Current increases in activity at this location particularly on Thursday's and Friday's are impacting local residents and the general public greatly. This mainly comes down to parking/traffic/highway where people entering this location are parking dangerously, also parking across local residents private drives. Inconsiderate/dangerous driving and then lack of parking for people outside/close to their homes, many of which have children are not safe on a very busy main road, with families often having to walk into the road to get around cars. As mentioned, there has been increasing activity here week on week recently and would indicate a change. The planning application even admits that work has already been started without consent. Permission would be needed before physical changes and changes to the use of the location surely? The planning application claims 12 parking spaces with this being increased to 14. I am unsure where these spaces have been fully identified as they are not currently used if so (see above comments). Aware of description in the application but the fact is this is not used in this way and then stretches down the roads. There is no room for parking facilities at this location to accommodate the number of cars we see at these times, so no alternative would be found for safe parking should the permission be granted. All of this impacts with the noise and disturbance of local residents, already with the location used for its current reason there is increased noise, including into the evening disturbing families with young children especially, again from cars but also loud voices, gathering close to people's home. This disturbs people who are working also earlier in the day. I hope these concerns will be taken seriously from the residents this is impacting when deciding on the outcome here.
