

The **public footpath and driveway are identified by the purple line**. The **first purple arrow**, bearing to the left, indicates the entrance into the property and construction area. The **second purple arrow** indicates the route of the public footpath, which continues onwards and around the site.

The entrance to the construction area will be secured with gates, with appropriate signage displayed to alert pedestrians and other users of the public footpath to the construction works.

The area identified by the **first purple arrow** will also be used as the designated delivery and material drop-off point. During deliveries, there may be limited occasions where part of a delivery vehicle temporarily overhangs or encroaches upon the route of the public footpath. Every reasonable effort will be made to avoid this and to minimise any temporary obstruction, with deliveries managed to protect the safe passage of pedestrians using the public footpath.
