

Appendix 3 - Tree Images

T3796 - above - a 3-stemmed birch that has failed at the base, with one stem hung up in a neighbouring oak, over the PROW.

T3797 - above - this oak, in otherwise good condition, has a deadwood hanger over the footpath. This is recommended for removal

T3799 - above - a standing dead sycamore directly next to the footpath. The tree is recommended for removal.

T3798 - above (all) - a mature oak within the woodland compartment. The leftmost image shows the brown cubical rot to the south east stem (the right stem in the centre image). The two right-hand images show the soil gap around the base.

T3800 – above – a semi mature ash in decline from ADB, over a footpath.

T3800 – above – a semi mature ash in decline from ADB, over a footpath.

T3805 – above – a young Corsican pine, where two stems have collapsed over the footpath.

T3806 - above - a mature sycamore, which is in decline, over a footpath.

T3807 - above - a standing dead birch, over the footpath.

TG4 - above - a row of ash in decline from ADB over a road, which is also a farm access track and PROW.

T3809 - above - a standing dead sycamore, within a hedgerow over a PROW

T3808 - above L&R - a mature beech to edge of the woodland. Image taken from the PROW. The right image shows a close up of the *Ganoderma* bracket, with car key for scale.
