1.0 Introduction

- 1.1 Paragon Highways has been appointed to prepare this Technical Note in support of a proposed relocation of an access off Linfit Lane, Kirkburton. The proposals comprise the closure of an existing field access and the formation of a new access in a more appropriate location. The site location can be found at Figure 1 below.

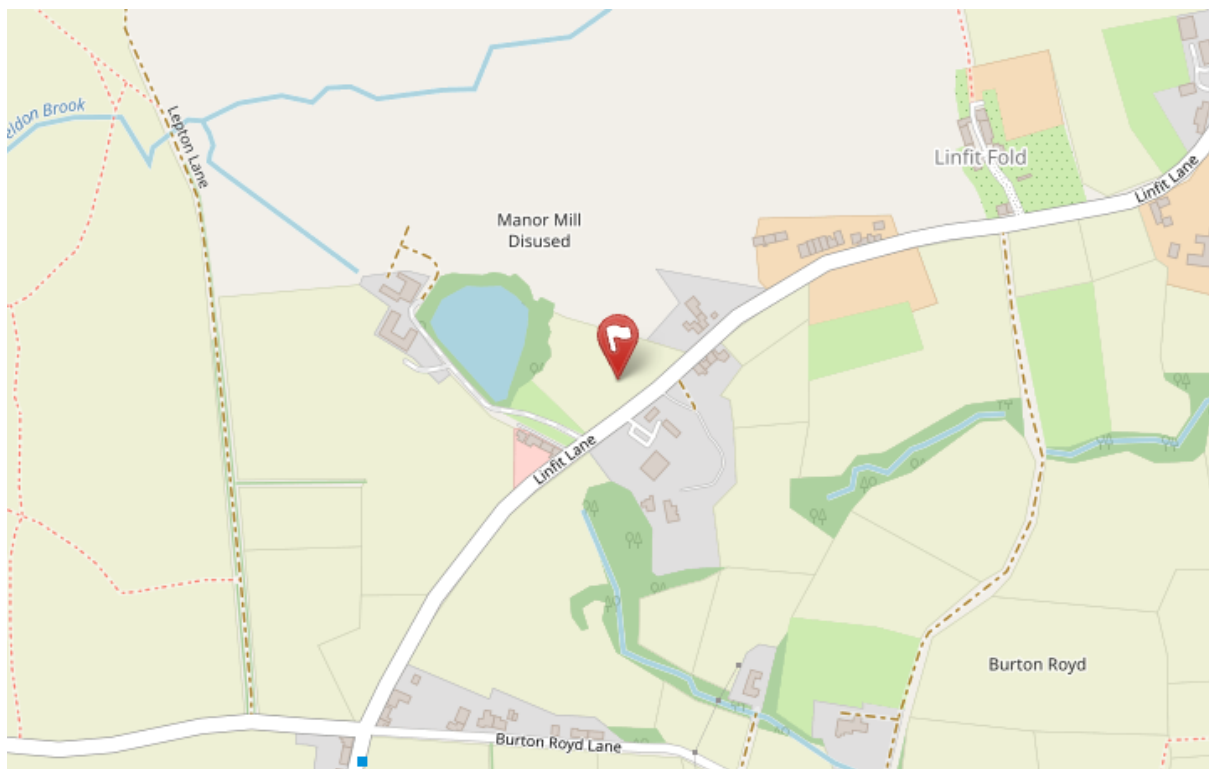

Figure 1 Site location

- 1.2 The purpose of this Technical Note is to present the proposals to remove an existing substandard field access and replace it with a new purpose designed access arrangement in a more suitable location. The proposed access has been designed in accordance with appropriate highway design guidance and is capable of achieving suitable visibility splays, thereby providing an improvement in highway safety and ensuring safe operation without detriment to the local highway network.

2.0 Existing Situation

Site Description

- 2.1 The site comprises grazing land located to the northwest of Linfit Lane on the outskirts of Kirkburton. The site is currently undeveloped and accessed from the adjacent highway via a field gate. Figure 2 below shows a bird's eye view of the existing site.

Figure 2 Birds-eye view of site

- 2.2 The site is bounded by open agricultural land to the north and south, with Linfit Lane to the east and a large pond to the west.
- 2.3 The existing access is located at a low point in the field, which accumulates standing water. Vehicles using this access regularly bring mud on to the adjacent highway. Visibility from the existing access is also severely substandard.

Figure 3 Existing site access

Local Highway Network

- 2.4 Linfit Lane comprises a two way single carriageway rural road located to the northeast of Kirkburton. Along the site frontage, the carriageway varies in width between approximately 6.3 metres and 7.2 metres and is considered to be in a good state of repair for its day to day use.
- 2.5 A footway is provided along the northwestern side of the carriageway adjacent to the site frontage, measuring approximately 1.5 metres in width. On the opposite side of the carriageway there is generally a highway verge with sporadic private access points serving existing properties and fields. The surrounding highway environment is semi rural in nature, with frontage development interspersed with agricultural land.

Figure 4 Linfit Lane - Northbound

- 2.6 Linfit Lane is subject to the national speed limit at the site frontage. To establish actual vehicle speeds in the vicinity of the site, speed surveys were undertaken at both the location of the existing field access and the location of the proposed access.
- 2.7 The speed survey undertaken at the proposed access location recorded 85th percentile vehicle speeds of approximately 35mph northbound and 36mph southbound. Based on these observed speeds, Design Manual for Roads and Bridges (DMRB) guidance indicates that visibility splays of 2.4m x 90m are appropriate at the proposed access location.
- 2.8 A separate speed survey undertaken at the location of the existing field access recorded notably higher 85th percentile vehicle speeds of approximately 43mph northbound and 42mph southbound. This demonstrates that the proposed access location is positioned within a section of Linfit Lane where vehicle speeds are materially lower than at the existing access position, providing an additional highway safety benefit beyond the improved visibility splays.
- 2.9 The speed survey data can be found at Appendix A.

3.0 Development Proposals

Proposed Development

- 3.1 The proposals comprise the closure of the existing field access and the formation of a new access in a more suitable location that accords with current highway design guidance. The existing access is currently substandard in highway terms due to its severely restricted visibility, poor interface with the public highway and the ongoing issue of mud and debris being dragged onto the carriageway.
- 3.2 The proposed access will be formed via a new vehicular footway crossing located towards the northeastern corner of the field. The access will measure approximately 5.5 metres in width for the first 10 metres into the site, allowing vehicles to safely enter and exit the field. A field gate will be positioned to the rear of the hard surfaced section, enabling vehicles to pull clear of the public highway whilst the gate is being opened or closed.
- 3.3 The first 10 metres of the access will be hard surfaced which will provide a significant improvement over the existing arrangement by reducing the likelihood of mud and debris being transferred onto the public highway. This will improve highway cleanliness and reduce the potential hazard to other road users associated with the current access arrangement.
- 3.4 Vehicle tracking has been undertaken to demonstrate that the proposed access can safely accommodate the anticipated vehicle types associated with the use of the field. Tracking of a Land Rover towing a horse box demonstrates that vehicles are capable of entering and exiting the site in a forward gear when transporting livestock/ horses. The vehicle tracking information can be found at Appendix B.
- 3.5 As previously discussed, speed surveys were undertaken at both the existing field access and the proposed access location. The surveys recorded 85th percentile vehicle speeds of approximately 35mph northbound and 36mph southbound at the proposed access location, compared with 43mph northbound and 42mph southbound at the existing field access. This demonstrates that the proposed access location benefits from a lower speed environment than the existing access arrangement.

- 3.6 In accordance with the guidance contained within the Design Manual for Roads and Bridges (DMRB), visibility splays of 2.4m x 90m are considered appropriate based on the recorded vehicle speeds at the proposed access location. The proposed access is capable of achieving the required visibility splays in both directions, representing a significant improvement over the existing access arrangement. In particular, visibility to the south from the existing access is currently restricted to approximately 22 metres, resulting in a shortfall of approximately 68 metres when compared to the required standard.
- 3.7 In order to achieve the required visibility splays, sections of the existing boundary wall along the frontage will be reduced to a maximum height of 1.0 metre above adjacent carriageway channel level within the visibility envelope. This will ensure suitable intervisibility between drivers emerging from the access and approaching vehicles on Linfit Lane.
- 3.8 The proposals do not seek to intensify the use of the field or introduce any operational development that would materially alter the level of traffic associated with the field. Vehicle movements associated with the site will therefore remain broadly unchanged, with the primary difference being that vehicles will utilise a new access arrangement that accords with current guidance and provides a significant improvement in highway safety terms when compared to the existing substandard access.
- 3.9 Overall, the proposals will replace an existing substandard and constrained field access with a new access arrangement that accords with current guidance, achieves appropriate visibility standards and provides a clear improvement in terms of highway safety and operation.

4.0 Conclusion

- 4.1 This Technical Note has demonstrated that the proposed access arrangement serving the field off Linfit Lane is appropriate in highway terms and represents a significant improvement over the existing situation.
- 4.2 Speed surveys undertaken at both the existing and proposed access locations confirm that vehicle speeds are materially lower at the proposed access position. Based on the recorded 85th percentile speeds, visibility splays derived from the Design Manual for Roads and Bridges (DMRB) are appropriate, with the proposed access capable of achieving the required 2.4m x 90m visibility splays in both directions.
- 4.3 The proposals will replace an existing substandard field access, which currently suffers from severely restricted visibility, poor interface with the public highway and mud/debris being dragged onto the carriageway, with a new access arrangement in a more suitable location. The proposed hard surfaced access will also reduce the transfer of mud and debris onto the public highway.
- 4.4 The proposed junction geometry, visibility provision and swept path analysis confirm that the site can be safely accessed and egressed by the intended vehicle types.
- 4.5 The proposals do not seek to intensify the use of the site and therefore the level of traffic associated with the field will remain broadly unchanged, with vehicles simply utilising a safer and more suitable access arrangement.
- 4.6 It is therefore concluded that there are no highway related reasons why the proposed development should not be supported.
