## PV System

### 3D, Grid-connected PV System

Climate Data	Huddersfield, GBR (2001 - 2020)
Values source	Meteonorm 8.2(i)
PV Generator Output	125.44 kWp
PV Generator Surface	512.9 m <sup>2</sup>
Number of PV Modules	256
Number of Inverters	3

Figure: Schematic diagram

The results have been calculated with a mathematical model calculation from Valentin Software GmbH (PV\*SOL algorithms). The actual yields from the solar power system may differ as a result of weather variations, the efficiency of the modules and inverter, and other factors.

## Overview

### System Data

Type of System	3D, Grid-connected PV System
----------------	------------------------------

### Climate Data

Location	Huddersfield, GBR (2001 - 2020)
Values source	Meteonorm 8.2(i)
Data resolution	1 h
Simulation models used:	
- Diffuse Irradiation onto Horizontal Plane	Hofmann
- Irradiance onto tilted surface	Hay & Davies

## Module Areas

# Three Phase Inverter with Synergy Technology for Europe

SE50K / SE66.6K / SE90K / SE100K

# INVERTERS

## Powered by unique pre-commissioning process for rapid system installation

- Pre-commissioning feature for automated validation of system components and wiring during the site installation process and prior to grid connection
- Easy 2-person installation with lightweight, modular design (each inverter consists of 2 or 3 Synergy Units and one Synergy Manager)
- Independent operation of each Synergy Unit enables higher uptime and easy serviceability
- Built-in thermal sensors detect faulty wiring ensuring enhanced protection and safety
- Built-in arc fault protection and optional rapid shutdown
- Built-in PID mitigation for maximized system performance
- Monitored\* and field-replaceable surge protection devices, to better withstand surges caused by lightning or other events: integrated RS485 and Type 2 DC SPDs, optional Type 2 AC SPD
- Optional integrated DC safety switch eliminates the need for external DC isolators
- Built-in module-level monitoring with Ethernet or cellular communication for full system visibility

\*Applicable only for DC and AC SPDs

# Three Phase Inverter For Europe

SE25K / SE30K / SE33.3K

# INVERTERS

## Specifically designed to work with power optimizers

- Fixed voltage inverter for superior efficiency (98.3%) and longer strings
- Quick and easy inverter commissioning directly from a smartphone using the SolarEdge SetApp
- Small, lightest in its class, and easy to install
- Integrated type 2 DC surge protection, to better withstand surges caused by lightning or other events
- Optional RS485 and type 2 AC surge protection
- Built-in module-level monitoring with Ethernet, wireless or cellular communication for full system visibility
- Advanced safety features - integrated arc fault protection and optional rapid shutdown
- IP65 for outdoor and indoor installations
- Optional integrated DC Safety Unit - eliminates the need for external DC isolators
- Future-proofed for SolarEdge energy storage solutions

# Power Optimizer

S1000 / S1200

POWER OPTIMIZERS

## SolarEdge's most advanced, cost-effective Power Optimizer for commercial and large field installations

### / Greater Energy Yields

- / High efficiency (99.5%) with module-level MPPT, for maximized system energy production and revenue, and fast project ROI
- / Supports high power and bifacial PV modules, and high string current for more power per string

### / Maximum Protection with Built-In Safety

- / Designed to automatically reduce high DC voltage to touch-safe levels, upon grid/inverter shutdown, with SafeDC™
- / Includes SolarEdge Sense Connect, allowing continuous monitoring to detect overheating due to installation issues or connector-level wear and tear

### / Lower BoS Costs

- / Flexible system design enables maximum space utilization and up to 2x longer string lengths, 50% less cables, fuses and combiner boxes
- / Supports connection of two PV modules in series with easy cable management and fast installation times

### / Simpler O&M

- / Module-level system monitoring enabling pinpointed fault detection and remote, time-saving troubleshooting

SolarEdge is a global leader in smart energy technology. By leveraging world-class engineering capabilities and with a relentless focus on innovation, SolarEdge creates smart energy solutions that power our lives and drive future progress.

SolarEdge developed an intelligent inverter solution that changed the way power is harvested and managed in photovoltaic (PV) systems. The SolarEdge DC optimized inverter maximizes power generation while lowering the cost of energy produced by the PV system.

Continuing to advance smart energy, SolarEdge addresses a broad range of energy market segments through its PV, storage, EV charging, UPS, and grid services solutions.

# Renusol *FS* Pro 10-EW IFP

EN | Installation Manual

## Preface for Installation with Fixed Elements

### EN | Application

Mounting system for the installation of framed PV modules on flat roofs with a roof pitch of up to 5°–10° with roof penetration.

### Before Installation

The Renusol FS Pro is fastened with third-party products (Nicholson Rooftrack, Solmont, Ejot-Ejotbar, etc.) to withstand wind loads. The required fastening depends on the underlying roof structure and must be determined in consultation with the third-party supplier. Use the Renusol PV Configurator to verify whether mounting option A is structurally suitable, considering regional conditions. Depending on the third-party product used, the connection method to the Renusol substructure may vary.

In the Renusol FS Pro 10-EW IFP mounting system, the module is secured at the corner areas of the short module side. It must be checked on-site whether the clamping area specified by the module manufacturer is maintained and that the permissible module loads are not exceeded.

Drainage holes in PV module frames must remain unobstructed and must not be covered by the mounting system. The roof surface must be free of snow, ice, and dirt before installation.

When installing, observe applicable regulations, current technical standards, and occupational safety guidelines.

A prerequisite for proper use is always a suitable substructure that can absorb the acting forces (weight load, wind, and snow load). The roof covering must be suitable for screwing and subsequent bonding or welding.

### Wind Report

The suction and pressure coefficients have been determined through wind tunnel tests.

Mounting Variant A:

Fastening is done using the IFP anchor bolt. Ensure that the M10 serrated lock bolt is tightened to 51 Nm.

B.

Mounting Variant B:

Fastening is done using a metric screw directly on the rail. Pre-drill in the center groove with a 10.4–11 mm drill bit. Ensure that the M10 screw is tightened to 51 Nm.

## Preface to the Installation with Fixed Elements

### EN | Usage

Mounting system for the installation of framed PV modules on flat roofs with a roof inclination of up to 5°-10° with roof penetration.

#### Before installation

The Renusol FS Pro is screwed with third-party products (Nicholson Rooftrack, Solmont, Ejot-Ejotbar, etc.) to withstand wind loads. The required fastening depends on the underlying roof structure and must be determined in consultation with the third-party provider. Check with the Renusol PV Configurator whether installation variant A is statically suitable, considering regional conditions. Depending on the third-party product used, the type of connection to the Renusol substructure may differ.

In the Renusol FS Pro 10-S IFP mounting system, the module is attached at the corner area of the short module side. It must be checked on-site whether the clamping area specified by the module manufacturer is maintained and whether the permissible module loads are not exceeded.

Drainage holes in the PV module frame must be kept clear and must not be covered by the mounting system. The roof surface must be free of snow, ice, and dirt for installation. ## Preface

### EN | Usage

The ridge support is pre-assembled for modules with a width between 1110-1150 mm.

If your module dimensions differ, please reposition the ridge support as shown in Step 1 a-d.

The support must be repositioned in a horizontal position.

Module Width	Ridge Support
990-1030 mm	A
1030-1070 mm	B
1070-1110 mm	C
1110-1150 mm	D
1150-1190 mm	E
1190-1230 mm	F

1.B

Installation Variant A

The distance (R) is continuously repeated except for the recessed IFPs at the end (E).

For the installation of the third-party product, the instructions in the respective manufacturer's manual must be followed and complied with. Pay particular attention to the installation instructions and recommendations regarding waterproofing and foil compatibility, which are also the responsibility of the third-party provider.

**1.B**

**Installation Variant B**

Module:	Dim: X

1110-1150	≈1.044 mm
1150-1190	≈1.084 mm
1190-1230	≈1.124 mm

*The row spacing (R) is continuously repeated. The dimension X depends on the module width and the associated position of the ridge support.*

*For the installation of the third-party product, the instructions in the respective manufacturer's manual must be followed and complied with. Pay particular attention to the installation instructions and recommendations regarding waterproofing and foil compatibility, which are also the responsibility of the third-party provider.*
