Act 1994.

### **Payment to owners of former copyhold land**

Relevant notices which may affect the property and any subsequent notice of retained interests in coal and coal mines, acceptance or rejection notices and whether any compensation has been paid to a claimant.

The map highlights any specific surface or subsurface features within or near to the boundary of the site.

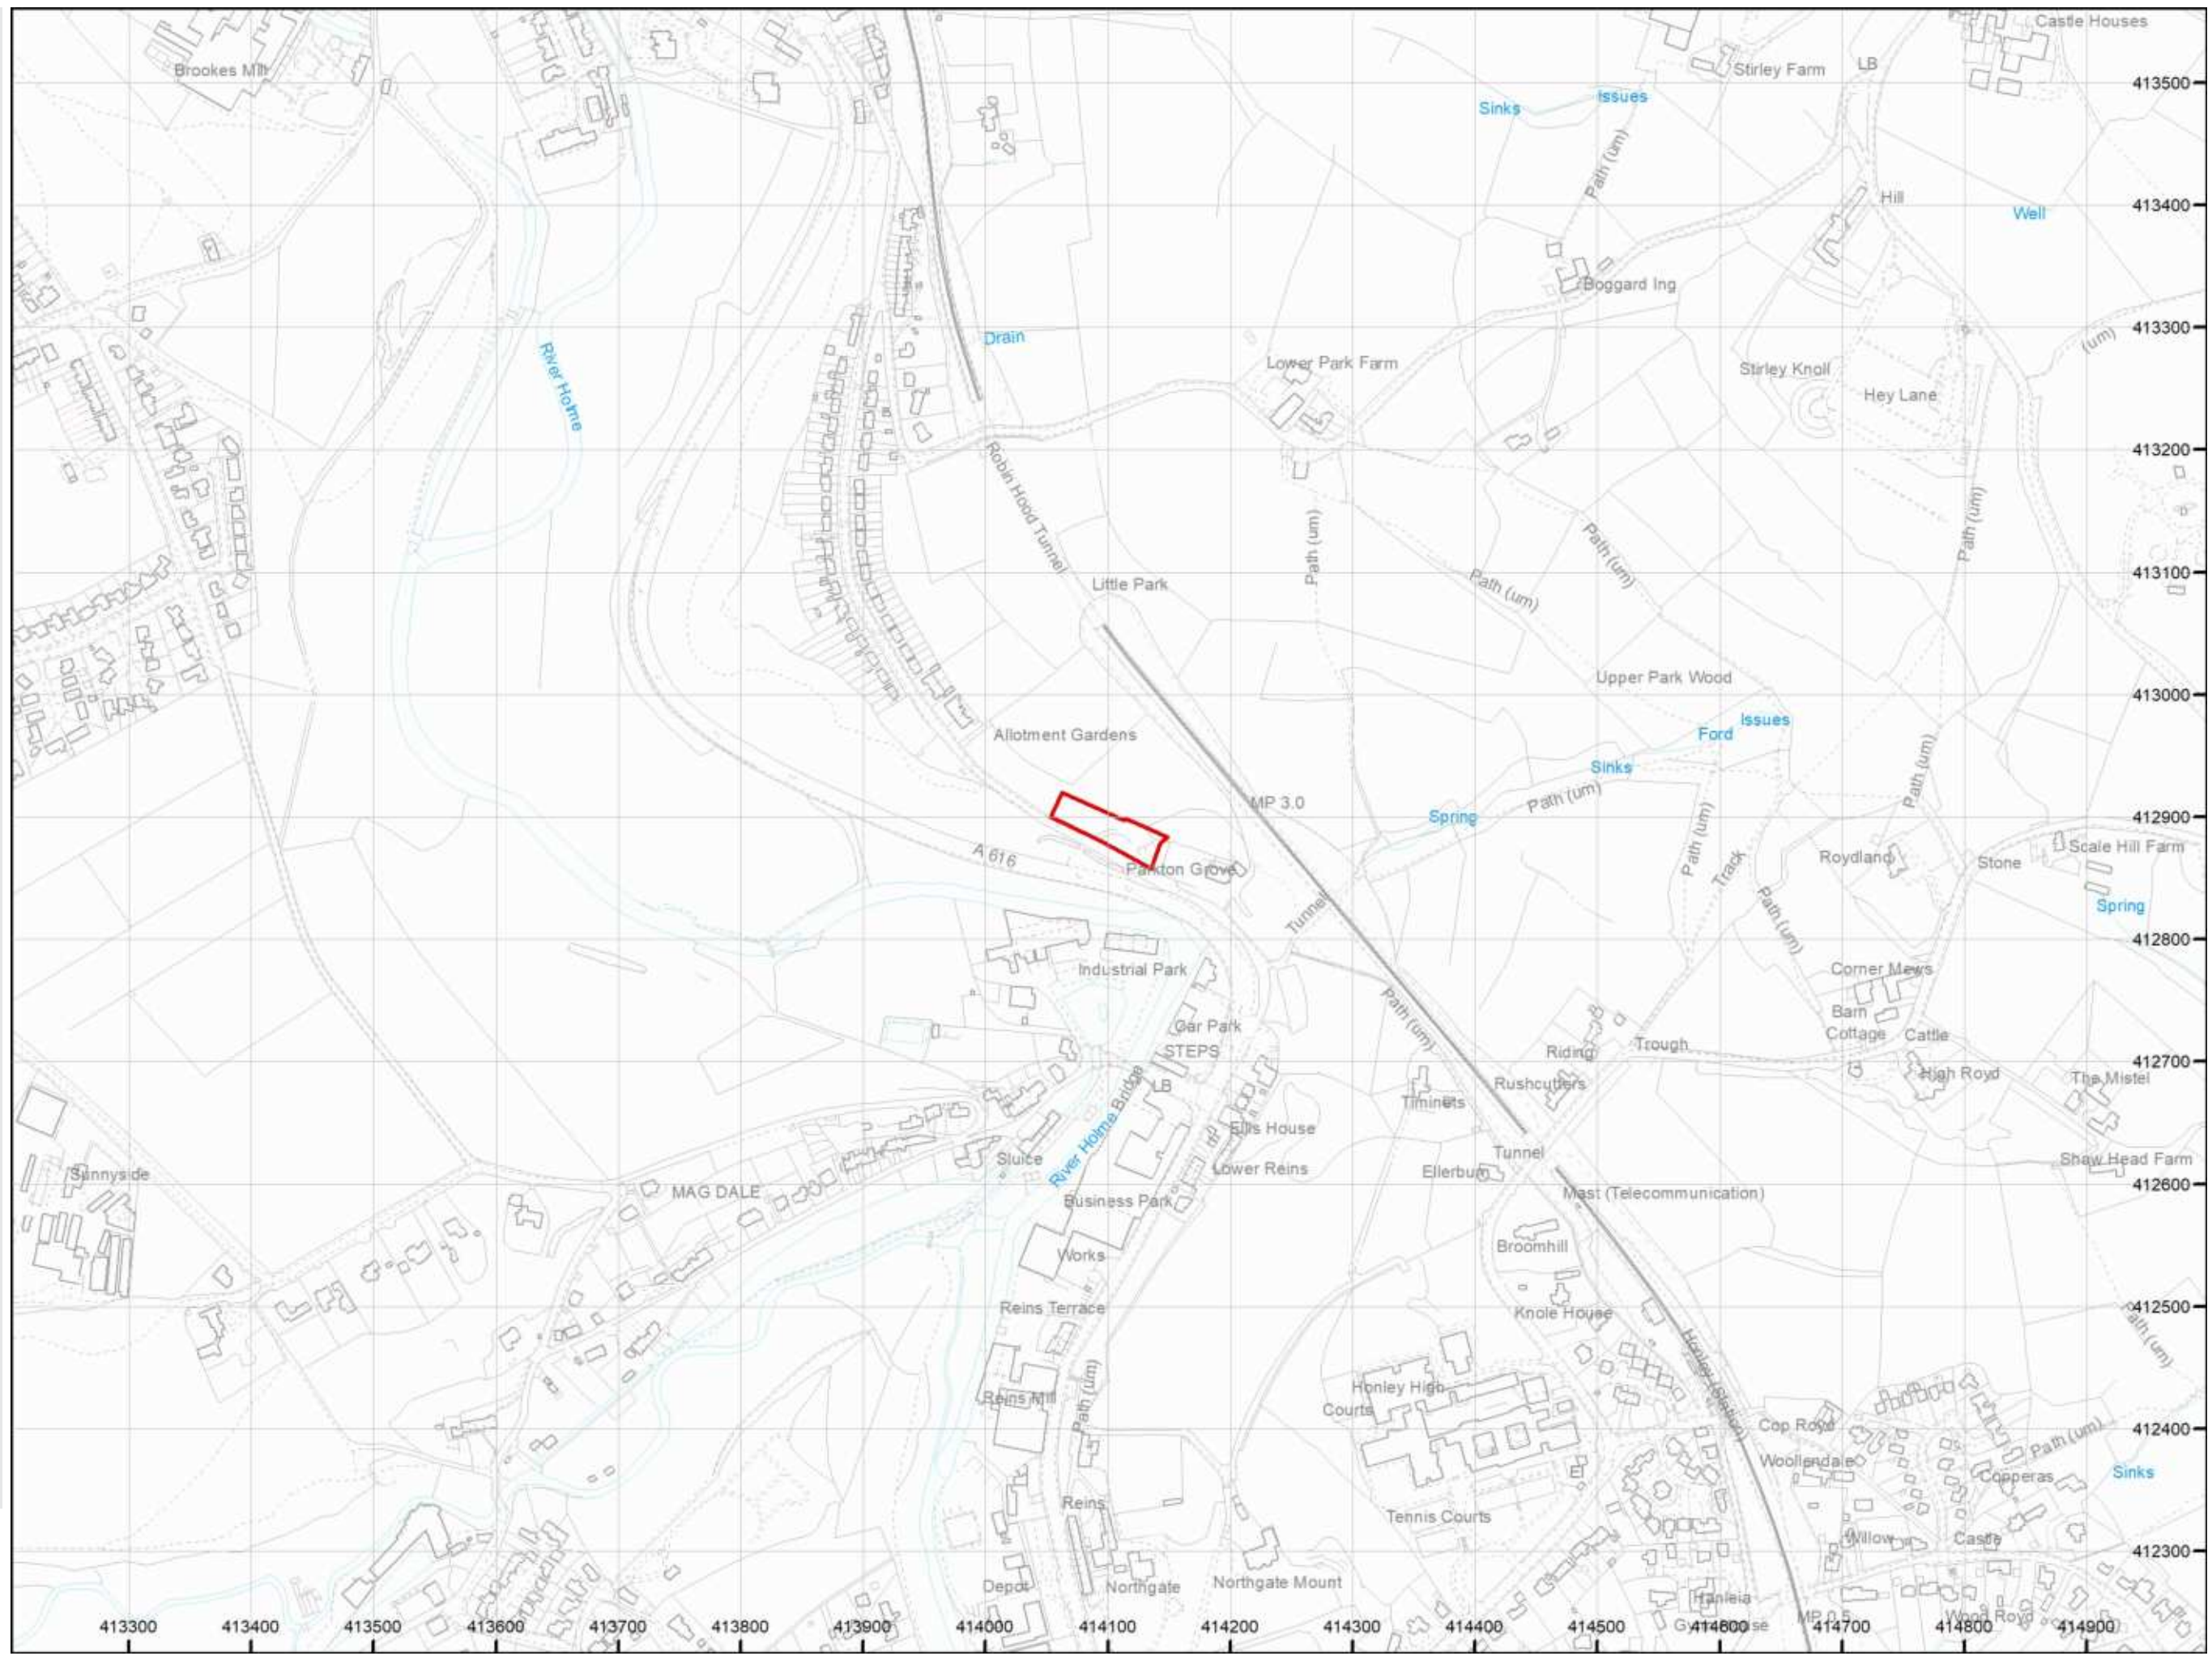

**Key**

Approximate position of the enquiry boundary shown

## Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

## Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

**Yorkshire**

**Published 1892**

**Source map scale - 1:2,500**

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

### Supply of Unpublished Survey Information

Published 1975

Source map scale - 1:2,500

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

## Large-Scale National Grid Data

Published 1993

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

# Russian Military Mapping Legends

## 1:5,000 and 1:10,000 mapping

a. Not drawn to scale b. Drawn to scale

	Government and Administrative Buildings		Military and Industrial Buildings
	Military and Communication Areas		Subway Entrance
	Fireproof Building		Prominent Fireproof Building
	Non-fireproof Building		Non-fireproof Building (non-dwelling)
	Factory, mill, and flour mill, with chimneys		Factory, mill, and flour mill, without chimneys
	Power Station, drawn to scale		Hydroelectric Power Station
	Radio Station, drawn to scale		Telephone Station, drawn to scale
	Abandoned Open-pit Mine or Quarry		Open-pit Salt Mine
	Pit		Oil Deposit or Well
	Oil Seepage		Tailings Pile
	Fuel Storage Tanks		Natural Gas Tank
	Bench Mark		Drill Hole
	Burial Mound		Triangulation Point on Burial Mound
	Single-track Railroad		Small Bridge
	Double-track Railroad		Pipe (Culvert)
	Railroad and Station Building		Coniferous Forest
	Deciduous Forest		Mixed Forest
	Lawns		Citrus Orchard
	Wet Ground		Scattered Vegetation

**243,8** Values for prominent elevations  
**186.0** Numbers for spot elevations, depth soundings, contour lines, etc.  
**0.2** Velocity of the current, width of river bed, depth of river  
 Fractional terms: length and capacity of bridges; depth of fords and condition of the river bottom; height of forest and the diameter of trees

### Russian Alphabet (For reference and phonetic interpretation of map text)

<b>А а (A)</b>	<b>З з (Z)</b>	<b>П п (P)</b>	<b>Ч ч (CH)</b>
<b>Б б (B)</b>	<b>И и (I)</b>	<b>Р р (R)</b>	<b>Ш ш (SH)</b>

## 1:25,000 mapping

a. Not drawn to scale b. Drawn to scale

	Government and Administrative Buildings		Military and Industrial Buildings
	Military and Communication Areas		Subway Entrance
	Partly Demolished Buildings		Demolished Buildings
	Built-Up Area with Fireproof Buildings Predominant		Built-Up Area with Non-Fireproof Buildings Predominant
	Individual Fireproof Building		Prominent Industrial Building
	Individual Dwelling, Fireproof		Ruins of an Individual Dwelling
	Factory or Mill Chimney		Factory or Mill with Chimney
	Factory or Mill without Chimney		Salt Mine
	Operating Shaft or Mine		Non-Operating Shaft or Mine
	Tailings Pile		Gas Pump or Service Station
	Fuel Storage or Natural Gas Tank		Oil or Natural Gas Derrick
	Small Hydroelectric Power Station		Power Station
	Transformer Station		Cemetery
	Burial Mound (height in metres)		Triangulation Point on Burial Mound
	Triangulation Point		Bench Mark
	Bench Mark (monumented)		Telegraph Office
	Telephone Station		Radio Station
	Radio Tower		Airfield or Seaplane Base
	Landing Strip		Cut
	Fill		Km Post
	Plantings		Width of Road
	Steep Grade		Telegraph/Telephone Lines
	Main Highway		Highway under Construction
	Improved Dirt Road (former truck road)		Small Bridge
	Pipe (Culvert)		Tunnel
	Dismantled Railroad		Double-track Railroad with First Class Station
	Railroad Under Construction		Shore Embankment
	River or Ditch with Embankment		Water Gauge
	Direction and velocity of current		Water Level Mark
	Well		Spring
	Water Reservoir or Rain Water Pit		Isobath with value
	Heavy (Index) Contour Line		Half Contour Line
	Contour Line and Value		Spot Elevation Value
	Coniferous		Deciduous
	Mixed		Scrub

## Key to Numbers on Mapping

### SE11SW\_Huddersfield

No.	Description
32	Industrial Building (Use Unknown)
33	Industrial Building (Use Unknown)
50	Mill (Weaving)
63	Power Station (Thermo-Electric)

**Yorkshire**

**Published 1854**

**Source map scale - 1:10,560**

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

**Huddersfield**  
**Published 1984**  
**Source map scale - 1:10,000**

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

**Ordnance Survey Plan**  
**Published 1992**  
**Source map scale - 1:10,000**

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

**10k Raster Mapping**  
**Published 2000**  
**Source map scale - 1:10,000**

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

**VectorMap Local**  
**Published 2025**  
**Source map scale - 1:10,000**

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

## Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

### Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

### Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

### Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

# UNEXPLODED BOMB RISK MAP

## SITE LOCATION

Location: HD4 7QU,  
Map Centre: 414193,412853

This map principally indicates a hazard from Unexploded Bombs (UXB) due to WWII bombardment. Other sources of Unexploded Ordnance (UXO) may be present. It should be noted that this map does not represent UXO risk and should not be reported as such when reproduced.

## LEGEND

- High:** Areas indicated as having a bombing density of 50 bombs per 1000acre or higher.
- Moderate:** Areas indicated as having a bombing density of 15 to 49 bombs per 1000acre.
- Low:** Areas indicated as having 15 bombs per 1000acre or less.

## How to use your Unexploded Bomb (UXB) risk map?

This map indicates the potential for UXBs to be present because of World War Two (WWII) bombing. It can be incorporated into a technical report, such as a Phase 1 Desk Study, or similar document as an indication of the potential for UXO encounter on a Site. Other sources of UXO may also be indicated, although note that these are not comprehensive and more detailed research is required to confirm their presence.

## What if my Site is in a moderate or high density area?

We typically recommend that a detailed UXO desk study and risk assessment is undertaken for sites in an area with a moderate or high bombing density. Additionally, if your site is in close proximity to a strategic target, military establishment, airfield or bombing decoy, then [additional detailed research](#) is recommended.

## If my site is in a low risk area, do I need to do anything?

If both the map and other research confirm that there is a low potential for UXO to be present on your site, then, subject to your own comfort and risk tolerance, works can proceed with no special precautions.

If you are unsure whether other sources of UXO may be present, you can request one of our [pre-desk study assessments \(PDSA\)](#) by emailing a site boundary and location to [pdsa@zetica.com](mailto:pdsa@zetica.com).

**You should never plan site work or undertake a risk assessment using these maps alone. More detail is required, to include an assessment of the likelihood of a source of UXO hazard from other military activity not reflected on these maps.**

## If I have any questions, who do I contact?

tel: [+44 \(0\) 1993 886682](tel:+441993886682) email: [uxo@zetica.com](mailto:uxo@zetica.com) web: [www.zeticauxo.com](http://www.zeticauxo.com)

The information in this UXB risk map is derived from a range of sources and should be used with the [accompanying notes on our website](#).

Zetica cannot guarantee the accuracy or completeness of the information or data used and cannot accept any liability for any use of the maps. These maps can be used as part of a technical report or similar publication, subject to acknowledgement. The copyright remains with Zetica Ltd.

# **APPENDIX IV**

## **Conceptual Site Model (CSM)**

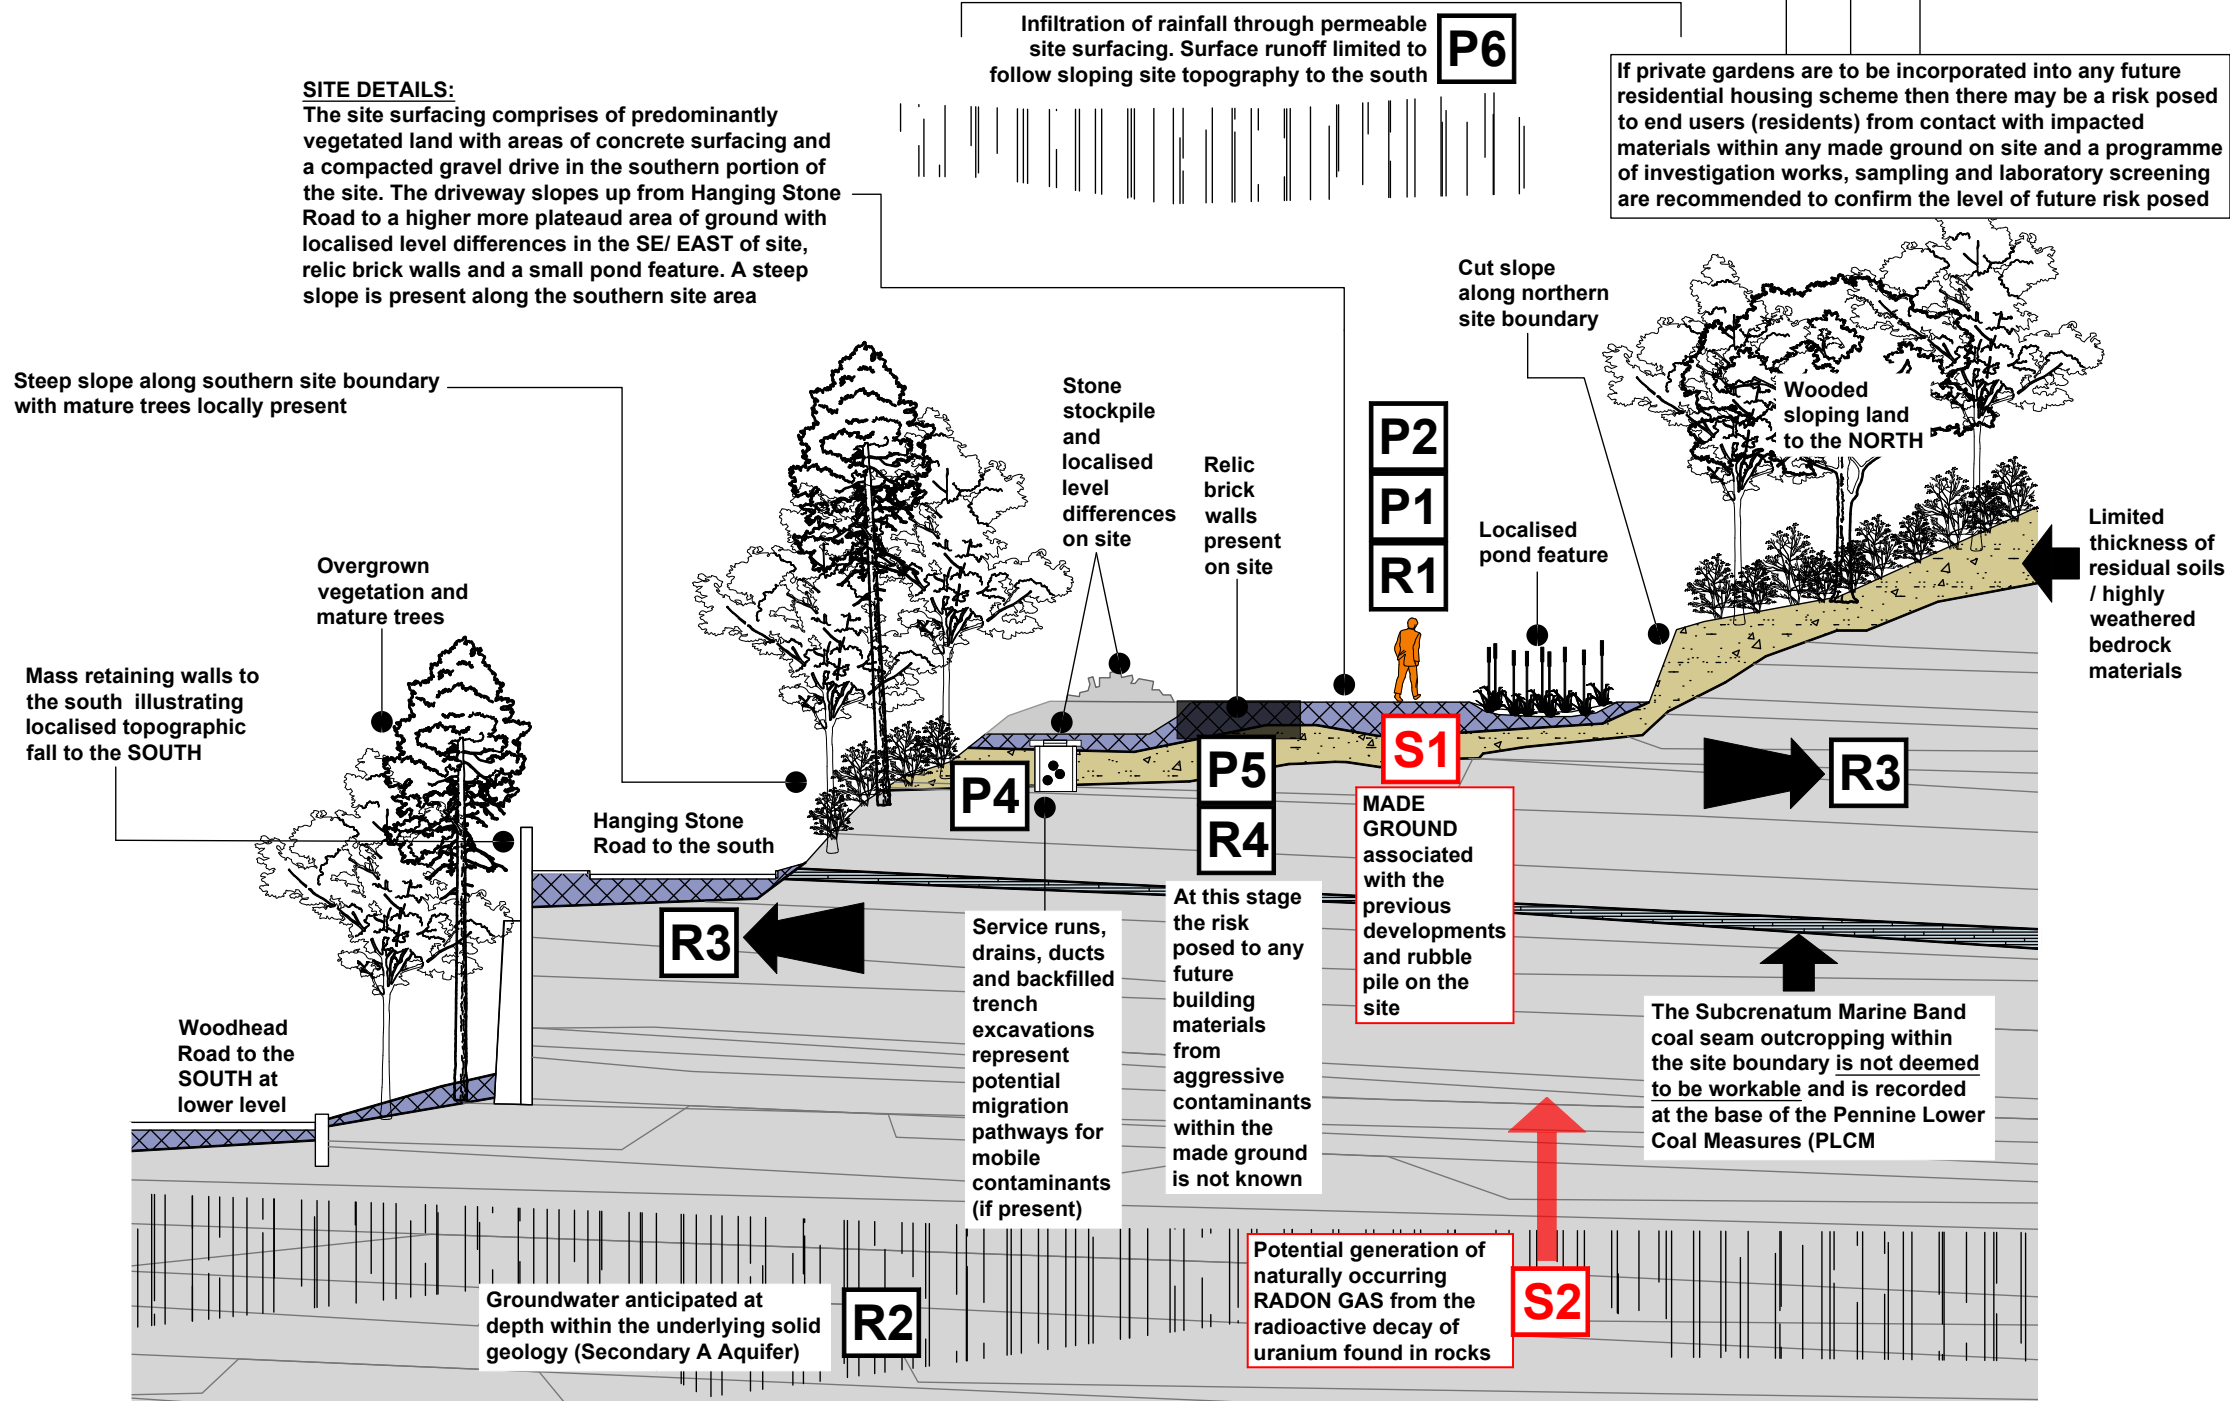

**CRITICAL POLLUTANT LINKAGES**

SOURCE	PATHWAY	RECEPTOR

(Residential with homegrown produce)</li> <li>Controlled Waters: Groundwater – anticipated within the underlying bedrock (PLCM) (Secondary Aquifer - A)</li> <li>Adjacent sites</li> <li>Building materials</li> <li>Flora and fauna</li> </ol>

Indicative section through site using a SOUTH to NORTH orientation

**SITE DETAILS:**

The site surfacing comprises of predominantly vegetated land with areas of concrete surfacing and a compacted gravel drive in the southern portion of the site. The driveway slopes up from Hanging Stone Road to a higher more plateau area of ground with localised level differences in the SE/ EAST of site, relic brick walls and a small pond feature. A steep slope is present along the southern site area

If private gardens are to be incorporated into any future residential housing scheme then there may be a risk posed to end users (residents) from contact with impacted materials within any made ground on site and a programme of investigation works, sampling and laboratory screening are recommended to confirm the level of future risk posed

Steep slope along southern site boundary with mature trees locally present

Overgrown vegetation and mature trees

Mass retaining walls to the south illustrating localised topographic fall to the SOUTH

Woodhead Road to the SOUTH at lower level

Hanging Stone Road to the south

P4

P5  
R4

S1

MADE GROUND associated with the previous developments and rubble pile on the site

R3

Groundwater anticipated at depth within the underlying solid geology (Secondary A Aquifer)

R2

Potential generation of naturally occurring RADON GAS from the radioactive decay of uranium found in rocks

S2

The Subrenatum Marine Band coal seam outcropping within the site boundary is not deemed to be workable and is recorded at the base of the Pennine Lower Coal Measures (PLCM)

At this stage the risk posed to any future building materials from aggressive contaminants within the made ground is not known

Service runs, drains, ducts and backfilled trench excavations represent potential migration pathways for mobile contaminants (if present)

Localised pond feature

P2  
P1  
R1

Relic brick walls present on site

Stone stockpile and localised level differences on site

Cut slope along northern site boundary

Wooded sloping land to the NORTH

Limited thickness of residual soils / highly weathered bedrock materials

Infiltration of rainfall through permeable site surfacing. Surface runoff limited to follow sloping site topography to the south

P6

**MADE GROUND:**  
In accordance with the published BGS maps, significant thicknesses of made ground are not shown to be onsite, however made ground is anticipated onsite in relation to the previous onsite developments. A rubble pile was noted during the site reconnaissance

**DRIFT DEPOSITS:**  
Published geological maps produced by BGS indicate that the site is located in an area where superficial deposits are thin or absent. Some limited superficial deposits or residual soils may be present associated with the weathering of solid geological deposits

**SOLID GEOLOGY:**  
According to published BGS data, the site is underlain by the Pennine Lower Coal Measures (PLCM). These deposits are typically comprised of interbedded grey mudstone, siltstone, pale grey sandstone and commonly coal seams. BGS maps record the solid geology to the immediate south of the site to consist of the Rough Rock Flags – Sandstone. These deposits typically comprise fine to medium grained, flaggy sandstone. BGS Maps record the Subrenatum Marine Band (SMB) coal seam to outcrop within the site boundary dipping to the east
