3 Trees Identified Identified

Adrian Waterhouse

Treeworld Ltd

Tree 1

W3W: [///slightly.marzipan.preheated](https://www.slightly.marzipan.preheated)

Dead Tree - Species Unknown

Location:

Located within public open space land.

Observations:

Tree is dead.

Recommended Works:

Fell tree to ground level and remove all arising material from site.

Replacement Planting:

Replace with one 10/12cm girth standard native deciduous tree during the next suitable planting season.

Tree 2

W3W: ///voices.washroom.acids

Mature Oak

Height: 17m

Canopy Spread: 12m

Location:

Public open space land, adjacent to a bridleway.

Observations:

Tree is showing signs of severe decline, particularly within the upper canopy. Approximately 80% of the crown comprises standing deadwood. The stem and canopy are heavily covered with ivy.

Recommended Works:

Reduce the tree to a pollard approximately 1m above the existing crown break, retaining the main stem and lower framework.

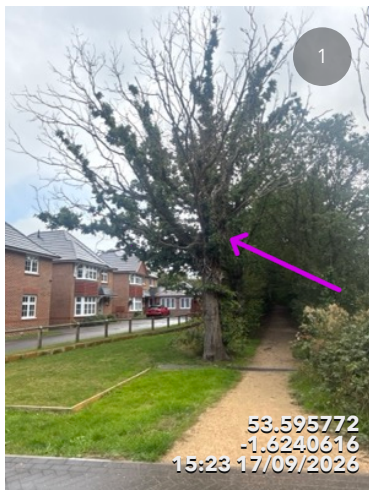

Remove/sever Ivy at base of tree

Objectives

Reduce the risk associated with the extensive dead canopy

Retaining the tree in a reduced form and increase regenerative growth.

Remove all arising material from site.

Tree 3

W3W: ///breeding.stealing.loaning

Ivy covered fallen limb in Public open space

Remove
