I support application 2026/92385 because it represents a practical and sustainable use of an existing building. At a time when communities need accessible local services, making effective use of premises that already exist is a sensible approach. It avoids the need to acquire land and construct an entirely new building elsewhere. The proposed use would allow the premises to continue contributing to the neighbourhood through education, worship and community activities. The existing management have been great with family members that have used the education services and it's only a 10 minute walk from my house to the centre. Subject to appropriate controls on attendance, traffic and noise, I see no reason why these activities cannot coexist with the surrounding residential area. I ask Kirklees Council to recognise the benefits of bringing an existing property into continued community use and support this application.
