

Slaithwaite Millpond —

Supplementary to S211 Notification of Proposed Works to Trees in a Conservation Area

Site: Goit Land: *Land Ownership map attached separately.*

Reference: FoSM-TS-2026-01 | Survey date: 04/08/2026 | Kara Ali, Keith Anderson

Tree location plan attached separately.

	T4 — Sycamore maple <i>Acer pseudoplatanus</i> 17 trunks from possible historic coppicing. Proposed: Crown lift, to supplement Himalayan balsam removal — enhancing light to the forest floor to promote biodiversity.		T5 — Privet <i>Ligustrum ovalifolium</i> Proposed: Crown lift, to supplement Himalayan balsam removal — enhancing light to the forest floor to promote biodiversity.
	T6 — Sycamore maple <i>Acer pseudoplatanus</i> 6 trunks from possible historic coppicing. Proposed: Crown lift, to supplement Himalayan balsam removal — enhancing light to the forest floor to promote biodiversity.		T7 — Sycamore maple <i>Acer pseudoplatanus</i> Surrounded by holly saplings. Proposed: Crown lift, to supplement Himalayan balsam removal — enhancing light to the forest floor to promote biodiversity.
	T8 — Horse chestnut <i>Aesculus hippocastanum</i> Rope on low branch needs removing. Proposed: Crown lift, to supplement Himalayan balsam removal — enhancing light to the forest floor to promote biodiversity.		T9 — Horse chestnut <i>Aesculus hippocastanum</i> Few lower dead branches - need removal. Proposed: Crown lift, to supplement Himalayan balsam removal — enhancing light to the forest floor to promote biodiversity.
	T10 — Horse chestnut <i>Aesculus hippocastanum</i> Off-vertical trunk angle. Proposed: Crown lift, to supplement Himalayan balsam removal — enhancing light to the forest floor to promote biodiversity.		T11 — Sycamore maple <i>Acer pseudoplatanus</i> Proposed: Crown lift, to supplement Himalayan balsam removal — enhancing light to the forest floor to promote biodiversity.

	T12 — Common beech <i>Fagus sylvatica</i> Proposed: Crown lift, to supplement Himalayan balsam removal — enhancing light to the forest floor to promote biodiversity.	No photo possible — dense foliage	T13 — Sycamore maple <i>Acer pseudoplatanus</i> High elevation on the bank. Proposed: Crown lift, to supplement Himalayan balsam removal — enhancing light to the forest floor to promote biodiversity.
	T14 — Elm <i>Ulmus (genus)</i> Proposed: Crown lift, to supplement Himalayan balsam removal — enhancing light to the forest floor to promote biodiversity.		T15 — Common beech <i>Fagus sylvatica</i> Horse chestnut adjacent. Proposed: Crown lift, to supplement Himalayan balsam removal — enhancing light to the forest floor to promote biodiversity.
