

i wish to object to this development because .

I was going to Rent a room from my friends parent in Whitechapel road. as we attend the same university. once i found out about this development, I changed my mind , even my friend is moving out as my family was at Blakeland in Milton Keynes and when this was being built and there life has been awful and the noise dust etc , as really effected there mental heath , they cant even sell their house as it has dropped so much in value. She used to smile and laugh a lot and now just cries a lot. Please speak to the residents there , before even considering this monster and that is not even as big as this one.

From someone with experience , this building is nothing like anything else and wont fit in and will destroy this village.

I have seen the local plan and this is nothing like it, it uses every available space. and the design is not in considering with the other properties in the village. The ink could have not been dry on the plan when you was secretly talking to this developer, you have let down your residents that you owe a duty of care.

From first hand experience the trees they plant are not much bigger than a large bush and some of them even die.

Most of the residents , would be dead before these trees were any use.

Our government has a done a survey into the effect of artificial light on wild life and how it is killing of insects etc. I recommend you read it. You don't hear wildlife around the Milton Keynes development anymore only lorries.
