I would be very happy to see this application approved. For younger people who drive, travelling to another mosque may not seem like a major issue. However, as people get older, travelling becomes more difficult and having facilities close to home becomes increasingly important. A local mosque would allow residents who are able to walk to attend prayers without depending on lifts from relatives or friends. It would also provide opportunities to meet others, maintain friendships and remain connected with the community. These are important benefits that should not be overlooked. Having a place of worship within the neighbourhood would make life easier for many local residents while potentially reducing the number of car journeys across Huddersfield. Currently I have to drive from Birkby to Moldgreen to pick up an elderly family member and then drive back to Birkby to attend prayers. I hope the Council considers the needs of people who simply want somewhere accessible to worship and meet others.
