Site Ref: 52, Paris, Scholes, Holmfirth
Post code HD9 1SY

52, Paris, has 14 front elevation windows that we propose to replace in order to bring back traditional timber windows into the property.

The existing aluminium windows circa 1980's hold no historical value and were installed prior to the property becoming listed.

The replacement timber windows that we propose shall bring the standard and visual appeal of the windows, and property overall into a more period correct condition.

The replacement windows will also locate into the same positions within the masonry apertures as per the existing, albeit requiring minor alteration to the internal timber linings to accept a deeper traditional timber window.

The present aluminium double glazed windows hold no special significance to the buildings heritage because they are not the original windows.

The replacements are to be fully hand-made and constructed from the finest quality painted timbers, using traditional woodworking manufacturing skills ensuring that they shall be as original as possible and in-keeping overall with the buildings' heritage.

Similarly they will be in keeping with the neighboring property, where we have already had experience working, with previous window replacements being conducted after obtaining the relevant listed building consents required.
