Appendix A – Climate Change Statement

Climate Change Statement for Planning Applications

Part 1: Applicant details

Name of Applicant/Agent	AHJ Architects
Site Address	10 Hoyle Beck Close Linthwaite Huddersfield HD7 5RB
Description of Development	The existing reinforced grassed parking area to the front of the dwelling is to be replaced with permeable hard surface to facilitate adequate EV parking space. Boundary retaining wall to allow for a level surface.

Part 2: Climate Change Mitigation measures

Please respond to the following questions considering the measures set out in the Climate Change Guidance note:
Q1: What measures have been/will be taken to reduce the energy demand associated with your proposed development beyond the minimum required in Building Regulations? (See section 2)
<p>The application is for alterations to an existing parking area and as such the applicant will consider the following:</p> <ul style="list-style-type: none">• Ensuring that building service controls such as external lighting and management systems are user friendly, efficient, up to date, and complementary. <p>The essential requirement for Combined Heat and Power (CHP) systems for master-planned sites or have the ability to connect to an existing system is not relevant for this type of application.</p>
Q2: What measures have been/will be taken to limit the carbon consumed through the implementation and construction processes, e.g. by reusing existing on-site materials or sourcing materials locally? (See section 3)
<ul style="list-style-type: none">• Primary materials will be sourced from local suppliers.• Waste management will be considered at an early stage in planning development proposals to demonstrate how waste will be minimised during construction.• The other essential requirements are for larger scale developments.

Q3: What measures have been/will be taken to utilise renewable or low carbon energy sources? (See section 4)

- There isn't any local area energy network.

Q4: What measures have been/will be taken to ensure the building design and layout has been optimised to energy efficiency beyond the minimum requirements in Part L of the Building Regulations ? (See section 5)

- Building control requirements for Part L are not relevant for this type of application

Q5: What measures have been/will be taken to reduce potential impacts of flooding associated with your proposed development? (See section 6)

- The building is located within flood zone 1. The new hard standing will be constructed with a permeable surface in accordance with:
<https://www.gov.uk/government/publications/permeable-surfacing-of-front-gardens-guidance/guidance-on-the-permeable-surfacing-of-front-gardens>

Q6: What measures have been/will be taken to reduce water stress associated with your proposed development? (e.g. Water retention and minimisation measures) (See sections 7 and 8)

- As question 5

Q7: What measures have been/will be taken to provide biodiversity net gains? (See section 8)

- The area to the front of the dwelling is reinforced grass with low value as this is being used as a parking space. The replacement will offer a similar value

Q8: What measures have been/will be taken to reduce air pollution associated with your proposed development? (See section 9)

- Materials and suppliers will be sourced locally to avoid excessive transport to and from the site. The proposals also facilitate the use of EV parking spaces.
