St John Ambulance,

27 Saint John's Ln,

London,

EC1M 4BU

Dear ,

AEDs and PAcT Kits (Bleed control kits) are both lifesaving equipment. They treat two completely different, time-critical medical emergencies.

Having them at the exact same location ensures bystanders are prepared for any crisis. It is essential that they are not in the same cabinet.

This new design solution allows for them to be collocated yet still follow the guidance to keep the kits separate to ensure the right equipment is accessed for the right emergency.

In both cardiac arrest and catastrophic bleeding, a person can die within minutes—well before an ambulance arrives. The person on the street (the "zero responder") must act immediately.

Putting both kits in one place ensures that no matter what the emergency is, the public knows exactly where to run to find the cure.

Kind Regards

Dr Lynn Thomas
