Appendix A – Climate Change Statement

Climate Change Statement for Planning Applications

Part 1: Applicant details

Name of Applicant/Agent	AHJ Architects
Site Address	69 Long Lane Earlsheaton DEWSBURY WF12 8LQ
Description of Development	Box dormer to the first floor

Part 2: Climate Change Mitigation measures

Please respond to the following questions considering the measures set out in the Climate Change Guidance note:
Q1: What measures have been/will be taken to reduce the energy demand associated with your proposed development beyond the minimum required in Building Regulations? (See section 2)
<p>The application is for an extension to an existing dwelling and as such the applicant will consider the following:</p> <ul style="list-style-type: none">• Installing 'smart' energy metering, including displays showing the amount and cost of energy consumed. [if not already installed]• Ensuring that building service controls such as lighting and gas boiler controls, and management systems are user friendly, efficient, up to date, and complementary.• Use energy efficient white goods (rating where possible) (e.g. fridges, washing machines). Providing external space for drying washing naturally. <p>The essential requirement for Combined Heat and Power (CHP) systems for master-planned sites or have the ability to connect to an existing system is not relevant for this type of application.</p>
Q2: What measures have been/will be taken to limit the carbon consumed through the implementation and construction processes, e.g. by reusing existing on-site materials or sourcing materials locally? (See section 3)
<ul style="list-style-type: none">• Primary materials such as timber will be sourced from local suppliers.

- Waste management will be considered at an early stage in planning development proposals to demonstrate how waste will be minimised during construction.
- The other essential requirements are for larger scale developments.

Q3: What measures have been/will be taken to utilise renewable or low carbon energy sources? (See section 4)

- There isn't any local area energy network. Renewable energy provision will be subject to affordability.

Q4: What measures have been/will be taken to ensure the building design and layout has been optimised to energy efficiency beyond the minimum requirements in Part L of the Building Regulations ? (See section 5)

- Standard building control compliant.

Q5: What measures have been/will be taken to reduce potential impacts of flooding associated with your proposed development? (See section 6)

- The building is located within flood zone 1, surface water where possible will be directed to soakaway, subject to ground conditions and existing surface water connections. In this instance it is assumed to connect into the existing system.

Q6: What measures have been/will be taken to reduce water stress associated with your proposed development? (e.g. Water retention and minimisation measures) (See sections 7 and 8)

- Sanitaryware goods if required will be specified to reduce the consumption of water. The occupancy of the dwelling will remain the same.

Q7: What measures have been/will be taken to provide biodiversity net gains? (See section 8)

- The building is existing and the extension will be over the existing building footprint and therefore the BNG value will remain the same.

Q8: What measures have been/will be taken to reduce air pollution associated with your proposed development? (See section 9)

- Materials and suppliers will be sourced locally to avoid excessive transport to and from the site.

Appendix B – Further information

Kirklees Local Plan

The development plan for the Kirklees Council area (www.kirklees.gov.uk/localplan)

Planning applications guidance and advice notes
