3. Ensure education facilities are available to all.	++?/?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		Levels of access to education facilities vary throughout this site. The most accessible part of the site is the east which is within 6-10 minutes of both a primary school and within 5 minutes of a secondary school. The least accessible part of the site is an area to the west of the centre which is within 16-20 minutes from a primary school and within 11-15 minutes of a secondary school. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective - potentially significant positive for the east and potentially minor positive for the area to the west of the centre of the site. In addition, travel times to the nearest further education institute vary across the site; the east is within 31-35 minutes and the area to the west of the centre is within 41-45 minutes.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the east which is within 6-10 minutes of a GP and within 36-40 minutes of a hospital. The least accessible part of the site is an area to the west of the centre which is 16-20 minutes from a GP and within 46-50 minutes of a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect is likely for this objective - minor positive for the east and negligible for the area to the west of the centre. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties in close proximity to the north, south and east of the site which may be affected by noise during the construction phase. Therefore a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The most accessible part of the east which is within 6-10 minutes travel time from the nearest local centre and within 21-25 minutes of a town/district centre. The least accessible part of the site is an area to the west of the centre which is within 16-20 minutes of the nearest local centre and within 31-35 minutes of a town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; negligible for the east and significant negative for the area to the west of the centre of the site.</p>
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site contains a green corridor/pedestrian/cycleway and a number of PRow footpaths which could all be lost or disrupted as a result of housing development. However, within 225m west of the site are several PRow footpaths. Within 340m north of the site are two areas of amenity greenspace, an area of allotments, two private bowling greens, two areas of school grounds and playing fields, a multi-use games area, an area of public playing fields, an area of private playing fields, a children's play area and an area of park and gardens. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.4ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access in four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (4.4ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of site is not within an area of high quality agricultural land (the land is classed urban with a small are on the southern edge classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4.4ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is not within 1km of any designated biodiversity and geodiversity sites; therefore development here could have a negligible effect on this SA Objective.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access in four of the eight features assessed; therefore a significant positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 1: employment (part of a mixed effect), 3: education (part of a mixed effect), 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 6: local services and facilities (mixed effect) and 8: leisure and recreation (mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H1754 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is within 21-25 minutes travel time of the nearest employment node; therefore a minor positive effect on this

SA Objectives	SA Score	Justification
they are accessible.		objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of both the nearest primary school and secondary school; therefore a significant positive effect is likely for this objective. The site is also within 31-35 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of the nearest GP and within 21-25 minutes of the nearest hospital. Therefore, a minor positive effect is likely for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties in close proximity to the north, east and west of the site which may be affected by noise during the construction phase. Therefore a minor negative effect on this SA objective is therefore likely.</p>
6. The most accessible part of the site is a small area in the south which is within 6-10 minutes travel time from the nearest local centre and within 11-15 minutes of a town/district centre. The least accessible part of the site is the centre which is within 11-15 minutes of the nearest local centre and within 16-20 minutes of a town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; minor positive for the small area in the south and negligible for the centre of the site.</p>

SA Objectives	SA Score	Justification
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site contains two PRoW footpaths which could be lost or disrupted as a result of housing development. However, there are several PRoW footpaths to the south of the site and within 370m south of the site are two areas of semi-natural and natural greenspace, allotments, an area of park and gardens which contain a children's play area and private tennis courts. In addition, within 430m east of the site area an area of semi-natural and natural greenspace, private tennis courts, two private bowling greens and an area of private playing fields. Also, approximately 185m north west of the site is an area of semi-natural and natural greenspace however it is located within another housing site option. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.65ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.65ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within an area of high quality agricultural land (the land is classed as urban with an area in the north classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.65ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on 64 and 66 Cliffe Lane at the northern end of this site which are Grade II Listed Buildings.

SA Objectives	SA Score	Justification
settings.		The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is not within 1km of any designated biodiversity or geodiversity sites; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. <p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 1: employment, 3: education (part of a mixed effect) and 8: leisure and recreation (part of a mixed effect) and a potential significant negative effect was identified in relation to SA objective 8: leisure and recreation (mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

## H1763 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 5 minutes travel time of the nearest primary school and within 6-10 minutes of a secondary school. Therefore a significant positive effect is expected for this objective. The site is also within 5 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 11-15 minutes travel time of the nearest GP and within 26-30 minutes of a hospital (with an area in the north west within 21-25 minutes). Therefore a significant positive effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by a number of existing residential properties which may be affected by noise during the construction phase. Therefore a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of the nearest local centre and within 11-15 minutes of a town/district</p>

SA Objectives	SA Score	Justification
		centre. Therefore a minor positive effect is likely for this objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Approximately 280m south east of the site is a PRoW footpath and another footpath runs approximately 290m to the west of the site. To the south of the site approximately 480m away is another PRoW footpath however it runs through another housing site option. Also to the south of the site is an area of semi-natural and natural greenspace approximately 80m away which is adjacent to an area of amenity greenspace which contains a children's play area, however the semi-natural and natural greenspace is located within another housing site option. Within 200m west of the site is an area of school grounds and playing fields. Approximately 280m north west of the site is a football ground and approximately 330m north of the site is a cricket ground which is also adjacent to an area of semi-natural and natural greenspace. Within 560m south west of the site are two areas of amenity greenspace and another area of amenity greenspace is located approximately 595m north east of the site and contains an area of children's play provision. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.4ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in all of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.4ha) on brownfield land; therefore a minor positive effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (0.4ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment,	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.

SA Objectives	SA Score	Justification
heritage assets and their settings.		The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is not within 1km from any designated biodiversity or geodiversity sites; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	The site is on brownfield land and is outside of flood zones 2 and 3; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  The site is on brownfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in all of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 1: employment, 3: education, 4: healthcare facilities, 8: leisure and recreation and a potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1765 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
---------------	----------	---------------

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is over 60 minutes travel time of the nearest employment node; therefore a significant negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is over 60 minutes travel time of the nearest primary school, secondary school and further education institute. Therefore a significant negative effect is expected for this objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is over 60 minutes travel time from both the nearest GP and hospital. Therefore a significant negative effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity to the north of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is over 60 minutes travel time of both the nearest local centre and a town/district centre. Therefore a significant negative effect is expected for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced

SA Objectives	SA Score	Justification
of crime.		by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 100m south of the site are four PRoW footpaths, however one of the footpaths runs through another housing site option. Also, within 420m east of the site are nine PRoW footpaths. Approximately 310m south west of the site is an area of school grounds and playing fields. To the north west of the site there is another area of school grounds and playing fields approximately 395m away. In addition, approximately 565m to the south west of the site is an area of Green corridor/pedestrian/cycleway which is adjacent to an area of semi-natural and natural greenspace. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.62ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as entirely 'green' in terms of its access for any of the eight features assessed. Therefore, a significant negative effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.62ha) and is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4 with a small area in the south west classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.62ha) and is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 135m from Hey Wood/West Wood Local Wildlife Site, 385m from Honley Station Cutting Site of Special Scientific Interest (SSSI), 245m from Cliff Wood Local Wildlife Site, approximately 765m from Upper Park Wood Local Nature Reserve and Local Wildlife Site and approximately 925m from Longwood Edge Quarry, Huddersfield

SA Objectives	SA Score	Justification
		Local Geological Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as entirely 'green' in terms of its access in any of the eight features assessed; therefore a significant negative effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation and potential significant negative effects were identified in relation to SA objectives 1; employment, 3: education, 4: healthcare facilities, 5: amenity, 6: local services and facilities, 10: sustainable transport, 14: biodiversity and geodiversity, 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1766 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The majority of the site is over 60 minutes travel time of the nearest employment node (with an area in the west within

SA Objectives	SA Score	Justification
they are accessible.		31-35 minutes); therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of site is over 60 minutes travel time from the nearest primary school (with an area in the west within 11-15 minutes) and over 60 minutes of a secondary school (with an area in the west within 6-10 minutes); therefore a significant positive effect is likely for this objective. The majority of the site is also over 60 minutes from a further education institute (with an area in the west within 26-30 minutes).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within over 60 minutes travel time from the nearest GP (with an area in the west within 11-15 minutes) and the majority of the site is over 60 minutes of the nearest hospital (with an area in the west over 60 minutes). Therefore, a significant negative effect is likely for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within <b>close</b> proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties in close proximity to the north and east of the site which may be affected by noise during the construction phase. Therefore a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is over 60 minutes travel time of the nearest local centre (with an area in the west within 6-10 minutes) and the majority is over 60 minutes of a town/district centre (with an area in the west within 11-15 minutes). Therefore a significant negative effect is likely for this objective.</p>
7. Make our communities	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the

SA Objectives	SA Score	Justification
safer by reducing crime, anti-social behaviour and the fear of crime.		incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site contains a PRow footpath which could be lost or disrupted as a result of housing development. However, there are several PRow footpaths within 340m south of the site and 390m north east of the site. To the west of the site within 530m are two areas of school grounds and playing fields however there is a railway line between the open space and the site making the open space less easily accessible. In addition, to the south west of the site is an area of semi-natural and natural greenspace and a Green corridor/pedestrian/cycleway, however they are both separated from the site by a railway line and the semi-natural and natural greenspace is within another housing site option. Within 600m south of the site are a private bowling green and an area of semi-natural and natural greenspace however they are less easily accessible as they are separated from the site by a railway line. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.66ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as mostly or entirely 'green' in terms of its access in any of the eight features assessed. Therefore, a significant negative effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.66ha) and the majority is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.66ha) and the majority is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.

SA Objectives	SA Score	Justification
settings.		The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 55m from Hey Wood/West Wood Local Wildlife Site, within 215m of Cliff Wood Local Wildlife Site, approximately 530m from Honley Station Cutting Site of Special Scientific Interest (SSSI) and approximately 815m from Longwood Edge Quarry, Huddersfield Local Geological Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  The majority of the site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as mostly or entirely 'green' in terms of its access in any of the eight features assessed; therefore a significant negative effect is likely.
<p><b>Summary of SA findings:</b> A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation (part of a mixed effect) and potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: healthcare services, 6: local services and facilities, 8: leisure and recreation (mixed effect), 10: sustainable transport, 14: biodiversity and geodiversity and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

## H1767 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is over 60 minutes travel time of the nearest employment node (with an area to the north west within 56-60 minutes); therefore a significant negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest primary school (with an area in the north west within 5 minutes) and within 26-30 minutes of a secondary school (with an area in the south east over 60 minutes). Therefore a minor positive effect is expected for this objective. The majority of the site is also within 51-55 minutes of a further education institute (with an area to the south east over 60 minutes).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 31-35 minutes travel time of the nearest GP (with an area in the south east over 60 minutes) and is over 60 minutes of a hospital. Therefore a minor negative effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity to the east and north west of the site which may be affected by noise during the construction phase. Therefore a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p>

SA Objectives	SA Score	Justification
		The majority of the site is within 26-30 minutes travel time of the nearest local centre (with an area in the south east over 60 minutes) and within 21-25 minutes of a town/district centre (with an area to the south east over 60 minutes). Therefore a minor negative effect is likely for this objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The West Yorkshire Cycle Route runs through the north west corner of the site and could be lost or disrupted as a result of housing development. However, a PRow footpath runs adjacent to the south east boundary of the site. There is another PRow footpath within 20m to the west of the site however it runs through another housing site option. To the north east of the site there are a further four PRow footpaths within 135m of the site. Within 270m east of the site is a National Cycle Route. Approximately 130m north of the site is an area of school grounds and playing fields and further north approximately 185m away is an area of semi-natural and natural greenspace however it contains another housing site option. This area of open space is adjacent to an area of park and gardens and an area of public playing fields that contains two areas of children's play provision. To the north west of the site approximately 485m away is a cricket ground. In addition, to the north of the site there is an area of amenity greenspace approximately 395m away and an area of allotment approximately 580m way which is adjacent to an area of semi-natural and natural greenspace. There is another area of semi-natural and natural greenspace within 600m north of the site. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.17ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.17ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.17ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.

SA Objectives	SA Score	Justification
		The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Lower Woodhouse Farmhouse and barn which are Grade II Listed Buildings.  The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 440m from Yateholme Reservoirs & Plantations Local Wildlife Site, approximately 595m from Digley Reservoir/Marsden Clough Local Wildlife Site, within 750m of Malkin House Wood Local Wildlife Site and approximately 965m Carr Green Meadows Holmbridge Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  The site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in one eight of the eight features assessed; therefore a minor positive effect is likely.</p>
<p><b>Summary of SA findings:</b> A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation (part of a mixed effect) and potential significant negative effects were identified in relation to SA objectives 1: employment and 8: leisure and recreation (mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H1769 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is over 60 minutes travel time of the nearest employment node (with two small areas to the north west within 56-60 minutes); therefore a significant negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is the northern part which is within 5 minutes of a primary school and within 26-30 minutes of a secondary school. The least accessible part of the site is a small area in the south which is within 11-15 minutes from a primary school and within 31-35 minutes of a secondary school. In between those areas journey times to education facilities vary in between those two</p>

SA Objectives	SA Score	Justification
		extremes. However, overall a minor positive effect is expected for this SA objective. The majority of the site is within 56-60 minutes of a further education institute (with an area in the north within 51-55 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 31-35 minutes travel time of the nearest GP (with an area in the south within 36-40 minutes) and is over 60 minutes of a hospital. Therefore a minor negative effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity to the north of the site which may be affected by noise during the construction phase. Therefore a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 26-30 minutes travel time of the nearest local centre (with an area in the south within 31-35 minutes) and within 26-30 minutes of a town/district centre (with an area to the north within 21-25 minutes). Therefore a minor negative effect is likely for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	To the north of the site approximately 65m away is a PRoW footpath and approximately 75m away is the West Yorkshire Cycle Route however both of the routes run through other housing site options. There is another PRoW footpath approximately 170m east of the site. Approximately 410m to the east of the site is a National Cycle route. To the east of the site there is another PRoW footpath approximately 355m away and a bridleway approximately 385m away. To the north east of the site there are a further four PRoW footpaths within 305m of the site. Approximately 230m north of the site is an area of school grounds and playing fields and further north approximately 270m away is an area of semi-natural and natural greenspace however it contains another housing site option. This area of open space is adjacent to an area of park and gardens and an area of public playing fields that contains two areas of children's play provision. To the north west of the site approximately 505m away is a cricket ground. In addition, to the north of the site there is an area of amenity greenspace approximately 515m away. Therefore a significant positive effect is expected for this

SA Objectives	SA Score	Justification
		objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.08ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.08ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.08ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 425m from Yateholme Reservoirs & Plantations Local Wildlife Site, approximately 580m from Digley Reservoir/Marsden Clough Local Wildlife Site and within 875m of Malkin House Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in one of the eight features assessed; therefore a minor positive effect is likely.
<b>Summary of SA findings:</b> A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation and a potential significant negative effect was identified in relation to SA objective 1: employment. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1770 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Most of this site is within 56-60 minutes travel time to an employment node (although the southern area is within 51-55 minutes travel time). Therefore, a significant negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

SA Objectives	SA Score	Justification
		<p>accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of this site is within 6-10 minutes travel time to a primary school (aside from an area in the north, which is within 11-15 minutes travel time). Most of this site is also within 36-40 minutes travel time to a secondary school (aside from the southern area which is within 31-35 minutes travel time); therefore, a minor positive effect is likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time to a GP and approximately half of this site is within 56-60 minutes travel time to a hospital, while the other half is within 51-55 minutes travel time; therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There is a single residential property to the north, of the site which may be affected by noise and light pollution during the construction phase. In addition, the neastern boundary of the site is adjacent to a railway line which may mean that residents in that part of the site are affected by railway noise. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 26-30 minutes travel time to a local centre and 6-10 minutes travel time to a town/district centre; therefore, a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site is within 600m of more than three recreational facilities. There are several Public Rights of Way (PRoW), to the west of the site and a local cycle route 580m south of the site. Greenspace designations nearby include, three parks and gardens, one amenity greenspace and six areas of semi-natural and natural greenspaces. Other recreational spaces nearby include two outdoor sports facilities and a site containing provision for children and young people. Therefore a significant positive effect is likely for this SA objective.</p>

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.44ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This site is small (0.44ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. This site is on Grade 4 agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (0.94ha) and on greenfield land. The site is not within 500m of the Peak District National Park. Therefore, the effect is likely to be a minor negative effect.  The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Huddersfield Narrow Canal is approximately 100m south of the site; therefore, development here could have a significant negative effect on this SA Objective. In addition Drop Clough Local Wildlife Site and the South Pennine Moors are both within 1km from the site (but not within 250m). Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation. No potential significant negative effects were identified. Potential significant negative effects were identified in relation to SA objectives, 1: employment, 5; local amenity and 14 biodiversity and geodiversity. These will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1771 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  This site is within 41-45 minutes travel time to an employment node. Therefore, a minor negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		This site is within 6-10 minutes travel time to a primary school. Most of this site is also within 26-30 minutes travel time to a secondary school (aside from a small area in the east which is within 21-25 minutes travel time); therefore, a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time to a GP and 51-55 minutes travel time to a hospital; therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties to the north, midwest and south of the site which may be affected by noise and light pollution during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 16-20 minutes travel time to a local centre and 6-10 minutes travel time to a town/district centre; therefore, a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities. There are several Public Rights of Way (PRoW), the closest is adjacent to the site in the southwest and a local cycle route, approximately 250m to the north. Greenspace designations nearby include, two parks and gardens, one amenity greenspace, eight areas of semi-natural and natural greenspaces, although two of these site are within housing options H1936 and H643 and therefore could be lost as a result of development. Other recreational spaces nearby include four outdoor sports facilities, two site containing provision for children and young people and four allotment sites. Therefore a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.94ha); therefore, a minor positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This site is small (0.94ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. This site is on land designated as urban quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (0.94ha) and on greenfield land. The site is not within 500m of the Peak District National Park. Therefore, the effect is likely to be a minor negative effect.  The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	South Pennine Moors Special Protection Areas is approximately 375m south of the site as well as Butterley Cutting, Marsden Local Geological Site which is 675m, south west of the site; therefore, development here could have a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation. No potential significant negative effects were identified.		

### H1772 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is mostly within 6-10 minutes travel time of an employment node (a small part of the site to the north east is located within 5 minutes travel time of an employment node); therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of this site is within 6-10 minutes travel time to a primary school, aside from the western area which is within 11-15 minutes travel time. This site is also within 6-10 minutes travel time to a secondary school; therefore, a significant positive effect is likely. This site is also within 6-10 minutes of a further education institute.
4. Improve the health of local people and ensure that they	++	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
can access the health and social care they need.		Access to healthcare varies across the site. The most accessible area is in the north eastern area of the site, which is within 6-10 minutes travel time to a GP and 16-20 minutes travel time to a hospital. The least accessible area is in the north western area of the site which is within 6-10 minutes travel time to a GP 26-30 minutes travel time to a hospital. In between these two extremes, travel times to healthcare facilities vary. However overall a significant positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The A638 (Westgate Road) is adjacent to the site in the north which may mean that residents in that part of the site are affected by road noise. There are also existing residential properties to the west, which may be affected by noise and light pollution during the construction phase. Furthermore, there are also industrial units to the within 100m of the site, to the north and south west, which could cause noise effects over the long term. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+/0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole site is within 6-10 minutes travel time to a local centre. However, access to town/district centre varies across the site. The most accessible area is in the north western area of the site, which is within 6-10 minutes travel time to a town/district area. The least accessible area is in the south western edge, which is within 16-20 minutes travel time. In between these two extremes, travel times to local service facilities vary. Therefore, a mixed effect is likely, potentially minor positive effect for the north western area of the site of the site and a negligible effect for the south western edge.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities. There is a national and local cycle route and several Public Rights of Way (PRoW) surrounding the site, the closest being immediately adjacent to the site in the south. Greenspace designations include two green corridors, eight amenity greenspaces, two semi-natural and natural greenspaces, four park and gardens Other facilities include eight outdoor sports facilities, a civic space, five sites containing provision for children and young people and one allotment site. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.58ha); therefore, a minor positive effect is likely.
10. Secure an effective and	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of

SA Objectives	SA Score	Justification
safe transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to all eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.58ha) and on brownfield land meaning that there is likely to be a minor positive effect on this objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This site is large (1.58ha) and on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park.  The site lies in an area classed as 'industrial/business parks' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	Lower Spen Wildlife Area Local Nature Reserve is the closest biodiversity / geodiversity site, but is almost 3km south of the site, therefore a negligible effect is likely on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is on brownfield land and most of it is outside the flood zone 3, aside from the areas along the eastern and southern boundary; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land therefore a minor positive effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to all eight of the features assessed. Therefore, a significant positive effect is likely overall.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: leisure and recreation 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity. This will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1773 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Levels of access to an employment node vary throughout this site. The most accessible part of the site is the western edge which is within 11-15 minutes travel time of the nearest employment node. The least accessible parts of the site are the North eastern and south eastern corners which are within 21-25 minutes from an employment node. In between those areas journey times to an employment node vary in between those two extremes. Therefore a mixed effect is likely for this objective – a significant positive effect for the western edge and a minor positive effect for the north eastern and south eastern corners.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The majority of the site is within 11-15 minutes travel time of the nearest primary school (with an area in the south within 6-10 minutes) and within 21-25 minutes of a secondary school (with an area in the west within 16-20 minutes); therefore a minor positive effect is likely for this objective. The majority of the site is also within 16-20 minutes of a further education institute (with an area in the west within 11-15 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest GP (with an area in the north eastern corner within 11-15) and within 41-45 minutes of the nearest hospital (with an area in the west within 36-40 minutes). Therefore, a minor positive effect is likely for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties in close proximity to the west and north east of the site which may be affected by noise during the construction phase. Therefore a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest local centre (with an area in the north eastern corner within 11-15 minutes) and within 11-15 minutes of a town/district centre (with an area in the north east corner and a small area on the eastern edge within 16-20 minutes). Therefore a minor positive effect is likely for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within an area of semi-natural and natural greenspace which could all be lost or disrupted as a result of housing development. However, to the north of the site within 45m is a PRoW footpath and a bridleway and 50m to the west of the site is the Fenay Greenway local cycle route. Within 290m east of the site are six areas of children's play provision and an area of amenity greenspace which contains a children's play area. Approximately 65m of the site and 140m south of the site are two areas of Green corridor/pedestrian/cycleway however the section to the north of the site is within another housing site option. In addition, approximately 5m north of the site is an area of semi-natural and natural greenspace that contains an area of children's play provision. Also, to the west of the site approximately 256m

SA Objectives	SA Score	Justification
		away is an area of semi-natural and natural greenspace which is adjacent to an area of amenity greenspace. Approximately 490m north west of the site is an area of allotments. To the south east of the site approximately 500m away is an area of allotments and an area of school grounds and playing fields. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.58ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access in six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.58ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within an area of high quality agricultural land (the land is classed as urban with a small area in the south classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.58ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 290m of Wakefield Road, Lepton Local Wildlife Site and approximately 870m from Round Wood, Tandem Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new	-	The site is on greenfield land and the majority of the site is outside of flood zones 2 and 3 (with a small area on the

SA Objectives	SA Score	Justification
development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		western edge within flood zone 3); therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access in six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 1: employment (part of a mixed effect), 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change and a potential significant negative effect was identified in relation to SA objective 8: leisure and recreation (mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1774 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 46-50 minutes travel time of an employment node, aside from the eastern area which is within 41-45 minutes travel time, therefore a minor negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment,	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of this site is within 6-10 minutes travel time to a primary school, aside from the area to the north east, which is within 5 minutes travel time. This site is within 11-15 minutes travel time to a secondary school; therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of this site is within 16-20 minutes travel time of a GP aside from an area in the north east which is within 11-15 minutes travel time. This site is also within 56-60 minutes travel time to a hospital. Therefore, a negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are several properties surrounding most of the site, and these residents could experience noise and light pollution during construction of the site. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 11-15 minutes of a local centre and a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are more than three recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is a Public Rights of Way, 76m to the west. There is also a semi-natural and natural greenspace, three outdoor sports facilities and one site containing provision for children and young people. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the

SA Objectives	SA Score	Justification
to live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.21ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.24ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is located on land classified as grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (1.21ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park.  The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential uncertain impacts on Thurstonland Conservation Area (the site is located within the boundaries of this conservation area). The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Lumb House and Round Wood, Brockholes Local Wildlife sites and Stocksmoor Grasslands Candidate Local Wildlife Site are all within 1km of the site, and as such, a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing

SA Objectives	SA Score	Justification
use, recovery and recycling of waste close to source.		buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified.		

### H1775 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The majority of the site is located within 11-15 minutes travel time of the nearest employment node (a small part of the site to the south west is located within 6-10 minutes travel time of the nearest employment node). Overall a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The site is located within 6-10 minutes travel time of a primary school and 11-15 minutes travel time of a secondary school. A significant positive effect is therefore likely on this SA objective.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP (a part of the site to the south west is within 5 minutes travel time of a GP). The site is also located with 36-40 minutes travel time of a hospital. A minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to the A643 along its western edge. It is considered that the close proximity of this major road may result in noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre. The majority of the site is also located within 6-10 minutes travel time of a town/district centre (a small part of the site to the north east is located within 11-15 minutes of a town/district centre); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site is on land which currently has a footpath running through it, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is in close proximity to a number of open spaces which may be used by new residents in the area. Outdoor sports facilities are located adjacent to the site along its north eastern boundary. Further outdoor sports facilities are located within 85m to the west of the site and also within 300m to the east of the site. A park is located within 195m to the south west of the site on Spen Bank and a children's playground is also provided at this location. Further outdoor sports facilities are located within 200m to the north of the site.</p> <p>As such an overall mixed effect (significant positive/potential significant negative) is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.07ha); therefore a minor positive effect is likely.</p>

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six out of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (3.07ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 3 Agricultural Land to the north and Urban Land to the south.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (3.07ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Spen Hall and the adjoining cottages opposite this site which have been designated as Grade II Listed Buildings.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	<p>The site is not within close proximity of any designated biodiversity features; Oakwell Park (a Local Nature Reserve and Local Wildlife Site) is the closest of such features but is located 1.66km to the north east and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is located on greenfield land but is not within Flood Zone 2 or 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.</p>

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1776 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located within 36-40 minutes travel time of the nearest employment node. A negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The site is located within 6-10 minutes travel time of a primary school and 6-10 minutes travel time of a secondary school. A significant positive effect is therefore likely on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP (a part of the site to the north is located within 11-15 minutes travel time of a GP). The site is also located with 41-45 minutes travel time of a hospital. A minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties on The Lodge and Cowlersley Lane to the north west. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre. The majority of the site is also located within 6-10 minutes travel time of a town/district centre (a small part of the site to the north is located within 11-15 minutes of a town/district centre); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which may be used by new residents in the area. Outdoor sports facilities are located adjacent to the site to the west. A small park and children's playground are also located adjacent to the site to the west. A semi-natural and natural greenspace is located to the north of the site within 55m. A cemetery is located to the south west of the site within 115m at Church Lane.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.44ha); therefore a significant positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six out of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (6.44ha) on mostly greenfield land (a small part of the site towards the south west has previously been developed); therefore a significant negative effect on this SA objective is likely. The site lies on land which has been identified as Urban Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (6.44ha) on mostly greenfield land (a small part of the site towards the south west has previously been developed); therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>The site is within 510m of Huddersfield Narrow Canal to the north which have been designated as a Candidate Local Wildlife Site. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	<p>This site is located on mostly greenfield land (a small part of the site towards the south west has previously been developed) but is not within Flood Zone 2 or 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.</p>

SA Objectives	SA Score	Justification
risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on mostly greenfield land (a small part of the site towards the south west has previously been developed); therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. <b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 9: housing, 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 11: land use and 12; landscape and townscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1777 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located within variable travel times of the nearest employment site. The western part of the site is located within 11-15 minutes travel time of the nearest employment node while the eastern part of the site is located more than 60 minutes travel time from the nearest employment node. Overall a mixed effect (significant positive/significant negative) is likely on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	+?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located at variable travel times of a primary school and secondary school. The western part of the site is located within 6-10 minutes travel time of a primary school while the eastern part of the site is located more than 60 minutes travel time from a primary school. The eastern part of the site is also located within 21-25 minutes travel time of the a secondary school while the western part of the site is located more than 60 minutes travel time of a secondary school. Overall a mixed effect (minor positive/significant negative) is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within variable travel times of the nearest GP and hospital. The western part of the site is located within 11-15 minutes travel time of the nearest GP while the eastern part of the site is located more than 60 minutes travel time of the nearest GP. The western part of the site is located within 31-35 minutes travel time of the nearest hospital while the eastern part of the site is located more than 60 minutes travel time of the nearest hospital. Overall a mixed effect (minor positive/significant negative) is expected on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is adjacent to a railway line to the north and as such new residential properties at this location may be adversely affected by the resultant noise. Given that the impact of this noise will be in the long term a significant negative effect on this SA objective is likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located at variable travel times from the nearest local centre and town/district centre. The western part of the site is located within 5 minutes travel time of the nearest local centre while the eastern part of the site is located more than 60 minutes travel time of the nearest local centre. The western part of the site is located within 6-10 minutes travel time of the nearest town/district centre while the eastern part of the site is located more than 60 minutes travel time of the nearest town/district centre. Overall a mixed effect (significant positive/significant negative) is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is on land which has been identified as a semi-natural and natural greenspace, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. Allotments are located within 20m to the west of the site. Outdoor sports facilities can be accessed within 265m to the north of the site and an amenity greenspace and children's playground are also provided at this location. Dewsbury District Golf Club is located within 335m to the east of the site and provides access to further outdoor sports facilities. A mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (11.04ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (11.04ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site lies on land which has been identified as Urban Land to the west and Grade 3 Agricultural Land to the east.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (11.04ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site could impact on the Grade II Listed Buildings which are in close proximity to Broad Oakes. It is expected that development at the site is unlikely to result in harm to these assets if the development accords with the anticipated Local Plan policies for managing change to the historic environment. A minor

SA Objectives	SA Score	Justification
		negative effect on this SA objective is therefore likely although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 200m of Whitley Wood to the west which have been designated as a Local Wildlife Site. Briery Bank Wood is another Local Wildlife Site and is located within 240m to the south. The proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	--	This site is located on greenfield land and is also within Flood Zone 3; therefore a significant negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces - and also increase the number of houses at high risk of being flooded within Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is not classed as 'green' in terms of its access to any of the eight features assessed; therefore a significant negative effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (it should be noted that this positive effect was recorded as part of an overall mixed effect however), 8: recreation and leisure, (it should be noted that this positive effect was recorded as part of an overall mixed effect however) and 9: housing, and potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health (it should be noted that these positive effects were recorded as part of an overall mixed effect for these three SA objectives however), 5: amenity, 8:		

SA Objectives	SA Score	Justification
		recreation and leisure (it should be noted that these positive effects were recorded as part of an overall mixed effect for this SA objective however), 11: land use, 12; landscape and townscape, 14: biodiversity and geodiversity, 16: flood risk and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.

### H1783 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located within variable travel times of the nearest employment node. The northern and eastern parts of the site are located within 26-30 minutes travel time of the nearest employment node while the southern part is located more than 60 minutes from the nearest employment node. Overall a mixed effect (minor positive/significant negative) is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located more than 60 minutes travel time from a primary school and more than 60 minutes travel time from a secondary school. A significant negative effect is therefore likely on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within variable travel times of a primary school or secondary school. The northern and central parts of the site are located within 6-10 minutes travel time of the nearest primary school while the southern part is located more than 60 minutes travel time of the nearest primary school. The northern and central parts of the site are located within 5 minutes travel time of the nearest secondary school while the southern part of the site is located more than 60 minutes travel time of the nearest secondary school. An overall mixed effect (significant positive/significant negative) is therefore expected on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise

SA Objectives	SA Score	Justification
		<p>pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties on Balmoral Avenue to the east. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The eastern part of the site is located within 5 minutes travel time of the nearest local centre while the southern part of the site is located more than 60 minutes travel time of the nearest local centre. The northern and eastern parts of the site are located within 11-15 minutes travel time of the nearest town/district centre, while the southern part of the site is located more than 60 minutes travel time from the nearest town/ district centre. Overall a mixed effect (significant positive/significant negative) is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site is on land which has been identified as an amenity greenspace to the south, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. Outdoor sports facilities can be accessed within 95m to the north east of the site. Beaumont Park is located to the south east of the site within 300m and provides access to a children's playground. Allotments are located to the east of the site within 555m. A mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	++	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (16.67ha); therefore a significant positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (16.67ha) on mostly greenfield land (some of the site has been previously developed to the north west); therefore a significant negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 4 Agricultural Land to the west and on Urban Land to the east.</p>

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (16.67ha) on mostly greenfield land (some of the site has been previously developed to the north west); therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies mainly within LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	<p>The site is in close proximity to Johnson Wellfield Quarries, Crosland Hill which is within 155m to the west and has been identified as a Local Geological Site. Delves Wood is within 45m to the south of the site and has been designated as a candidate Local Wildlife Site. To the west within 510m Beaumont Park, Huddersfield has been designated as a Local Geological Site. The proximity of the site to these designated biodiversity and geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is located on mostly greenfield land (some of the site has been previously developed to the north west); therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is located on mostly greenfield land (some of the site has been previously developed to the north west); therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 4: health, 6: access to local services, 8: recreation and leisure (it should be noted that mixed effects were recorded overall for these three SA objectives) 9: housing, 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 4: health, 6: local services, 8: recreation and leisure (it should be noted that mixed effects were recorded overall for these three SA objectives), 11: land use, 12: landscape and townscape, and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

#### H1784 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect is likely on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of the nearest primary school. The majority of the site is located within 16-20 minutes travel time of the nearest secondary school (a small part of the site to the south is located within</p>

SA Objectives	SA Score	Justification
		11-15 minutes travel time of the nearest secondary school). A significant positive effect is therefore likely on this SA objective. The majority of the site is located within 16-20 minutes travel time of the nearest centre for further education (a small part of the site to the south is located within 11-15 minutes travel time of the nearest centre for further education).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 5 minutes travel time of the nearest GP. The majority of the site is located within 46-50 minutes travel time of the nearest hospital (the southern part of the site is located within 51-55 minutes travel time of the nearest hospital). Overall a minor positive effect is expected on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to an existing railway line to the west. New residential properties at this location may be adversely affected by noise in the long term due to this and as such a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest local centre (the northern part of the site is located within 11-15 minutes travel time of the nearest local centre). The majority of the site is also located within 6-10 minutes travel time of the nearest town/district centre (a small part of the site to the north is located within 11-15 minutes travel time of the nearest town/district centre). Overall a minor positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++/--?	The site is on land which has been identified as a semi-natural and natural greenspace to the east, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. Amenity greenspace and a children's playground are located within 20m to the north east. Outdoor sports facilities are located within 185m to the south east of the site. A semi-natural and natural greenspace is located within 30m of the site to the south. A

SA Objectives	SA Score	Justification
usage.		mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.86ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.86ha) on mostly brownfield land (some of the site to the east remains undeveloped); therefore a minor positive effect on this SA objective is likely. The site lies on land which has been identified as Grade 4 Agricultural Land to the west and on Urban Land to the east.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (0.86ha) on mostly brownfield land (some of the site to the east remains undeveloped); therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in relatively close proximity to Denby Delph to the south west and Turpin Hill to the west of the site both of which have been identified as Candidate Local Wildlife Sites. The relative proximity of the site to these designated biodiversity and geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is located on mostly brownfield land (some of the site to the east remains undeveloped) and is not within Flood Zone 2 or 3; therefore a negligible effect is likely given that the development of new housing on this brownfield land would not result in an increase in the area of impermeable surfaces and therefore be unlikely to increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on mostly brownfield land (some of the site to the east remains undeveloped); therefore a minor positive effect is likely. The positive effect is uncertain given that the materials currently onsite are unknown at this stage.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure (it should be noted that mixed effects were recorded overall for this SA objective), 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: recreation and leisure (it should be noted that mixed effects were recorded overall for this SA objective). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1785 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located within variable travel times of the nearest employment node. The south west part of the site is located within 41-45 minutes travel time of the nearest employment node while the north east part of the site is located within 31-35 minutes travel time of the nearest employment node. Overall a mixed effect (negligible/minor positive) is

SA Objectives	SA Score	Justification
		expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest primary school (a small part of the site to the south west is located within 11-15 minutes travel time of the nearest primary school). The majority of the site is located within 6-10 minutes travel time of the nearest primary school (a small part of the site to the south west is located within 11-15 minutes travel time of the nearest secondary school). A significant positive effect is therefore likely on this SA objective. The majority of the site is located within 21-25 minutes travel time of the nearest centre for further education (a small part of the site to the south west is located within 26-30 minutes travel time of the nearest centre for further education).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest GP (a small part of the site to the south west is located within 16-20 minutes travel time of the nearest GP). The majority of the site is located within 41-45 minutes travel time of the nearest hospital (the south western part of the site is located within 46-50 minutes travel time of the nearest hospital). Overall a minor positive effect is expected on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to a quarry to the south and in close proximity to Crosland Moor Airfield to the south and south west respectively. New residential properties at this location may be adversely affected by noise in the long term due to this and as such a significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest local centre (the south western part of the site is located within 11-15 minutes travel time of the nearest local centre). The majority of the site is also located within 11-15 minutes travel time of the nearest town/district centre (a small part of the site to the south west is located within 16-20 minutes travel time of the nearest town/district centre). There is a strong visual relationship with the moorlands of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is in close proximity (250m) to Johnson Wellfield Quarries, Crosland Hill to the south east which has been identified as Local Geological Site. The proximity of the site to this designated geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on mostly greenfield land (some of the site to the south appears to have been previously developed to use as a quarry) and is not within Flood Zone 2 or 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would result in an increase in the area of impermeable surfaces and therefore potentially increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is located on mostly greenfield land (some of the site to the south appears to have been previously developed to use as a quarry); therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H1792 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Access to employment nodes vary across the site. The most accessible area is in the far south west of the site, which is within 16-20 minutes travel time to an employment node. The least accessible area is in the far north eastern area, which is within 26-30 minutes travel time. In between these two extremes, travel times to employment nodes vary. Therefore, a mixed effect is likely, potentially significant positive for the far south west of the site and a minor positive effect for the far north eastern area.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is in the far south western edge of the site,</p>

SA Objectives	SA Score	Justification
		which is within 6-10 minutes travel time to a primary and secondary school. The least accessible area is in the far north eastern area of the site which is within 16-20 minutes travel time to a primary school and within 26-30 minutes travel time to a secondary school. In between these two extremes, travel times to education facilities vary. Therefore, a mixed effect is likely, potentially significant positive effect the far south western edge of the site and a negligible effect for the far north eastern area of the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to healthcare varies across the site. The most accessible area is in the far south western edge of the site, which is within 5 minutes travel time to a GP and 51-55 minutes travel time to a hospital. The least accessible area is in the far north eastern of the site which is within 11-15 minutes travel time to a GP and over 60 minutes travel time to a hospital. In between these two extremes, travel times to healthcare facilities vary. Therefore, overall a potentially minor positive effect is likely for the whole site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties to the north, west and south west of the site which may be affected by noise and light pollution during the construction phase. Furthermore, there are also industrial units within 100m to the south east of the site, which could cause noise effects over the long term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local services varies across the site. The most accessible area is in the south western area of the site, which is within 11-15 minutes travel time to a local centre and town/district centre. The least accessible area is in the north-eastern area of the site which is within 31-35 minutes travel time to a local centre and 21-25 minutes travel time to a town/district centre. In between these two extremes, travel times to local service facilities vary. Therefore, a mixed effect is likely, potentially minor positive effect for the south western areas of the site and minor negative effect for the north-eastern area of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the	++/--?	<p>This site includes a Public Right of Way (PRoW), which could be lost as a result of development. However, this site is within 600m of more than three recreational facilities including other PRoW and footpaths. Greenspace designations</p>

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		nearby includes three amenity greenspaces, two semi-natural and natural greenspaces and one park and garden. Other recreational spaces nearby include four outdoor sports facilities, one site containing provision for children and young people and two allotment sites. A mixed effect has therefore been identified (significantly positive and significantly negative) for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (17.67ha); therefore, a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This site is large (17.67ha) and on greenfield land; therefore a significant negative effect on this SA objective is likely. Most of this site is on land designated as Grade 3 agricultural quality, aside from areas in the south west and north west which are on land designated as urban.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is relatively large (17.67ha) and on greenfield land; therefore, development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park.  The site lies mainly within LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	--?	Historic England has rated this site as 'red' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is likely to result in substantial harm to a designated heritage asset and subsequently that the site should not be allocated. This site adjoins the southern boundary of the Registered Battlefield at Adwalton and substantial harm to this heritage asset's significance should be wholly exceptional as per national planning policy. The effect on this SA objective is therefore noted to be a significant negative although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Tong Moor Local Nature Reserve is approximately 380m north west of the site and therefore a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore, a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation and 9: Housing. Potential significant negative effects were identified in relation to SA objectives 5: pollution, 8: leisure and recreation, 11: land use, 12: landscape character and 13: historic environment. These will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1793 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The majority of the site is located within 41-45 minutes travel time of the nearest employment node (a small part of the site to the south east is located within 36-40 minutes travel time of the nearest employment node); therefore a minor negative effect on this objective is expected.
2. Achieve an economy better	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 11-15 minutes travel time of a primary school and 31-35 minutes travel time of a secondary school. A minor positive effect is therefore likely on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of a GP (the eastern part of the site is located within 6-10 minutes travel time of a GP) and within 51-55 minutes travel time of a hospital (the western part of the site is located within 56-60 minutes travel time of a hospital); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is located within 45m of existing residential properties which are present on Hassocks Road to the east. These properties may be adversely affected by noise during the construction phase and as such a minor negative effect on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 16-20 minutes travel time of a local centre (a small part of the site to the west is located within 21-25 minutes travel time of a local centre). The site is located within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces. Outdoor sports facilities are located within 45m to the east of the site. A small children's playground is located to the south east of the site within 285m. A green corridor and a semi-natural and natural greenspace are located to the south of the site within 310m.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.63ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three out of the eight features assessed. Therefore, a minor positive effect is likely</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.63ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively small site (1.63ha) on greenfield land. The site is also located within 315m of the Peak District National Park.</p> <p>Therefore a significant negative effect is likely on this SA objective. The effect is recorded as uncertain given that the design of any development proposed may be sympathetic of local townscape and landscape.</p> <p>The site lies in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 905m of the South Pennine Moors which have been designated as a Special Area of Conservation, a Special Protection Area and a Site of Special Scientific Interest to the south west. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for

SA Objectives	SA Score	Justification
		this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and potential significant negative effects were identified in relation to SA objective 12: landscape and townscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1794 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Levels of access to an employment node vary throughout this site. The most accessible part of the site is the south east

SA Objectives	SA Score	Justification
they are accessible.		which is within 5 minutes travel time of the nearest employment node. The least accessible part of the site is the north west which is within 11-15 minutes from an employment node. In between those areas journey times to an employment node vary in between those two extremes. However, overall a significant positive effect is likely for this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is the south east which is within 6-10 minutes of a primary school and within 11-15 minutes of a secondary school. The least accessible part of the site is the north west which is within 16-20 minutes from both a primary school and secondary school. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective - potentially significant positive for the south eastern part and potentially minor positive for the north western parts of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the south which is within 5 minutes travel time from the nearest GP and within 46-50 minutes of a hospital. The least accessible part of the site is the north west which is within 11-15 minutes from a GP and within 51-55 minutes of a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. However, overall a minor positive effect is expected for this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity to the east of the site which may be affected by noise during the construction phase. In addition, the site is adjacent a railway line to the south which may mean that residents in the northern part of the site are affected by railway noise. Therefore a significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	++/+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The most accessible part of the site is the south which is 5 minutes travel time from both the nearest local centre and town/district centre. The least accessible part of the site is the north west which is within 11-15 minutes from both the nearest local centre and town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; significant positive for the southern and minor positive for the north western parts of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is a PRow footpath which runs through the site and could be lost or disrupted as a result of housing development. However, there two bridleways that run adjacent to the north western boundary of the site and a further two bridleway run within 10m and 450m to the north west of the site. In addition, to the south west of the site approximately 110m away there is a PRow footpath. To the east of the site approximately 230m away is a cricket ground and pavilion which is adjacent to an area of semi-natural and natural greenspace and an area of children's play provision, however part of the cricket ground and semi-natural and natural greenspace are located within another housing site option. To the south east of the site there is an area of allotments approximately 215m away and an area of children's play provision approximately 190m away. Further to the south east approximately 390m away is an area of park and gardens. There are two more areas of park and gardens to the south of the site approximately 415m and 480m away with the latter located adjacent to a children's play area. Also, to the south west of the site approximately 380m away is an area of public playing fields which contains a children's play area. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.64ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access in seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This is a relatively small site (4.64ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4.64ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 700m from Riding Wood Local Wildlife Site and approximately 735m from Cliffe Woods Park Quarry, Clayton West Local Geological Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  The site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access in seven of the eight features assessed; therefore a minor positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 1: employment, 3: education (part of a mixed effect), 6: local services and facilities (part of a mixed effect), 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: leisure and recreation (mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H1795 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located at variable travel times from the nearest employment node. The northern part of the site is located within 11-15 minutes travel time of the nearest employment node while the south eastern part of the site is located more than 60 minutes from the nearest employment node. Overall a mixed effect (significant positive/significant negative) is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located at variable travel times from a primary school and secondary school. The north eastern part of the site is located within 5 minutes travel time of a primary school while the south eastern part of the site is located more</p>

SA Objectives	SA Score	Justification
		than 60 minutes travel time from a primary school. The north eastern part of the site is located within 11-15 minutes travel time of a secondary school while the south eastern part of the site is located within 60 minutes travel time of a secondary school. Overall a mixed effect (significant positive/significant negative) is expected on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located at variable travel times from a GP and hospital. The northern part of the site is located within 6-10 minutes travel time of a GP while the southern part of the site is located more than 60 minutes travel time of a GP. The south eastern part of the site is located within 21-25 minutes travel time of a hospital while the southern part of the site is located more than 60 minutes travel time of a hospital. Overall a mixed effect (significant positive/significant negative) is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is adjacent to the Spen Valley Industrial Park to the north. It is considered that the proximity of this industrial site to new residential properties will have a long term negative impact on amenity for new residents and as such a significant negative effect is likely.</p>
6. Retain and enhance access to local services and facilities.	+/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located at variable travel times of a local centre or town/district centre. The northern part of the site is located within 6-10 minutes travel time of a local centre while the southern part of the site is located more than 60 minutes from a local centre. The northern part of a the site is located within 6-10 minutes travel time of a town/district centre while the southern part of the site is located more than 60 minutes travel time of a town/ district centre. Overall a mixed effect (minor positive/significant negative) is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++/--?	The site contains a footpath which may be lost as a result of the development of housing at this location and therefore a potential significant negative is recorded for this objective. The site is also however in close proximity to a number of open spaces. The relative close proximity of these open spaces to the site may encourage new residents to make use of them. Outdoor sports facilities are located adjacent to the site to the south east, within 45m to the east of the site and within 95m to the north west of the site. A semi-natural and natural greenspace is located adjacent to the site to the

SA Objectives	SA Score	Justification
usage.		north west and a children's playground is also found at this location.  As such a mixed effect (significant positive/potential significant negative) is recorded on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (9.2ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (9.2ha) on mostly greenfield land (small parts of the site to the north and to the south have previously been developed); therefore a significant negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively large site (9.2ha) on mostly greenfield land (small parts of the site to the north and to the south have previously been developed). The site is not within close proximity of the Peak District National Park.  Therefore a significant negative effect is likely on this SA objective. The negative effect is recorded as uncertain given that the design of any new development may mitigate impact on local townscape and landscape.  The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity or geodiversity features; Oakwell Park is the closest of such features but is located 2.52km to the north east and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on mostly greenfield land (small parts of the site to the north and to the south have previously been developed) and is mostly outside of flood zones 2 and 3 (it is recognised that some of the north eastern part of the site is located within flood zones 2 and 3); therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on mostly greenfield land (small parts of the site to the north and to the south have previously been developed); therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is not classed as 'green' in terms of its access to any of the eight features assessed; therefore a significant negative effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health (the effect recorded for these three SA objectives was mixed), 8: recreation and leisure and 9: housing and potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health (the effect recorded for these three SA objectives was mixed), 5: amenity, 6: access to local services (an overall mixed effect was recorded for this SA objective), 10 transport, 11: land use and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H1796 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
---------------	----------	---------------

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located at variable travel times from the nearest employment node. The northern part of the site is located within 21-25 minutes travel time of the nearest employment node while the southern part of the site is located within 11-15 minutes from the nearest employment node. Overall a mixed effect (significant positive/minor positive) is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+++	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located at variable travel times from a primary school and secondary school. The northern part of the site is located within 11-15 minutes travel time of a primary school while a portion of the southern part of the site is located more within 5 minutes travel time from a primary school. The majority of the site is located within 11-15 minutes travel time of a secondary school (the north eastern part of the site is located within 16-20 minutes travel time of a secondary school). Overall a significant positive effect is expected on this SA objective. The site is located at variable travel times from the nearest centre for further education; the north eastern part of the site is located within 31-35 minutes travel time of the nearest centre for further education while the south part of the site is located within 21-25 minutes travel time of the nearest centre for further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of a GP (parts of the site to the south east and north west are located within 6-10 minutes travel time of a GP). The site is located at variable travel times from a hospital. The north eastern part of the site is located within 51-55 minutes travel time of a hospital while the southern part of the site is located within 31-35 minutes travel time of a hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.

SA Objectives	SA Score	Justification
		This site is adjacent to existing residential properties on Laverhills to the south. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest local centre (the north eastern part of the site is located within 16-20 minutes travel time of the nearest centre). The north western part of the site is located within 6-10 minutes travel time of the nearest town/district centre while the northern part of the site is located within 16-20 minutes travel time of the nearest town/district centre. Overall a mixed effect (minor positive/negligible) is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces. Outdoor sports facilities are located within 50m to the south west, 50m to the south east and 100m to the north east. Large semi-natural and natural greenspace is located within 125m to the north west of the site. An amenity greenspace is accessible within 400m to the south west of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (8.5ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. <b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (it should be noted that the overall effect on this SA objective was recorded as mixed), 3: education, 8: recreation and leisure, 9: housing, 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objective 11: land use. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1797 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located at variable travel times from the nearest employment node. The northern part of the site is located more than 60 minutes travel time from the nearest employment node while the southern and eastern parts of the site are located within 11-15 minutes from the nearest employment node. Overall a mixed effect (significant positive/significant negative) is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The majority of the site is located within 11-15 minutes travel time of a primary school (a small part of the site to the north is located more than 60 minutes travel time from a primary school). The majority of the site is located within 11-

SA Objectives	SA Score	Justification
		15 minutes travel time of a secondary school (a small part of the site to the north is located more than 60 minutes travel time from a secondary school). Overall a significant positive effect is expected on this SA objective. The majority of the site is located within 26-30 minutes travel time of a centre for further education (a small part of the site to the north is located more than 60 minutes travel time from a centre for further education).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 6-10 minutes travel time of a GP (A small part of the site to the north is located more than 60 minutes from a GP). The majority of the site is located within 36-40 minutes travel time of a hospital (a small part of the site to the north is located more than 60 minutes travel time from a hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties on West End Drive to the north and Halifax Road to the south. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 16-20 minutes travel time of the nearest local centre (the northern part of the site is located more than 60 minutes travel time from the nearest centre). The majority of the site is located within 11-15 minutes travel time of a town/district centre (the northern part of the site is located more than 60 minutes travel time from a town/district centre). Overall a minor positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is on land which has been identified as a semi-natural and natural greenspace, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. A sizeable park is located within 195m to the south east of the site. Provision is made within the park for a children's playground. High Bank First and Nursery School provides access to outdoor sports facilities within 250m of the site to the south west. Amenity greenspace is located within 415m to the west of the site by the A643. A mixed (significant positive and potential

SA Objectives	SA Score	Justification
		significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.25ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.25ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 3 Agricultural Land to the north and Urban Land to the south.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.25ha) on greenfield land. The site is not within close proximity of the Peak District National Park.  Therefore a minor negative effect is likely on this SA objective. The negative effect is recorded as uncertain given that the design of any new development may mitigate impact on local townscape and landscape.  The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity or geodiversity features; Hanging Wood is the closest of such features but is located 2.26km to the north and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (it should be noted that the overall effect on this SA objective was recorded as mixed), 3: education, 8: recreation and leisure (it should be noted that the overall effect on this SA objective was recorded as mixed), 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 1: employment and 8: recreation and leisure (it should be noted that the overall effect recorded for these two SA objectives were mixed). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H1798 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located at variable travel times from the nearest employment node. The western part of the site is located within 11-15 minutes travel time of the nearest employment node while the eastern part of the site is located within 21-25 minutes travel time of the nearest employment node. Overall a mixed effect (significant positive/minor positive) is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 11-15 minutes travel time of a primary school (a small part of the site to the east is located within 16-20 minutes travel time of a primary school). The site is located at variable travel times of the nearest secondary school. The western part of the site is located within 21-25 minutes travel time from a secondary school while the eastern part of the site is located within 11-15 minutes travel time of a secondary school. Overall a mixed effect (significant positive/minor positive) is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located at variable travel times from a GP and hospital. The most northerly part of the site is located more than 60 minutes travel time from a GP while the most southerly part of the site is located within 6-10 minutes travel time of a GP. The most northerly part of the site is located more than 60 minutes from a hospital while the western part of the site is located within 36-40 minutes travel time of a hospital. Overall a mixed effect (minor positive/significant negative) is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is located within 50m of existing residential properties to the west off Halifax Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located at variable travel times from a local centre and town/district centre. The most northerly part of the site is located more than 60 minutes travel time for a local centre while the majority of the site excluding the eastern part is located within 16-20 minutes travel time of a local centre. The most northerly part of the site is located more than 60 minutes travel time of a town/district centre while the rest of the site excluding the eastern part is located within 11-15 minutes travel time of a town/district centre. Overall a mixed effect (minor positive/significant negative) is expected on this SA objective.</p>
7. Make our communities	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the

SA Objectives	SA Score	Justification
safer by reducing crime, anti-social behaviour and the fear of crime.		incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is located on land which has been identified as a semi-natural and natural greenspace, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. A is located within 230m to the south west of the site by Lynfield Drive. Outdoor sports facilities can be accessed within 255m to the south of the site by Springfield Drive. A children's playground is located at the south of the site within 300m at Teasel Close. A mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.97ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.97ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.97ha) on greenfield land. The site is not within close proximity of the Peak District National Park.  Therefore a minor negative effect is likely on this SA objective. The negative effect is recorded as uncertain given that the design of any new development may mitigate impact on local townscape and landscape.  The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Lower Blacup Farmhouse a Grade II Listed Building which is located 200m to the east of the site. The loss of this area and its subsequent development could harm elements which contribute to this Listed Building's significance.

SA Objectives	SA Score	Justification
		The effect on this SA objective is uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity or geodiversity features; Clifton Lagoon is the closest of such features but is located 2.78km to the south west and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure (it should be noted that the overall effect on these three SA objectives was recorded as mixed), 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 4: health, 6: access to local services and 8: recreation and leisure (it should be noted that the overall effect recorded for these three SA objectives were mixed). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

## H1802 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Most of this site is within 41-45 minutes travel time to the nearest employment centre (although the southern tip and north western edge are within 36-40 minutes travel time and the eastern tip is within 46-50 minutes travel time). Overall, a minor negative effect is expected for this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of this site is within 16-20 minutes travel time to a primary school (although a small area is within 21-25 minutes travel time). Most of this site is within 31-35 minutes travel time to a secondary school (although the north western edge and southern tip are within 26-30 minutes travel time and the eastern tip is within 36-40 minutes travel time). Overall, a negligible effect is expected for the whole site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 6-10 minutes travel time to a GP (aside from a small area in the southern tip which is within 5 minutes travel time). Most of this site is also within 56-60 minutes travel time to a hospital apart from two areas in the north western and south western areas which are within 51-55 minutes travel time. Therefore, a minor positive effect is expected for this site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties to the south of the site which may be affected by noise and light pollution during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 21-25 minutes travel time to a local centre (aside from two areas in the north western and southern tips, which are within 16-20 minutes travel time). Most of this site is within 11-15 minutes travel time to a town/ district centre (aside from an area in the north western tip, which is within 6-10 minutes and the far eastern tip, which is within 16-20 minutes). Overall a minor positive effect is expected because of the proximity of the site to a town / district centre.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities including several Public Rights of Way (PRoW), the closest being immediately adjacent to the site in the south. There is also access to a national cycle route to the north west and south of the site. Greenspace designations nearby include a green corridor, one amenity greenspace, three semi-natural and natural greenspace and two park and gardens. Other recreational spaces nearby includes six outdoor sports facilities, four sites containing provision for children and young people and five allotment sites. A significant positive effect is therefore identified for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.1ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This site is small (2.1ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. Most of this site is on land designated as urban land, aside from the north western and eastern areas which is on land designated as Grade 4 agricultural quality.</p>

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is relatively small (2.1ha) and on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA F5: Holme &amp; Hall Dyke (Holmfirth &amp; Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.</p> <p>The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>Folly Dolly Falls Local Geological site, Honley Wood Candidate Wildlife site and Hall Hayes Wood Local Wildlife site are all within 1km of the site (but more than 250m); therefore a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	<p>This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore, a minor negative effect is likely.</p>
18. Increase efficiency in water, energy and raw material use.	0	<p>While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.</p>
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated</p>

		greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation. No potential significant negative effects were identified.		

### H1810 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located within 16-20 minutes travel time of an employment node. A significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+++	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The site is located within 6-10 minutes travel time of the nearest primary school and within 6-10 minutes travel time of the nearest secondary school. Overall a significant positive effect is expected on this SA objective. The site is located within 16-20 minutes travel time of the nearest centre for further education.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.  The site is located within 11-15 minutes travel time of a GP. The site is located within 41-45 minutes travel time of a hospital. Overall a minor positive effect is expected on this SA objective.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.

SA Objectives	SA Score	Justification
		This site is adjacent to existing residential properties on Whitechapel Grove to the south. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of the nearest local centre. The site is located within 11-15 minutes travel time of a town/district centre. Overall a minor positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site is on land which currently is currently used as a park and also provides access to a children's playground. This open space provision could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is in close proximity to a number of open spaces. Within 35m to the south east of the site a number of allotments are located by the cemetery on Whitechapel Road. Amenity greenspace can be accessed within 435m to the south west of the site at Tabbs Lane.</p> <p>Outdoor sports facilities are accessible within 320m to the south east of the site on the southern side of Whitechapel Road. As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is also expected on this SA objective and overall a mixed effect is recorded.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.72ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.72ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 3 Agricultural Land to the north and Urban Land to the south.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and	-?	This is a relatively small site (0.72ha) on greenfield land. The site is not within close proximity of the Peak District National Park.

SA Objectives	SA Score	Justification
townscape.		<p>Therefore a minor negative effect is likely on this SA objective. The negative effect is recorded as uncertain given that the design of any new development may mitigate impact on local townscape and landscape.</p> <p>The site lies in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity or geodiversity features; Hanging Wood is the closest of such features but is located 1.46km to the north east and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is located on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure (it should be noted that the overall effect on this SA objective was recorded as mixed), 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objective 8: recreation and leisure (it should be noted that the overall effect recorded for this SA objective was mixed). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H1811 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located within 11-15 minutes travel time of an employment node. A significant positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 5 minutes travel time of the nearest primary school and within 5 minutes travel time of the nearest secondary school. Overall a significant positive effect is expected on this SA objective. The site is located within 6-10 minutes travel time of the nearest centre for further education.</p>
4. Improve the health of local	++	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 5 minutes travel time of a GP. The site is located within 21-25 minutes travel time of a hospital. Overall a significant positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties on all sides at Blue Bell Hill, Blagden Lane, Mansion Gardens and Bankfield Park Avenue. These properties may be affected by noise during the construction phase and a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 5 minutes travel time of the nearest local centre. The site is located within 16-20 minutes travel time of a town/district centre. Overall a minor positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site is on land which has been designated as a semi-natural and natural greenspace to the north east. This open space provision could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is in close proximity to a number of open spaces. A separate semi-natural and natural greenspace is located within 45m to the north. Allotments are also located to the north of the site within 55m. A cemetery is located within 210m to the north of the site at Lockwood Rectory. Amenity greenspace is provided within 55m to the south of the site at Berry View. Outdoor sports equipment is provided at Newsome High School within 180m to the south east of the site. As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is also expected on this SA objective and overall a mixed effect is recorded.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.38ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.38ha) on mostly greenfield land (the site contains a car park towards the north east); therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Urban Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.38ha) on mostly greenfield land (the site contains a car park towards the north east). The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.</p> <p>Therefore a minor negative effect is likely on this SA objective. The negative effect is recorded as uncertain given that the design of any new development may mitigate impact on local townscape and landscape.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site could impact on the nearby Taylor Hill Working Men's Club a Grade II Listed Building. It is expected that development at the site is unlikely to result in harm to these assets if the development accords with the anticipated Local Plan policies for managing change to the historic environment. A minor negative effect on this SA objective is therefore likely although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in relatively close proximity to Beaumont Park, Huddersfield which is within 660m to the west and has been identified as a Local Geological Site. The relative proximity of the site to this designated geodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings

SA Objectives	SA Score	Justification
use, recovery and recycling of waste close to source.		and materials although this is uncertain depending on the previous use of the site.  This site is located on mostly greenfield land (the site contains a car park towards the north east); therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: recreation and leisure (it should be noted that the overall effect on this SA objective was recorded as mixed), 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: recreation and leisure (it should be noted that the overall effect recorded for this SA objective was mixed). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H1812 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located within 26-30 minutes travel time of an employment node. A minor positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The site is located within 11-15 minutes travel time of the nearest primary school and within 11-15 minutes travel time of the nearest secondary school. Overall a significant positive effect is expected on this SA objective. The site is located within 21-25 minutes travel time of the nearest centre for further education.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP. The site is located within 41-45 minutes travel time of a hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is bordered by the A6024 to the east and as such new residential properties may be affected by noise in the long term. As such a significant negative effect is therefore likely on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of the nearest local centre. The site is located within 11-15 minutes travel time of a town/district centre. Overall a minor positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces. A green corridor is provided within 390m to the east of the site beside the A616. Further to the west within 470m of the site a cemetery is located by Steep Riding. A small park can be accessed within 495m to the east by Brockholes Lane.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.41ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.41ha) on greenfield land. The site lies on land which has been identified as Grade 3 Agricultural Land. As such a minor negative effect is likely on this SA objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.41ha) on greenfield land. The site is not within close proximity of the Peak District National Park.  Therefore a minor negative effect is likely on this SA objective. The negative effect is recorded as uncertain given that the design of any new development may mitigate impact on local townscape and landscape.  The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Scheduled Monument at Castle Hill which is located in close proximity. This site forms part of the area of open countryside which contributes to the Scheduled Monument's setting and development at this location could harm elements which contribute to its significance.  The effect on this SA objective is uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is in close proximity to Hagg Wood which is within 205m to the south east and has been identified as a Candidate Local Wildlife Site. Brockholes and Round Wood, Brockholes is within 445m of the site to the east and has been designated as a Local Geological Site. The proximity of the site to these designated biodiversity and geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on greenfield; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objective 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1813 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The majority of the site is located within 11-15 minutes travel time of an employment node (a small part of the site to the south is located within 6-10 minutes travel time of an employment node). A significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of the nearest primary school and within 6-10 minutes travel time of the nearest secondary school. Overall a significant positive effect is expected on this SA objective. The site is located within 6-10 minutes travel time of the nearest centre for further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 11-15 minutes travel time of a GP. The majority of the site is located within 31-35 minutes travel time of a hospital (a small part of the site to the south is located within 26-30 minutes travel time of a hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is adjacent to existing properties on Nab Lane to the south. As such these properties may be affected by noise during any construction phase which may result and a minor negative effect is therefore likely on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 16-20 minutes travel time of the nearest local centre (a small part of the site to the south is located within 11-15 minutes travel time of the nearest local centre). The majority of the site is located within 11-15 minutes travel time of a town/district centre (a small part of the site to the south is located within 6-10 minutes travel time of a town/district centre). Overall a minor positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open	++	<p>The site is in close proximity to a number of open spaces. A semi-natural and natural greenspace is located within 10m to the south west of the site. Outdoor sports facilities are provided within 185m to the south west of the site on Leeds Road. A children's playground is also provided at this location. An amenity greenspace is located within 525m to the south by Millers Croft.</p>

SA Objectives	SA Score	Justification
space and encourage their usage.		As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.15ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.15ha) on greenfield land. The site lies on land which has been identified as Grade 4 Agricultural Land to the north east and as Urban Land to the south west. As such a minor negative effect is likely on this SA objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.15ha) on greenfield land. The site is not within close proximity of the Peak District National Park.  Therefore a minor negative effect is likely on this SA objective. The negative effect is recorded as uncertain given that the design of any new development may mitigate impact on local townscape and landscape.  The site lies mainly in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity or geodiversity features; Morley Spring Wood is the closest of such features but is located 1.43km to the south east and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on greenfield; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

### H1814 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Travel times from the nearest employment node vary across the site. Part of the site to the south west is located within 21-25 minutes travel time of the nearest employment node while part of the site to the north east is located within 36-40 minutes travel time of the nearest employment node. The overall effect on this SA objective is recorded as mixed (minor positive/negligible).
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	++?/+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest primary school (a small part of the site is located within 11-15 minutes travel time from the nearest primary school). The site is located within variable travel times of the nearest secondary school. The southern part of the site is located within 16-20 minutes travel time of a primary school while the north eastern part of the site is located within 26-30 minutes travel time of a primary school. Overall a mixed effect is expected on this SA objective (significant positive/minor positive).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest GP (a small part of the site to the north east is located within 16-20 minutes travel time of the nearest GP). The majority of the site is located within 56-60 minutes travel time of a hospital (a small part of the site to the south is located within 51-55 minutes travel time of a hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is adjacent to existing properties on Ashbrow to the south and Park View to the east. As such these properties may be affected by noise during any construction phase which may result and a minor negative effect is therefore likely on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	0/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest local centre (a small part of the site to the south is located within 5 minutes travel time of the nearest local centre). The site is located at variable travel times of the nearest town/district centre. The north eastern corner of the site is located within 41-45 minutes travel time of the nearest town/district centre while the south western corner of the site is located within 26-30 minutes travel time of the nearest town/district centre. Overall a mixed effect (negligible/minor negative) is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the</p>

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site contains a footpath which may be lost as a result of the development of housing at this location and therefore a potential significant negative is recorded for this objective. The site is however also in close proximity to a number of open spaces which may be used by new residents is the area. A small park which includes a children' playground is located within 125m to the west of the site. A semi-natural and natural greenspace is located beside this park. Outdoor sports facilities are located within 140m also to the west of the site at Flockton Cricket Club. Allotments are located within 260m to the south west of the site at Pinfold Close. Also to the south west of the site beyond the allotments and within 300m of the site amenity greenspace is provided.</p> <p>As such a mixed effect (significant positive/potential significant negative) is recorded overall for this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.18ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (5.18ha) on greenfield land. The site lies on land which has been identified as Grade 3 Agricultural Land. As such a significant negative effect is likely on this SA objective.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (5.18ha) on greenfield land. The site is not within close proximity of the Peak District National Park.</p> <p>Therefore a significant negative effect is likely on this SA objective. The negative effect is recorded as uncertain given that the design of any new development may mitigate impact on local townscape and landscape.</p> <p>The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to	-?	The site is located within 560m of the Kirkby Wood which have been designated as a Candidate Local Wildlife Site to the

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		south. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on greenfield; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education (it should be noted that this significant positive was recorded as part of an overall mixed effect), 8: recreation and leisure and 9: housing and potential significant negative effects were identified in relation to SA objectives 11: land use and 12: townscape and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H1817 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
---------------	----------	---------------

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located within 6-10 minutes travel time of the nearest employment; therefore a significant positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of a primary school and within 11-15 minutes travel time of a secondary school. Overall a significant positive effect is expected on this SA objective. The site is located within 16-20 minutes travel time of a centre for further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 11-15 minutes travel time of the nearest GP. The site is located within 41-45 minutes travel time of a hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is adjacent to existing properties on Primrose Lane to the east. As such these properties may be affected by noise during any construction phase which may result and a minor negative effect is therefore likely on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 11-15 minutes travel time of the nearest local centre. safer by reducing crime, anti-social behaviour and the fear of crime.		incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces. A semi-natural and natural greenspace is located to the west of the site within 90m. A green corridor is located within 130m also to the west of the site. Another semi-natural and natural greenspace is located within 90m to the south of the site. A Local Nature Reserve is located to the west of the site within 235m beyond Penistone Road.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.43ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.43ha) on greenfield land. The site lies on land which has been identified as Grade 3 Agricultural Land. As such a minor negative effect is likely on this SA objective.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.43ha) on greenfield land. The site is not within close proximity of the Peak District National Park.</p> <p>Therefore a minor negative effect is likely on this SA objective. The negative effect is recorded as uncertain given that the design of any new development may mitigate impact on local townscape and landscape.</p> <p>The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Highburton Conservation Area that would result due to development of this open space.

SA Objectives	SA Score	Justification
		The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is located within 540m of Lepton Great Wood which has been designated as a Candidate Local Wildlife Site and a Local Geological Site to the north east. Burton Dean Quarry, Kirkburton is located within 640m to the south east of the site and has been designated as a Local Geological Site. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. 15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	<p>This site is located on brownfield land and is outside of flood zones 2 and 3; therefore a negligible effect is likely given that the development of new housing on this brownfield land would not result increase the area of impermeable surfaces in Kirklees.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is located on brownfield; therefore a minor positive effect is likely. The effect is recorded as uncertain given that the exact availability of materials on the site is unknown at present.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education (it should be noted that the overall effect recorded for this SA objective was mixed), 8: recreation and leisure 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

#### H1819 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 26-30 minutes travel time of the nearest employment node. Therefore, a minor positive effect on this SA objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 16-20 minutes of a primary school, within 21-25 minutes of a secondary school, and within 36-40 minutes of a further education institute. Therefore, development of this site could have a negligible effect on this SA objective.</p>
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 11-15 minutes of a GP and within 46-50 minutes of a hospital. The site is not within or adjacent to an AQMA. Therefore, a minor positive effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The south of the site is adjacent to a plastic bag manufacturing facility and the west of the site is within 60m of the A629 Abbey Road North, which may result in noise pollution affecting residents of the development in the longer term. Therefore, a significant negative effect on this SA objective is predicted.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 11-15 minutes of a local centre and within 31-35 minutes of a town/district centre. Therefore, a minor negative effect on this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	To the south west of the site is an outdoor sports facility (400m), an area of amenity greenspace (325m), and an area of semi natural and natural greenspace (325m). To the south of the site is a PRoW within 40m and to the east of the site is another PRoW within 160m. Therefore, a significant positive effect on this SA objective is predicted.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.67ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of

SA Objectives	SA Score	Justification
prudent use of land.		land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site of approximately 0.67ha on greenfield land. The site is classified as high quality agricultural land as it is classed as Grade 3 in the Agricultural Land Classification. Therefore, a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.67ha) on greenfield land which is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that the development of the site is unlikely to result in harm to any designated heritage asset; therefore a negligible effect on this SA objective is likely.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The east of the site is within 310m to the Yew Tree Wood Local (Approved) Wildlife Site. Therefore, development may have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3. Therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation, with potential significant negative effects predicted for SA objective 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1935: Cambridge Road (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is within 6-10 minutes of the nearest employment node. Therefore a significant effect on this SA objective is predicted.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+++	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The site is within 6-10 minutes of a primary school, within 16-20 minutes of a secondary school and a further education institute. Therefore, development of this site could have a significant positive effect on this SA objective.
4. Improve the health of local people and ensure that they can access the health and	++	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
social care they need.		The majority of the site is within 6-10 minutes journey time of a GP, with the east of the site within 5 minutes of a GP. The majority of the site is within 16-20 minutes travel time of a hospital, with the west of the site within 21-25 minutes of a hospital. Overall, a significant positive effect on this SA objective is expected.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.  The south of the site is adjacent to the A62, which may result in noise pollution affecting residents of the development in the longer term. Therefore, a significant negative effect on this SA objective is predicted.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.  The majority of the site is within 6-10 minutes of a local centre, with the north east of the site within 5 minutes journey time of a local centre. The majority of the site is within 6-10 minutes of a town/district centre, with the east of the site within 5 minutes travel time of a town/district centre. Therefore, a minor positive effect on this SA objective is predicted.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	To the north of the site are playing fields (55m), an allotment (235m), an area of semi-natural and natural greenspace (345m), and a cemetery (400m). To the north west of the site is an allotment and a pond (95m). To the east of the site is an area of amenity greenspace (70m). There are also several areas of open space to the south and south west of the site, however, these are accessed by crossing the dual carriage A62 road. To the east of the site is national cycle route (15m). To the west of the site is a PRoW within 95m. Therefore, a significant positive effect on this SA objective is predicted.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.38ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to eight of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of

SA Objectives	SA Score	Justification
prudent use of land.		land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site of approximately 1.38ha on mainly brownfield land (the site is predominately a car park with a small building to the west of the site, however there are several small areas of greenfield land). It is not within an area of high quality agricultural land as it is classed as Urban in the Agricultural Land Classification. Therefore, a minor positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (1.38ha) on mainly brownfield land which is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees. Therefore, development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment as the site adjoins the boundary of the Greenfield Park Conservation Area. Therefore, development of this site could have a minor negative effect on this SA objective.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The east of the site is within 530m of Sir John Ramsden Canal Local (Candidate) Wildlife Site. The south west of the site is 1km from the Gledholt Woods Local Nature Reserve. Therefore, a development of this site could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	The site is mainly on brownfield land and is outside of flood zones 2 and 3. Therefore, a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is mainly on brownfield land. Therefore, development of the site could have a minor positive effect on this objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to eight of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: leisure and recreation, 10: sustainable transport, and 19: climate change, with potential significant negative effects predicted for SA objective 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

#### H1936: Tunnel End (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The western part of the site is within 31-35 minutes of the nearest employment node; however, the eastern part is within 41-45 minutes from an employment node. In between, journey times to employment nodes vary in between those two extremes. Therefore a mixed effect on this objective is expected – a negligible effect for the western side and minor negative for the eastern side.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Therefore, development of this site could have a minor positive effect on this SA objective.</p>

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes of a GP. The western part of the site is within 41-45 minutes of a hospital; however, the eastern part is within 51-55 minutes. In between, journey times to a hospital vary in between those two extremes. The site is not within or adjacent to an AQMA. Overall, a minor positive effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The north of the site is adjacent to a railway line, which may result in noise pollution affecting residents of the development in the longer term. Therefore, a significant negative effect on this SA objective is predicted.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 11-15 minutes of a local centre and within 6-10 minutes of a town/district centre. Therefore, a minor positive effect on this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	--?/++	<p>The majority of the site is classed as an area of semi-natural/natural greenspace. Also present within the site boundary is an outdoor sports facility (multiuse games area) and a children's playground.</p> <p>Adjacent to the east and south of the site are areas of semi-natural/natural greenspace. To the south west of the site are two areas of semi-natural/natural greenspace (15m and 275m), an allotment (50m), two cemeteries (180m and 200m), and amenity greenspace (170m). To the south of the site is an allotment (185m). To the north of the site is a park and garden (85m), a children's playground (120m) and an outdoor sports facility (150m). To the south of the site is a local cycle route (100m).</p> <p>Therefore, a mixed (significant positive and potential significant negative) effect is predicted for this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.48ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of</p>

SA Objectives	SA Score	Justification
safe transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site of approximately 2.48ha on greenfield land. The site is not classified as high quality agricultural land as it is classed as Urban in the Agricultural Land Classification, with a small section of the north of the site classed as Grade 4. Therefore, a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.48ha) on greenfield land which is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'amber' in terms of the potential for effects on the historic environment. This site adjoins the boundary of the Marsden Conservation Area. The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area. The effect on the historic environment of development of this site is uncertain.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is adjacent to the Huddersfield Narrow Canal Local (Candidate) Wildlife Site. In addition, the north/west/south of the site is within 1km of the South Pennine Moors SAC/SPA/SSSI. Therefore, development may have a significant negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3. Therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 10: sustainable transport, and 19: climate change, with potential significant negative effects predicted for SA objectives 5: local amenity, and 14: biodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H1937: Cliff Street (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 6-10 minutes of the nearest employment node, with the north east of the site within 11-15 minutes of an employment node. Therefore a significant effect on this SA objective is predicted.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The southern part of the site is within 6-10 minutes of a primary school, and within 16-20 minutes of a secondary school and a further education institute. The north eastern part of the site is within 6-10 minutes of a primary school, and within 26-30 minutes of a secondary school and a further education institute. In between, journey times to education facilities vary in between those extremes. Overall, development of this site could have a minor positive effect on this SA objective.</p>

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The southern part of the site is within 6-10 minutes of a GP and within 16-20 minutes of a hospital. The northern part of the site is within 6-10 minutes of a GP and within 26-30 minutes of a hospital. In between, journey times to health care facilities vary in between those extremes. Overall, a significant positive effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The south of the site is within 25m of the A638 Dewsbury Ring Road, which may result in noise pollution affecting residents of the development in the longer term. The north of the site is adjacent to residential properties, which may be affected by noise during the construction phase. Therefore, a minor negative effect on this SA objective is predicted.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 11-15 minutes of a local centre, with the south of the site within 6-10 minutes journey time of a local centre. The majority of the site is within 6-10 minutes of a town/district centre, with the north east of the site within 11-15 minutes travel time of a town/district centre. Therefore, a minor positive effect on this SA objective is predicted.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The north east of the site is adjacent to a large park and garden and within close proximity to a children's playground (85m), an area of semi-natural and natural greenspace (70m) and an outdoor sports facility (240m). To the north of the site is a regional cycle route (110m) and a PRoW (70m). Therefore, a significant positive effect on this SA objective is predicted.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.36ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site of approximately 1.36ha on brownfield land (the site is currently a car park). In addition, it is not within an area of high quality agricultural land as it is classed as Urban in the Agricultural Land Classification. Therefore, a minor positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (1.36ha) on brownfield land which is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees. Therefore, development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that the development of the site is unlikely to result in harm to any designated heritage asset; therefore a negligible effect on this SA objective is likely.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is 170m from the Caulms Wood Quarry Local Geological Site. Therefore, a development of this site could have a significant negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	The site is on brownfield land and is outside of flood zones 2 and 3. Therefore, a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on brownfield land. Therefore, development of the site could have a minor positive effect on this objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 8: leisure and recreation, 10: sustainable transport, and 19: climate change, with potential significant negative effects predicted for SA objective 14: biodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

#### H1938: Wards Hill (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 5 minutes of the nearest employment node. Therefore a significant effect on this SA objective is predicted.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes of a primary school, within 16-20 minutes of a secondary school and within 11-15 minutes of a further education institute. Therefore, development of the site could have a significant positive effect on this SA objective.</p>
4. Improve the health of local	++	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes of a GP, with the north of the site within 5 minutes of a GP. The site is within 16-20 minutes of a hospital. Overall, a significant positive effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The east of the site is 200m from the A652, which may result in noise pollution affecting residents of the development in the longer term. The west of the site is within close proximity to residential properties, which may be affected by noise during the construction phase. Therefore, a minor negative effect on this SA objective is predicted.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre and within 5 minutes journey time of a town/district centre. Therefore, a minor positive effect on this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>To the south of the site is an area of amenity greenspace (10m). To the west of the site is a park and garden (110m), an area of amenity greenspace (220m), a children's playground (250m), and a civic space (160m). Therefore, a significant positive effect on this SA objective is predicted.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.55ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to eight of the eight features assessed. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

#### H1978: Land North of Station Road, Meltham, Holmfirth (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Accessibility to the nearest employment node varies across this site. An area to the south east is within 26-30 minutes travel time of the site; however an area to the north west is within 36-40 minutes. In between, journey times vary between these two extremes. A mixed effect is therefore likely – minor positive to the south east of the site and negligible to the north west.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Accessibility to education facilities varies across this site. An area to the north west is within 16-20 minutes travel time of a primary school; however an area to the south east is within 6-10 minutes travel time. In between, travel time to primary schools varies between these extremes. The majority of the site is within 31-35 minutes travel time of a</p>

SA Objectives	SA Score	Justification
		secondary school (although a small area to the north west is within 36-40 minutes travel time). A mixed effect is therefore likely – minor positive to the south east and negligible to the north west.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 5 minutes travel time of a GP (although an area to the north west is within 6-10 minutes travel time) and the whole site is within 41-45 minutes travel time of a hospital. A minor positive effect is therefore likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors within 100m of the south, west and eastern boundaries, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Accessibility to local services and facilities varies across this site. An area to the north west is within 16-20 minutes travel time of a local centre, while an area to the south east is within 6-10 minutes. The majority of the site is within 5 minutes travel time of a town/district centre (although an area to the north west is within 6-10 minutes travel time). A minor positive effect is therefore likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of a number of areas of open space including a green corridor located directly adjacent to the southern site boundary, an area of semi natural and natural greenspace located approximately 22m to the south of the site, and an area of allotments located approximately 91m to the south of the site. In addition, there is a cycle path, which is a National Route and part of the Meltham Greenway which runs directly adjacent to part of the northern site boundary. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.15ha); therefore a minor positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (2.15ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.15ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within 500m of the Peak District National Park.  The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 144m of the Folly Dolly Falls Local Geological Site and 292m from the Honley Wood candidate Local Wildlife Site; therefore development here could have a significant negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and the majority of the site is outside of flood zones 2 and 3 (although a small area to the south east is within a flood zone); therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
waste close to source.		This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H1983: Land at Serpentine Road, Cleckheaton (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is within 6-10 minutes travel time of the nearest employment node therefore a significant positive effect is considered likely for this objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The site is within 6-10 minutes travel time of both the nearest primary school and secondary school; therefore a significant positive effect is expected for this objective. The site is also within 25 minutes of the nearest further education institute.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest GP (with an area in the south east within 5 minutes) and within 31-35 minutes of a hospital. Therefore a minor positive effect is considered likely for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties in close proximity to the north of the site which may be affected by noise during the construction phase. Therefore a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest local centre (with an area in the east with 5 minutes) and within 6-10 minutes of the nearest town/district centre (with an area in the south east within 5 minutes). Therefore a minor positive effect is considered likely for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>There is a National Cycle route that runs approximately 25m west of the site and with 465m east of the site there a number of PRow footpaths. Within 10m west of the site is a Green corridor/pedestrian/cycleway. Approximately 335m north west of the site is a private bowling green. In addition, within 345m east of the site is an area of allotments, an area of semi-natural and natural greenspace, an area of park and gardens which contain a children's play area and a private tennis club. There is another area of park and gardens approximately 235m south of the site. To the north of the site within 595m are two areas of amenity greenspace, a private bowling green, an area of public playing fields which contains a children's play area and an area of semi-natural and natural greenspace. However, the area of semi-natural and natural greenspace is located within another housing site option. Also, to the west of the site within 375m is an area of amenity greenspace and an area of park and gardens. The close proximity of the site to these areas of open space may encourage new residents to make use of them; therefore a significant positive effect is expected for this objective.</p>
9. Ensure all people are able to live in a decent home	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable</p>

SA Objectives	SA Score	Justification
which meets their needs.		housing. This site is relatively small (1.38ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.38ha) on brownfield land; therefore a minor positive effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (1.38ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is not within 1km from any designated biodiversity or geodiversity sites; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is on brownfield land and is outside of flood zones 2 and 3; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on brownfield land; therefore a minor positive effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives.		

#### H2066: Warren Cottage, 916 Halifax Road, Scholes, Cleckheaton (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is within 11-15 minutes travel time of the nearest employment node therefore a significant positive effect is considered likely for this objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The site is within 11-15 minutes travel time of the nearest primary school and within 16-20 minutes of a secondary school; therefore a significant positive effect is expected for this objective. The site is also within 26-30 minutes of the nearest further education institute.
4. Improve the health of local people and ensure that they can access the health and	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
social care they need.		The site is within 6-10 minutes travel time of the nearest GP and within 36-40 minutes of a hospital. Therefore a minor positive effect is considered likely for this objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties in close proximity to the east of the site and a school to the south of the site which may be affected by noise during the construction phase. In addition, the southern boundary of the site is adjacent to the A649 (Halifax Road) which may result in noise pollution affecting residents in the longer-term. The site is also within close proximity to the M62 motorway. Therefore a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 16-20 minutes travel time of the nearest local centre and within 11-15 minutes of the nearest town/district centre. Therefore a minor positive effect is considered likely for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Approximately 15m south of the site is an area of school grounds and playing fields. In addition, to the east of the site approximately 130m away is an area of amenity greenspace which contains a children's play area and approximately 275m away is an area of semi-natural and natural greenspace. The close proximity of the site to these areas of open space may encourage new residents to make greater use of them; therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.59ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of

SA Objectives	SA Score	Justification
prudent use of land.		land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.59ha) and the majority of the site is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.59ha) and the majority of the site is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is not within 1km from any designated biodiversity or geodiversity sites; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  The majority of the site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in six of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2089: Land South of Lees Hall Road, Dewsbury (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Accessibility to the nearest employment node varies across this site. An area to the north east and east is within 16-20 minutes travel time of the site; however an area to the west is more than an hour from the nearest employment node. In between, journey times vary between these two extremes. A mixed effect is therefore likely – significant positive to the north east and east of the site and significant negative to the west.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Accessibility to education facilities varies across this site. SA Objectives	SA Score	Justification
		time of both a primary school and a secondary school. In between, travel time to education facilities varies between these extremes. A mixed effect is therefore likely – significant positive to the east of the site and significant negative to the west.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Accessibility to health and social care facilities varies across this site. An area to the north east of this site is within 5 minutes travel time of a GP and within 21-25 minutes travel time of a hospital; however an area to the south and west of the site is more than an hour travel time from both a GP and a hospital. In between, travel time to healthcare facilities varies between these extremes. A mixed effect is therefore likely – significant positive to the north east of the site and significant negative to the south and west. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors directly adjacent to north eastern site boundary and within 100m of the northern and part of the north western site boundaries, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Accessibility to local services and facilities varies across this site. An area to the north east is within 5 minutes travel time of a local centre and 11-15 minutes travel time of a town/district centre; however an area to the south and west is more than an hour travel time from both a local centre and a town/district centre. A mixed effect is therefore likely – significant positive to the north east of the site and significant negative to the south and west.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++/--?	This site wholly encompasses two areas of allotments and is bisected by numerous Public Rights of Way, all of which could be lost as a result of housing development. However, this site is also within 600m of a number of areas of open space including a golf course located directly adjacent to the west of the site, an area of allotments located directly adjacent to the north of the site, and an area of semi natural and natural greenspace located approximately 89m to the north of the site. In addition, an existing footpath runs along part of the northern site boundary (several others are also

SA Objectives	SA Score	Justification
usage.		in close proximity to the site). A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (156.02ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (156.02ha) on mainly greenfield land (although there are a small number of existing buildings within the site boundary), the majority of which is classified as Grade 3 Agricultural Land; therefore a significant negative effect is expected on this SA objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (156.02ha) on mainly greenfield land (although there are a small number of existing buildings within the site boundary); therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within 500m of the Peak District National Park.  The site lies mainly in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is directly adjacent to the Jordan Wood and Oliver Wood Local Wildlife Site and approximately 99m from the Whitley Wood Local Wildlife Site; therefore development here could have a significant negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	-	This site is on mainly greenfield land (although there are a small number of existing buildings within the site boundary) and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on mainly greenfield land (although there are a small number of existing buildings within the site boundary); therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.		While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 6: services, 8: leisure and recreation (all part of overall mixed effects) and 9: housing, and a potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health, 6: services, 8: leisure and recreation, 11: land use (all part of overall mixed effects), 12: landscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2091: Land to the Rear of United Reform Church, Chapel Lane, Heckmondwike (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The whole site is within 6-10 minutes travel time of a primary school and the majority of the site is within 6-10 travel time of both a secondary school and a further education facility (although an area to the south east is within 5 minutes travel time of both). A significant positive effect is therefore likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The whole site is within 6-10 minutes travel time of a GP and the majority of the site is within 21-25 minutes travel time of a hospital (although an area to the south east is within 16-20 minutes travel time). A significant positive effect is therefore likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not completely surrounded by existing residential development; however there are sensitive receptors within 100m of all site boundaries, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre and 11-15 minutes travel time of a town/district centre. A minor positive effect is therefore likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation	++/--?	<p>This site wholly encompasses a playing field, which could be lost as a result of housing development. However, this site is also within 600m of a number of areas of open space including a bowling green located approximately 99m to the west of the site, playing fields located approximately 268m to the west and an area of allotments located approximately</p>

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		268m to the north west of the site. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.74ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to all of the eight features assessed; therefore a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.74ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.74ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within 500m of the Peak District National Park.  The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is more than 1km from any designated biodiversity or geodiversity sites; therefore development here could have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to all of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: leisure and recreation (part of an overall mixed effect), 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 8: leisure and recreation (part of an overall mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

## H2092: Land north and west of High Street and Challenge Way, Hanging Heaton, Batley (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Levels of access to an employment node vary throughout this site. The southern part of the site is within 11-15 minutes travel time of the nearest employment node and the northern part of the site is within 21-25 minutes of the nearest employment node. In between those areas journey times to an employment node vary in between those two extremes. Therefore a mixed effect on this objective is expected –significant positive for the south and minor positive for the northern part of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

SA Objectives	SA Score	Justification
		<p>accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is the south west which is within 5 minutes travel time of the nearest primary school and within 21-25 minutes of a secondary school. The least accessible part of the site is an area in the north which is within 16-20 of a primary school and within 31-35 minutes of a secondary school. Therefore a mixed effect is expected for this objective – potentially minor positive for the south west and potentially negligible for the area in the north. Travel times to a further education institute also vary across the site with the south within 21-25 minutes and the north within 31-35 minutes.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	<p>+/0</p>	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The south western edge of the site is the most accessible as it is within 6-10 minutes of a GP and within 31-35 minutes travel time of the nearest hospital however the northern part of the site is within 26-30 minutes of a GP and within 46-50 minutes of a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective – minor positive for the south western edge and negligible for the northern part of the site. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	<p>--</p>	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties in close proximity to the south of the site which may be affected by noise during the construction phase. In addition, there is an industrial area immediately to the north of the site which may result in noise pollution affecting residents in the longer-term. Therefore a significant negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	<p>+/-</p>	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district centre facilities vary throughout this site. The southern part of the site is within 16-20 minutes of a Local centre and within 11-15 minutes travel time of the nearest town/district centre however a small area in the north of the site is within 26-30 minutes of both a local centre and town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; minor positive for the southern part of the site and minor negative for the small area in the north of the site.</p>
<p>7. Make our communities</p>	<p>0</p>	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the</p>

SA Objectives	SA Score	Justification
safer by reducing crime, anti-social behaviour and the fear of crime.		incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	A PRoW footpath runs through the south eastern corner of this site and could be lost or disrupted as a result of housing development. However, a PRoW byway is within 45m north of the site and within 120m east of the site are two PRoW footpaths and a bridleway. Approximately 165m to the east of the site is an area of park and gardens that contain two children's play areas and a multi-use games area, which is adjacent to a rugby ground and playing fields. To the west of the site approximately 440m away is an area of children's play provision. In addition, approximately 295m south west of the site is an area of private playing fields which is adjacent to a private bowling green. Also, approximately 50m south of the site is an area of school grounds and playing fields. Approximately 495m north west of the site is an area of allotments. To the north of the site within 225m is an area of semi-natural and natural greenspace however this is located within another housing site option. To the south east of the site approximately 440m away is an area of amenity greenspace. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (10.4ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access in five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (10.4ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The majority of the site is also within an area of high quality agricultural land (the land is classed as grade 3) with a small area in the south classed as urban.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (10.4ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies mainly in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.

SA Objectives	SA Score	Justification
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is not within 1km from any designated biodiversity or geodiversity sites; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access in five of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 1: employment and 8: leisure and recreation which were both part of a mixed effect overall and objectives 9: affordable housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: leisure and recreation (mixed effect), 11: use of land and 12: character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

## H2095: Land to the east of New Road, Netherthong, Holmfirth (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 36-40 minutes travel time of the nearest employment node (with an area in the north within 41-45 minutes); therefore a negligible effect is considered likely for this objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?/+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is the south eastern corner which is within 11-15 minutes travel time of both the nearest primary school and secondary school. The least accessible part of the site is an area on the western edge which is within 21-25 minutes of a primary school and within 11-15 minutes of a secondary school. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective – potentially significant positive for the south eastern corner and potentially minor positive for the western edge. The majority of the site is also within 26-30 minutes travel time of the nearest further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest GP (with an area in the south west within 5 minutes) and over 60 minutes from a hospital (with an area in the south west corner within 51-55 minutes). Therefore a minor positive effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties in close proximity to the south and west of the site which may be affected by noise during the construction phase. Therefore a minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 26-30 minutes travel time of the nearest local centre however levels of access to town/district centre facilities vary throughout this site. The south western corner of the site is within 6-10 minutes of the nearest town/district centre however a small area on the north western edge of the site is within 16-20 minutes of a town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; minor positive for the south western corner of the site and minor negative for the north western edge of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	A PRoW footpath runs through this site and could be lost or disrupted as a result of housing development. However, approximately 100m to the south west of the site is a PRoW footpath and there are three PRoW footpaths within 265m west of the site. To the south east of the site there is a sports centre approximately 340m away. Within 345m north of the site are an area of schools grounds and playing fields, an area of amenity greenspace, a children's play area and an area of semi-natural and natural greenspace. Within 430m south of the site are three areas of park and gardens, two of which contain children's play areas. In addition, within 540m east of the site are two areas of semi-natural and natural greenspace and private tennis courts. Within 530m south of the site are two areas of playing fields, one of which contains an area of children's play provision and a multi-use games area. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.57ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access in four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.57ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4) however a small area in</p>

SA Objectives	SA Score	Justification
		the south eastern corner is classed as grade 3.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.57ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Netherthong/Deanhouse Conservation Area which lies 75 metres away. The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 895m from Holmroyd Wood Local Wildlife Site and 950m from Hagg Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>The site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access in four of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 3: education and 8: leisure and recreation which were both part of a mixed effect overall and objectives 10: sustainable transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 8: leisure and recreation which was part of a mixed effect. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

#### H2096: Land to the south of Thong Lane, Netherthong, Holmfirth (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 36-40 minutes travel time of the nearest employment node (with an area in the east within 31-35 minutes); therefore a negligible effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 16-20 minutes travel time of the nearest primary school and most of the site is within 11-15 minutes travel time to a secondary school (with an area in the east within 6-10 minutes). Therefore, a minor positive effect is</p>

SA Objectives	SA Score	Justification
		expected for this objective. Most of this site is also within 30 minute of a further education institute (with a very small area in the far western area within 31-35 minutes)
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 6-10 minutes travel time of the nearest GP (with the eastern area within 5 minutes) and the site is within 56-60 minutes of a hospital; therefore a minor positive effect is likely for this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties in close proximity to the north of the site which may be affected by noise during the construction phase. Therefore a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This within 11-15 minutes travel time of the nearest local centre and most of the site is within 11-15 minutes of a town/district centre (with an area to the west within 6-10 minutes); therefore a minor positive effect is likely for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There is a PRow footpath approximately 490m north of the site and there are three more footpaths within 600m west of the site. Approximately 590m to the south of the site is a sports centre. Within 500m west of the site are an area of schools grounds and playing fields, an area of amenity greenspace, a children's play area and an area of semi-natural and natural greenspace. In addition, within 315m to the east of the site are a private tennis club, a private bowling green, indoor facilities, an area of semi-natural and natural greenspace, an area of private playing fields and an area of public playing fields. Also, within 575m south of the site are two areas of park and gardens, one of which contains a children's play area. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.18ha); therefore a minor positive effect is likely.
10. Secure an effective and	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of

SA Objectives	SA Score	Justification
safe transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access in five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.18ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4) however a small area in the south eastern corner is classed as grade 3.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.18ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 490m from Hagg Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access in five of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives.		

## H2100: Land to the south of Thong Lane, Netherthong, Holmfirth (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Levels of access to an employment node vary throughout this site. The western part of the site is within 26-30 minutes travel time of the nearest employment node and the south eastern corner of the site is over 60 minutes from the nearest employment node. In between those areas journey times to an employment node vary in between those two extremes. Therefore a mixed effect on this objective is expected – minor positive for the west and significant negative for the south eastern corner of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

SA Objectives	SA Score	Justification
		<p>accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is a tiny area in the south west which is within 6-10 minutes travel time of the nearest primary school and within 31-35 minutes of the nearest secondary school. The least accessible part of the site is the south eastern corner which is over 60 minutes from both a primary school and secondary school. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective – potentially minor positive for the tiny area in the south west and potentially significant negative for the south eastern corner. Travel times to the nearest further education institute also vary across the site with the west within 21-25 minutes and the south eastern corner over 60 minutes away.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The western part of the site is the most accessible as it is within 6-10 minutes of a GP and within 41-45 minutes travel time of the nearest hospital however the south eastern corner of the site is over 60 minutes from both a GP and hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective – minor positive for the west and significant negative for the south eastern corner of the site. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are no existing residential properties in close proximity to the site which may be affected by noise during the construction phase. However, immediately to the south of the site there is an industrial area which may result in noise pollution affecting residents in the longer-term. Therefore a significant negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	+/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district centre facilities vary throughout this site. The most accessible part of the site is the south western edge which is within 6-10 minutes of the nearest local centre and within 5 minutes of a town/district centre. The least accessible part of the site is the south eastern corner of the site which is over 60 minutes away from both a local and town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; minor positive for</p>

SA Objectives	SA Score	Justification
		the south western edge and significant negative for the south eastern corner of the site.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is a PRoW footpath that runs just inside the southern boundary of this site and could be lost or disrupted as a result of housing development. However, approximately 400m to the east of the site is an area of semi-natural and natural greenspace. In addition, within 590m south of the site are an area of park and gardens, an area of allotments, a green corridor and an area of semi-natural and natural greenspace. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.45ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access in five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (5.45ha) and the majority of the site is on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4) however a small area in the south eastern corner is classed as grade 3.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (5.45ha) and the majority of the site is on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and

SA Objectives	SA Score	Justification
		roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.  The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 15m from Hall Hayes Wood Local Wildlife Site, approximately 185m from Folly Dolly Falls, Meltham Local Geological Site, approximately 215m from Honley Wood Local Wildlife Site and approximately 280m from Bank Wood Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of this site is on greenfield land and is outside of flood zones 2 and 3 (with a small area on the eastern edge within flood zone 3); therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  The majority of this site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access in five of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: healthcare facilities and 8: leisure and recreation which were all part of a mixed effect, as well as objectives 5: amenity, 11: use of land, 12: character		

SA Objectives	SA Score	Justification
and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2148 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is located 11-15 minutes travel time from the nearest employment node (a small part of the site to the south is located within 16-20 minutes travel time of the nearest employment node); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 5 minutes travel time of a primary school (a small part of the site to the east is located within 6-10 minutes travel time of a primary school). The majority of the site is also located within 26-30 minutes travel time of a secondary school (a small part of the site is located within 31-35 minutes travel time of a secondary school). A minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 6-10 minutes travel time of a GP (a small part of the site to the east is located within 11-15 minutes travel time of a GP). The site is located within 36-40 minutes travel time of a hospital. Overall a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by existing residential development to the west on Greenwood Avenue, to the north west on</p>

SA Objectives	SA Score	Justification
		Town Street, to the north on Providence Street, to the east on Jilling Ing Park and to the south on Ossett Lane. As such development at this location would be in close proximity to existing sensitive receptors on all sides meaning there is potential for negative impacts on local amenity during any construction phase which is required. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 5 minutes travel time of a local centre (a small part of the site to the south east is located within 6-10 minutes travel time of a local centre). The site is located within 11-15 minutes travel time of a town/district centre; therefore a significant positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is located within close proximity of a number of designated open spaces which may be used by new residents in the area. An area of semi-natural and natural greenspace is located adjacent to the site to the south east. Amenity greenspace is located to the east of the site within 65m by Jilling Ing Park. Further amenity greenspace is located to the south of the site also within 65m and a children's playground is also at this location. A park is located within 180m to the east of the site at Mill Lane. As such a significant positive effect is also recorded and therefore an overall mixed effect (significant positive/uncertain significant negative) effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.60ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.60ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Urban Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and	-?	This is a relatively small site (1.60ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.

SA Objectives	SA Score	Justification
townscape.		The site is not within close proximity of the Peak District National Park.  The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not located within close proximity of any designated biodiversity features. The closest biodiversity or geodiversity site is at Caulms Wood Quarry, Dewsbury which has been designated as a Local Geological Site within 1.10km to the north west. As such a negligible effect is expected on this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 6: access to local services,		

SA Objectives	SA Score	Justification
8: leisure and recreation, 10: sustainable transport and 19: climate change and potential significant negative effects were identified in relation to SA objective 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2149 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located 11-15 minutes travel time from the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 11-15 minutes travel time of a primary school is also located within 11-15 minutes travel time of a secondary school. A significant positive effect is expected on this SA objective. The site is located within 21-25 minutes travel time of the nearest centre for further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 11-15 minutes travel time of a GP. The site is located within 31-35 minutes travel time of a hospital. Overall a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential development to the west on Brookfield View and to the east and to the south on Cliffe Lane. As such development at this location would be in close proximity to existing sensitive receptors but not on all sides and therefore there is potential for limited negative impacts on local amenity during any construction phase which is required. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre. The site is located within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is located within close proximity of a number of designated open spaces which may be used by new residents in the area. Semi-natural and natural greenspace is located adjacent to the site to the north. Outdoor sports facilities which include a children's playground on site are provided at Exchange Street within 315m to the west of the site. An amenity greenspace is located within 320m of the site to the south west by Bradford Road. As such a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (it is less than 5.00ha in size); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	+	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (it is less than 5.00ha in size) on brownfield land (the site currently contains a number of buildings and a paved car parking area); therefore a minor positive effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This is a relatively small site (it is less than 5.00ha in size) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to</p>

SA Objectives	SA Score	Justification
		main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 990m of Hunsworth Great Wood and Little Wood to the north west which has been identified as a Candidate Local Wildlife Site. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on brownfield land but is located partly within flood zones 2 and 3 to the east side; therefore a minor negative effect is likely given that the development of new housing at this location would result in the provision of dwellings within an area of high flood risk.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on brownfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives. These		

SA Objectives	SA Score	Justification
issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

### H2159 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located within variable travel times of the nearest employment node. The northern part of the site is located within 21-25 minutes travel time from the nearest employment node while the south eastern part of the site is located within 6-10 minutes travel time of the nearest employment node. Overall a mixed effect (significant positive/minor positive) is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within variable travel times of the nearest primary school and secondary school. The northern part of the site is located within 21-25 minutes travel time of the nearest primary school and within 26-30 minutes travel time of the nearest secondary school. The south eastern part of the site is located within 6-10 minutes travel time of the nearest primary school and within 6-10 minutes travel time of the nearest secondary school. Overall a mixed effect (uncertain significant positive/uncertain negligible) is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 11-15 minutes travel time of the nearest GP. The site is located within variable travel times of the nearest hospital. The south eastern part of the site is located within 31-35 minutes travel time from the nearest hospital while the northern part of the site is located within 41-45 minutes travel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise

SA Objectives	SA Score	Justification
		<p>pollution affecting residents in the longer term.</p> <p>This site is located within close proximity of existing residential development to the east on Denby Close and to south east on Lower Hall Mount. As such development at this location would be in close proximity to existing sensitive receptors but not on all sides and therefore there is potential for limited negative impacts on local amenity during any construction phase which is required. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest local centre. The site is located within variable travel times of the nearest town/district centre. The northern part of the site is located within 31-35 minutes travel time of the nearest town/district centre while the southern part of the site is located within 11-15 minutes travel time of the nearest town/district centre. As such a mixed effect (negligible/minor negative) is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is located within close proximity of a number of designated open spaces which may be used by new residents in the area. The site is bordered by a green corridor and a national cycle to the north and beyond this, outdoor sports facilities can be accessed at Primrose Lane. Further outdoor sports provision is located within 195m of the site to the north on the grounds of Spenborough Swimming Pool &amp; Fitness Complex and at the running track provided at Princess Mary Stadium Cleckheaton. Christ Church provides access to further open space within 475m to the west of the site by Church Lane. As such a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.13ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p>

SA Objectives	SA Score	Justification
		This is a relatively small site (3.13ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The northern part of the site is located on Grade 3 Agricultural Land while the southern part of the site is located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (3.13ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not located within close proximity of any designated biodiversity features. The closest biodiversity or geodiversity site is at Oakwell Park which has been designated as a Local Nature Reserve and a Local Wildlife Site within 2.90km to the north west. As such a negligible effect is expected on this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site was classed as mostly 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is expected on this SA objective.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education (for both of these SA objectives the positive effects were identified as part of a mixed overall effect) and 8: leisure and recreation. No potential significant negative effects were identified in relation to any of the SA objectives against which the site was assessed. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

### H2537 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  This site is located 6-10 minutes travel time from the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  Most of the site is located mainly within 0-5 minutes travel time of a primary school and the whole site is within 6-10 minutes travel time of a secondary school so is likely to have a significant positive effect on this SA objective. The site is located within 16-20 minutes travel time of a further education institute.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 11-15 minutes travel time of a GP and within 26-30 minutes travel time of a hospital; therefore a significant positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties along Halifax Road. These properties may be affected by noise during the construction phase. Halifax Road is also an 'A' road located directly adjacent north of the site, this may result in noise pollution affecting residents in the long term. As such a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre and 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is a green corridor located 283m east of the site and playing fields at Headlands Church of England School located 115m north east of the site. There is also an area of semi-natural and natural greenspace located 365m east of the site on Headlands Road. In addition there is a footpath that follows the eastern boundary of the site leading to Ashton Clough Road and a cycle route located 375m south of the site also leading to Ashton Clough Road. It is noted that there is a footpath through the site. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.61 ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to eight of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.61 ha) and on mainly brownfield land (site appears to be developed with building and car park). As a result a minor positive effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (0.61 ha) on mainly brownfield land (site appears to be developed with building and carpark); therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  Most of the site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees. Although the south-western corner of the site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are not any designated biodiversity or geodiversity sites within 1000m proximity to the site. As such a negligible effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is on mainly brownfield land (site appears to be developed with building and carpark) and is located outside of flood zones 2 and 3; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
of waste close to source.		This site is on brownfield land; therefore a minor positive effect is likely. This effect is recorded as uncertain as depending on the previous use of the site.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 1: employment, 3: education, 4: health 8: recreation and leisure (it should be noted however that the overall effects on this SA objective was recorded as mixed), 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: recreation and leisure (it should be noted however that the overall effect on this SA objective was recorded as mixed). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2546 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  This site is located mainly 31-35 minutes travel time from the nearest employment node (a small section to the west of the site is within 26-30 minutes); therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		Most of the site is located mainly within 6-10 minutes travel time of a primary school (although a small section to the west of the site is within 11-15 minutes) and within 6-10 minutes travel time of a secondary school so is likely to have a significant positive effect on this SA objective. The site is located within 26-30 minutes travel time of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of the site is located mainly within 6-10 minutes travel time of a GP (although a third of the site to the east is located within 11-15 minutes travel time of a GP) and mainly within 41-45 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There is a residential development adjacent to the site to the south on Woodroyd Avenue and a number of residential properties north of the site on Northgate; these properties may be affected by noise during the construction phase. In addition the site is directly adjacent to a railway line to west of the site which may result in noise pollution affecting residents in the longer term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is located mainly within 16-20 minutes travel time (although a small section of the site from the west is within 11-15 minutes travel time of a local centre). The whole site is 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an outdoor sports facility located 103m west of the site which consists of playing fields at Honley High School and Upper Park Wood is a woodland local nature reserve located 230m north of the site. There are also allotments located 488m north west from the site on Hanging Stone Road. In addition there are a number of footpaths surrounding the site, one of them is from the north boundary leading north towards Roaf Wood and another is from the east boundary leading towards Honley Road. As a result an overall significant positive effect is expected for this SA

SA Objectives	SA Score	Justification
		objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.42 ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (5.42 ha) and on greenfield land; therefore a significant negative effect on this SA objective is likely. The site has been identified as Grade 4 Agricultural Quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (5.42 ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, as the site forms part of the area of open countryside which contributes to the setting of the Scheduled Monument at Castle Hill. The loss of this area and its subsequent development could therefore harm elements which contribute to the significance of this Scheduled Monument. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Honley Station Cutting SSSI is located along the western boundary of the site and Upper Park Wood is a Local Nature Reserve and Local Wildlife Site located 255m north of the site. In addition Hey Wood is a candidate Local Wildlife Site located 262m east from the site. The close proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation, 9: housing, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 11: land use, 12: landscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2547 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  This site is located 16-20 minutes travel time from the nearest employment node (although a small section north of the site is located within 21-25 minutes travel time); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

SA Objectives	SA Score	Justification
through increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 6-10 minutes travel time of a primary school and within 11-15 minutes to a secondary school. It is noted that a small part of the site to the north is located within 11-15 minutes travel time of a primary school and 16-20 minutes to a secondary school. Therefore it is likely to have a significant positive effect on this SA objective. The site is located mainly within 26-30 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is mainly located within 6-10 minutes travel time of a GP (a small part of the site to the north is located within 11-15 minutes travel time of a GP). However travel times to a hospital facility vary across the site, the most accessible area is along the southern corner of the site which is located within 41-45 minutes travel time of a hospital and the least accessible area is along the northern boundary which is located within 56-60 minutes travel time. Therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential developments on St Barnabas Road to the south of the site. These properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is mainly located within 11-15 minutes travel time of a local centre (although a small section north of the site is located within 16-20 minutes travel time) and 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There are playing fields located 194m from the site and a private bowling green located 120m from the site on Springfield Drive. There are also two childrens playgrounds within close proximity to the site; one is located 140m south of the site on Teasel Close and another 186m from the site on Cuniver Crescent. Heightown Heights is a park located 290m west of the site on Lynfield Drive and there is an amenity greenspace feature located 315m south of the site on Miry Lane. In addition there are a number of footpaths surrounding the site; there is a footpath along the northern site boundary which also leads through the centre of the site to the south towards Church Stree. It is noted that the site is within an area of semi natural and natural greenspace. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.23 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.23 ha) and on greenfield land. As a result a minor negative effect is likely. The site has been identified as mainly urban land while the northern sector is Grade 3 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-	This is a relatively small site (1.23 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may

SA Objectives	SA Score	Justification
		exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are not any designated biodiversity or geodiversity sites within a 1000m proximity to the site. As such an overall negligible effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment 3: education, 8: recreation (this is a mixed effect overall), 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenit and 8: recreation (a mixed effect is likely overall). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2548 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and	+	While the location of housing sites will not influence the number, location or type of employment opportunities available

SA Objectives	SA Score	Justification
range of employment opportunities available for local people, and ensure that they are accessible.		<p>in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The section of the site to west is mainly located 21-25 minutes travel time from the nearest employment node (small section south of the site within 16-20 minutes); therefore a minor positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 11-15 minutes travel time of a primary school and mainly within 21-25 minutes travel time of a secondary school so is likely to have a minor positive effect on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to GP and hospital facilities varies across the site. The most accessible area is along the southern boundary, which is within 11-15 minutes travel time to a GP and 36-40 minutes to hospital. The least accessible area is along the centre of the eastern boundary of the site which is over 21-25 minutes travel time to a GP and 46-50 minutes travel time to a Hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the southern edge and potentially negligible effect for the central eastern boundary of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is adjacent to residential development to the east on Fir Avenue and west on Church Lane of the site; these properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	++/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the southern boundary, which is within 6-10 minutes travel time to a local centre and a town/district centre. The least accessible area is along the central eastern boundary of the site which is 16-20 minutes travel time to a local and town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the southern edge and potentially minor negative for the central eastern boundary of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There are a number of outdoor sports facilities within close proximity to the site; there are playing fields directly adjacent north of the site and Holdroyd Park is located 90m east of the site which includes playing fields, a park and childrens playground. In addition there are a number of footpaths surround the site, one of them runs from east to west along the northern half of the site. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (15.53 ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (15.53 ha) and on greenfield land; therefore a significant negative effect on this SA objective is likely. The site has been identified as urban land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (15.53 ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
		The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as the property lies less than 100m from Castle Hill motte and Bailey Castle and there are several Grade II Listed Buildings adjacent to this site including the tower of the old Church of St Mary. The development of this area could therefore harm elements which contribute to the significance of these cultural assets. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are not any designated biodiversity or geodiversity sites within 1km of the site. Lower Spen Wildlife Area is a Local Wildlife Site and Local Nature Reserve located 1014m north east from the site. As such a negligible effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated

SA Objectives	SA Score	Justification
		greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 6: services and facilities, 8: recreation, 9: housing, 10: transport and 19: climate change (although objectives 6 and 8 are part of a mixed effect). Potential significant negative effects were identified in relation to SA objectives 5: amenity, 11: land use and 12: landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2549 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  This site is located 16-20 minutes travel time from the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  Most of the site is located mainly within 11-15 minutes travel time of a primary school and 16-20 minutes travel time of a secondary school (although a small part of the site to the north is located within 11-15 minutes travel time of a secondary school) so is likely to have a significant positive effect on this SA objective. The whole site is located within 16-20 minutes travel time of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.  The site is located within 11-15 minutes travel time of a GP and within 16-20 minutes travel time of a hospital; therefore a significant positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New

SA Objectives	SA Score	Justification
light pollution.		residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.  This site is within 100m of residential development to the north along Burn Road; these properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.  The site is located within 6-10 minutes travel time of a local centre and 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is a recreation ground located 158m west from the site along Yew Tree Road. The grounds include allotments, parks and gardens, an area of semi natural and natural greenspace and a childrens playground. There is also a private cricket ground which includes an area of semi natural and natural greenspace located 200m west of the site. In addition there is a byway along the southern boundary of the site which leads east towards Reap Hirst. As such a significant positive effect is recorded for this SA objective
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.72 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to eight of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.72 ha) and mainly on greenfield land (a section of the site has been developed for residential and recreational purposes); therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on mostly Grade 4 Agricultural Land.
12. Protect and enhance the	-	This is a relatively small site (0.72 ha) on greenfield land; therefore development here could have a minor negative

SA Objectives	SA Score	Justification
character of Kirklees and the quality of the landscape and townscape.		<p>effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the site's potential impact on a number of Grade II Listed buildings in the site's vicinity including The Store, Middle Burn Farmhouse and Lower Burn Farmhouse. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Grimescar Wood is a Local Wildlife Site located 468m east from the site. The close proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mainly greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on mainly greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as entirely 'green' in terms of its access to eight of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: recreation, 10: transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2550 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Access to employment nodes vary across the site. The most accessible area is in the far southern edge, which is within 16-20 minutes of an employment node. The least accessible area is along the north west boundary of the site which is over 26-30 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the far southern edge and potentially minor positive for the north western boundary of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. Most of the site is mainly located within 11-15 minutes of a primary</p>

SA Objectives	SA Score	Justification
		school (although a small section of the site is located 16-20 minutes travel time from a primary school). The most accessible area to a secondary school on site is located along the southern half of the site which is located 11-15 minutes travel time and the least accessible area to a secondary school is along the north western edge of the site which is 21-25 minutes travel time. In between these two extremes, travel times vary. Therefore a mixed effect on this objective is expected – potentially significant positive along the southern half and potentially minor positive along the north western edge.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is mainly located within 6-10 minutes travel time of a GP (the north western section of the site is located within 11-15 minutes travel time) and within 46-50 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is adjacent to residential properties on White Hall Road East; these properties may be affected by noise during the construction phase. White Hall Road East is located directly adjacent to the south of the site and is an 'A' road, this may result in noise pollution affecting residents in the longer term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is in the south of the site, which is within 11-15 minutes travel time to a local centre and 16-20 minutes travel time to a town/district centre. The least accessible area is along the north western boundary of the site which is 31-35 minutes travel time to a local centre and 21-25 minutes travel time to a town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially negligible for the south of the site and potentially minor negative along the north western boundary of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There are allotments located 283m north west from the site and playing fields 420m south west from the site on

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		Ghyllroyd Drive. There is an amenity greenspace feature located 353m south of the site on Ghyllroyd Drive and another 431m south on Birkenshaw Lane which also has a childrens playground. In addition there is a footpath 233m north east from the site which leads south towards Heightlands Farm and another 543m south of the site from Moor Lane towards Warren Lane. As a result an overall significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.26 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (2.26 ha) and on mainly greenfield land (a small section in the southern corner of the site has been developed). The site has been identified as Grade 3 agricultural quality. As a result a minor negative effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.26 ha) on mainly greenfield land (a small section in the southern corner of the site has been developed); therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	--?	Historic England has rated this site as 'red' in terms of the potential for effects on the historic environment as this site adjoins the western boundary of the Registered Battlefield at Adwalton. The significant negative effect on this SA objective is also uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Tong Moor is a Local Wildlife Site and Local Nature Reserve located 870m north west from the site. As such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood	-	This site is on mainly greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable

SA Objectives	SA Score	Justification
risk areas and ensure development does not contribute to increased flood risk for existing property and people.		surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation, 10: transport and 19: climate change (although objectives 1 and 3 are part of a mixed effect). Potential significant negative effects were identified in relation to SA objectives 5: amenity and 13: historic environment. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2551 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is mostly located 21-25 minutes travel time from the nearest employment node, although part of the site to the north east is located 16-20 minutes travel time from an employment node; therefore a minor positive on this SA objective is predicted
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is mostly located within 6-10 minutes travel time of a primary (a small part of the site to the south is located within 11-15 minutes travel time of a primary). Most of the site is within 16-20 minutes travel time of a secondary, while a section to the south is 21-25 minutes from a secondary. A significant positive effect on this SA objective. The site is mostly located within 26-30 minutes travel time of a further education institute (a portion of the site to the north east is located within 16-20 minutes travel time of a further education institute).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 16-20 minutes travel time of a GP (a small part of the site to the north east is located within 11-15 minutes travel time of a GP); and within 41-45 minutes travel time of a hospital; therefore a negligible effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on Shillbank View and Bank Avenue and to the east on Shillbank Avenue. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is mostly located within 6-10 minutes travel time of a local centre (a small part of the site to the south is located within 11-15 minutes travel time of a local centre); and mostly within 11-15 minutes travel time of a town/district centre, although a small section to the south is located within 16-20 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Within 600m to the north, a park containing children and young people's space is located. To the north east of the site, a park and set of allotments are located. Within 600m to the east, a park is located, as well as a children and young people's space. Additionally, an outdoor sports facility is attached to the site to the east. To the south east, parks, children's spaces, amenity greenspaces and outdoor sports facilities are clustered together within 330m. To the west and north west, a number of outdoor sports facilities are located. A significant positive effect is predicted on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.61ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (4.61ha) mostly on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4.61ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as the site lies approximately 160m from Castle Hill motte and Bailey Castle (a Scheduled Monument), approximately 185m from the Grade II* Listed Church of St Mary which contains several Grade II Listed Buildings within its boundary. The development of this area could therefore harm elements which contribute to their significance. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to	0?	The site is not within 1km of any designated biodiversity or geodiversity sites. A negligible effect is therefore predicted,

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		although this effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 13: historic environment. No potential significant negative effects were identified in relation to the SA objectives.		

### H2552 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that	++/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Access to employment nodes vary across the site. The most accessible area is in the far south-western corner of the

SA Objectives	SA Score	Justification
they are accessible.		site, which is within 16-20 minutes travel time of an employment node. The least accessible area is along the north-western corner of the site which is over 60 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the far south-western corner and potentially significantly negative for the north-western corner of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is in the far western edge, which is within 11-15 minutes travel time to a primary school and 21-25 minutes to a secondary school. The least accessible area is along the north-western corner of the site which is over 60 minutes travel time to a primary and secondary school. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the far western edge and potentially significantly negative for the north western corner of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to GP and hospital facilities varies across the site. The most accessible area is in the far western edge, which is within 11-15 minutes travel time to a GP and 31-35 minutes to hospital. The least accessible area is along the north-western corner of the site which is over 60 minutes travel time to a GP and Hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the far western edge and potentially significantly negative for the north-western corner of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties within 100m west of the site on Gomersal Lane. These properties may be affected by noise during the construction phase. As such a minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	-/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the far western edge, which is within 21-25 minutes travel time to a local and town/district centre. The least accessible area is along the north western corner of the site which is over 60 minutes travel time to a local, town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor negative for the far western edge and potentially significantly negative for the north western corner of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There are private playing fields located directly adjacent to the south of the site and public playing fields located 289m north of the site on Nibshaw Lane. There is an amenity greenspace feature located 246m north east of the site on Nibshaw Lane and also public playing fields with a childrens playground located 277m north east of the site on Shirley Road. There is a park and garden located on Upper Lane 360m east of the site and Royds Park is located 310m south of the site. In addition there is a footpath along the southern site boundary that leads to Mount Pleasant in the west and Lower Lane to the east and another 10m north of the site from Gomersal Lane. As such an overall significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.27 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as 'green' in terms of its access to none of the eight features assessed. Therefore, a significant negative effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.27 ha) and mainly on greenfield land (a small section of the north east corner of the site appears to be developed). The site has been identified as Grade 3 agricultural quality. As a result a minor negative effect is likely.</p>
12. Protect and enhance the character of Kirklees and the	-?	This is a relatively small site (2.27 ha) on mainly greenfield land (a small section of the north east corner of the site appears to be developed); therefore development here could have a minor negative effect on this SA objective although

SA Objectives	SA Score	Justification
quality of the landscape and townscape.		<p>this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are not any designated biodiversity or geodiversity sites within 1000m proximity to the site. As such a negligible effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mainly greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely..</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is not classed as 'green' in terms of its access to none of the eight features assessed; therefore a significant negative effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (part of a mixed effect), 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 6: services and facilities, 10: transport and 19: climate change (although objectives 1, 3 and 6 are part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2553 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Most of the site is located 16-20 minutes travel time from the nearest employment node (although a small section in the far north of the site is located 21-25 minutes travel time); therefore a significant positive on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  Most of the site is located mainly within 11-15 minutes travel time of a primary school and 41-45 minutes travel time of a secondary school so is likely to have a minor positive effect on this SA objective.
4. Improve the health of local	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 16-20 minutes travel time of a GP and within 41-45 minutes travel time of a hospital; therefore a negligible effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties within 100m west of the site on Gregory Springs Mount and Granny Lane. These properties may be affected by noise during the construction phase. As such a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre and 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is a large area of semi-natural and natural greenspace located 197m north of the site and allotments located 457m north west of the site. Mirfield Memorial Recreational Ground is located 558m north of the site and consists of an amenity greenspace feature, a childrens playground and private playing fields. There are also private cricket grounds located 600m south east of the site. In addition there is a bridleway located 245m east of the site from Newhall Lane and footpath located 319m west of the site from Gregory Springs Lane. As such an overall significant positive is expected for this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.57 ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green'</p>

SA Objectives	SA Score	Justification
modes of transport.		in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.57 ha) and on greenfield land. The site has been identified as mainly Grade 3 agricultural quality and a small section of the north of the site is urban land. As a result a minor negative effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.57 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as the site includes Sheep Ings Farmhouse and the attached barn which are Grade II Listed Buildings. The development of this area could therefore harm elements which contribute to their significance. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	There are two Local Wildlife Sites within close proximity to the site; Briery Bank Wood is located 190m south west of the site and Whitley Wood is located 460m east of the site. As such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as mainly 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

#### H2554 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Access to employment nodes vary across the site. The most accessible area is in the far south-western edge, which is within 16-20 minutes of an employment mode. The least accessible area is the eastern third of the site which is over 60 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the south-western edge and potentially significant negative for the lower eastern boundary of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 11-15 minutes travel time of a primary school and 46-50 minutes travel time of a secondary school so is likely to have a minor positive effect on this SA objective.</p>

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of the site is located within 16-20 minutes travel time of a GP and mainly within 46-50 minutes travel time of a hospital; therefore a negligible effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties within 100m west of the site on Gregory Springs Mount and Granny Lane north of the site. These properties may be affected by noise during the construction phase. As such a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is located mainly within 6-10 minutes travel time of a local centre and mainly 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an area of semi-natural and natural greenspace located 280m north west of the site on Hopton New Road and another 138m north of the site. There are allotments 400m north west of the site on Hopton New Road and Dewsbury District Golf Club is located 575m east of the site. There are also private playing fields located 581m south east of the site in Whitley Wood Bottom. In addition there is a footpath 320m west of the site from Gregory Springs Lane leading south and a bridleway 150m east of the site from New Hall Lane leading south. As such an overall significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.65 ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as moderately 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.65 ha) and on mainly greenfield land. The site has been identified as mainly Grade 3 agricultural quality and a third of the site in the northern half has been identified as urban land. As a result a minor negative effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.65 ha) on mainly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as the site lies approximately 50m from Sheep Ings Farmhouse and the attached barn which are Grade II Listed Buildings. The development of this area could therefore harm elements which contribute to their significance. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	There are a number of Local Wildlife Sites located within close proximity to the site; Briery Bank Wood is located 207m south west of the site, Whitley Wood is located 460m east of the site and Gregory Spring is located 730m south of the site. As such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mainly greenfield land and a small section north of the site is within Flood Zone 2; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Potential significant negative effects were identified in relation to SA objectives 1: employment (part of a mixed effect) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2556 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Access to employment nodes vary across the site. The most accessible area is in along the eastern boundary, which is within 11-15 minutes travel time of an employment node. The least accessible area is along the north western corner of the site which is located within 26-30 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is mainly located within 11-15 minutes travel time of a primary school (although a section of the site</p>

SA Objectives	SA Score	Justification
		along the west boundary is located within 6-10 minutes travel time). However travel times to a secondary school vary across the site, the most accessible area is along the western boundary of the site which is located within 6-10 minutes travel time of a secondary school and the least accessible area is along the eastern half of the site which is located 16-20 minutes travel time from a secondary school. Therefore a significant positive effect is expected for this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to GP and hospital facilities varies across the site. The most accessible area to a GP is along the eastern half of the site and a section along the western boundary which is located 6-10 minutes travel time to a GP and the most accessible to a hospital is a small section along the western boundary which is 41-45 minutes travel time to a hospital. The least accessible area to a GP is north of the site which is over 60 minutes travel time whereas to a hospital the least accessible is the centre along the east boundary which is 55-60 minutes to a hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the most accessible area of the site and potentially minor negative for the least accessible area of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential development along the northern site boundary and the western site boundary on Swincliffe Crescent. Birkenshaw Middle School is also located adjacent to the north west of the site. These properties may be affected by noise during the construction phase. The M62 is also located directly adjacent to the south of the site, this may result in noise pollution affecting residents in the longer term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is a small section along the western boundary of the site, which is within 6-10 minutes travel time to a local centre and along the eastern half of the site is located 11-15 minutes travel time to a district/town centre. The least accessible area to a local centre is the eastern half which is 21-25 minutes travel time and the north of the site is least accessible to a district/town centre which is located 11-15 minutes travel time. In between these two extremes, travel times vary. Therefore a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced

SA Objectives	SA Score	Justification
of crime.		by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Birkenshaw Middle School has playing fields which are located directly adjacent to the north west of the site and there also playing fields located 264m north of the site on Ghyllroyd Drive. In addition there are allotments located 270m north of the site on Bottoms Lane which also has an amenity greenspace feature adjacent to it with a childrens playground. Oakwell Hall and Country Park is located 327m south east of the site. In addition there is a footpath 80m south of the site from Wheatleys Farm and there are two footpaths on site. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (8.01 ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (8.01 ha) and on greenfield land. As a result a significant negative effect is likely. The site has been identified as mainly Grade 3 agricultural quality with a small section to the north west section of the site identified as urban land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--	This is a relatively large site (8.01 ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Oakwell Country Park is a Local Wildlife Site and a Local Nature Reserve located 335m south east of the site As such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (part of a mixed effect), 3: education, 8: recreation (part of a mixed effect), 9: housing, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: recreation (part of a mixed effect) and 11: landuse and 12: landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2557 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Access to employment nodes vary across the site. The most accessible area is in along the central eastern boundary, which is within 36-40 minutes travel time of an employment node. The least accessible area is along the north western

SA Objectives	SA Score	Justification
		corner of the site which is over 60 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected – potentially negligible for the central eastern boundary and potentially significantly negative for the north western corner of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0?/-?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is mainly located within 16-20 minutes travel time of a primary school (although a section of the site along the east boundary is located within 11-15 minutes travel time). However travel times to a secondary school vary across the site, the most accessible area is a small section north of the site and the eastern corner of the site which is located within 26-30 minutes travel time of a secondary school and the least accessible area is along the western corner of the site which is located over 60 minutes travel time from a secondary school. Therefore, a mixed effect on this objective is expected – potentially negligible for the most accessible area of the site and potentially minor negative for the western corner of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Travel times to a GP vary across the site. The most accessible area is along the north and south-east corner of the site which is located within 11-15 minutes travel time of a GP and the least accessible area is the north west corner of the site which is located over 60 minutes travel time from a GP. The site is mainly located within 51-55 minutes travel time of a hospital (a small part of the site along the western boundary is located over 60 minutes travel time from a hospital). Therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential development along the north eastern site boundary on Hanson Road and the south eastern site boundary on Wessenden Head Road. These properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is a small section in the north and eastern corner of the site, which is within 16-20 minutes travel time to a local centre and 11-15 minutes to a district/town centre. The least accessible area is the western corner of the site which is located over 60 minutes from a local and district/town centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the most accessible area on site and potentially minor negative for the western corner of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is a green corridor located 170m north of the site with an area of semi-natural and natural greenspace surrounding it and an amenity greenspace feature located 296m north east of the site. There is a childrens playground located 281m north of the site on Sunny Bank Road. There are also allotments located 389m south east of the site on Calmlands Road. In addition there is a footpath along the southern site boundary following Colders Lane and another 205m north east of the site following Meltham Dike. As such an overall significant positive is expected for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (9.86 ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as 'green' in terms of its access to none of the eight features assessed. Therefore, a significant negative effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (9.86 ha) and on greenfield land. As a result a significant negative effect is likely. The site has been identified as Grade 4 agricultural quality with a small section in the north east corner of the site classed as urban land.</p>
12. Protect and enhance the character of Kirklees and the	--?	This is a relatively large site (9.86 ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective.

SA Objectives	SA Score	Justification
quality of the landscape and townscape.		<p>Peak District National Park is located adjacent to the site to the west of the site. Development within this part of the District could have a negative effect on the quality of the landscape. As such an overall significant negative effect is expected on this SA objective. The effect is recorded as uncertain until the design of the development is known.</p> <p>Most of the site lies in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.</p> <p>Although a section of north eastern boundary of the site lies in LCA F5: Holme &amp; Hall Dyke (Holmfirth &amp; Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as the site lies approximately 390m to the east of the Scheduled Monument at Oldfield Hill. The development of this area could therefore affect elements which contribute to the significance of this monument. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	South Pennine Moors SAC, Peak District Moors SPA and Dark Peak SSSI is located 725m west of the site. Bannister Edge is a Local Geological Site located 995m south west of the site. As such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is not classed as 'green' in terms of its access to none of the eight features assessed; therefore a significant negative effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation (part of a mixed effect) and 9: housing. Potential significant negative effects were identified in relation to SA objectives 1: employment, 5: amenity, 6: services and facilities, 8: recreation, 10: transport, 11: landuse, 12: landscape and 19: climate change (SA objective 1 and 6 are part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2558 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Most of the site is located mainly 16-20 minutes travel time from the nearest employment node (although a third of the site is located within 21-25 minutes travel time); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  Most of the site is located mainly within 11-15 minutes travel time of a primary school and the whole site is within 6-10 minutes travel time of a secondary school so is likely to have a significant positive effect on this SA objective. The site is located within 6-10 minutes travel time of a further education institute.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of the site is located mainly within 6-10 minutes travel time of a GP (although a small section south of the site is located within 11-15 minutes travel time of a GP) and the whole site is within 46-50 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is within 100m proximity to residential properties on Huddersfield Road. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 11-15 minutes travel time of a local centre and most of the site is mainly within 6-10 minutes travel time of a town/district centre (although a small section south of the site is located within 11-15 minutes travel time); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>There are three footpaths within a 600m proximity to the site; two from Huddersfield Road located within 144m north west of the site and another 366m from site on Back Lane. As such an overall significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.44 ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green'</p>

SA Objectives	SA Score	Justification
modes of transport.		in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.44 ha) and on greenfield land. As a result a minor negative effect is likely. The site has been identified as Grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.44 ha) and is located on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Springs Wood (candidate Local Wildlife Site) is located 760m north west of the site. As such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as mainly 'green' in terms of its access to seven of the eight features assessed; therefore a minor positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation, 10: transport and 19: climate change. There are no potential significant negative effects identified in relation to any of the SA objectives. The significant positive effects identified will need to be considered further in terms or enhancement, which may be achieved through Local Plan policies.</p>		

### H2561 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is mostly located 21-25 minutes travel time from the nearest employment node (a small part of the site to the east is located within 16-20 minutes travel time of an employment node); therefore a minor positive on this SA objective is predicted</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is mostly located within 16-20 minutes travel time of a primary (a small part of the site to the east is located within 11-15 minutes travel time of a primary school); and mostly 16-20 minutes travel time of a secondary, with a small section located 11-15 minutes away to the east. A minor positive effect on this SA objective in therefore predicted.</p>

SA Objectives	SA Score	Justification
		The distance to a further education institute varies across the site, ranging from 21-25 minutes in the east to 36-40 minutes in the north.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to GP and hospital facilities varies across the site. The most accessible area is in the north east, which is within 6-10 minutes travel time to a GP and 41-45 minutes to hospital. The least accessible area is in the western area of the site which is 16-20 minutes from a GP and 46-50 minutes from a Hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the north eastern area and potentially negligible for western area. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within 100m of existing residential properties to the east and south east. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the east of the site, which is within 11-15 minutes travel time to a local centre and 11-15 minutes to town / district centre. The least accessible area is along the northern boundary of the site which is 26-30 minutes travel time to a local centre and 16-20 minutes from a town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the eastern edge and potentially minor negative for the lower northern boundary of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Within 600m to the east, a number of amenity green spaces, outdoor sports facilities and semi-natural and natural green spaces are located. Additional outdoor sports facilities are located to the south. To the south west, a park with space for children and young people, semi-natural and natural greenspace and allotments are located within 600m. The site is also surrounded by public footpaths and rights of way. However, the site is partially atop woodland. As such a mixed significant positive and possible significant negative effect is recorded for this SA objective.

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.86ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.86ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on mostly Grade 3 Agricultural Land (the eastern edge of the site is located on Grade 4 Agricultural Land).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.86ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites. A negligible effect is therefore predicted, although this effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 8: recreation (part of a mixed effect). Potential significant negative effects were identified in relation to SA objective 8: recreation (part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2562 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Access to employment nodes vary across the site. The most accessible area is in the far northern edge, which is within 31-35 minutes of an employment node. The least accessible area is along the western boundary of the site which is 41-45 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected – potentially negligible for the far northern edge and potentially minor negative for the western boundary of the site.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of a primary school and most of the site is mainly located within 16-20 minutes travel time from a secondary school (although a small section north of the site is located within 11-15 minutes travel time from a secondary school). Therefore a significant positive effect is expected for this SA objective. The site is located mainly within 31-35 minutes travel time to a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is mainly located within 21-25 minutes travel time of a GP (a small section south west of the site is located within 26-30 minutes travel time) and mainly within 46-50 minutes travel time of a hospital; therefore a negligible effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by properties to the north and east of the site along Cross Lane and Station Road. These properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local centres varies across the site. The most accessible area is along far northern edge, which is within 16-20 minutes travel time to a local centre. The least accessible area is along the south west corner of the site which is within 26-30 minutes travel time to a local centre. The site is mainly located within 21-25 minutes travel time to town/district centre (a section of the south of the site is located within 26-30 minutes). Therefore a minor negative effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an area 235m north of the area which consists of allotments, a park and a recreation ground for children. There is a footpath that runs through the site from east to west towards Ing Head Lane. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.64 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as moderately 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.64 ha) and on greenfield land. As a result a minor negative effect is likely. The site has been identified as Grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.64 ha) and is located on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Upper and Lower Stones Wood is a Local Wildlife Site and Local Geological Site located 220m east of the site. Stocksmoor Grassland (candidate Local Wildlife Site) is located 316m north west of the site and Birks Wood (candidate Local Wildlife Site) is located 493m north of the site. Browns Knoll Meadows (Local Wildlife Site) is 367m north of the site. As such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that

SA Objectives	SA Score	Justification
		there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education and 8: recreation (although part of a mixed effect). Potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: recreation (although part of a mixed effect) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2563 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
local people, and ensure that they are accessible.		This site is located 36-40 minutes travel time from the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 6-10 minutes travel time of a primary school (although a small section east of the site is located within 11-15 minutes travel time of a primary school) and 16-20 minutes travel time of a secondary school so is likely to have a significant positive effect on this SA objective. The site is located within 31-35 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 21-25 minutes travel time of a GP and mainly within 46-50 minutes travel time of a hospital (a small section along the east border of the site is located within 41-45 minutes travel time of a hospital); therefore a negligible effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties adjacent to the site on Station Road to the west. These properties may be affected by noise during the construction phase. There is also a railway track directly adjacent to the site to the north; this may result in noise pollution affecting residents in the longer term. As such a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is located mainly within 21-25 minutes travel time of a local centre and mainly 26-30 minutes travel time of a town/district centre (although a small section of the north western boundary of the site is located 21-25 minutes travel time); therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Norton Terrace Allotments and park which also includes a childrens playground is located 315m north west of the site. There is a footpath 115m west of the site which leads to Ing Head Lane and another 250m south of the site towards Fulstone Road. As such an overall significant positive is expected for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.51 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as moderately 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (2.51 ha) and on greenfield land. The site has been identified as Grade 4 agricultural quality. As a result a minor negative effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.51 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  Most of the site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.  Although a section along the south-eastern site boundary lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main

SA Objectives	SA Score	Justification
		roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	There are two candidate Local Wildlife Sites within close proximity to the site; Stocksmoor Grasslands is located 420m west of the site and Birks Wood is located 262m north of the site. Browns Knoll Meadows Local Wildlife Site is located 384m north west of the site. In addition Upper and Lower Stones Wood is a Local Wildlife Site and Local Geological Site located directly adjacent of the east of the site. As such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. SA Objectives	SA Score	Justification
modes of transport.		'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.2 ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as Grade 4 Agricultural Quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.2 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as properties 15, 19 and 21 Cross Lane opposite this site are Grade II Listed Buildings. The loss of this area and its subsequent development could therefore harm elements which contribute to their significance. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Upper and Lower Stone Woods is a Local Wildlife Site and Local Geological Site located 382m east from the site. Stocksmoor Grasslands is another candidate Local Wildlife Site located 135m north from the site and another Local Wildlife Site is Browns Knoll Meadows located 215m north from the site. The close proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
of waste close to source.		This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as moderately 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
<b>Summary of SA findings:</b> A potential significant positive effect was identified for this site in relation to SA objective 8: recreation. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2569 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located 16-20 minutes travel time from the nearest employment node; therefore a significant positive on this SA objective is predicted
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The southern section of this site is located within 11-16 minutes travel time of a primary and secondary; and the north half is within 6-10 minutes travel time of a primary and secondary; so is likely to have a significant positive effect on this

SA Objectives	SA Score	Justification
		SA objective. The southern section of the site is 36-40 minutes from the nearest further education institute, while the northern section is within 21-25 minutes away.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The southern half of the site is located within 11-15 minutes travel time of a GP and 46-50 minutes of a hospital. The northern half of the site is within 6-10 minutes of a GP and 51-55 minutes of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties on all sides. These properties may be affected by noise during the construction phase. The site is located on the A651. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the northern boundary, which is within 6-10 minutes travel time to a local centre and 11-15 minutes to town / district centre. The least accessible area is along the southern boundary of the site which is between 21-25 minutes travel time to a local, town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the northern edge and potentially minor negative for the southern boundary of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Outdoor sports facilities are located within 600m to the north and south east. Amenity greenspace which incorporates children and young people's space is located within 400m east and 600m south. A number of public rights of way also surround the site. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable

SA Objectives	SA Score	Justification
which meets their needs.		housing. This site is relatively small (3.13ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to 5 of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.13ha) mostly on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.13ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as the site includes West House which is a Grade II Listed Building. The loss of this area and its subsequent development could therefore harm elements which contribute to its significance. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Oakwell Park, a local nature reserve, is located 500m east of this site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is mainly or entirely 'green' in terms of its access to 5 of the eight features assessed. Therefore, a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

## H2570 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is mostly located 16-20 minutes travel time from the nearest employment node - (a small part of the site to the north west is located within 11-15 minutes travel time of an employment node); therefore a significant positive on this SA objective is predicted</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The site is mostly located within 11-15 minutes travel time of a primary - (a small part of the site to the north is located within 6-10 minutes travel time of a primary); and 31-35 minutes travel time of a secondary, with a small portion to the west located 26-30 minutes from a secondary. A minor positive effect is therefore predicted on this SA objective. The site varies in distance from a further education institute, ranging from 31-35 minutes travel time on the south west to 16-20 minutes on the north east.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site mostly is located within 11-15 minutes travel time of a GP - (a small part of the site to the south is located within 16-20 minutes travel time of a primary); and mostly within 46-50 minutes travel time of a hospital, with a small portion to the north west located 41-45 minutes from a hospital. Therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a small number of residential properties within 100m to the north, south and west on Riley West. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site mostly is located within 5 minutes travel time of a local centre, with a section to the south located 6-10 minutes away. The site is also mostly within 26-30 minutes travel time of a town/district centre (a portion of the site to the south is located within 31-35 minutes travel time of a town/district centre); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Within 600m to the north, a green corridor, three semi-natural and natural greenspaces, four amenity greenspaces and provision for children and young people are located. To the east, private playing fields, and semi-natural and natural greenspaces are found. To the west of the site, semi-natural and natural greenspace is located; footpaths are located to the north west, north east and south of the site, within 300m. A significant positive is therefore predicted on this site.

SA Objectives	SA Score	Justification
usage.		
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.21ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.21ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being on mostly Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.21ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are a number of biodiversity and geodiversity sites located within 1km south of this site. The three candidate wildlife sites; Shelley Wood, Allen Wood, and Thunderbridge are located within 800m, while the geological site is Hartley Bank Quarry, located 900m south. Burton Dean Quarry also lies within 600m to the north of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation, 10: transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives,		

### H2571 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is mostly located 6-10 minutes travel time from the nearest employment node, although a small eastern section is located 11-15 minutes away. Therefore a significant positive on this SA objective is predicted
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 11-15 minutes travel time of a primary (small parts of the site to the south and north west are located within 6-10 minutes travel time of a primary). The distance to a secondary school varies across the site, ranging from 6-10 minutes in the north to 16-20 minutes in the south. This means that a significant positive effect is predicted on this SA objective. The distance to a further education institute varies across the site, ranging from 6-10 minutes in the north to 16-20 minutes in the south.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The northern half of the site is located 11-15 minutes from the nearest GP, while the southern half of the site is located 16-20 minutes from the closest GP. The distance to a hospital varies across the site, ranging from 21-25 minutes in the north to 31-35 minutes in the south; therefore a mixed significant positive in the north to a negligible effect in the south is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by residential properties on all sides. These properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is mostly located within 16-20 minutes travel time of a local centre, with a small section in the north located 6-10 minutes from a local centre. The site is also mostly within 11-15 minutes travel time of a town/district centre (a small part of the site to the south is located within 5 minutes travel time of a town/district centre); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance	++/--?	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the</p>

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		area. Within 600m to the north, a number of outdoor sports facilities are located, along with parks and semi-natural and natural greenspaces. Within 600m to the east of the site, amenity green space is located, along with a park which contains provision for children and young people. To the south, a small area of children and young people's space is located, which runs alongside a green corridor. To the west, other open space is located alongside amenity green space and outdoor sports facilities. To the northwest, a cluster of outdoor sports facilities are located with a park which also contains a children's play area. Additionally, the site is surrounded by public footpaths in all directions. However, the site is located directly atop a green corridor. Therefore, a mixed significant positive and significant negative effect is predicted for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.57ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (2.57ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Urban land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.57ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites. A negligible effect is therefore predicted, although this effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (part of a mixed effect), 3: education, 4: health, 8: recreation (although SA objectives 4 and 8 are part of a mixed effect). Potential significant negative effects were identified in relation to SA objectives 8: recreation as part of a mixed effect. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2572 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 46-50 minutes travel time of a primary school and within 56-50 minutes travel time of a secondary school. Both sites have a small section north of the site that is located over 60 minutes travel time to a primary and secondary school. Therefore a significant negative effect is expected for this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located mainly within 46-50 minutes travel time of a GP (a small section north of the site is located over 60 minutes travel time) and over 60 minutes travel time of a hospital; therefore a significant negative effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential properties along the east and southern site boundary on Drub Lane. These developments may be affected by noise during the construction phase. As such a significant negative is expected on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is located mainly within 51-55 minutes travel time of a local centre and mainly 56-60 minutes travel time of a town/district centre (although a small section north of the site is located over 60 minutes travel time); therefore a significant negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Drub Park and Recreation Ground is located directly adjacent to the east of the site and also contains a childrens

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		playground. Hunsworth Park and Recreation Ground is another open space with a childrens playground located 421m west of the site. In addition there is a bridleway located 85m east of the site which leads north towards Whitehall Road West. There is also a footpath 162m south east from the site which leads towards Lanes Wood. As such an overall significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.54 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as moderately 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.54 ha) and on mainly greenfield land. As a result a minor negative effect is likely. The site has been identified as Grade 3 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-	This is a relatively small site (0.54 ha) and on mainly greenfield; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Hunsworth Great Wood and Little Wood is a candidate Local Wildlife Site located 870m west of the site. As such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	-	This site is on mainly greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as moderately 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment and 8: recreation. Potential significant negative effects were identified in relation to SA objectives 3: education, 4: health 5: amenity and 6: services and facilities. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2573 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located 6-10 minutes travel time from the nearest employment node; therefore a significant positive effect on this SA objective is predicted
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	++?	The availability of school and college places to serve the growing population will depend in part on whether new places

SA Objectives	SA Score	Justification
are available to all.		<p>are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 5 minutes travel time of a primary; and 6-10 minutes travel time of a secondary; so is likely to have a significant positive effect on this SA objective. The site is located within 16-20 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP and within 41-45 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the south and West on Moor Lane and the surrounding roads. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 11-15 minutes travel time of a local centre and within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. As such a significant positive effect is recorded for this SA objective. Semi-natural and natural green space is located 500m to the north. To the south east, a park with children and young people's space lies next to outdoor sports facilities. To the south of the site, amenity greenspace with children and young people's space, semi-natural and natural greenspace and allotments are found in a cluster within 600m. To the south west, a green corridor runs from south east to northwest. Finally, semi-natural and natural greenspace and an outdoor sport facility are found within 100m west of</p>

SA Objectives	SA Score	Justification
		the site, and the site is surrounded by public footpaths and rights of way. A significant positive effect is predicted for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.06ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.06ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on mostly Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.06ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	A candidate local wildlife site; Lepton Great Wood, and a local geological site; Lepton Great Wood, are located within 500m north of the site. Another local geological site, Burton Dean Quarry, lies within 500m to the south of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation, 10: transport and 19: climate change. No potential significant negative effects are identified for any of the SA objectives.		

#### H2574 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  This site is located 26-30 minutes travel time from the nearest employment node; therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of a primary school and 31-35 minutes travel time of a secondary school (a small part of the site to the south west is within 26-30 minutes travel time of a secondary school); so is likely to have a minor positive effect on this SA objective. The site is located within 21-25 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 5 minutes travel time of a GP and within 41-45 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within 100m of existing residential properties to the south on Deacon Close and to the west. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre and within 5 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++/--?	<p>The site is within close proximity of a number of designated open spaces and sports facilities which may be used by new residents in the area. A green corridor is located directly north of the site, with semi natural/natural greenspaces and a cycle path running alongside. Located within 600m to the south east is a public park which contains tennis courts, two sets of allotments and provision for children and young people. Another allotment is located further south east, with a golf course located at the end of the 600m limit. Located 500m to the south west of the site are school playing fields,</p>

SA Objectives	SA Score	Justification
usage.		which contain outdoor sports facilities. A park is found 600m to the west of the site, while two sets of allotments can be found within 600m. North west of the site, private playing fields can be found, which contain bowling greens and a multiuse games area. Directly to the west of these playing fields, within 600m of the site, public playing fields which contain provision for children and young people are located. However, the site is located on top of a green corridor; therefore, a mixed effect of possible significant positive and possible significant negative is predicted for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.57ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.57ha) mostly on greenfield land (there is one building to the east of the site); therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.57ha) mostly on greenfield land (there is one building to the east of the site); therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance	0?	The site is not within 1km of any designated biodiversity or geodiversity sites. A negligible effect is therefore predicted, although this effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and with an area of flood zone 2 running through the site; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly or entirely 'green' in terms of its access to five of the 'eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation (part of a mixed effect), 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 8: recreation (part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2575 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
opportunities available for local people, and ensure that they are accessible.		This site is located 31-35 minutes travel time from the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 11-15 minutes travel time of a primary school (although a small section south of the site is located within 6-10 minutes travel time of a primary school) and the whole site is within 21-25 minutes travel time of a secondary school so is likely to have a minor positive effect on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 0-5 minutes travel time of a GP and within 51-55 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties surrounding the site such as on Sunny Heys Road north of the site and Mean Lane south of the site. These properties may be affected by noise during the construction phase. As such a significant negative is expected on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 11-15 minutes travel time of a local centre and most of the site is mainly within 6-10 minutes travel time of a town/district centre (although a small section south of the site is located within 0-5 minutes travel time); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an outdoor sports facility located 135m east of the site which consists of a childrens playground and public playing fields. There is an amenity greenspace feature located directly adjacent to the west of the site and an area of semi-natural and natural greenspace 112m south west of the site. There is a green corridor which follows Meltham Dike located 120m south west of the site and allotments 210m south east of the site located on Near Lane. In addition there is a cycle route on Mean Lane located 20m south of the site and also a footpath along the eastern and western site boundary. It is noted that there is an amenity greenspace feature and allotments located on site with a childrens playground on the north west corner of the site. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.73 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.73 ha) and mainly on greenfield land (a small section of the north east corner of the site appears to be developed). The site has been identified as urban land. As a result a minor negative effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.73 ha) on mainly greenfield land (a small section of the north east corner of the site appears to be developed); therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment; therefore

SA Objectives	SA Score	Justification
the historic environment, heritage assets and their settings.		a potential minor negative effect is identified. The minor negative effect on this SA objective is also uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Folly Dolly Farms is a Local Geological Site located 862m north east of the site. As such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mainly greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation (part of a mixed effect), 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: recreation (part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

## H2576 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located 21-26 minutes travel time from the nearest employment node; therefore a minor positive on this SA objective is predicted</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is mostly located within 6-10 minutes travel time of a primary (a small part of the site to the west is located within 11-15 minutes travel time of a primary school). The western half of the site is within 21-25 minutes and the eastern half within 26-30 minutes travel time of a secondary; so is likely to have a minor positive effect on this SA objective. The site is located within 31-35 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP and mostly within 46-50 minutes travel time of a hospital (a small part of the site to the east is located within 51-55 minutes travel time of a hospital); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the west on Stoneroyd and Wellfield Ave, and to the south on Denby Lane and Whitley Walk. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The western half of the site is located within 6-10 minutes travel time of a local centre, with the eastern half of the site located 11-15 minutes from the nearest local centre. The site is also located within 21-25 minutes travel time of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. As such a significant positive effect is recorded for this SA objective. Within 600m to the south, three separate areas of outdoor space are located, one of which contains an area for children and young people. Also to the south, a number of amenity green spaces are located, one of which contains allotments. To the south west, a public park containing children and young people's space is located within 400m. Finally, allotments are located 400m to the west, with semi-natural and natural green space located within 200m west. A significant positive effect is therefore predicted on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.18ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.18ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on mostly Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.18ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an</p>

SA Objectives	SA Score	Justification
		elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites. A negligible effect is therefore predicted, although this effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 8: recreation. No potential significant negative effects were identified in relation to any of the SA objectives.		

## H2577 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The north western half of the site is located 6-10 minutes travel time from the nearest employment node and the south eastern half is located 11-16 minutes from the nearest employment node; therefore a significant positive effect on this SA objective is predicted</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of a primary; and mostly within 16-20 minutes travel time of a secondary (a small part of the site to the east is located within 21-25 minutes travel time of a secondary); so is likely to have a significant positive effect on this SA objective. The site is mostly located within 16-20 minutes travel time of a further education institute, with a small eastern segment located 21-26 minutes from a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 11-15 minutes travel time of a GP and within 36-40 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within 100m of existing residential properties to the north, and west, on Leeds Road, and to the south on Willerton Close. These properties may be affected by noise during the construction phase. The site is located on the A653. A significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre and within mostly 16-20 minutes travel time of a town/district centre (a small part of the site to the east is located within 21-25 minutes travel time of a town/district centre); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Within 600m to the south of the site, amenity green space is located, with a small amount of children and young people's space nearby. To the south west of the site, public playing fields are found, as well as a park which contains children and young people's space and a multiuse games area. The site is surrounded by footpaths within 600m. A significant positive effect is predicted for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.18ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.18ha) mostly on greenfield land (a small area to the north of the site previously been developed); therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Grade 3 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.18ha) mostly on greenfield land (a small area to the north of the site previously been developed); therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
		The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are three approved biodiversity sites within 1km to the north; Dunn Wood, Scargill Wood and Soothill Wood. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2581 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The whole site is located 56-60 minutes travel time from the nearest employment node; therefore a significant negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is mainly located within 21-25 minutes travel time of a primary school (although a small part of the site to the north west is located within 16-20 minutes travel time of a primary school) and 26-30 minutes travel time of a secondary school so is likely to have a negligible effect on this SA objective. The site is located within 51-55 minutes travel time of a further education institute.</p>

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The whole site is located within 11-15 minutes travel time of a GP and over 60 minutes travel time to a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties adjacent to the site to the east on Penistone Road; these properties may be affected by noise during the construction phase. In addition Penistone Road is an 'A' road and is located adjacent to the site, this may result in noise pollution affecting residents in the longer term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 16-20 minutes travel time of a local centre and 16-20 minutes travel time of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is a woodland area that is classed as an area of natural/semi natural greenspace located 600m north of the site. There is also an open area 479m south west from the site associated with scheduled monument/listed building. In addition there is a footpath along the western site boundary that leads north and the West Yorkshire Cycle Route is 33m south of the site. As a result an overall significant positive effect is expected for this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.61 ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as moderately 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.61 ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as Grade 4 Agricultural Quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.61 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA D9: Low Common, Royd Moor and Whitley Common, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently rising landform and is open, large scale and exposed. Woodland cover is sparse and there is strong rural character and important relative levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, as the site lies approximately 485 metres from the Scheduled Monument at Castle Hill. The loss of this area and its subsequent development could therefore harm elements which contribute to the significance of this Scheduled Monument. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Denby Delph is a candidate Local Wildlife Site located 772m east from the site. The close proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as moderately 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
<b>Summary of SA findings:</b> A potential significant positive effect was identified for this site in relation to SA objective 8: recreation. Potential significant negative effects were identified in relation to SA objectives 1: employment and 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2582 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located 56-60 minutes travel time from the nearest employment node; therefore a significant negative effect on this SA objective is predicted
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The site is mostly located within 5 minutes travel time of a primary, with a small area to the east located 6-10 minutes away from a primary school; and mostly 31-35 minutes travel time of a secondary (a small part of the site to the north is located within 26-30 minutes travel time of a secondary school); so is likely to have a minor positive effect on this SA

SA Objectives	SA Score	Justification
		objective. The site is mostly located within 51-55 minutes travel time of a further education institute, with a small eastern area located 56-60 minutes from a further education institution.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 11-15 minutes travel time of a GP and more than 60 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the west and south west on Highfield Avenue and Bird's Edge Lane. These properties may be affected by noise during the construction phase. The site is also located on the A629. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is mostly located within 16-20 minutes travel time of a local centre (a small part of the site to the east is located within 21-25 minutes travel time of a local centre) and mostly within 16-20 minutes travel time of a town/district centre, with a small eastern section located 21-25 minutes from the closest town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Outdoor sports facilities exist to the north west within 300m. To the east, semi-natural and natural greenspaces exist are located within 300m. To the west, a park with children and young people's space and outdoor sport provision can be found. The site is also surrounded by foot paths and public rights of way within 600m. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.35ha); therefore a minor positive effect is likely.
10. Secure an effective and	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of

SA Objectives	SA Score	Justification
safe transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.35ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.35ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA D9: Low Common, Royd Moor and Whitley Common, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently rising landform and is open, large scale and exposed. Woodland cover is sparse and there is strong rural character and important relative levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as the site lies approximately 50m from Bird's Edge Mill, a Grade II Listed Building. The development of this site could therefore affect elements which contribute to the significance of this building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Lower Jane Well, an approved local wildlife site is located within 1km to the north of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
of waste close to source.		This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (part of a mixed effect), 3: education, 8: recreation (part of a mixed effect), 9: housing, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 1: employment and 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2583 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  This site is located 11-15 minutes travel time from the nearest employment node (a small part of the site to the south is located within 16-20 minutes travel time from the nearest employment node); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		Most of the site is located mainly within 0-5 minutes travel time of a primary school and mainly 6-10 minutes travel time of a secondary school (although a small part of the site to the south is located within 11-15 minutes travel time of a secondary school) so is likely to have a significant positive effect on this SA objective. The site is located mainly within 6-10 minutes travel time of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP and within 31-35 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to residential development along the northern and southern site boundary on Lady House Lane and Newsome Road South; these properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 0-5 minutes travel time of a local centre and most of the site is mainly located within 11-15 minutes travel time of a town/district centre; therefore a significant positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There are two sports facilities within close proximity to the site; there are playing fields 50m south from the site which contains a childrens playground and 200m north of the site at Newsome High School and Sports College. In addition there are allotments 100m north west of the site on Caldercliffe Road. There is a footpath 40m south east of the site that leads to Stirley Farm. However the site is an area of semi natural and natural greenspace. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable

SA Objectives	SA Score	Justification
which meets their needs.		housing. This site is relatively small (0.54 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.54 ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on urban land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.54 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, as the site forms part of the area of open countryside which contributes to the setting of the Scheduled Monument at Castle Hill. The loss of this area and its subsequent development could therefore harm elements which contribute to the significance of this Scheduled Monument. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Park Wood is a candidate Local Wildlife Site located 405m south from the site and Upper Park Wood is another Local Wildlife Site and Local Nature Reserve located 756m south from the site. The close proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: services and facilities, 8: recreation (although part of a mixed effect), 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: recreation (although of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2584 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is mostly located 16-20 minutes travel time from the nearest employment node; (part of the site to the east is located within 6-10 minutes travel time of an employment node); therefore a significant positive effect on this SA objective is predicted
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The western half of the site is located within 5 minutes travel time of a primary and 11-15 minutes of a secondary, whereas the east of the site is located within 6-10 minutes of a primary school; and 11-15 minutes travel time of a secondary; so is likely to have a significant positive effect on this SA objective. The site is mostly located within 26-30 minutes travel time of a further education institute (a small part of the site to the east is located within 11-15 minutes travel time of a further education institute).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP and mostly within 31-35 minutes travel time of a hospital (a small part of the site to the west is located within 36-40 minutes travel time of a hospital); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on Halifax Road an Aquila Way, east on Halifax Road and East on Rydale Close. These properties may be affected by noise during the construction phase. The site is located on the A649. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 11-15 minutes travel time of a local centre and within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Semi-natural and natural green space is located 600m to the north, with outdoor sport facilities and provision for</p>

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		children and young people found closer to the site. Outdoor sport facilities and children and young people's space is located within 600m to the east, with an allotment located within 560m to the south east. To the west, amenity greenspace and outdoor sports facilities are located, as well as semi-natural and natural greenspace within 600m. Footpaths and public rights of way also surround the site within 600m. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.66ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+/-?	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.66ha) on brownfield land; the site has been identified as being located on Grade 3 Agricultural Land. Therefore a mixed minor positive and minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (0.66ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  Most of the site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.  Although a section along the northern site boundary lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites. A negligible effect is therefore predicted, although this effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
soil pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is on brownfield land and is located outside of flood zones 2 and 3; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on brownfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2585 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Most of this site is located 51-55 minutes travel time from the nearest employment node, (a small part of the site to the north east is 46-50 minutes travel time of the nearest employment node); therefore a significant effect on this SA objective is predicted
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
better capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of a primary school (a small part of the site to the north east is 11-15 minutes travel time of the nearest primary school); and 16-20 minutes travel time of a secondary; so is likely to have a significant positive effect on this SA objective. The site is mostly located within 41-45 minutes travel time of a further education institute, with a portion of the north east located 36-40 minutes away from further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is mostly located within 21-25 minutes travel time of a GP (a small part of the site to the south is 26-30 minutes travel time of the nearest GP); and within 56-60 minutes travel time of a hospital; therefore a negligible effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within 100m of a number of existing residential properties to the south west on Dobb Lane and to the North and North West on Old Road, Water Street and the A6024. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 16-20 minutes travel time of a local centre and mostly within 16-20 minutes travel time of a town/district centre (a small part of the site to the north east is 11-15 minutes travel time of the nearest town and district centre); therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. To the north, a park with children and young people's provision is found 600m away, with two sets of semi-natural and natural greenspaces and an allotment within 600m. To the west, located within 600m; amenity greenspace, recreation ground, an outdoor sports facility with two sets of allotments inside and a semi-natural and natural greenspace can be found. School playing grounds and outdoor sports facilities also exist within 500m to the south west. A number of footpaths and cycle paths also exist surrounding the site. However, the site is located atop amenity greenspace; therefore, a mixed effect of significant positive and uncertain significant negative is predicted for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.25ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.25ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.25ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as the site lies within the Hincliffe Mill Conservation Area and 1 and 2 Water Street (to the north), 1 Spring Lane (to the south), and Hincliffe Mill Bridge and 5 Spring Lane to the west are all Grade II Listed Buildings. The loss of this area and its subsequent development could therefore harm elements which contribute to their significance. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to	-?	The site is within 1km of a number of candidate and approved local wildlife sites. Approved sites are found to the east

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		(Malkin House Wood) and the north west (Carr Green Meadows Holmbridge and New Laith Fields Holmbridge), while two candidate sites are located to the south west. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located within flood zone 2; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education and 8: recreation (part of a mixed effect). Potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: recreation (part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2586 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and	0/+	While the location of housing sites will not influence the number, location or type of employment opportunities available

SA Objectives	SA Score	Justification
range of employment opportunities available for local people, and ensure that they are accessible.		<p>in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Access to employment nodes vary across the site. The most accessible area is in the far southern area, which is within 21-25 minutes of an employment node. The least accessible area is in the northern area of the site which is 31-35 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the south edge and potentially negligible for the north of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located mostly within 6-10 minutes travel time of a primary (part of the site to the north is located within 11-15 minutes travel time of a primary school). Access to a secondary school varies across the site. The most accessible area is in the far southern area, which is within 6-10 minutes of a secondary. The least accessible area is in the northern area of the site which is 16-20 minutes travel time to a secondary. In between these two extremes, travel times to a secondary vary. A significant positive effect on this SA objective is therefore predicted. Access to a further education institute varies across the site. The most accessible area is in the far southern area, which is within 6-10 minutes of a secondary. The least accessible area is in the northern area of the site which is 21-25 minutes travel time to a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The south half of the site is located within 6-10 minutes travel time of a GP, while the northern half is located 11-15 minutes away. The southern half of the site is within 46-50 minutes travel time of a hospital, while the northern half is within 51-55 minutes of a hospital. Therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is located within 100m of a number of residential properties to the east on Greenway and to the South on</p>

SA Objectives	SA Score	Justification
		Westcroft. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to a local centre varies across the site. The most accessible area is in the far southern area, which is within 11-15 minutes of a local centre. The least accessible area is in the northern area of the site which is 21-25 minutes travel time to a local centre. In between these two extremes, travel times vary. The site is located within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Within 600m to the east of the site, semi-natural and natural greenspace is located, as well as a green corridor. To the south east of the site, a park with children and young people's space and outdoor sports facilities are located. To the south west of the site, outdoor sports facilities with children and young people's space lies within 600m. The site is also surrounded by footpaths and public rights of way in all direction. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.95ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.95ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on mostly Grade 3 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.95ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
		<p>Most of the site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.</p> <p>Although a section of the south of the site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within a close proximity of a number of biodiversity and geodiversity sites. Within 150m north of the site, Spring Wood (an approved local wildlife site) is located. Honley Wood, a candidate local wildlife site is also located within 600m to the west. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	--	This site is on greenfield land and is located on flood zones 2 and 3; therefore a significant negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 14: biodiversity and geodiversity and 16: flooding. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2587 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site crosses a number of different travel times from south to north, ranging from 36-40 minutes from the nearest employment node in the south to 56-60 minutes travel time from the nearest employment node in the north; therefore a mixed effect is likely in this site, ranging from negligible in the south and significantly negative in the north.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The site crosses a number of different travel times from south to north, ranging from 6-10 minutes from the nearest primary in the south to 21-25 minutes travel time from the nearest primary in the north. Similarly, the site crosses a number of different travel times from south to north in regards to secondary schools, ranging from 6-10 minutes from

SA Objectives	SA Score	Justification
		the nearest secondary in the south to 21-25 minutes travel time from the nearest secondary in the north. This means that a mixed effect is likely on this site, ranging from negligible in the south to significantly positive in the north. The site is located within 31-35 minutes from the south, to 46-50 minutes travel time to the north of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site crosses a number of different travel times to the nearest GP, ranging from 6-10 minutes from the nearest GP in the south and west to 21-25 minutes travel time from the nearest GP in the north. The nearest hospital is 56-60 minutes travel time away. This means that a mixed effect is likely, ranging from negligible in the north to a minor positive in the south. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north, east and south. These properties may be affected by noise during the construction phase. The site is also located on A635. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site crosses a number of different travel times from south to north, ranging from 6-10 minutes from the nearest local centre in the south to 21-25 minutes travel time from the nearest local centre in the north. Similarly, the closest town/district centre is 6-10 minutes away in the south of the site, and 26-30 minutes away in the north of the site. This means that a mixed minor negative to the north to a minor positive in the south is predicted in relation to this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. The site is connected on its east and north sides to woodland, with amenity greenspace to the north east. Within 600m to the north, playing fields, more semi-natural and outdoor greenspace and other open space are located. Within 600m north east, Holmfirth Sport Centre is located, which is surrounded by sports facilities and contains children and young people's space. East of the site, additional semi-natural and natural greenspace is located within 600m. Finally, to

SA Objectives	SA Score	Justification
usage.		the south west, amenity greenspace, parks and gardens, children and young people's provision and Holmfirth Pool can be found. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.44ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (2.44ha) on brownfield land; therefore a minor positive effect on this SA objective is likely. The site has been identified as being located on mostly Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (2.44ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Hagg Wood candidate biodiversity site is located 800m north of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	0	This site is on brownfield land and is located outside of flood zones 2 and 3; therefore a negligible effect is likely.

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on brownfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education part of a mixed effect), 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 1: employment and 5: amenity (although both of these are part of mixed effects). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2589 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located over 60 minutes travel time from the nearest employment node ; therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	--	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located over 60 minutes travel time of a primary and secondary school so is likely to have a significant negative effect on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located over 60 minutes travel time to a GP and hospital; therefore a significant negative effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is adjacent to residential properties to the south of the site on Wellhouse Lane; these properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located over 60 minutes travel time to a local and district/town centre; therefore a significant negative effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is a Local Nature Reserve located directly adjacent to the site to the west. There are also a number of playing fields within proximity to the site; there is a facility 190m south east from the site, football grounds 279m east of the site and another 509m north east from the site at Kirkheaton Primary School. There is an amenity greenspace feature located 410m north east from the site which includes a childrens playground on Sunnyhill Avenue and another

SA Objectives	SA Score	Justification
usage.		600m east on Easingwood Drive. In addition there are a number of footpaths surrounding the site, one of them is along the western site boundary which leads north towards Kirkheaton. As a result an overall significant positive effect is expected for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.18 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as 'green' in terms of its access to none of the eight features assessed. Therefore, a significant negative effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.18 ha) and mainly on greenfield land (a third of the site has been developed); therefore a minor negative effect on this SA objective is likely. The site has been identified as Grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.18 ha) on greenfield land (a third of the site has been developed); therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Dalton Bank is a Local Nature Reserve and Local Wildlife Site located directly adjacent to the west of the site. As such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood	-	This site is on mainly greenfield land (a third of the site has been developed) and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would

SA Objectives	SA Score	Justification
risk areas and ensure development does not contribute to increased flood risk for existing property and people.		increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is not classed as 'green' in terms of its access to none of the eight features assessed; therefore a significant negative effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation. Potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health 5: amenity, 6: local services and facilities, 10: transport, 14: biodiversity and geodiversity and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2590 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The section of the site to the west is mainly located 16-20 minutes travel time from the nearest employment node whereas the east section of the site is mainly located 11-15 minutes travel time; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 11-15 minutes travel time of a primary school (although a small section to the north of the site is within 6-10 minutes) and within 16-20 minutes travel time of a secondary school so is likely to have a significant positive effect on this SA objective. The site is located within 26-30 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP and mainly within 41-45 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential development along the north, south and west of the site; these properties may be affected by noise during the construction phase. In addition the site is directly adjacent to Moorside to the north which is an 'A' road; this may result in noise pollution affecting residents in the longer term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is located mainly within 16-20 minutes travel time (although small section of the site from the north is within 11-15 minutes travel time of a local centre). The site is mainly located 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		area. There is an amenity greenspace feature located 66m west from the site on Stonefield Road and another 335m south from the site on Sixth Avenue, both features contain a childrens playground. There are also playing fields located 252m west from the site on Highmoor Lane. Hightown Heights is a recreational ground located 462m south east from the site. In addition there is a footpath 290m east of the site which leads north Brick Street. However the site is an area of semi natural and natural greenspace. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.91 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.91 ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as urban land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-	This is a relatively small site (0.91 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are no biodiversity or geodiversity sites within a 1km proximity to the site. As such a negligible effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. This site is classed as mainly 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation (part of a mixed effect), 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: recreation (part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2591 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  This site is located mainly 31-35 minutes travel time from the nearest employment node; therefore a negligible effect on this objective is expected.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 0-5 minutes travel time of a primary school (although a small section to the south and north west of the site is within 6-10 minutes) and mainly within 6-10 minutes travel time of a secondary school so is likely to have a significant positive effect on this SA objective. The whole site is located within 26-30 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The whole site is located within 11-15 minutes travel time of a GP and within 41-45 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential development along Brockholes Lane to the north of the site and Oakes Lane to the south; these properties may be affected by noise during the construction phase. In addition the site is directly adjacent to New Mill Lane which is an 'A' road; this may result in noise pollution affecting residents in the longer term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is located mainly within 6-10 minutes travel time (although a small section of the site from the south is within 0-5 minutes travel time of a local centre). The whole site is 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced

SA Objectives	SA Score	Justification
of crime.		by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an outdoor sports facility located 43m east of the site which consists of playing fields at Brockholes Junior and Infant School. There is also an area of semi natural and natural greenspace adjacent to the south of the site and a park 200m south of the site which also contains a childrens playground. In addition there are a number of footpaths surrounding the site, one of them is 30m west of the site leading to Hagg Wood. However the site is a recreational ground with a childrens playground. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.54 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.54 ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as Grade 4 Agricultural Quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.54 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance	--?	Brockholes and Round Wood is a Local Geological Site located 27m north from the site and Hagg Wood is a candidate Local Wildlife Site located 165m west from the site and another is Cliff Wood located 297m north from the site. The close

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	--	This site is on greenfield land and the western half of the site is located in Flood Zone 2; therefore a significant negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees especially as the site is within a flood risk zone.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation (part of a mixed effect), 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: recreation (part of a mixed effect) 14: biodiversity and geodiversity and 16: flooding. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2594 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and	0	While the location of housing sites will not influence the number, location or type of employment opportunities available

SA Objectives	SA Score	Justification
range of employment opportunities available for local people, and ensure that they are accessible.		<p>in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is mostly located 31-35 minutes travel time from the nearest employment node (two small parts of the site to the west and south are located within 21-25 minutes travel time of an employment node); therefore a negligible effect on this SA objective is predicted</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is mostly located within 6-10 minutes travel time of a primary (a small part of the site to the north is located within 11-15 minutes travel time of a primary school); and mostly within 16-20 minutes travel time of a secondary (a small part of the site to the south east is located within 21-15 minutes travel time of a secondary school); so is likely to have a significant positive effect on this SA objective. The site is mostly located within 16-20 minutes travel time of a further education institute, with eastern portions containing areas within 21-25 and 26-30 minutes travel time.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is mostly located within 11-15 minutes travel time of a GP (a small part of the site to the south east is located within 6-10 minutes travel time of a GP); and mostly within 36-40 minutes travel time of a hospital (a small part of the site to the north west is located within 31-35 minutes travel time of a hospital); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by existing residential and commercial properties on all sides. These properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is mostly located within 6-10 minutes travel time of a local centre, (with small portions to the north and south within 11-15 minutes), and mostly within 11-15 minutes travel time of a town/district centre, with a small portion to the west within 6-10 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is surrounded by designated open spaces which may be used by new residents in the area. To the north, a nature reserve, sports facilities, and provision for children and young people lie within 600m. To the east lies a children and young people's space. To the south, a number of natural and semi-natural greenspaces exist, as well as green corridors, allotments and a piece of amenity greenspace. To the west, amenity greenspace, semi-natural and natural greenspaces, allotments, outdoor sports facilities and parks and gardens are located. Additionally, footpaths and public rights of way surround the site within 600m. A significant positive effect is therefore predicted on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (10.69ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (10.69ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site has been identified as being located on Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (10.69ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development.</p>

SA Objectives	SA Score	Justification
		This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is 200m north of the Round Wood approved local wildlife site, as well as the Round Wood candidate local wildlife site. To the north of the site, located within 500m is Dalton Bank nature reserve. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation (part of a mixed		

SA Objectives	SA Score	Justification
		effect), 9: housing, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 11: landuse, 12: landscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.

### H2594a (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is mostly located 31-35 minutes travel time from the nearest employment node (one small part of the site to the south east is located within 21-25 minutes travel time of an employment node); therefore a negligible effect on this SA objective is predicted
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The site is mostly located within 6-10 minutes travel time of a primary (a small part of the site to the north is located within 11-15 minutes travel time of a primary school); and mostly within 16-20 minutes travel time of a secondary (a small part of the site to the south east is located within 21-15 minutes travel time of a secondary school); so is likely to have a significant positive effect on this SA objective. The site is mostly located within 16-20 minutes travel time of a further education institute, with eastern portions containing areas within 21-25 and 26-30 minutes travel time.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.  The site is mostly located within 11-15 minutes travel time of a GP (a small part of the site to the south east is located within 6-10 minutes travel time of a GP); and mostly within 36-40 minutes travel time of a hospital (a small part of the site to the north west is located within 31-35 minutes travel time of a hospital); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution

SA Objectives	SA Score	Justification
		<p>affecting residents in the longer term.</p> <p>This site is located adjacent to industrial areas located on Newland Road and School Lane. As such, a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is mostly located within 6-10 minutes travel time of a local centre, (with small portions to the north and south within 11-15 minutes), and wholly within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an area of semi natural and natural greenspace located directly adjacent to the south of the site and an amenity greenspace feature with a childrens playground located 80m south west of the site on Arlington Way. There is a green corridor located 80m east of the site on School Lane and a large area of playing fields with a childrens playground located 300m north of the site on Bankfield Lane. There is a footpath and bridleway 50m north of the site from Cold Royd Lane and a footpath 120m south of the site from Waterloo Road leading west. As such a significant positive effect has been identified for this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	++	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.28 ha); therefore a significant positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to six of the eight features assessed. <p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation (part of a mixed effect), 9: housing, 10: transport 11: landuse and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 11: landuse, and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2595 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Most of this site is located 41-45 minutes travel time from the nearest employment node, although small portions to the east and south are located 36-40 minutes from the nearest employment node, and a small north western portion is located 46-50 minutes from the nearest employment node. Therefore a mixed effect is likely, ranging from negligible in the east and south to negative in the north west.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is mostly located within 6-10 minutes travel time of a primary (a small central part of the site is located within</p>

SA Objectives	SA Score	Justification
		11-15 minutes travel time of a primary school); and 16-20 minutes travel time of a secondary (a portion of the site to the north west is located within 21-25 minutes travel time of a secondary); so is likely to have a significant positive effect on this SA objective. The site is mostly located within 26-30 minutes travel time of a further education institute, with portions 31-35 and 16-20 minutes from a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is mostly located within 6-10 minutes travel time of a GP (a small central portion of the site is located within 11-15 minutes travel time of a GP); and mostly within 41-45 minutes travel time of a hospital (a small part of the site to the east is located within 36-40 minutes travel time of a hospital); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is located within 100m of a number of residential properties to the north, west and south. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is mostly located within 6-10 minutes travel time of a local centre, with a portion to the east being 0-5 minutes and a western portion being 11-15 minutes away. The site is mostly within 11-15 minutes travel time of a town/district centre (a small part of the site to the west is located within 6-10 minutes travel time of a town/district centre); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Amenity greenspace containing an allotment is located within 600m to the north. Four outdoor sports facilities are provided to the south west of the site within 600m. Further amenity greenspace is accessible 600m to the south of the site, as well as a park with outdoor sports space and amenity greenspace. Within 600m south east of the site, allotments and semi-natural and natural greenspace are located. Finally, a park with provision for children and young people is located to the east. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the

SA Objectives	SA Score	Justification
to live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.78ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.78ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on mostly Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.78ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment due to the presence of five Grade II* Listed Building at Westwood Mills in the middle of this area. The development of this area could therefore harm elements which contribute to their significance. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is located directly next to Huddersfield Narrow Canal and atop Low Westwood Pond. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	--	This site is on greenfield land and is located almost entirely on flood zones 2 and 3; therefore a significant negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 14: biodiversity and geodiversity and 16: flooding. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2596 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Most of the site is located mainly within 21-25 minutes travel time from the nearest employment node (although a small part of the site to the north east is located within 16-20 minutes travel time from the nearest employment node); therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	0?	The availability of school and college places to serve the growing population will depend in part on whether new places

SA Objectives	SA Score	Justification
are available to all.		<p>are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The whole site is located within 16-20 minutes travel time of a primary school and 21-25 minutes travel time of a secondary school so is likely to have negligible effect on this SA objective. Most of the site is located mainly within 26-30 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Just over half the site is located within 6-10 minutes travel time and the other half of the site located within 11-15 minutes of a GP. The whole site is located within 41-45 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by residential development south of the site on Fenay Lane and west of the site on Fleminghouse Lane; these properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located mainly within 11-15 minutes travel time of a local centre (less than half of the site to the north is located within 6-10 minutes travel time of a local centre) and mainly 11-15 minutes travel time of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an amenity greenspace feature located 230m west from the site which also contains a childrens playground. There is also an area of semi natural and natural greenspace located 200m north west from the site on Southfield Road and another 300m north of the site. An outdoor sport facility is located 400m north west from the site at Almondbury Junior School and Fernside Park is located 260m north west from the site. In addition there is a byway 70m</p>

SA Objectives	SA Score	Justification
usage.		west from the site leading to Almondbury Junior School and another 80m north of the site leading to Southfield Road. As a result an overall significant positive effect is expected for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.74 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.74 ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on urban land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.74 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, as the site forms part of the area of open countryside which contributes to the setting of the Scheduled Monument at Castle Hill. The loss of this area and its subsequent development could therefore harm elements which contribute to the significance of this Scheduled Monument. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Almondbury Common is a Local Wildlife Site located 670m south from the site and Wakefield Road (Lepton) is another candidate Local Wildlife Site located 940m north east from the site. The close proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation, 10: transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2598 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Access to employment nodes vary across the site. The most accessible area is in the far south-eastern edge, which is within 21-25 minutes of an employment node. The least accessible area is along the north-western boundary of the site which is 31-35 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the south-eastern edge and potentially negligible for the north-western boundary of the site.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is in the far south-eastern edge, which is within 11-15 minutes travel time to a primary school and 11-15 minutes to a secondary school. The least accessible area is along the north-western boundary of the site which is 26-30 minutes travel time to a primary and 26-30 minutes from a secondary school. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the south-western edge and potentially negligible for the north-western boundary of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to GP and hospital facilities varies across the site. The most accessible area is along the south-eastern boundary, which is within 11-15 minutes travel time to a GP and 56-50 minutes to hospital. The least accessible area is along the north-western boundary of the site which is within 21-25 minutes travel time to a GP and 56-60 minutes to a Hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the south-eastern edge and potentially negligible for the north western boundary of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north east on Derwent Road and Moorside Road. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the south-eastern boundary, which is within 16-20 minutes travel time to a local centre and 6-10 minutes to town / district centre. The least accessible area is along the north-western boundary of the site which is 26-30 minutes travel time to a local centre and 21-25 minutes from a town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the south-eastern edge and potentially minor negative for the lower eastern boundary of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Outdoor sports facilities are located within 300m to the north with provision for children and young people. To the north east, amenity greenspace is located within 200m of the site. A number of cycle routes and footpaths also surround the site. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.92ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (3.92ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Grade 3 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (3.92ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
		The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Honley Wood, a candidate local wildlife site, is located 900m north west of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education (as part of a mixed effect overall), 8: recreation, 10: transport and 19: climate change. No likely significant negative effects were identified for this site.		

## H2600 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is located 11-15 minutes travel time from the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 11-15 minutes travel time of a primary school (although a small part of the site to the north west is located within 16-20 minutes travel time of a primary school) and the whole site is within 6-10 minutes travel time of a secondary school so is likely to have a significant positive effect on this SA objective. The site is located within 26-30 minutes travel time of a further education institute.</p>
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 11-15 minutes travel time of a GP and within 41-45 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential development to the south on Dorchester Road; these properties may be affected by noise during the construction phase. In addition the site is located adjacent to Bradford Road which is an 'A' Road, this may result in noise pollution affecting residents in the longer term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 11-15 minutes travel time of a local centre and 16-20 minutes travel time of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There are two semi natural and natural greenspace located nearby, one is located 226m south east from the site and another is Upper Fell Grave located 275m south of the site. An amenity greenspace feature is located 532m south west from the site between Clough Lane and Lightridge road. Outdoor sports facilities are provided to the south east of the site within 378m by All Saints Catholic College and Bradley Park Golf Course is another outdoor sports facility located 500m east of the site. There is also footpath 25m north of the site which follows Bradley Park Dike. As such a significant positive effect is recorded for this SA objective</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.52 ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.52 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on mostly Grade 3 Agricultural Land (the southern boundary of the site is identified as Urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.52 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Lower Fell Greave is a candidate Local Wildlife Site located 700m south east from the site. The close proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation, 10: transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

## H2601 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Access to employment nodes vary across the site. The most accessible area is in the eastern edge of the site, which is within 5 minutes of an employment node. The least accessible area is in the centre of the site which is 21-25 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected – significantly positive to the east and minor positive in the centre.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+/?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

SA Objectives	SA Score	Justification
		<p>accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is in the far south-western edge, which is within 11-15 minutes travel time to a primary school and 6-10 minutes to a secondary school. The least accessible area is to the north of the site which is 26-30 minutes travel time to a primary and 21-25 minutes to a secondary school. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significantly positive for the south-western edge and potentially negligible to the north.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to GP and hospital facilities varies across the site. The most accessible area is along the south-western boundary, which is within 11-15 minutes travel time to a GP and 31-35 minutes to hospital. The least accessible area is along the north eastern boundary of the site which is over 60 minutes travel time to a GP and Hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the south-western edge and potentially significantly negative for the north-eastern boundary of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within 100m of a small number of residential properties to the south west on Bradford Road, as well as Shepherds Thorn Farm to the north east. These properties may be affected by noise during the construction phase. The site is located on the A641. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the south-western boundary, which is within 11-15 minutes travel time to a local centre and 16-25 minutes to town / district centre. The least accessible area is along the north eastern boundary of the site which is over 60 minutes travel time to a local or town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially negligible for the south-western edge and potentially significantly negative for the north eastern boundary of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced</p>

SA Objectives	SA Score	Justification
of crime.		by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Outdoor sports facilities are provided to the east and south of the site, within 600m. Within 600m to the south and south west of the site, semi-natural and natural greenspace is located. Public footpaths are located surrounding the site within 600m. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (13.67ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (13.67ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site has been identified as mostly being located on Grade 3 Agricultural Land, with a small south western corner located on urban land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (13.67ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as approximately 80m to the east of the site, lies the Grade II Listed barn at Shepherds Thorn Farm. The loss of this area and its subsequent development could therefore harm elements which contribute to the significance of this building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to	-?	Lower Fell Greave, a candidate local wildlife site, is located 620m south east of the site. The close proximity of the site

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (part of a mixed effect), 8: recreation (part of a mixed effect), and 9: housing. Potential significant negative effects were identified in relation to SA objectives 4: health (part of a mixed effect), 5: amenity, 6: local services and facilities (part of a mixed effect), 11: landuse and 12: landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

## H2602 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and	+/0?	While the location of housing sites will not influence the number, location or type of employment opportunities available

SA Objectives	SA Score	Justification
range of employment opportunities available for local people, and ensure that they are accessible.		<p>in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Access to employment nodes vary across the site. The most accessible area is to the south west of the site, which is within 16-20 minutes travel time to an employment node. The least accessible area is along the north eastern boundary of the site which is 26-30 minutes travel time to an employment node. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive in the south west and potentially negligible for the north eastern boundary of the site. The site is not within or adjacent to an AQMA.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education varies across the site. The most accessible area is to the south west of the site, which is within 6-10 minutes travel time to a primary and secondary. The least accessible area is along the north eastern boundary of the site which is 16-20 minutes travel time to a primary and 26-30 minutes of a secondary. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significantly positive in the south west and potentially negligible for the north eastern boundary of the site. The south west of the site is also within 30 minutes travel time of a further education institute, which adds to the significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to healthcare varies across the site. The most accessible area is to the south west of the site, which is within 5 minutes travel time to a GP and 56-60 minutes of a hospital. The least accessible area is along the north eastern boundary of the site which is 11-15 minutes travel time to a primary and 46-50 minutes of a secondary. In between these two extremes, travel times vary. Therefore, a minor positive effect is predicted on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by residential properties on all sides within 100m. These properties may be affected by noise during the construction phase. The site is located on the A58. A significant negative effect on this SA objective is</p>

SA Objectives	SA Score	Justification
		therefore likely.
6. Retain and enhance access to local services and facilities.	+/-?	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local and town/district centres vary across the site. The most accessible area is to the south west of the site, which is within 11-15 minutes travel time of a local and town/district centre. The least accessible area is along the north eastern boundary of the site which is 31-35 minutes travel time to a local centre and 21-25 minutes travel from a town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect is predicted on this SA objective, minor positive to the south west and a minor negative to the north east.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Within 600m to the south of the site, three outdoor sports facilities and two sets of amenity greenspace are located; one of these amenity greenspaces contains a set of allotments and a children and young people's space. To the west of the site, semi-natural and natural greenspace is located, along with a park which contains children and young people's space and outdoor sports provisions. Attached to the site to the north, a set of allotments are located. Footpaths and public rights of way surround the site within 600m. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (28.13ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely classed as mostly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a large site (28.13ha) mostly on greenfield land (a small number of buildings are scattered throughout the site); therefore a significant negative effect on this SA objective is likely. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of a primary; and mostly within 16-20 minutes travel time of a</p>

SA Objectives	SA Score	Justification
		secondary (a small area to the south is located 11-15 minutes from a secondary); so is likely to have a significant positive effect on this SA objective. The site is located within 26-30 minutes travel time of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 5 minutes travel time of a GP and mostly within 51-55 minutes travel time of a hospital (a small area to the north east is located within 56-60 minutes of a hospital); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north, south and west. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is mostly located within 21-25 minutes travel time of a local centre (an area to the south is located within 16-20 minutes of a local centre) and mostly within 11-15 minutes travel time of a town/district centre (an area to the north east of the site is located within 16-20 minutes of a town/district centre); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Amenity greenspace, outdoor sports facilities and allotments lay within 600m to the north of the site. 600m to the south, more outdoor sports space with amenity for children and young people are located. To the south west of the site, semi-natural and natural greenspace is located, along with a park with outdoor sports facilities and space for children and young people. A number of public rights of way surround the site within 600m. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.05ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.05ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.05ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as the site lies close to the Registered Battlefield at Adwalton. The development of this site could therefore harm elements which contribute to its significance. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Tong Moor, a local approved wildlife site is located 700m to the north west of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as mostly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.</p>
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation, 10: transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objective.		

#### H2604 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is mostly located 41-45 minutes travel time from the nearest employment node, with a north western section located 36-40 minutes from the nearest employment node; therefore a minor negative on this SA objective is predicted</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is in the far western edge, which is within 5 minutes travel time to a primary school and 6-10 minutes to a secondary school. The least accessible area is along the</p>

SA Objectives	SA Score	Justification
		lower eastern boundary of the site which is within 11-15 minutes travel time to a primary and secondary school. In between these two extremes, travel times vary. Therefore, a significant positive effect is predicted in relation to this site. Additionally, further education is located between 31-35 and 21-25 minutes from the site, from west to east respectively.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is mostly located within 11-15 minutes travel time of a GP (a small part of the site to the west is located within 6-10 minutes travel time of a GP); and mostly within 46-50 minutes travel time of a hospital, with a small section to the south east located 51-55 minutes from a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to north on Church Lane. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is mostly located within 11-15 minutes travel time of a local centre (a small part of the site to the west is located within 6-10 minutes travel time of a local centre); and within 11-15 minutes travel time of a town/district centre, with a small section to the west located within 6-10 minutes; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. To the north, within 600m, semi-natural and natural green space, outdoor sports facilities and amenity greenspace is located. To the east, a golf course is found within 100m. To the south west, school playing fields and amenity green space with allotments are located within 500m. To the west, private playing fields attached to a park with children and young people's space can be found within 200m. Located 400m to the west lies semi-natural and natural green space. The site is also surrounded by footpaths and public rights of way within 600m. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the

SA Objectives	SA Score	Justification
to live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.46ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.46ha) mostly on greenfield land (a building is located in the middle of the site); therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Urban Land
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.46ha) mostly on greenfield land (a building is located in the middle of the site); therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Two candidate local wildlife sites are located within 700m to the north west, Low Westwood Pond and Huddersfield Narrow Canal. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	-	This site is mostly on greenfield land (a building is located in the middle of the site) and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on mostly greenfield land (a building is located in the middle of the site); therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation, 10: transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objective.		

### H2608 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  This site is located 16-20 minutes travel time from the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	+?	The availability of school and college places to serve the growing population will depend in part on whether new places

SA Objectives	SA Score	Justification
are available to all.		<p>are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of a primary school and most of the site is located mainly within 16-20 minutes travel time of a secondary school so is likely to have a minor positive effect on this SA objective. The site is located within 21-25 minutes travel time of a higher education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 0-5 minutes travel time of a GP and mainly within 51-55 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential development to the north and south of the site. These developments may be affected by noise during the construction phase. As such a significant negative is expected on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located mainly within 21-25 minutes travel time of a local centre (the southern section of the site is within 16-20 minutes travel time) and mainly within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There are allotments directly adjacent to the north of the site and school ground playing fields located 230m north of the site. There is also a large area of open space located 116m south west of the site which consists of a park, childrens playground, multiuse games area and public bowling green. In addition there is a footpath 38m south of the site from Old Lane and another 197m north of the site leading to Birkenshaw Primary School. As such an overall significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the</p>

SA Objectives	SA Score	Justification
to live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.37 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.37 ha) and on mainly greenfield land. As a result a minor positive effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.37 ha) and on mainly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as the site lies close to the Registered Battlefield at Adwalton. The development of this site could therefore harm elements which contribute to its significance. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Tong Moor is a Local Wildlife Site and Local Nature Reserve located 754m north of the site. As such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mainly greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely. This effect is recorded as uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. <p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2623 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/-?	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Access to employment nodes vary across the site. The most accessible area is to the north west of the site, which is within 36-40 minutes travel time to an employment node. The least accessible area is along the eastern boundary of the site which is 46-50 minutes travel time to an employment node. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially negligible in the north west and potentially minor negative for the north western boundary of the site. The site is not within or adjacent to an AQMA.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education varies across the site. The most accessible area is to the north west of the site, which is within 6-10</p>

SA Objectives	SA Score	Justification
		minutes travel time to a primary and secondary school. The least accessible area is along the south eastern boundary of the site which is 21-25 minutes from a primary and secondary. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significant positive in the north west and potentially negligible for the south east of the site. The north of the site is also within 30 minutes of a further education institute, which adds to the significant positive effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/?	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to healthcare facilities varies across the site. The most accessible area is to the north of the site, which is within 11-15 minutes of a GP and 46-50 minutes travel time to a hospital. The least accessible area is to the south of the site which is 21-25 minutes from a GP and 56-60 minutes from a hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected, minor positive to the north and negligible to the south. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within 100m of existing residential properties to the north on Church Lane. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-?	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local and town/district centres vary across the site. The most accessible area is to the north west of the site, which is within 6-10 minutes of a local and town/district centre. The least accessible area is to the south of the site which is within 21-25 minutes of a local and town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected, minor positive to the north west and minor negative to the south.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. To the north, semi-natural and natural green space are located 600m away, with outdoor sports facilities, a park and children and young people's provision located within 300m. A golf course lies within 300m east of the site, with further outdoor sports facilities to the west. To the north west of the site, amenity greenspace and allotments can be found within 300m. As such a significant positive effect is recorded for this SA objective.

SA Objectives	SA Score	Justification
usage.		
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (7.4ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely classed as mostly or entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (7.4ha) on greenfield land; therefore a significant negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively small site (7.4ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are two candidate local wildlife sites within 900m to the north west of this site, Huddersfield Narrow Canal and Low Westwood Pond. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and

SA Objectives	SA Score	Justification
risk areas and ensure development does not contribute to increased flood risk for existing property and people.		could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is mainly or entirely classed as mostly or entirely 'green' in terms of its access to two of the eight features assessed. <p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education (part of a mixed effect), 8: recreation and 9: housing. Potential significant negative effects were identified in relation to SA objective 11: landuse and 12: landscape and townscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

## H2626 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is located 6-10 minutes travel time from the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	++?	The availability of school and college places to serve the growing population will depend in part on whether new places

SA Objectives	SA Score	Justification
are available to all.		<p>are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 0-5 minutes travel time of a primary school and most of the site is located mainly within 11-15 minutes travel time of a secondary school so is likely to have a significant positive effect on this SA objective. The site is located within 16-20 minutes travel time of a higher education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located mainly within 0-5 minutes travel time of a GP and mainly within 31-35 minutes travel time of a hospital (a small section along the southern boundary of the site is located within 26-30 minutes travel time); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties within 100m to the north of the site on Brooke Street and also Howard Park Community School is located directly adjacent to the west of the site. These developments may be affected by noise during the construction phase. St Peg Lane is an 'A' road located directly adjacent to the north of the site, this may result in noise pollution affecting residents in the longer term. As such a significant negative is expected on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located mainly within 6-10 minutes travel time of a local and town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is a park and garden located 15m north of the site which also includes a childrens playground and there are private tennis courts located 90m north of the site. King Edward VII Memorial Park is located 320m west of the site on</p>

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		Parkside and there are allotments located 310m north of the site on Vally Road. There is a green corridor located 490m west of the site. In addition there is a footpath from the north west corner site boundary and another along the eastern site boundary. As such an overall significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.7 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (2.7 ha) and on brownfield land. As a result a minor positive effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (2.7 ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  Most of the site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads. Although a small section along the far western edge of the site site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There is not a designated biodiversity or geodiversity site within 1000m proximity to the site. As such an overall negligible effect is expected on this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood	-	This site is on brownfield land and is located within flood zones 2 and 3 (the southern half of the site and a small section of the northern half is within Zone 2); therefore a minor negative effect is likely given that the development of new

SA Objectives	SA Score	Justification
risk areas and ensure development does not contribute to increased flood risk for existing property and people.		housing on this brownfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on brownfield land; therefore a minor positive effect is likely. This effect is recorded as uncertain depending on the previous use of the site.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2627 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located 11-15 minutes travel time from the nearest employment node; therefore a significant positive effect on this SA objective is predicted
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 5 minutes travel time of a primary; and 16-20 minutes travel time of a secondary; so is likely to have a significant positive effect on this SA objective. The site is located within 16-20 minutes travel time of a further education institute, with a small area to the north west located 21-25 minutes away.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP and mostly within 36-40 minutes travel time of a hospital (a small part of the site to the north west is located within 41-45 minutes travel time of a hospital); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded on all sides by existing residential properties on Woodlands Avenue, Woodlands Road, Spen Lane and Fusden Lane. These properties may be affected by noise during the construction phase. The site is also located on the A643. A significant negative effect is therefore predicted for this SA objective.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is mostly located within 6-10 minutes travel time of a local centre (a small part of the site to the north west is located within 11-15 minutes travel time of a local centre); and within 6-10 minutes travel time of a town/district centre, with a small section along the western edge located 11-15 minutes away. Therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. To the north west of the site, within 600m, a number of children and young people's space are located, along with two amenity greenspace. To the east of the site, additional amenity greenspace is located. To the south east, semi-</p>

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		natural and natural greenspace is located within 300m, with amenity greenspace and outdoor sport facilities containing children and young people's space within 500m of the site. To the south of the site, an outdoor sports facility is located. To the south west, private playing fields with two bowling greens lie within 200m of the site. Finally, to the west, semi-natural and natural greenspace and outdoor sports facilities are located within 600m. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.45ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.45ha) on brownfield land; therefore a minor positive effect on this SA objective is likely. The site has been identified as being located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (1.45ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites. A negligible effect is therefore predicted, although this effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	0	This site is on brownfield land and is located outside of flood zones 2 and 3; therefore a negligible effect is predicted for this SA objective.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on brownfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2633 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Most of the site is mainly located 6-10 minutes travel time from the nearest employment node (although small part of the site to the north-western corner is located within 11-15 minutes travel time from the nearest employment node); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	++?	The availability of school and college places to serve the growing population will depend in part on whether new places

SA Objectives	SA Score	Justification
are available to all.		<p>are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of a primary school and 16-20 minutes travel time of a secondary school so is likely to have a significant positive effect on this SA objective. The site is located within 16-20 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is mainly located within 0-5 minutes travel time of a GP (a small part of the site to the north-western corner is located within 6-10 minutes travel time of a GP) and within 36-40 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential development on Church Lane located south, the Coppice on the west of the site and also to the east of the site on Church Meadows. These developments may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is located mainly within 0-5 minutes travel time of a local centre (although the smaller northern half of the site is located within 6-10 minutes travel time from a local centre) and 6-10 minutes travel time of a town/district centre; therefore a significant positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There are three outdoor sports facility within a relatively close proximity to the site; playing fields located 361m west of the site at Gomersal Middle School, cricket grounds located 600m south west of the site on Oxford Drive and another 581m north west of the site at Gomersal First School. There is an amenity greenspace feature located 168m north east of the site on Kirkgate. In addition there is a bridleway 275m north of the site that follows Warrens Lane and</p>

SA Objectives	SA Score	Justification
usage.		a footpath 300m south of the site from Muffit Lane leading to Oxford Road. As a result an overall significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.94 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.94 ha) and on mainly greenfield land. As a result a minor negative effect is likely. The site has been identified as Grade 3 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.08 ha) on mainly greenfield land (a small section along the eastern corner of the site has been developed); therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Oakwell Park (Local Wildlife Site and Local Nature Reserve) is located 670m north of the site. As such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	This site is on mainly (a small section along the eastern corner of the site has been developed) greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: local severvices and facilities, 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

## H2638 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Access to employment nodes vary across the site. The most accessible area is in the far southern edge, which is within 21-25 minutes of an employment node. The least accessible area is along the northern boundary of the site which is 36-40 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the southern edge and potentially negligible for the northern boundary of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	++?/?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is in the far southern edge, which is within 6-10 minutes travel time to a primary and secondary school. The least accessible area is along the northern boundary of the site which is over 16-20 minutes travel time to a primary and secondary school. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the southern edge and potentially minor positive for the northern boundary of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to GP and hospital facilities varies across the site. The most accessible area is along the far southern boundary, which is within 16-20 minutes travel time to a GP and 36-40 minutes to hospital. The least accessible area is along the far north of the site which is within 26-30 minutes travel time to a GP and within 46-50 minutes travel time to a Hospital. In between these two extremes, travel times vary. Therefore a negligible effect is expected for this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is adjacent to residential properties 35m west of the site on Ridings Fields. These properties may be affected by noise during the construction phase. In addition the site is directly adjacent to a railway track to the west of the site; this may result in noise pollution affecting residents in the long term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along far southern edge, which is within 11-15 minutes travel time to a local and town/district centre. The least accessible area is along the northern boundary of the site which is within 21-25 minutes travel time to a local centre and 26-30 minutes travel time to a town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the southern edge and potentially minor negative for the northern boundary of the site.</p>
7. Make our communities	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the

SA Objectives	SA Score	Justification
safer by reducing crime, anti-social behaviour and the fear of crime.		incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There are playing fields located 180m south of the site at Brockholes Junior and Infant School and an area of semi-natural and natural greenspace located 320m north west of the site by Cliff Wood. There are two amenity greenspace features located within close proximity to the site; one 290m south of the site on Brockholes Lane and another 486m south of the site by Quarry Close and both features have childrens playgrounds. In addition there is a footpath 90m south east from the site that leads to Round Wood and another from the north western site boundary that leads north towards Halling Lane. As a result an overall significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.94 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as moderately 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.94 ha) and on greenfield land. As a result a minor negative effect is likely. The site has been identified as Grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.94 ha) and is located on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to	-?	Brockholes and Roundwood Local Geological Site is located 325m south of the site. There are two candidate Local

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		Wildlife Sites within close proximity to the site; Cliff Wood is located 38m west of the site and Hagg Wood is 464m south west of the site. Round Wood Local Wildlife Site is located 495m south east from the site. As such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education (part of a mixed effect) and 8: recreation. Potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2639 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment	++/--	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

SA Objectives	SA Score	Justification
opportunities available for local people, and ensure that they are accessible.		<p>accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to employment nodes vary across the site. The most accessible area is along the western and eastern boundary, which is within 11-15 minutes of an employment node. The least accessible area is along the north western corner of the site which is over 60 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the western and eastern boundary and potentially significant negative for the north western corner of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is along the north western of the boundary which is located within 6-10 minutes travel time to a primary school and 11-15 minutes travel time to a secondary school. The least accessible area is along the north eastern corner of the site which is located over 60 minutes travel time to a primary and secondary school. Therefore a minor positive effect is likely for this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Travel times to health facilities vary across the site. The most accessible area covers most of the site except for the north western boundary and is located within 6-10 minutes travel time of a GP and the south east half of the site is located within 36-40 minutes travel time to a hospital. The least accessible area is in along the northern boundary of the site which is located over 60 minutes travel time to a GP and hospital. In between these two extremes, travel times to a health facility vary. Therefore, a mixed effect on this objective is expected – potentially minor positive in the most accessible area and potentially significant negative along the northern boundary. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential developments on Halifax Road to the south and to the north of the site. These</p>

SA Objectives	SA Score	Justification
		properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	-/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the north-western boundary of the site, which is within 11-15 minutes travel time to a local centre and 6-10 minutes to town/district centre. The least accessible area is along the north-eastern corner of the site which is over 60 minutes travel time to a local and town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive along the north-western boundary of the site and potentially significant negative for the north-eastern corner of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an amenity greenspace feature located 175m west of the site which also includes a childrens playground on Stonefield Street. There are also playing fields located 350m west of the site on Highmoor Lane and Hightown Heights is a park located 73m south of the site on Lynfield Drive which also includes a childrens playground. In addition there is a bridleway 175m north of the site from Wellands Green and another 186m west of the site which leads to Brick Street to the north and Springfield Drive to the south. It is noted that the site is located within an area of semi natural and natural greenspace with a footpath along the eastern side of the site which runs from north to south. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (13.36 ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. <p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 9: housing, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 11: landuse and 12: landscape and townscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

## H2640 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Most of the site is located 16-20 minutes travel time from the nearest employment node (although a small section in the far east of the site is located 21-25 minutes travel time); therefore a significant positive on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is along the northern site boundary and sections along the southern site boundary, which is within 6-10 minutes travel time to a primary school and 11-15 minutes to a secondary school. The least accessible area is a section in the centre of the northern site boundary which is over 60 minutes travel time to a primary and secondary school. In between these two extremes, travel times vary.</p>

SA Objectives	SA Score	Justification
		Therefore, a mixed effect on this objective is expected – potentially significant positive for the most accessible area and potentially significantly negative for the lower eastern boundary of the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to GP and hospital facilities varies across the site. The most accessible area is along the site boundary, which is within 6-10 minutes travel time to a GP and within the centre of the site which is 11-15 minutes to a hospital. The least accessible area is along the centre of the northern site boundary which is over 60 minutes travel time to a GP and Hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the most accessible area and potentially significantly negative for the least accessible area. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential developments surrounding the site. These properties may be affected by noise during the construction phase. Halifax Road is an 'A' road located directly adjacent to the south of the site. As such a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the north western corner and south eastern corner of the site which is within 11-15 minutes travel time to a local centre and 6-10 minutes to town / district centre. The least accessible area is along the centre of the northern site boundary which is over 60 minutes travel time to a local, town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the most accessible area and potentially significantly negative for the least accessible area of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an amenity greenspace feature with a childrens playground located 150m west of the site on Moorfield. Hightown Heights is a park located 65m south of the site and there is a private bowling green located 75m south of the site on Springfield Drive. There is also school ground playing fields with a childrens playground located 195m south east

SA Objectives	SA Score	Justification
space and encourage their usage.		of the site and an amenity greenspace feature located 288m south of the site on Miry Lane. It is noted that there are a number of footpaths through the site and the site is located within an area of semi-natural and natural greenspace. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (41.59 ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (41.59 ha) and on mainly greenfield land. The site has been identified as mainly Grade 3 agricultural quality and a section along the southern site boundary has been identified as urban land. As a result a significant negative effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (41.59 ha) on mainly greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are not any designated biodiversity or geodiversity sites within 1000m proximity to the site. As such a significant negligible effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood	-	This site is on greenfield land and a small section along the north eastern site boundary is within Flood Zone 2; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the

SA Objectives	SA Score	Justification
risk areas and ensure development does not contribute to increased flood risk for existing property and people.		area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as moderately 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education (as part of a mixed effect), 4: health (as part of a mixed effect), 6: access to services (as part of a mixed effect), 8: recreation (as part of a mixed effect), 9: housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 3: education (as part of a mixed effect), 4: health (as part of a mixed effect), 5: amenity, 6: access to services (as part of a mixed effect), 8: recreation (as part of a mixed effect), 11: land use and 12: landscape and townscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

#### H2641 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  This site is located mainly within 31-35 minutes travel time from the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

SA Objectives	SA Score	Justification
through increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is mainly located within 6-10 minutes travel time of a primary school. However travel times to a secondary school vary across the site, the most accessible area is along the southern corner of the site which is located within 26-30 minutes travel time of a secondary school and the least accessible area is along the north-eastern corner of the site which is located within 36-40 minutes travel time. Therefore a minor positive effect is likely on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of the site is mainly located within 6-10 minutes travel time of a GP (although a small section in the eastern boundary of the site is located within 11-15 minutes travel time) and mainly within 51-55 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is within 100m proximity of residential properties. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is mainly located within 6-10 minutes travel time of a local centre (although a small section within the north-western corner of the site is located within 11-15 minutes travel time) and the whole site is within 21-25 minutes travel time of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++	The site is within proximity of designated open spaces which may be used by new residents in the area. Dean Wood is an

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		area of semi-natural and natural greenspace located 40m east of the site. There is also a footpath along the southern border of the site which leads towards Deyne Road and a bridleway 245m west of the site that follows Turbid Lane. As a result an overall significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.29 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.29 ha) and on mainly greenfield land. As a result a minor negative effect is likely. The site has been identified as Grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.29 ha) on mainly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies mainly in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.  Although a section of the eastern corner of the site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance	-?	Deans Wood Local Wildlife Site is located 40m east of the site. Bank Wood is a candidate Local Wildlife Site located 556m south of the site and another is Delves Wood located 718m north east of the site. As such a minor negative effect is

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mainly greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation, 10: transport and 19: climate change. No potential significant negative effects were identified in relation to SA objectives.		

### H2645 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  This site is located mainly within 11-15 minutes travel time from the nearest employment node (a small section north of the site is located within 6-10 minutes travel time); therefore a significant positive effect on this objective is expected.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 6-10 minutes travel time of a primary school and the whole site is located within 11-15 minutes travel time of a secondary school so is likely to have a significant positive effect on this SA objective. The site is mainly located within 21-25 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 0-5 minutes travel time of a GP and mainly within 31-35 minutes travel time of a hospital (although a small section north of the site is located within 26-30 minutes travel time); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential development on Royd Wood south of the site, on Hightown Road west of the site and a number of properties north of the site. These properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is mainly located within 11-15 minutes travel time of a local centre (although a small section north of the site is located within 6-10 minutes travel time) and the whole site is located within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is a green corridor directly adjacent to the east of the site and King Edward VII Memorial Park is located 170m north east of the site on Pyenot Hall Lane. There is an area of semi-natural and natural greenspace located 262m west of the site and a private playing field 309m south east of the site. In addition there is a cyclepath following the green corridor adjacent to the east of the site and a bridleway 230m south of the site leading to Rawfolds. As a result an overall significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.38 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.38 ha) and on mainly brownfield land. As a result a minor positive effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+	The site is located on mainly brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not located within a 1000m proximity of a designated biodiversity or geodiversity site. As such a negligible effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	-	This site is on mainly brownfield land and a small section of the northern sector of the site is located within Flood Zone 2; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on brownfield land; therefore a minor positive effect is likely. The effect is recorded as uncertain depending on the previous use of the site.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

## H2646 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is mostly located 11-16 minutes travel time from the nearest employment node (a small part of the site to the west is located within 6-10 minutes travel time of an employment node); therefore a significant positive on this SA objective is predicted
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	+	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is almost entirely located within 6-10 minutes travel time of a primary, although a very small area to the east is located within 11-16 minutes from a primary. The site varies in distance from a further education institute, ranging from 21-25 minutes travel time on the east to 31-35 minutes in the central area. A minor positive effect is therefore predicted in relation to this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is mostly located within 6-10 minutes travel time of a GP, with a small area to the north west located within 5 minutes of a GP. The site is mostly within 31-35 minutes of a hospital, with a small area to the north west located within 26-30 minutes of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within 100m of existing residential properties to the west on Headfield Road. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is mostly located within 11-15 minutes travel time of a local centre (a small part of the site to the north west is located within 6-10 minutes travel time of a local centre); and within 11-15 minutes travel time of a town/district centre, with a small eastern section located 16-20 minutes from a town district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. To the north, three outdoor sports facilities and another open space are located within 600m Public footpaths, cycle</p>

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		paths and amenity/semi-natural and natural greenspace are located. To the south west, allotments and children and young people's space can be found. To the west, amenity greenspace, children and young people's space and outdoor sports facilities lie within 600m. Finally, to the north west, a green corridor can be found within 600m, attached to amenity greenspace, semi-natural and natural greenspace, outdoor sports facilities and a local nature reserve. A significant positive is therefore predicted on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.72ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (2.72ha) on brownfield land; therefore a minor positive effect on this SA objective is likely. The site has been identified as being located on mostly Urban Land (the south edge of the site is located on Grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (2.72ha) on greenfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment; therefore a potential minor negative effect is identified. The minor negative effect on this SA objective is also uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is located within 130m of Sparrow Wood, an approved local wildlife park. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	0	This site is on brownfield land and is located outside of flood zones 2 and 3; therefore a negligible effect is likely.

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on brownfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2647 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located 11-25 minutes travel time from the nearest employment node; therefore a significant positive on this SA objective is predicted
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is mostly located within 5 minutes travel time of a primary, with a northern portion located 6-10 minutes away from a primary; and mostly within 21-25 minutes travel time of a secondary (part of the site to the south is located within 16-20 minutes travel time of a secondary); so is likely to have a minor positive effect on this SA objective</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP. Access to hospitals varies across the site. The most accessible area is in the south, which is within 11-15 minutes travel time to hospital. The least accessible area is to the north of the site, which is 21-25 minutes travel time of a hospital; therefore a significant positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential properties to the north, east, south and west. These properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre and within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. To the north, a public park containing two areas for children and young people and three outdoor sports facilities is found within 400m. To the north east, semi-natural and natural green space and school playing fields are located</p>

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		within 600m. Amenity greenspace containing outdoor sports facilities and children and young people's spaces is located to the east. To the south, a number of outdoor sports facilities and additional parks are located within 600m. To the west, semi-natural and natural green space, amenity greenspace and a number of children and young people's areas are clustered within 500m. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.76ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.76ha) on brownfield land; therefore a minor positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (0.76ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites. A negligible effect is therefore predicted, although this effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and	0	This site is on brownfield land and is located outside of flood zones 2 and 3; therefore a negligible effect is predicted for this SA objective.

SA Objectives	SA Score	Justification
people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on brownfield land. A minor positive effect is therefore predicted for this site
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 8: recreation, 10: transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 5: amenity. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2649 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is mostly located 36-40 minutes travel time from the nearest employment node, with an area to the south east located 41-45 from the nearest employment node; therefore a negligible effect on this SA objective is predicted
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The site is mostly located within 5 minutes travel time of a primary (a small part of the site to the south east is located within 6-10 minutes travel time of a primary school); and mostly within 21-25 minutes travel time of a secondary (a small part of the site to the south east is located within 26-30 minutes travel time of a secondary); a minor positive effect on this SA objective is therefore predicted. The site is mostly located within 31-35 minutes travel time of a further education institute, with a small area in the south east located within 36-40 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is mostly located within 6-10 minutes of a GP, with an eastern portion located 11-15 minutes from the nearest GP. The site is mostly located within 56-60 minutes travel time of a hospital (a small part of the site to the north is located within 51-55 minutes travel time of a hospital); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on Olive Lane and Manchester Road and to the south on Carrs Road and Deer Hill. These properties may be affected by noise during the construction phase. The site is located on the A62. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is mostly located within 11-15 minutes travel time of a local centre (a small part of the site to the south east is located within 16-20 minutes travel time of a local centre); and mostly within 5 minutes travel time of a town/district centre, with a small area in the south east located 6-10 minutes from the nearest town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Within 600m to the north, semi-natural and natural green space, allotments and an outdoor sports facility are located. Located to the east, more allotments and a park containing outdoor sports facilities, amenity greenspace and children and young people's space lay within 200m. Further east, within 400m of the site semi-natural and natural

SA Objectives	SA Score	Justification
space and encourage their usage.		greenspace and a park with space for children and young people are located. Finally, to the south west and west of the site, outdoor sports facilities, amenity green space, allotments and a number of semi-natural and natural green spaces are found. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.05ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.05ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.05ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Huddersfield Narrow Canal, a candidate local wildlife site is located within 350m to the north, and Butterley Cutting, a local geological site is located within 800m to the south. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land and is located outside of flood zones 2 and 3 (although the north western corner contains a

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		small are of flood zones 2 and 3); therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2651 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Most of the site is located mainly within 26-30 minutes travel time from the nearest employment node (although a small section north of the site is located within 21-25 minutes travel time); therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 6-10 minutes travel time of a primary school (although a small part to the west of the site is located within 0-5 minutes travel time of a primary school) and the whole site is within 31-35 minutes travel time of a secondary school so is likely to have a minor positive effect on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of the site is mainly located within 6-10 minutes travel time of a GP (although a small part of the site to the north is located within 0-5 minutes travel time of a GP). However travel times to a hospital facility vary across the site, the most accessible area is along the north and south-east corner of the site which is located within 26-30 minutes travel time of a hospital and the least accessible area is a section in the centre of the site which is located within 36-40 minutes travel time. Therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential development to the west of the site on Birks Road and the south of the site. These properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local and town/district centre, although it is noted that a small section north of the site is located within 11-15 minutes travel time to a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is a large area of semi-natural and natural greenspace located 95m north of the site which also consists of an amenity greenspace feature in Quarmby and another 324m north west of the site on Grove Street. There is a recreation ground located 67m south west of the site on Royd Street which consists of playing fields, skate park, childrens playground, and basketball court. There is another outdoor sports facility at Cliff End which is located 310m north east of the site. In addition there is a footpath along the western boundary of the site which leads north to Thornhill Road and another footpath 70m east of the site leading to Vicarage Road. As a result an overall significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.79 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.79 ha) and on mainly brownfield land. As a result a minor positive effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	The site is located on mainly brownfield land (site appears to be used for industrial purposes); therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Huddersfield Narrow Canal is a candidate Local Wildlife Site located 400m south of the site. As such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mainly brownfield land (appears to be used for industrial purposes) and a small section along the south western site boundary is located within Flood Zone 2; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on brownfield land; therefore a minor positive effect is likely. The effect is recorded as uncertain depending on the previous use of the site.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2652 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located 16-20 minutes travel time from the nearest employment node; therefore a significant positive on this

SA Objectives	SA Score	Justification
they are accessible.		SA objective is predicted
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of a primary; and 21-25 minutes travel time of a secondary; so is likely to have a minor positive effect on this SA objective. The site is located within 21-25 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP and within 16-20 minutes travel time of a hospital; therefore a significant positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within 100m of a number of residential properties to the east on Burcote Drive and to the south and west on New Hey Road. These properties may be affected by noise during the construction phase. The site is located on the A640. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre and within 16-20 minutes travel time of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. To the south of the site, a children and young people's area and a golf course are located within 500m. To the west of the site, Semi-Natural & Natural Greenspace is located within 300m. Additionally, a number of footpaths run to the south of the site. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.84ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.84ha) and mostly on greenfield land (there is a building on the southern edge of the site); therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.84ha) on greenfield land (there is a building on the southern edge of the site); therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	A local wildlife site, Shaw Wood, is located within 400m to the south of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as

SA Objectives	SA Score	Justification
		uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2654 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site mostly is located 31-35 minutes travel time from the nearest employment node (a small part of the site to the

SA Objectives	SA Score	Justification
they are accessible.		north east is located within 26-30 minutes travel time of an employment node); therefore a negligible effect on this SA objective is predicted
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is mostly located within 6-10 minutes travel time of a primary school, with a small portion in the north west located within 5 minutes of a primary school; and mostly within 21-25 minutes travel time of a secondary, with a portion to the south west located within 26-30 minutes of a secondary school. Therefore a minor positive effect on this SA objective is likely. The site is located within 16-20 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP and mostly within 36-40 minutes travel time of a hospital (a small part of the site to the north east is located within 31-35 minutes travel time of a hospital); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within 100m of existing residential properties to the north and south. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is mostly located within 6-10 minutes travel time of a local centre, with an area in the south west located within 11-15 minutes of a local centre and mostly within 5 minutes travel time of a town/district centre (a small part of the site to the east is located within 6-10 minutes travel time of a town/district centre); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. To the north, amenity greenspace and outdoor sports facilities with provision for children and young people are located. To the north east, outdoor sports facilities are attached to a park with children and young people's amenity within 600m. To the south east, outdoor sports facilities and a park with children and young people's space can be found within 600m, with another park with space for children and young people located 500m to the south. Within 600m to the west of the site, outdoor sports facilities and a children and young people's space can be located, along with amenity greenspace. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.24ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.24ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.24ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Huddersfield Narrow Canal, a potential local wildlife site, is located within 250m south of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a significant negative effect is recorded for this SA objective. The effect

SA Objectives	SA Score	Justification
		is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

## H2667 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
---------------	----------	---------------

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is mostly located 11-15 minutes travel time from the nearest employment node (a small part of the site to the east is located within 16-20 minutes travel time of an employment node); therefore a significant positive effect on this SA objective is predicted</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is mostly located within 6-10 minutes travel time of a primary (a small part of the site to the east is located within 11-15 minutes travel time of a primary); and mostly 6-10 minutes travel time of a secondary (a small part of the site to the east is located within 11-15 minutes travel time of a secondary); so is likely to have a significant positive effect on this SA objective. The site is located within 16-20 minutes travel time of a further education institute, which contributes to the significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is mostly located within 11-15 minutes travel time of a GP (a small part in the centre of the site is located within 6-10 minutes travel time of a GP); and mostly within 41-45 minutes travel time of a hospital (a small part of the site to the south west is located within 36-40 minutes travel time of a hospital); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within 100m to existing residential properties to the north on Scott Lane and to the west on a number of nearby streets. These properties may be affected by noise during the construction phase. The site is also located on the A651. A significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre and within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. To the north, amenity greenspace with children and young people's space is located within 600m, while a public park is located within 600m to the north east. To the south of the site, outdoor sports facilities, amenity greenspaces and semi-natural greenspaces are located. Children and young people's spaces are also located west of the site. Additionally, footpaths are located within 600m surrounding from the site. However, the site is located on top of existing school playing grounds; therefore a mixed significant positive and significant negative effect is predicted for this SA objective. The effect is recorded as uncertain as it cannot be known the whether the recreational asset would be lost due to development.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.42ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	+	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.42ha) on brownfield land; therefore a minor positive effect on this SA objective is likely. The site has been identified as being located on urban land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This is a relatively small site (1.42ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
		The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, as the western part of the site lies in the Gomersal Conservation Area, Grove Congregational Church and its forecourt walls are Grade II Listed Buildings and the house, barn and coach house at Red House opposite this site, are Grade II* Listed Buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Oakwell Park, a local nature reserve, is located within 500m of the site, to the north east. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is on brownfield land and is located outside of flood zones 2 and 3; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on brownfield land; therefore a minor positive effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. <p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation (part of a mixed effect), 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: recreation (part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

#### H2684 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Access to employment nodes vary across the site. The most accessible area is in the far north-western edge, which is within 6-10 minutes of an employment mode. The least accessible area is along the south-eastern corner of the site which is within 16-20 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. As such a significant positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is the northern half of the site, which is</p>

SA Objectives	SA Score	Justification
		within 6-10 minutes travel time to a primary school and 11-15 minutes to a secondary school. The least accessible area is the south-eastern corner of the site which is within 16-20 minutes travel time to a primary school and 21-25 minutes to a secondary school. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the northern half and potentially negligible for the south-eastern corner of the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to GP and hospital facilities varies across the site. The most accessible area is the western half of the site, which is within 6-10 minutes travel time to a GP and 36-40 minutes to hospital. The least accessible area is along the south-eastern corner of the site which is within 21-25 minutes travel time to a GP and within 51-55 minutes to a hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the western half of the site and potentially minor negative for the south-eastern corner of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to north, north east and south west. These properties may be affected by noise during the construction phase. The site is located on the A629. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the north-western corner of the site, which is within 6-10 minutes travel time to a local and town / district centre. The least accessible area is along the lower south-eastern corner of the site which is within 21-25 minutes travel time to a local centre and within 16-20 minutes travel time to a town / district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the north-western corner and potentially minor negative for the lower south-eastern corner of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++/--	The site is within close proximity of a number of designated open spaces which may be used by new residents in the

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		area. Semi-natural and natural greenspace lies within 600m north. To the north east, outdoor sports space, amenity greenspace and semi-natural and natural greenspace can be found within 500m. To the east, a large area of semi-natural and natural greenspace can be found within 400m. To the south, outdoor sports facilities and a number of semi-natural and natural greenspaces can be found. To the south west, a local nature reserve lies within 600m. To the west, a golf course is located. A green corridor runs through the centre of the site, north to south. A mixed significant positive and significant negative effect is therefore predicted.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (9.49ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (9.49ha) on greenfield land; therefore a significant negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively small site (9.49ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as the site forms part of the area of open countryside which contributes to the setting of the Scheduled Monument at Castle Hill. The loss of this area and its subsequent development could therefore harm elements which contribute to the significance of this Scheduled Monument. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	A number of biodiversity and geodiversity sites are located within 1km of this site. Lepton Great Wood, a candidate local wildlife site is located within 100m to the east. Carr Wood candidate local wildlife site is located within 1km to the west of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat

SA Objectives	SA Score	Justification
		connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: local services and facilities, 8: recreation (part of a mixed effect), 9: housing, 10: transport and 19: climate change (although objectives 3, 6 and 8 are part of a mixed effect). Potential significant negative effects were identified in relation to SA objective 8: recreation, 11: landuse, 12: landscape and townscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2684a (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Access to employment nodes vary across the site. The most accessible area is in the far north-western edge, which is

SA Objectives	SA Score	Justification
they are accessible.		within 6-10 minutes of an employment node. The least accessible area is along the south-eastern corner of the site which is within 16-20 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. As such a significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is the northern half of the site, which is within 6-10 minutes travel time to a primary school and 11-15 minutes to a secondary school. The least accessible area is the south-eastern corner of the site which is within 16-20 minutes travel time to a primary school and 21-25 minutes to a secondary school. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the northern half and potentially negligible for the south-eastern corner of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to GP and hospital facilities varies across the site. The most accessible area is the western half of the site, which is within 6-10 minutes travel time to a GP and 36-40 minutes to hospital. The least accessible area is along the south-eastern corner of the site which is within 21-25 minutes travel time to a GP and within 51-55 minutes to a hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the western half of the site and potentially minor negative for the south-eastern corner of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by existing residential development along Rowley Lane and Woodsome Park. The site is also located directly adjacent to the A629. As such, a significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	++/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the north-western corner of the site, which is within 6-10 minutes travel time to a local and town / district centre. The least accessible area is along the lower south-eastern corner of the site which is within 21-25 minutes travel time to a local centre and within 16-20 minutes travel time to a town / district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the north-western corner and potentially minor negative for the lower south-eastern corner of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is a green corridor located through the centre of the site and an area of open space located 331m north east of the site consisting of an area of semi natural and natural greenspace, an amenity greenspace feature and playing fields. Woodsome Hall Golf Club is also located 210m west of the site and a large area of semi natural and natural greenspace located 110m east of the site. There are a number of PROWs within close proximity to the site, for example there is a footpath from the centre of the site leading to Rowley Lane to the north and towards Highburton to the south. As such a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (8.19 ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (8.19 ha) on greenfield land; therefore a significant negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and	--?	This is a relatively large site (8.19 ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.

SA Objectives	SA Score	Justification
townscape.		<p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G9: Fenay Beck Valley &amp; Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	There are two candidate Local Wildlife Sites within close proximity of the site; Lepton Great Wood is located 110m east, and Carr Wood is located 805m west of the site. Lepton Great Wood Local Geological Site is located 210m south east of the site and Almondbury Common Local Wildlife Site is located 810m west of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	--	This site is on greenfield land and a small section in the far southern edge of the site is located within flood zones 2 and 3; therefore a significant negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as mainly 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: local services and facilities, 8: recreation (part of a mixed effect), 9: housing, 10: transport and 19: climate change (although objectives 3, 6 and 8 are part of a mixed effect). Potential significant negative effects were identified in relation to SA objective 8: recreation, 11: landuse, 12: landscape and townscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2685 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Most of the site is located within 6-10 minutes travel time from the nearest employment node (although a small section along the western site boundary is within 11-16 minutes); therefore a significant positive effect on this SA objective is predicted</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located within 6-10 minutes travel time of a primary school and mainly within 16-20 minutes travel time of a secondary school (although a small section along the western corner of the site is within 21-25 minutes travel</p>

SA Objectives	SA Score	Justification
		time to a primary school and 11-15 minutes to a secondary school); so is likely to have a significant positive effect on this SA objective. Most of the site is located within 6-10 minutes travel time of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of site is located mainly within 6-10 minutes travel time of a GP and mainly within 21-25 minutes travel time of a hospital (although a small section along the western corner of the site is within 11-15 minutes travel time of a GP and 26-30 minutes of a hospital); therefore a significant positive effect is likely on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the North on Stile Common Road, the east on Newsome Road and to the west on Malvern Rise. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is located within 6-10 minutes travel time of a local centre and mainly within 11-15 minutes travel time of a town/district centre (although a small section along the eastern corner of the site is within 11-15 minutes travel time of a local centre and within 16-20 minutes of a town/district centre); therefore a significant positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Semi-natural and natural green space surrounds the location within 600m to all sides. To the north of the site, children and young people's space, outdoor sports facilities and allotments can be found within 300m. To the east, amenity greenspace lies within 200m, and allotments lie within 500m. To the south, amenity greenspace and outdoor sports facilities lie within 300m. To the west, a park with children and young people's space is located within 500m. Public rights of way surround the site within 600m. However, the site is partially located on top of semi-natural and natural green space. Therefore, a mixed significant positive and significant negative effect is predicted on this site.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.94ha); therefore a minor positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to eight of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.94ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.94ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>Huddersfield Narrow Canal, a candidate local wildlife site is located within 550m to the north of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as entirely 'green' in terms of its access to eight of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: local services and facilities, 8: recreation (part of a mixed effect), 10: transport and 19: climate change (although objectives 3, 6 and 8 are part of a mixed effect). Potential significant negative effects were identified in relation to SA objective 8: recreation (although this is part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

## H2711 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is located 36-40 minutes travel time from the nearest employment node; therefore a negligible effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of a primary school and 16-20 minutes travel time of a secondary school so is likely to have a significant positive effect on this SA objective. The site is mainly located within 31-35</p>

SA Objectives	SA Score	Justification
		minutes travel time of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP and within 46-50 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties within 100m proximity to the site on Heys Lane. These properties may be affected by noise during the construction phase. As such a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 11-15 minutes travel time of a local centre and within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Wilberlee Junior and Infant School's playing fields are located 215m north west of the site and there are allotments located 127m east of the site on Ing Head. There is an amenity greenspace feature located 330m east of the site which also has a childrens playground on Longroyd Crescent. There is an area of semi-natural and natural greenspace located 586m south east of the site by Slathwaite Reservoir. In addition there is a cycle route adjacent to the north of the site following Heys Lane. It is noted that there is a footpath located on site leading east. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.44 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as moderately 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.44 ha) and on greenfield land. The site has been identified as mainly Grade 4 agricultural quality. As a result a minor negative effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.44 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Huddersfield Narrow Canal is a candidate Local Wildlife Site located 760m south east of the site. As such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as moderately 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation (part of a mixed effect), 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 8: recreation (although this is part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2712 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Access to employment nodes vary across the site. The most accessible area is in the far northern edge, which is within 16-20 minutes of an employment node. The least accessible area is along the centre of the western boundary of the site which is 26-30 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the far northern edge and potentially minor positive for centre of the western boundary of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 11-15 minutes travel time of a primary and secondary school (although a small</p>

SA Objectives	SA Score	Justification
		section in the northern corner of the site is within 6-10 minutes travel time) so is likely to have a significant positive effect on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of the site is located mainly within 16-20 minutes travel time to a GP (although a small section along the centre of the western site boundary is within 21-25 minutes travel time). Access to hospital facilities varies across the site. The most accessible area to a hospital is the far northern edge of the site which is located within 41-45 minutes travel time and the least accessible is the centre of the western site boundary which is located 51-55 minutes travel time to a hospital. In between these two extremes, travel times vary. As such a negligible effect is likely for this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential development to the east and north of the site. These properties may be affected by noise during the construction phase. As such a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is within 0-5 minutes travel time to a local centre and 16-20 minutes to a district/town centre. The least accessible area is an area along the centre of the western site boundary which is located within 11-15 minutes travel time of a local centre and within 26-30 minutes travel time of a district/town centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the most accessible area on site and potentially minor negative for the area along the centre of the western site boundary.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an amenity greenspace located directly adjacent to the east of the site and another 130m north west of the site which also has a childrens playground. There are school ground playing fields located 333m north west of the site and another 452m south west of the site on Fall Road. There is a park located 340m north of the site which also has a childrens playground. In addition there is a footpath 70m west of the site that leads to Fall Road and another from the

SA Objectives	SA Score	Justification
usage.		south eastern corner site boundary. As such an overall significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.4 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as moderately 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.4 ha) and on greenfield land. The site has been identified as Grade 3 agricultural quality. As a result a minor negative effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-	This is a relatively small site (1.4 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Sunny Bank Ponds is a Local Wildlife Site and Local Nature Reserve located 603m south east of the site. As such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as moderately 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (part of a mixed effect), 3: education, 8: recreation (part of a mixed effect), 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2713 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Most of the site is mainly located within 16-20 minutes travel time from the nearest employment node (although a small section along the western site boundary is located within 21-25 minutes travel time); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

The least accessible area is along far southern corner of the site which is within 16-20 minutes travel time to a local centre and within 26-30 minutes of a town/district centre. In between these two extremes, travel times vary. Therefore, a mixed</p>

SA Objectives	SA Score	Justification
		effect on this objective is expected – potentially significant positive for the north-eastern corner of the site and potentially minor negative for far southern corner of the site.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. To the north, a park with semi-natural and natural greenspace is located within 600m. To the north east, an allotment and a park containing children and young people's space is located. To the east, semi-natural and natural greenspace is located within 600m, as well as outdoor sports provision attached to the eastern boundary of the site. To the south, a bridleway runs alongside the site. Further south, within 600m, semi-natural and natural greenspace, outdoor sports facilities, allotments and amenity greenspace can be found. 200m north east, amenity greenspace can be located, which contains children and young people's space; further to the north west, within 600m, outdoor sports facilities can be found, attached to a park which contains children and young people's space. Footpaths and public rights of way surround the site in all direction. However, the site is located atop existing outdoor sports space, children and young people's space and some allotments. As such a mixed effect is predicted for this site, possibly significant positive effect and possibly uncertain significant negative.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (9.33ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (9.33ha) on greenfield land; therefore a significant negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the	--?	This is a relatively large site (9.33ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.

SA Objectives	SA Score	Justification
quality of the landscape and townscape.		<p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as part of the site adjoins the boundary of the Longwood Edge Conservation Area. The loss of this currently-open area and its subsequent development could therefore harm elements which contribute to the significance of this area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Longwood Edge Quarry, a local geological site, is located within 200m to the north west of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health 6: local services and facilities, 8: recreation, 9: housing, 10: transport and 19: climate change (although objectives 1, 3, 4, 6 and 8 are part of a mixed effect). Potential significant negative effects were identified in relation to SA objective 5: amenity, 8: recreation (aprt of a mixed effect), 11: landuse, 12: landscape and townscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2718 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Access to employment nodes vary across the site. The most accessible area is along the north western site boundary, which is within 41-45 minutes of an employment mode. The least accessible area is the north eastern corner of the site which is within 51-55 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected – potentially minor negative for the north western site boundary and potentially significantly negative for the north eastern corner of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		<p>Access to primary schools vary across the site. The most accessible area is along the north-western boundary of the site, which is within 6-10 minutes travel time and the least accessible area is the north-eastern edge of the site which is within 16-20 minutes travel time to a primary school. Most of the site is mainly located within 16-20 minutes travel time to a secondary school (an area along the lower half of the site is within 21-25 minutes travel time). In between these extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the most accessible area and potentially minor positive for the least accessible area of the site.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is mainly located within 6-10 minutes travel time to a GP (a small section in the eastern corner of the site is within 11-15 minutes travel time). However access to hospital facilities vary across the site. The most accessible area is along the central north-western site boundary which is within 46-50 minutes travel time and the least accessible area is along the north-eastern corner of the site which is within 56-60 minutes travel time to a hospital. In between these two extremes, travel times vary. As such a minor positive effect is expected on this SA objective. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential development to the north of the site on Tudor Street and Stockerhead Lane; these properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the central north-western site boundary, which is within 6-10 minutes travel time to a local, town / district centre. The least accessible area is along the north-eastern corner of the site which is within 16-20 minutes travel time to a local, town / district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the central north-western site boundary and potentially minor negative for the north-eastern corner of the site.</p>
<p>7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.</p>	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the</p>

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There are public playing fields directly adjacent to the west of the site and also an open space 67m north of the site which consists of a public bowling green and an amenity greenspace feature. There is a childrens playground located 222m north of the site on Gordon Street and allotments 256m north of the site on Hollins Row. There is an area of semi-natural and natural greenspace located 90m north west of the site on Commercial Street. In addition there is a footpath along the southern site boundary and it is noted that there is a footpath that goes through the centre of the site from Stockerhead Lane to Jerusalem Street. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.74 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.74 ha) and on mainly greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as mainly Grade 4 Agricultural Quality and the land along the northern site boundary has been identified as urban land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.74 ha) and on mainly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.

SA Objectives	SA Score	Justification
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Huddersfield Narrow Canal is a candidate Local Wildlife Site located 515m north of the site. The close proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mainly greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation, 10: transport and 19: climate change (although objective 3 and 8 are part of a mixed effect). A potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

## H2726 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and	-	While the location of housing sites will not influence the number, location or type of employment opportunities available

SA Objectives	SA Score	Justification
range of employment opportunities available for local people, and ensure that they are accessible.		<p>in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is located within 46-50 minutes travel time from the nearest employment node; therefore a minor negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. SA Objectives	SA Score	Justification
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an area of semi-natural and natural greenspace located 115m north east of the site on Moor Top Avenue and playing fields located 150m north east of the site which also has a childrens playground. There is another playing field located 230m east of the site. In addition there is a footpath 105m west of the site leading north towards Halling Road and another 197m south west of the site leading south towards Occupation Lane. As such an overall significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.43 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as moderately 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.43 ha) and on greenfield land. As a result a minor negative effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.43 ha) and is located on greenfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to	-?	There are two Local Wildlife Sites within close proximity to the site; Round Wood (Brockholes) is located 515m west of

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		the site and Lumb House is 708m north east of the site. Stocksmoor Grassland is a candidate Local Wildlife Site located 1000m north east of the site. As such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as moderately 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation, 10: transport and 19: climate change. No potential significant negative effects were identified in relation to the SA objectives.		

## H2728 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
local people, and ensure that they are accessible.		This site is located 6-10 minutes travel time from the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of a primary and secondary school so is likely to have a significant positive effect on this SA objective. The site is located mainly within 16-20 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 0-5 minutes travel time of a GP and most of the site is mainly located within 26-30 minutes travel time to a hospital (although a small section along the south-western site boundary is within 31-35 minutes travel time). Therefore a significant positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential properties. These properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is mainly located within 0-5 minutes travel time of a local and town / district centre (although a small section within the far southern edge of the site is within 6-10 minutes travel time of a local centre). Therefore, a significant positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced

SA Objectives	SA Score	Justification
of crime.		by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is a green corridor located 190m west of the site and a civic space located 25m south of the site on Serpentine Road. There is an amenity greenspace feature located 227m north west of the site on High Street. There is a large area of open space located 185m east of the site which consists of an area of semi-natural and natural greenspace, allotments, private tennis courts and a park. In addition there is a cycle route along the green corridor located 190m west of the site and a footpath 40m east of the site from Station Road. As such an overall significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.68 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to eight of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.68 ha) and on brownfield land. As a result a minor positive effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+	The site is located on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are no designated biodiversity or geodiversity sites within a proximity of 1000m to the site; therefore a negligible effect is expected on this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on brownfield land is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		that the development of new housing on this brownfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on brownfield land; therefore a minor positive effect is likely. The effect is recorded as uncertain depending on the previous use of the site.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as entirely 'green' in terms of its access to eight of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 6: services and facilities, 8: recreation, 10: transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H2730 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The whole site is located 11-15 minutes travel time from the nearest employment node; therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 6-10 minutes travel time of a primary school (a small section along the northern site boundary is within 0-5 minutes travel time) and within 16-20 minutes travel time of a secondary school so is likely to have a significant positive effect on this SA objective. The site is also mainly located within 21-25 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is mainly located within 11-15 minutes travel time to a GP (a small section in the northern corner of the site is within 6-10 minutes travel time). However access to hospital facilities vary across the site. The most accessible area is along the northern site boundary which is within 41-45 minutes travel time and the least accessible area is along the south-western edge of the site which is within 51-55 minutes travel time to a hospital. In between these two extremes, travel times vary. As such a minor positive effect is expected on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential development north west of the site; these properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++/+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local centres varies across the site. The most accessible area is along the far northern edge of the site, which is within 6-10 minutes travel time to a local centre and the least accessible area is a small section along the centre edge of the south-western edge of the site which is 21-25 minutes travel time to a local centre. The site is mainly within 11-15 minutes travel time to a town / district centre (two small sections along the northern edge and west of the site is within 6-10 minutes travel time). In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the most accessible area and potentially minor positive for the least accessible area of the site.</p>

SA Objectives	SA Score	Justification
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Lepton Great Wood is an area of semi-natural and natural greenspace located directly adjacent to the east of the site and a green corridor located 176m west of the site. Rowley Lane Junior, Infant and Nursery School is located 25m north of the site and consists of an area of semi-natural and natural greenspace, playing fields and an amenity greenspace feature. There are playing fields located on school grounds 552m south of the site on Northfield Lane. In addition there is a footpath along the western site boundary from Rowley Lane leading to Highburton. It is noted that there is another footpath along the northern sector of the site leading from Rowley Lane to Green Balk Lane. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (11.02 ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (11.02 ha) and on greenfield land. As a result a significant negative effect is likely. The eastern half of the site has been identified as Grade 3 agricultural quality and the western half is urban land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (11.02 ha) and on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site most lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.  Although the south-western section of the site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015

SA Objectives	SA Score	Justification
		Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment because Crow Trees on Rowley Lane to the north of this area is a Grade II Listed Building. The loss of this area and its subsequent development could therefore harm elements which contribute to the significance of this building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Lepton Great Wood (candidate Local Wildlife Site) is located directly adjacent to the east of the site and there is a Local Geological Site located 122m from the site by Beldon Beck within Lepton Great Wood. As such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as mainly 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: services and facilities, 8: recreation, 9: housing, and 19: climate change (although objectives 6 and 8 are part of a mixed effect). Potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: recreation (although part of a mixed effect), 11: land use, 12: landscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2730a (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest employment node (with an area in the south within 16-20 minutes); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is northern part which is within 5 minutes travel time of a primary school and within 16-20 minutes travel time of a secondary school. The least accessible part of the site is the southern edge which is within 16-20 minutes from a primary school and within</p>

SA Objectives	SA Score	Justification
		21-25 minutes of a secondary school. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; potentially significant positive for the northern part of the site and potentially negligible for the southern edge of the site. Travel times to the nearest further education institute also vary across the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the northern part which is within 6-10 minutes travel time of the nearest GP and within 41-45 minutes of a hospital. The least accessible part of the site is the southern part which is within 21-25 minutes of a GP and within 51-55 minutes of a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; potentially minor positive for the northern part and potentially negligible effect for the southern part of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by existing residential development to the north and east of the site on Rowley Lane. As such, a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The most accessible area of the site is the northern part which is 6-10 minutes travel time from both the nearest local centre and town/district centre. The least accessible area of the site is the southern part which is within 21-25 minutes from the nearest local centre and within 16-20 minutes of a town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; potentially minor positive for the northern part and potentially minor negative for the southern part of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation	++/--	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is a green corridor located 160m west of the site and located directly adjacent to a large area of semi natural and natural greenspace to the east of the site. In addition there is another large area of open space located 26m

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		north of the site which consists of an area of semi natural and natural greenspace, playing fields and an amenity greenspace feature. There are a number of PROWs within close proximity to the site, as such a significant positive effect has been identified. However, there is a footpath located on the site therefore an overall mixed effect is expected (significant positive / uncertain significant negative), the effect is recorded as uncertain as it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (10.08 ha); therefore a significant positive effect is likely.
10. <p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education (part of a mixed effect), 8: leisure and recreation (part of a mixed effect), 9: affordable housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation (mixed effect), 11: use of land, 12: character and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2731 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
opportunities available for local people, and ensure that they are accessible.		Access to employment nodes vary across the site. The most accessible area is in the far southern edge, which is within 16-20 minutes of an employment node. The least accessible area is along the north boundary of the site which is within 26-30 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the far southern edge and potentially minor positive for the north boundary of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is in the far southern edge, which is within 6-10 minutes travel time to a primary school and 21-25 minutes to a secondary school. The least accessible area is along the northern site boundary which is within 21-25 minutes travel time to a primary and within 36-40 minutes travel time to a secondary school. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the far southern edge and potentially negligible for the northern site boundary.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to GP and hospital facilities varies across the site. The most accessible area is along the southern half of the site, which is within 11-15 minutes travel time to a GP and 45-50 minutes to a hospital. The least accessible area is along the northern boundary of the site which is within 21-25 minutes travel time to a GP and within 56-60 minutes to a hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the southern half of the site and potentially negligible for the northern boundary of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to a residential development on the eastern side of the site on Park Avenue; these properties may be affected by noise during the construction phase. The site is also directly adjacent to Penistone Road which is an</p>

SA Objectives	SA Score	Justification
		'A' road, this may result in noise pollution affecting residents in the longer term. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the southern half of the site, which is within 6-10 minutes travel time to a local centre and within 21-25 minutes to town / district centre. The least accessible area is along the northern boundary of the site which is within 16-20 minutes travel time to a local centre and within 31-35 minutes to a town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially negligible for the southern half of the site and potentially significantly negative for the lower eastern boundary of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an amenity greenspace feature located directly adjacent to the southern corner of the site on Park Avenue. Shelley First School is located 325m east of the site which consists of an area of semi-natural and natural greenspace and playing fields. There is an amenity greenspace feature located 439m east of the site on Far Bank and Shelley Cricket Club is located 395m north east of the site which consists of private playing fields, basketball court, park and childrens playground. In addition there is a footpath along the lower half of the eastern site boundary and another along the northern site boundary which leads north towards Kirkburton. As such a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.97 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as moderately 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (4.97 ha) and on greenfield land. As a result a minor negative effect is likely. The site has been identified as Grade 3 agricultural quality.</p>

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (4.97 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site mostly lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.</p> <p>Although a section along the southern site boundary lies in LCA G9: Fenay Beck Valley &amp; Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	<p>There are three candidate Local Wildlife Sites within close proximity to the site; Shelley Wood is located 20m north west of the site, Allen Wood is located 390m north of the site and Shepley Mill Wood is located 173m south of the site. Upper and Lower Stones Wood Local Wildlife Site is located 295m south of the site and Hartley Bank Quarry (Thunderbridge) Local Geological Site is located 710m west of the site. As such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.</p>
17. Increase prevention, re-use, recovery and recycling	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p>

SA Objectives	SA Score	Justification
of waste close to source.		This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as moderately 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (although part of a mixed effect) and 8: recreation. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 6: services and facilities (although part of a mixed effect) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2739 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located 16-20 minutes travel time from the nearest employment node; therefore a significant positive effect on this SA objective is predicted.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 0-5 minutes travel time of a primary; and 16-20 minutes travel time of a secondary; so is likely to have a significant positive effect on this SA objective. The site is located within 16-20 minutes travel time of a further</p>

SA Objectives	SA Score	Justification
		education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP and within 51-55 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the south east on north view road. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 16-20 minutes travel time of a local and town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. To the north east, semi-natural and natural greenspace runs alongside a local nature reserve. To the south west, outdoor sports facilities, a park with children and young people's space, amenity greenspace and allotments are located within 600m. To the north west, a golf course lies within 400m. The site is also surrounded by public rights of way within 600m in all direction. As such a significant positive effect is recorded for this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.45ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green'</p>

SA Objectives	SA Score	Justification
modes of transport.		in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.45ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.45ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as the western and southern edges of the site adjoin the boundary of the East Brierly Conservation Area. The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Tong Moor, a local nature reserve is located within 250m of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as mainly 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2741 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Most of the site is mainly located within 11-15 minutes travel time from the nearest employment node (a small section along the northern and western site boundary is within 16-20 minutes travel time); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is within 0-5 minutes travel time to a primary school and 11-15 minutes to a secondary school. The least accessible area is along the northern site boundary which is within 11-15 minutes travel time to a primary school and within 21-25 minutes to a secondary school. In</p>

SA Objectives	SA Score	Justification
		between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially a significant positive for the most accessible area and potentially minor positive for the northern site boundary.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to GP and hospital facilities varies across the site. The most accessible area is along the far southern site boundary, which is within 6-10 minutes travel time to a GP and 26-30 minutes to a hospital. The least accessible area is along the northern site boundary which is within 16-20 minutes travel time to a GP and 41-45 minutes travel time to a hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the most accessible area and potentially negligible for the least accessible area of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by residential properties within 100m proximity to the site. These developments may be affected by noise during the construction phase. In addition the site is directly adjacent to Gelderd Road to the east of the site which is an 'A' road. As such a significant negative is expected on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to a local centre varies across the site. The most accessible area is along the eastern site boundary, which is within 11-15 minutes travel time to a local centre and the least accessible area is along the western site boundary which is within 21-25 minutes travel time. Most of the site is mainly within 6-10 minutes travel time to a town / district centre (although a small section along the northern and western site boundary is located within 11-15 minutes travel time). As such a minor positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an area of semi-natural and natural greenspace located 25m north of the site and a private bowling green directly adjacent to the west of the site. There are also private playing playing fields located 425m east of the site on Leeds Road. There is another area of semi-natural and natural greenspace located directly adjacent to the south of the site which also has allotments. There is a green corridor located 290m north west of the site and Oakwell Hall Country

SA Objectives	SA Score	Justification
usage.		Park is located 200m north west of the site. In addition there is a footpath along the southern site boundary which leads to Field Head Lane to the west and Copley Hill to the east. It is noted that the site is an amenity greenspace feature. As a result an overall mixed effect is expected for this SA objective (++/--?), the effect is recorded as uncertain given that it cannot be known whether the recreation asset would be lost due to the development.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.34 ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (5.34 ha) and on greenfield land. As a result a significant negative effect is likely. The site has been identified as urban land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (5.34 ha) and on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Oakwell Park is a Local Wildlife Site and Local Nature Reserve located 250m west of the site. As such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: leisure and recreation (part of a mixed effect), 9: affordable housing, 10: sustainable transport and 19: climate change (although SA objectives 3, 4 and 8 are part of mixed effects). Potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: leisure and recreation (mixed effect), 11: use of land, 12: character and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H2757 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located 36-40 minutes travel time from the nearest employment node; therefore a negligible on this SA objective is predicted
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

SA Objectives	SA Score	Justification
		<p>accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 11-15 minutes travel time of a primary and secondary school; so is likely to have a significant positive effect on this SA objective. Most of the site is mainly located within 21-25 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 11-15 minutes travel time of a GP and within 36-40 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the South on Tom Lane. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre and within 16-20 minutes travel time of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. 300m to the north of the site, a park with children and young people's space is found. To the west of the site, within 600m, allotments are located. To the south, amenity greenspace with a children and young people's area is located within 500m To the west of the site, a park with children and young people's space and outdoor sports amenity can be found. A bridleway is also located 550m to the west, and footpaths surround the site. As such a significant positive effect is recorded for this SA objective.</p>
9. Ensure all people are able to live in a decent home	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable</p>

SA Objectives	SA Score	Justification
which meets their needs.		housing. This site is relatively small (0.57ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.57ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.57ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment as the site adjoins the boundary of Milsbridge Conservation Area. The loss of this area and its subsequent development could harm elements which contribute to the significance of this area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Huddersfield Narrow Canal, a candidate local wildlife site is located within 400m to the north of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, , 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives		

### H3316 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located 16-20 minutes travel time from the nearest employment node; therefore a significant positive on this SA objective is predicted.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The site is located within 11-15 minutes travel time of a primary school; and 21-25 minutes travel time of a secondary school; so is likely to have a minor positive effect on this SA objective.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 11-15 minutes travel time of a GP and within 36-40 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site not within 100m of any residential properties. However, the site is adjacent to the A649. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 16-20 minutes travel time of a local and town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. 600m to the east, semi-natural and natural green space can be found. Within 500m, amenity greenspace with provision for children and young people and outdoor sports spaces can be found. As such a significant positive effect is recorded for this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.63ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>

SA Objectives	SA Score	Justification
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.63ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Grade 3 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-	<p>This is a relatively small site (0.63ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any biodiversity or geodiversity sites. A negligible effect is expected for this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H3323 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located 11-15 minutes travel time from the nearest employment node; therefore a significant positive on this SA objective is predicted.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The majority of the site is located within 0-5 minutes travel time to a primary school (the east and south west corner are located within 6-10 minutes travel time). The site is located entirely within 15-20 minutes travel time of a secondary school. A significant positive effect is therefore likely on this SA objective.

SA Objectives	SA Score	Justification
		The site is within 21-25 minute travel time from a further education centre.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The entire site is located within 6-10 minutes travel time of a GP and most of the site is within 36-40 minutes travel time of a hospital (the east and south west corner are located within 6-10 minutes travel time); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by existing residential development on Marsh Lane. As such, a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 0-5 minutes travel time of a local centre and within and within a 16-20 minute travel time to a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. The site is located directly adjacent to an area of semi natural and natural greenspace and there are private playing fields located 115m north of the site. There are a number of PROWs within close proximity to the site, for example there is a footpath located 120m north east of the site and there is a footpath and bridleway located 316m west of the site. As such a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.44 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.44 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.44 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Upper and Lower Stones Wood Local Wildlife Site is located 630m north west of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H3325 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located 6-10 minutes travel time from the nearest employment node; therefore a significant positive on this SA objective is predicted.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The site is located within 6-10 minutes travel time to a primary school. The site is located entirely within 16-20 minutes travel time of a secondary school. A significant positive effect is therefore likely on this SA objective. The site is located within a 16-20 minute travel time to a centre of further education.
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The entire site is located within 6-10 minutes travel time of a GP and most of the site is within 41-45 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by existing residential development to the west of the site on Whinmoor Drive and the A629 is located directly adjacent to the north of the site. As such, a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre and town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an area of open space located 125m west of the site on Back Lane consisting of a childrens playground, private playing fields and an area of semi natural and natural greenspace. There is also a large park and garden located 380m south west of the site and another childrens playground located 435m from the site. There is a bridleway along the southern site boundary leading to Long Lane to the west and a footpath from the southern boundary leading south towards Bilham Spring. As such a significant positive effect has been identified for this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	++	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.91 ha); therefore a significant positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green'</p>

SA Objectives	SA Score	Justification
modes of transport.		in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	++	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively large site (5.91 ha) on brownfield land; therefore a significant positive effect on this SA objective is expected.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This site is located on brownfield land; therefore development here could have a minor positive effect on this SA objective as it is likely that the overall character and appearance of the site will be improved. Although this effect is recorded as uncertain given that it depends largely on the appearance of the development in comparison to what was on the site previously.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment; therefore a potential minor negative effect is identified. The minor negative effect on this SA objective is also uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are no designated biodiversity or geodiversity sites located within close proximity of the site, therefore a negligible effect is expected on this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on brownfield land and is located within Flood Zone 2 and 3 along the north of the site as the River Dearne runs through the site. As such a minor negative effect is expected on this SA objective.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on brownfield land therefore there may be good opportunities for using existing buildings and materials for the proposed development; therefore a minor positive effect is likely. This effect is recorded as uncertain depending on

SA Objectives	SA Score	Justification
		the previous use of the site.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as mainly 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 9: housing 10: sustainable transport, 11: land use and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H3325a (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located 6-10 minutes travel time from the nearest employment node; therefore a significant positive on this SA objective is predicted.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time to a primary school. The site is located entirely within 16-20 minutes travel time of a secondary school. A significant positive effect is therefore likely on this SA objective. The site is located</p>

SA Objectives	SA Score	Justification
		within a 16-20 minute travel time to a centre of further education.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The entire site is located within 6-10 minutes travel time of a GP and most of the site is within 41-45 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by existing residential development to the west of the site on Whinmoor Drive and the A629 is located directly adjacent to the north of the site. As such, a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre and town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an area of open space located 125m west of the site on Back Lane consisting of a childrens playground, private playing fields and an area of semi natural and natural greenspace. There is also a large park and garden located 380m south west of the site and another childrens playground located 435m from the site. There is a bridleway along the southern site boundary leading to Long Lane to the west and a footpath from the southern boundary leading south towards Bilham Spring. As such a significant positive effect has been identified for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.52 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (4.52 ha) on brownfield land; therefore a minor positive effect on this SA objective is expected.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This site is located on brownfield land; therefore development here could have a minor positive effect on this SA objective as it is likely that the overall character and appearance of the site will be improved. Although this effect is recorded as uncertain given that it depends largely on the appearance of the development in comparison to what was on the site previously.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment; therefore a potential minor negative effect is identified. The minor negative effect on this SA objective is also uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are no designated biodiversity or geodiversity sites located within close proximity of the site, therefore a negligible effect is expected on this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on brownfield land and is located within Flood Zone 2 and 3 along the north of the site as the River Dearne runs through the site. As such a minor negative effect is expected on this SA objective.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		This site is on brownfield land therefore there may be good opportunities for using existing buildings and materials for the proposed development; therefore a minor positive effect is likely. This effect is recorded as uncertain depending on the previous use of the site.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport, 11: land use and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H3350 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 31-35 minutes travel time of an employment node; therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 11-15 minutes travel time of a primary school and 31-35 minutes from a secondary school. Therefore, a minor positive effect is likely.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>A large proportion of the site lies within 6-10 minutes travel time of a GP (part of the northern section lies within 5 minutes travel time) and 41-45 minutes of a hospital. A minor positive effect is likely overall as a result of the site's proximity to a GP. The site is not within or adjacent to an AQMA.</p> <p>In this way, the northern part of the site is within 5 minutes travel time of a GP whereas the southern part is within 6-10 minutes of a GP. Although accessibility to healthcare facilities varies across the site,</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within 100m of existing residential properties on Shop Lane, Orchard Road and Cockley Hill Lane. These properties may be affected by noise during the construction phase. As such, a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 6-10 minutes travel time of a local centre and 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. There is an area located 80m north of the site on Town Road which contains a private bowling green, allotments and an area of semi natural and natural greenspace. There is also another large area of playing fields and a childrens playground located 260m west of the site on Bankfield Lane and a park located 370m north of the site on Park Side. There are a number of PROWs within close proximity to the site, as such a significant positive effect has been identified. However, there is a footpath located on the site therefore an overall mixed effect is expected (significant positive / uncertain significant negative), the effect is recorded as uncertain as it cannot be known whether the recreation asset would be lost due to the development.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.04 ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of</p>

SA Objectives	SA Score	Justification
safe transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (2.04 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.04 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.  The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Dalton Bank is a Local Nature Reserve and Local Wildlife Site located 875m north west of the site. The close proximity of the site may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure (part of a mixed effect overall), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified for SA objectives 8: recreation and leisure (part of a mixed effect overall), 11: use of land and 12: character and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H3379 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  Access to employment nodes vary across the site. The most accessible area is towards the southern boundary of the site which is located within 11-15 minutes travel time of an employment node. The least accessible area is towards the north eastern corner of the site which is located more than 60 minutes travel time of an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected on this SA objective. A potential significant positive effect is expected in combination with a potential significant negative effect in terms of access to employment opportunities.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		<p>Access to education facilities vary across the site. The most accessible area is towards the south eastern corner of the site which is within 6-10 minutes travel time of a primary school and within 6-10 minutes travel time of a secondary school. The least accessible area is a section towards the north eastern corner of the site which is over 60 minutes travel time to a primary and secondary school. In between these two extremes, travel times vary. Therefore, a mixed effect on this SA objective is expected. A potential significant positive effect is expected in combination with a potential significant negative effect in terms of access to education facilities.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to GP and hospital facilities varies across the site. The most accessible area is along the southern site boundary, which is within 6-10 minutes travel time to a GP and within 31-35 minutes travel time to a hospital. The least accessible area is towards the north eastern corner of the site which is over 60 minutes travel time to a GP and Hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this SA objective is expected. A potential minor positive effect is expected in combination with a potential significant negative effect in terms of access to health care facilities.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is located within close proximity of a number of residential properties to the west by Hall Lane; this may result in increased noise and light pollution affecting these properties, particularly during the construction phase of the development. A minor negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	0/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the southern half of the site, which is within 6-10 minutes travel time to a local centre and within 21-25 minutes travel time to town / district centre. The least accessible area is towards the north eastern corner of the site which located more than 60 minutes travel time of a local centre and a town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this SA objective is expected. A negligible effect is expected in combination with a potential significant negative effect in terms of access to local services and facilities.</p>
<p>7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.</p>	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the</p>

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. An outdoor sports facility is located adjacent to the site to the north and east. Allotments are also accessible adjacent to the site to the north. A moderately sized park (which included an area of provision for children and young people as well as outdoor sports facilities) is located adjacent to the site to the south. The site is located within 95m of a cemetery to the south west. A PRoW runs adjacent to the site by its south boundary. As such the site would provide new residents with a good level of access to existing areas of open space and PRoWs and therefore a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.11 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	+/-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.11 ha) a significant portion of which has been developed to contain residential properties and a hard standing at Hall Lane; therefore a minor positive effect on this SA objective is likely. The site has been identified as being located on Grade 3 Agricultural Land meaning this positive effect is therefore combined with a minor negative effect.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (1.11 ha) located on mostly brownfield land; therefore development here could have a positive negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The site lies opposite the ruins of the Medieval Thornhill Hall which are designated as a Scheduled Monument. There are also a number of Grade II Listed Buildings to the south of this site and additionally the site lies opposite the Thornhill Conservation Area. The development of this area may harm elements which contribute to these heritage assets' significance. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.

SA Objectives	SA Score	Justification
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are no biodiversity or geodiversity sites within 1km of the site. As such a negligible effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within or adjacent to an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is located on mostly brownfield land and is located outside of Flood Zones 2 and 3; therefore a negligible effect is likely on this SA objective given that the development of new housing at this location would be unlikely to contribute to an increase in flood risk in Kirklees
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on mostly brownfield land; therefore a minor but uncertain positive effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education and 8: recreation (as part of an overall mixed effect). Potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health 6: access to services and facilities (although it is recognised that all significant negative effects identified were likely to be part of an overall mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H3380 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
opportunities available for local people, and ensure that they are accessible.		The site is located within 26-30 minutes travel time of an employment node; therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 6-10 minutes travel time of a primary school (although a small section of the site to the west is located within 11-15 minutes travel time of a primary school). The site is also located within 46-50 minutes of a secondary school and therefore a minor positive effect on this SA objective is expected. The whole site is located within 41-45 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The whole site is located within 11-15 minutes travel time of a GP and within 41-45 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is located within close proximity of a number of residential properties to the south east west by Hopton Lane and Jackroyd Lane; this may result in increased noise and light pollution affecting these properties, particularly during the construction phase of the development. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities</p> <p>The site is located within 6-10 minutes travel time of a local centre and most of the site is mainly located within 6-10 minutes travel time of a town/district centre (a small portion of the site to the west is located within 11-15 minutes travel time of a town/district centre); therefore a minor positive effect on this SA objective is likely.</p>
7. Make our communities	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the

SA Objectives	SA Score	Justification
safer by reducing crime, anti-social behaviour and the fear of crime.		incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. An outdoor sports facility is located within 275m of the site to the south east. A park is also located to the south east of the site within 390m. There is a provision for children and young people within this park. A cemetery is also located to the south east of the site within 415m. The closest PRow runs within 135m of the site to the north. As such the site would provide new residents with a good level of access to existing areas of open space and PRows and therefore a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.73 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.73 ha) which is located on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.73 ha) located on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to	-?	The site is located within 800m of Covey Clough Wood Local Wildlife Site which is to the south east. Briery Bank Wood

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		Local Wildlife Site is located within 995m of the site to the east. As such a minor negative effect is recorded for this SA objective given that the relatively close proximity of the site to these biodiversity features may mean there is potential habitat disturbance or fragmentation. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within or adjacent to an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is located outside of Flood Zones 2 and 3; therefore a minor negative effect is likely on this SA objective given that the development of new housing at this location would result in an increase in the area of impermeable surfaces in Kirklees
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on greenfield land; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation, 10: transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives. The positive effects identified will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

### H3381 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
local people, and ensure that they are accessible.		The whole site is located within 31-35 minutes travel time from the nearest employment node; therefore a negligible effect on this SA objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of a primary school and within 6-10 minutes travel time of a secondary school so is likely to have significant positive effect on this SA objective. The site is located within 21-25 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP. The site is also located within 41-45 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is located in close proximity to a number of existing residential properties to the west and east; this may result in increased noise and light pollution affecting these properties, particularly during the construction phase of the development. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre and 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced

SA Objectives	SA Score	Justification
of crime.		by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. The site is located within 325m of an outdoor sports facility to the north. A small park is located within 415m of the site to the north west. An area of provision for children and young people is also located within this park. A PRoW is accessible within 40m of the site to the west. As such the site would provide new residents with a good level of access to existing areas of open space and PRoWs and therefore a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.55 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.55 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.55 ha) located on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The site is located within relatively close proximity of 49 Blackmoorfoot Road and the adjacent barn opposite this site which are both Grade II Listed Buildings. As such the development of this site could impact upon the significance of these heritage assets. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance	0?	There are no biodiversity or geodiversity sites within 1km of the site. As such a negligible effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within or adjacent to an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation, 10: transport and 19: climate change. No potential significant negative effects have been identified for any of the SA objectives. The significant positive effects expected will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

### H3383 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The majority of the site is located within 16-20 minutes travel time from the nearest employment node (a small part of the site to the south is located within 11-15 minutes travel time from the nearest employment node); therefore a

SA Objectives	SA Score	Justification
		significant positive effect on this SA objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of a primary school (a portion of the site to the south is located within 5 minutes travel time of a primary school) and within 21-25 minutes travel time of a secondary school (a portion of the site to the south is located within 16-20 minutes travel time of a secondary school) so is likely to have minor positive effect on this SA objective. The majority of the site is located within 21-25 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 5 minutes travel time of a GP (small portions of the site to the west and north east are located within 6-10 minutes travel time of a GP). The site is also located within 36-40 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is located adjacent to the A642 to the south and as such new residential properties at this location would be affected by noise pollution in the longer term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 5 minutes travel time of a local centre (small portions of the site to the west and north east are located within 6-10 minutes travel time of a local centre) and the entire site is located within 11-15 minutes travel time of a town/district centre; therefore a significant positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. The closest open space to the site is a number of allotments which are located within 15m to the south. An outdoor sports facility is located within 65m of the site to the south west. The closest park is located within 95m of the site to the south east and this area also contains provision for children and young people as well as outdoor sports facilities. Two PRoWs run adjacent to the site to the west and north east. As such the site would provide new residents with a good level of access to existing areas of open space and PRoWs and therefore a significant positive effect is expected on this SA objective. The PRoWs identified however run within the boundaries of the site meaning that development of this area may result in the loss of this use. A significant negative effect is also identified on this SA objective, therefore, meaning an overall mixed effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.39 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (2.39 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Grade 4 Agricultural Land and Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.39 ha) located on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may

SA Objectives	SA Score	Justification
		exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is located within 640m of Wakefield Road, Lepton Candidate Local Wildlife Site which is to the north west. Lepton Great Wood Candidate Local Wildlife Site is located within 720m of the site to the south west. As such a minor negative effect is recorded for this SA objective given that the relatively close proximity of the site to these biodiversity features may mean there is potential habitat disturbance or fragmentation. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within or adjacent to an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 6: access to services and facilities, 8: recreation (as part of an overall mixed effect), 10: transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 8: recreation (as part of an overall mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H3386 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is located 31-35 minutes travel time from the nearest employment node; therefore a negligible effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 11-15 minutes travel time of a primary school and within 11-15 minutes travel time of a secondary school so is likely to have a significant positive effect on this SA objective. The site is located within 26-30 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 5 minutes travel time of a GP and within 51-55 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to the A6024 to the east; this may result in noise pollution affecting residents in the longer term. A significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located mainly within 11-15 minutes travel time of a local centre (less than half of the site to the north is located within 16-20 minutes travel time of a local centre) and within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. An area of outdoor sports facilities is located to the east of the site within 20m. An area of parks and gardens is located within 140m of the site to the north east. A civic space is located within 320m of the site to the south. Holmfirth Pool is the closest sports centre to the site and is located within 305m of the site to the north. As such the site would provide new residents with a good level of access to existing areas of open space and sports centres and therefore a significant positive effect is expected on this SA objective. The site also however contains a footpath and development of this area may result in the loss of this use. A significant negative effect is therefore also expected on this SA objective meaning overall a mixed effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.34 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	+	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.34 ha) which has previously been developed. As most of the site is located on brownfield land a minor positive effect is expected on this SA objective.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This is a relatively small site (2.34 ha) located on mostly brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
		The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are no biodiversity or geodiversity sites within 1km of the site. As such a negligible effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within or adjacent to an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is on mainly brownfield land (site appears to be developed containing Bridge Mills business centre) and is located outside of flood zones 2 and 3; therefore a negligible effect is likely on this SA objective.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on brownfield land; therefore a minor positive but uncertain effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation (although as part of a mixed effect), 10: transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 8: recreation (although as part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H3387 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  This site is located at variable travel times of an employment node. The western of the site is located within 16-20 minutes travel time from the nearest employment node while the southern portion of the parcel is located more than 60 minutes travel time of an employment node; therefore a mixed effect (significant positive/significant negative) on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The site is located within variable travel times of a primary school and secondary school. The northern portion of the

SA Objectives	SA Score	Justification
		site is located within 11-15 minutes travel time of a primary school while the southern portion of the site is located more than 60 minutes travel time of a primary school. The northern portion of the site is located within 21-25 minutes travel time of the nearest secondary school while the southern portion of the site is located more than 60 minutes travel time of a primary school. A mixed effect (minor positive/significant negative) is therefore likely on this SA objective. The site is located within variable travel times of a further education institute. The most accessible parts of the site to the north east are located within 21-25 minutes travel time of an institute for higher education sad the southern position of the site is located more than 60 minutes from an institute for higher learning.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within variable travel times of a GP and hospital. The site to the north east is located within 11-15 minutes travel time of a GP. Southern portions of the site are located more than 60 minutes travel time of a GP. Portions of the site to the north are located within 41-45 minutes travel tome of a hospital. Southern portions of the site are located more than 60 minutes travel time of a hospital. As such a mixed effect (minor positive/significant negative) is expected on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to a railway line to the north and is also located within close proximity to a number of industrial sites to the south west and north east; this may result in noise pollution affecting residents in the longer term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the central northern site boundary, which is within 6-10 minutes travel time to a local, town/district centre and within 6-10 minutes travel time of a town/district centre. The least accessible area is along the southern boundary of the site which is more than 60 minutes travel time to a local and town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect (minor positive/significant negative) on this objective is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		area. An area of semi-natural and natural open space is located to the south east of the site within 30m. Another area of semi-natural and natural open space is located within 30m of the site to the north. To the north within 220m an outdoor sports facilities is located and this area also provides access to an amenity greenspace and an area of provision for children and young people. The closest allotments to the site are within 245m to the south west. A PRoW is accessible along the western boundary of the site. As such the site would provide new residents with a good level of access to existing areas of open space and PRoWs and therefore a significant positive effect is expected on this SA objective. The site also however contains an area of semi-natural and natural greenspace and development of this area may result in the loss of this use. A significant negative effect is therefore also expected on this SA objective meaning overall a mixed effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.48 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to none of the eight features assessed. Therefore, a significant negative effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.48 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on mostly Urban Land (it is recognised that a small portion of the site to the east is located on Grade 3 Agricultural Land).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.48 ha) located on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. There are a number of Grade II Listed Buildings on the southern bank of the River Calder. Development of this site could impact upon their significance. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance	--?	The site is located within 170m of Whitley Wood Local Wildlife Site which is to the south east. Jordan Wood and Oliver Wood Local Wildlife Site is also located to the south east of the site within 820m. Another Local Wildlife Site Briery Bank

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		Wood is located within 520m of the site to the south west. As such a significant negative effect is recorded for this SA objective given that the close proximity of the site to these biodiversity features may mean there is potential habitat disturbance or fragmentation. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development
15. Reduce air, water and soil pollution.	0	This site is not within or adjacent to an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	--	This site is located on greenfield land and large portions of the site to the south are located within Flood Zone 2 and 3; therefore a significant negative effect is likely given that the development of new housing in this area would increase the level of housing at high risk of being impacted upon by flooding and would also increase the area of impermeable surfaces in the district.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to none of the eight features assessed; therefore a significant negative effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, and 8: recreation (as part of an overall mixed effect). Potential significant negative effects were identified in relation to SA objectives 1: employment (as part of an overall mixed effect), 3: education (as part of an overall mixed effect), 4: health (as part of an overall mixed effect), 5: amenity, 6: access to services and facilities (as part of an overall mixed effect), 8: recreation (as part of an overall mixed effect), 10:sustainable transport, 14: biodiversity and geodiversity, 16: flood risk and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H3389 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
---------------	----------	---------------

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of this site is located 36-40 minutes travel time from the nearest employment node (a small part of the site to the west is located within 31-35 minutes travel time of the nearest employment node); therefore a negligible effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of a primary school (a small part of the site to the south is located within 11-15 minutes travel time of a primary school) and within 31-35 minutes travel time of a secondary school (a small part of the site to the north east is located within 36-40 minutes travel time of a secondary school) so is likely to have a minor positive effect on this SA objective. The majority of the site is located within 31-35 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 6-10 minutes travel time of a GP (a portion of the site to the north east is located within 5 minutes travel time of a GP) and within 41-45 minutes travel time of a hospital (a portion of the site to the north east is located within 46-50 minutes travel time of a hospital); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. The site has been identified as being located on Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (3.09 ha) located on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
		The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is located within 875m of Dalton Bank Local Wildlife Site which is to the north west. As such a minor negative effect is recorded for this SA objective given that the relatively close proximity of the site to this biodiversity feature may mean there is potential habitat disturbance or fragmentation. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development
15. Reduce air, water and soil pollution.	0	This site is not within or adjacent to an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. This site is classed as mainly 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objective 8: recreation (although as part of a mixed effect). A potential significant negative effect was identified in relation to SA objective 8: recreation (although as part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### H3390 (not allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The majority of this site is located 31-35 minutes travel time from the nearest employment node (small parts of the site to the east and west are located within 26-30 minutes travel time of the nearest employment node); therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The site is located within 6-10 minutes travel time of a primary school and the majority of the site is located within 16-20 minutes travel time of a secondary school (a portion of the site to the east is located within 21-25 minutes travel time of the a secondary school) so is likely to have a significant positive effect on this SA objective. The majority of the site is located within 21-25 minutes travel time of a further education institute.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of a GP (a portion of the site to the south east is located within 6-10 minutes travel time of a GP) and within 36-40 minutes travel time of a hospital (a portion of the site to the north west is located within 31-35 minutes travel time of a hospital); therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded to the south, east, west and north west by residential properties; this may result in increased noise and light pollution affecting these properties, particularly during the construction phase of the development. A large industrial unit is also located adjacent to the site to the north east which may result in noise pollution affecting residents in the longer term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located mainly within 6-10 minutes travel time of a local centre (a small portion of the site is located within 11-15 minutes travel time of a local centre) and within 11-15 minutes travel time of a town/district centre (a small portion of the site is located within 6-10 minutes travel time of a town/district centre); therefore a minor positive effect is likely</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. The site is located adjacent to part of an area of semi-natural and natural greenspace to the north east. Amenity greenspaces are located within 15m of the site to the east and within 20m to the south respectively. The closest green corridor to the site is located within 160m to the east. A PRoW is accessible within 190m of the site to the east. As such the site would provide new residents with a good level of access to existing areas of open space and PRoWs and therefore a significant positive effect is expected on this SA objective. The site also however contains part of an area of semi-natural and natural greenspace and the development of this area may result in the loss of this use. A significant negative effect is therefore also expected on this SA objective meaning overall a mixed effect is likely.</p>
9. Ensure all people are able	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the</p>

SA Objectives	SA Score	Justification
to live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.83 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.83 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on mostly Grade 4 Agricultural Land with some areas of Urban land also present.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.83 ha) located on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies almost entirely in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment as 6-10 Cold Royd Lane to the north of this area and 1-7 School Lane to the east are Grade II Listed Buildings the significance of which may be impacted upon by development of this area. The minor negative effect on this SA objective is also uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is located within 135m of Round Wood, Tandem Local Wildlife Site which is to the south. Also to the south of the site within 375m Round Wood, Tandem (additional) has been identified as a candidate Local Wildlife Site. Dalton Bank is located within 680m to the north and has been identified as both a Local Wildlife Site and a Local Nature Reserve. As such a significant negative effect is recorded for this SA objective given that the close proximity of the site to these biodiversity features may mean there is potential habitat disturbance or fragmentation. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within or adjacent to an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood	--	This site is on greenfield land and is located within land that falls within Flood Zones 2 and 3; therefore a significant negative effect is likely given that the development of new housing at this location would increase the number of homes

SA Objectives	SA Score	Justification
risk areas and ensure development does not contribute to increased flood risk for existing property and people.		at high risk of flooding in the district and would also increase the area of impermeable surfaces in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation (although as part of a mixed effect), 10: transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 5: amenity, 8: recreation (although as part of a mixed effect), 14: biodiversity and geodiversity and 16: flood risk. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### H3395 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  This site is located 36-40 minutes travel time from the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	+	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 11-15 minutes travel time of a primary school (the northern portion of the site is located within 6-10 minutes travel time of a primary school) and the entire site is located within 31-35 minutes travel time of a secondary school so is likely to have a minor positive effect on this SA objective. The site is located within 21-25 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP and within 41-45 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is located within close proximity of a number of residential properties to the south by Brook Lane and to the north by Carr Top Lane; this may result in increased noise and light pollution affecting these properties, particularly during the construction phase of the development. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre and within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. The closest open space to the site is a cemetery which is to the north within 95m. A large open space containing an area of provision for children and young people, outdoor sports facilities, a park and semi-natural and natural greenspace is located to the north east of the site within 195m. To the north west of the site within 205m an amenity</p>

SA Objectives	SA Score	Justification
space and encourage their usage.		greenspace and outdoor sports facility is located by Ridings Lane. The closest PRoW runs along the north western boundary of the site. As such the site would provide new residents with a good level of access to existing areas of open space and PRoWs and therefore a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.71 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (0.71 ha) which is located on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.71 ha) located on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the site's potential impact on a number of Grade II Listed Buildings to the north and south of the site. The site also lies within the Golcar Conservation Area. Development of this site could impact upon the significance of this area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is located within 500m of Huddersfield Narrow Canal Candidate Local Wildlife Site which is to the south. As such a minor negative effect is recorded for this SA objective given that the relatively close proximity of the site to these biodiversity features may mean there is potential habitat disturbance or fragmentation. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within or adjacent to an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is located outside of Flood Zones 2 and 3; therefore a minor negative effect is likely on this SA objective given that the development of new housing at this location would result in an increase in the area of impermeable surfaces in Kirklees
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on greenfield land; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation, 10: transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives 8. The potential significant positive effects identified in relation to this residential site will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

### H3405 (allocated in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is located within 11-15 minutes travel time of an employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within variable travel times of the nearest primary school. The south eastern corner of the site is located within 5 minutes travel time of a primary school while the north eastern portion of the site is located within 11-15 minutes travel time of a primary school. The majority of the site is located within 16-20 minutes travel time of a secondary school (a portion of the site to the south is located within 11-15 minutes travel time of a secondary school). As such a significant positive effect is expected on this SA objective for the entire site. The majority of the site is located within 6-10 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of site is located within 6-10 minutes travel time of a GP (a portion of the site to the south is located within 5 minutes travel time of a GP) and the entire site is located within 21-25 minutes travel time of a hospital; therefore a significant positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is located within close proximity of a number of residential properties to the south by Ruth Street and Church and to the north by Hart Street; this may result in increased noise and light pollution affecting these properties, particularly during the construction phase of the development. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located mainly within 6-10 minutes travel time of a local centre (less than half of the site to the south is located within 5 minutes travel time of a local centre) and within 16-20 minutes travel time of a town/district centre (less than half of the site to the south is located within 11-15 minutes travel time of a town/district centre); therefore a negligible effect is likely</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced</p>

SA Objectives	SA Score	Justification
of crime.		by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. The site is adjacent to an area of semi-natural and natural greenspace to the west. A further area of open space is located within 40m of the site to the east between Naomi Road and Hart Street. The closest outdoor sport facilities to the site are located to the north west within 60m. The closest PRow to the site is a footpath which runs along the northern boundary. As such the site would provide new residents with a good level of access to existing areas of open space and PRows and therefore a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.08 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (1.08 ha) which is located on land much of which has previously been developed (Newsome Mill is located within the boundaries of the site). Considering that much of the site is brownfield land a minor positive effect is expected on this SA objective. The site has been identified as being located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+	This is a relatively small site (1.08 ha) which contains a sizeable portion of brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the site's potential impact on a number of Grade II Listed Buildings within fairly close proximity of the site. Development of this site could also impact upon the significance of the Golcar Conservation Area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are no designated biodiversity or geodiversity sites within 1000m proximity to the site. As such an overall negligible effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within or adjacent to an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site contains a large portion of brownfield land and is located outside of flood zones 2 and 3; therefore a negligible effect is likely on this SA objective.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on brownfield land; therefore a minor positive effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health 8: recreation, 10: transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives 8. The potential significant positive effects identified in relation to this residential site will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

## Safeguarded Land Site Options

Note that these sites were only promoted as safeguarded sites, rather than as options for allocation in the Local Plan period.

### SL2170a (safeguarded in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and	--	While the location of housing sites will not influence the number, location or type of employment opportunities available

SA Objectives	SA Score	Justification
range of employment opportunities available for local people, and ensure that they are accessible.		<p>in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 56-60 minutes travel time of the nearest employment node (within an area to the south over 60 minutes); therefore a significant negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/-?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is an area in the north west which is within 5 minutes travel time of the nearest primary school and 21-25 minutes of a secondary school. The least accessible part of the site is the south eastern edge which is within 21-25 minutes travel time of the nearest primary school and within 41-45 minutes of a secondary school. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective: potentially minor positive for the north western part and potentially minor negative for the south eastern edge of the site. Travel times to the nearest further education institute also vary across the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	-/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the north west which is within 21-25 minutes travel time of the nearest GP and over 60 minutes from a hospital. The least accessible part of the site is the south eastern edge which is within 31-35 minutes of a GP and over 60 minutes from a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect is likely for this objective; minor negative for the north west and significant negative for the south eastern edge of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is located in very close proximity of existing residential development to the west at Green Abbey. These residential properties may be affected by noise due to the development of this site, particularly during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	-/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The most accessible part of the site is the northern part which is within 16-20 minutes of both the nearest local centre and town/district centre. The least accessible part of the site is the south eastern edge which is within 36-40 minutes of the nearest local centre and within 31-35 minutes of a town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; minor negative for the northern part and significant negative for the south eastern edge of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. The closest area of open space to the site is the cemetery at Hade Edge Methodist Church which is within 120m to the north west. An outdoor sports facility is located within 140m of the site to the north east by Snittle Road. An area of parks and gardens is located to the north west of the site within 300m by Greave Road. Provision for children and young people is also accessible at this location. The closest footpath to the site runs alongside Long Ing Road which is within 15m to the west. As such a significant positive effect is expected on this SA objective
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.24 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.24 ha) on mostly greenfield land (it is recognised that a number of smaller buildings which are ancillary to the main farm buildings offsite are located within the site boundary); therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and	-?	This is a relatively small site (2.24 ha) on mostly greenfield land (it is recognised that a number of smaller buildings which are ancillary to the main farm buildings offsite are located within the site boundary); therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the

SA Objectives	SA Score	Justification
townscape.		<p>development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is located within 445m of the Candidate Local Wildlife Site Wild Boar Clough to the east. Morton Wood Local Wildlife Site is located within 895m of the site to the north east. An area of the South Pennine Moors which has been designated as an SAC, SPA and SSSI is also located within 900m of the site to the south west. The close proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mostly greenfield land (it is recognised that a number of smaller buildings which are ancillary to the main farm buildings offsite are located within the site boundary) and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on mostly greenfield land (it is recognised that a number of smaller buildings which are ancillary to the main farm buildings offsite are located within the site boundary); therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was cased as mainly or entirely 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation and 9: affordable housing and potential significant negative effects were identified for SA objectives 1: employment, 4: health (part of a mixed effect), 6: local services and facilities (part of a mixed effect), 11: use of land and 12: landscape and townscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

#### SL2170b (safeguarded in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is within 56-60 minutes travel time of the nearest employment node; therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.  The site is within 6-10 minutes travel time to a primary school and 21-25 minutes of a secondary school. A minor positive effect is therefore likely. Travel times to the nearest further education institute also vary across the site.  The most accessible part of the site is an area in the north west which is within 5 minutes travel time of the nearest

SA Objectives	SA Score	Justification
		primary school and The least accessible part of the site is the south eastern edge which is within 21-25 minutes travel time of the nearest primary school and within 41-45 minutes of a secondary school. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective: potentially minor positive for the north western part and potentially minor negative for the south eastern edge of the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.  The site is within 21-25 minutes travel time of the nearest GP and over 60 minutes from a hospital. A minor negative effect is likely for this SA objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.  This site is located in very close proximity of existing residential development to the west at Dunfold Road and to the north at Greave Road. These residential properties may be affected by noise due to the development of this site, particularly during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.  The site is within 16-20 minutes of both the nearest local centre and town/district centre. Therefore a minor negative effect is expected for this objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. The closest area of open space to the site is the area of parks and gardens by Hade Edge School to the north west which is within 25m. An area of provision for children and young people and an outdoor sports facility is also located by the school. A cemetery is located to the south west of the site within 50m by Hade Edge Methodist Church. The closest footpath to the site is located within 170m to the west. As such a significant positive effect is expected on this SA objective
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.97 ha); therefore a minor positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to one of the eight features assessed. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

### SL2666 (not safeguarded in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  This site is mostly located 31-35 minutes travel time from the nearest employment node while a small part of the site is located 36-40 minutes travel time from the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

SA Objectives	SA Score	Justification
		<p>accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is located mainly within 6-10 minutes travel time of a primary school (although a small part of the site to the north west is located within 11-15 minutes travel time of a primary school). Most of the site is located within 6-10 minutes travel time of a secondary school (although a small part of the site to the north is located within 11-15 minutes travel time of a secondary school). As such an uncertain significant positive effect is expected on this SA objective. Part of the site is located within 26-30 minutes travel time of a further education institute and part of the site is located within 31-35 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located mostly 16-20 minutes from a GP (although part of the site to the south is located within 11-15 minutes travel time of a GP) and all of the site is located within 46-50 minutes travel time of a hospital; therefore a negligible effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential development to the east at Bramley Close and to the west at New Mill Road. Lydgate School is located within 70m of the site to the south. These sensitive receptors may be affected by noise during the construction phase. In addition the site is located adjacent to the A635 also to the south. The close proximity of this A-road may result in noise pollution affecting residents and users of the school in the longer term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local and town/district centres varies across the site. The most accessible area within the site boundary is located towards the south west, which is within 5 minutes travel time to a local centre and within 6-10 minutes travel time of a town/district centre. The least accessible area is by the north western boundary of the site which is within 11-15 minutes travel time of a local centre and within 16-20 minutes travel time of a town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect (significant positive/negligible) on this SA objective is expected.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced</p>

SA Objectives	SA Score	Justification
of crime.		by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Outdoor sports facilities are located to the south and to the north west of the site within 10m and within 15m respectively. A natural and semi-natural greenspace is also located to the south of the site within 15m. The closest area of parks and gardens is located within 250m of the site to the south by Royds Avenue. An area of provision for children and young people is also within this location. A PRow runs along the western edge of the site. The site however is located on land which has been identified as semi-natural and natural greenspace and also contains a PRow. Development of the site may result in the loss of these uses depending on the design of the development. As such an overall mixed effect (significant positive/ uncertain significant negative) is recorded for this SA objective
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.52 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (3.52 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.52 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies partially in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.  The northern portion of the site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to

SA Objectives	SA Score	Justification
		development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are no biodiversity or geodiversity sites within a 1km proximity to the site. As such a negligible effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 6: local services and facilities, 8: recreation, 10: transport and 19: climate change (SA objectives 6 and 8 are part of a mixed effect). Potential significant negative effects were identified for SA objectives 5: amenity and 8: recreation (part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

## SL2732 (not safeguarded in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is located at variable travel times from the nearest employment node. The southern portion of the site is located within 16-20 minutes travel time of the nearest employment node while the north western corner of the site is located more than 60 minutes from the nearest employment node; therefore a mixed (significant positive/ significant negative) effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is located at variable travel times from the nearest primary school and secondary school. The southern portion of the site is located within 6-10 minutes travel time of the nearest primary school while the north western corner of the site is located more than 60 minutes travel time from the nearest primary school. The south eastern corner of the site is located within 21-25 minutes travel time of the nearest secondary school while the north western corner of the site is located more than 60 minutes travel time from the nearest secondary school. As such a mixed (uncertain minor positive/uncertain significant negative) effect is expected on this SA objective. The site is also located at variable travel times from the nearest higher education institute. The southern part of the site is located within 21-25 minutes travel time of the nearest of these facilities while the north western corner of the site is located more than 60 minutes from the nearest of these facilities.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within variable travel times from the nearest GP and hospital. The southern portion of the site is located within 11-15 minute travel time of the nearest GP while the north western corner of the site is located more than 60 minutes travel time of the nearest GP. The southern portion of the site is located within 46-50 minutes travel time of the nearest hospital while the north western corner of the site is located more than 60 minutes travel time from the nearest hospital; therefore a mixed (minor positive/significant negative) effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative

SA Objectives	SA Score	Justification
including avoiding noise and light pollution.		<p>effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential development to the south by Penistone Road. These sensitive receptors may be affected by noise as a result of development of this site, particular during the construction phase. In addition the site is located adjacent to the A629 (Penistone Road) also to the south. The close proximity of this A-road may result in noise pollution affecting residents in the longer term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local and town/district centres varies across the site. The south southern portion of the site is located within 6-10 minutes travel time of the nearest local centre while the north western corner of the site is located more than 60 minutes travel time of the nearest local centre. The southern portion of the site is located within 21-25 minutes travel time of the nearest town/district centre while the north western corner of the site is located more than 60 minutes travel time of the nearest town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect (negligible/significant negative) on this SA objective is expected.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. The closest area of open space to the site is an area of amenity greenspace which is located within 165m to the south east by Penistone Road. A semi-natural and natural greenspace is located within 455m of the site to the east. A PRoW runs along the western edge of the site. As such a significant positive effect is recorded for this SA objective
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.89 ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of

SA Objectives	SA Score	Justification
prudent use of land.		<p>land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (6.89 ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site has been identified as being mostly located on Grade 3 Agricultural Land with only a part portion of the site to the south being located on Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (6.89 ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies mostly in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.</p> <p>A small area of the site to the south lies in LCA G9: Fenay Beck Valley &amp; Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the site's potential impact on a number of Grade II Listed buildings in the site's vicinity including 18 and 20 Dam Hill which are located within 70m of the site to the south. The loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	<p>Shelley Wood Candidate Local Wildlife Site is located adjacent to the site to the north. Upper and Lower Stones Wood is the closest Local Wildlife Site to the site which is within 290m to the south west. The site is also located within 450m of Hartley Bank Quarry, Thunderbridge Local Geological Site to the north west. The close proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure	-	<p>This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.</p>

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as mainly 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (although the overall score for this SA objective is expected to be mixed), 8: recreation (although the overall score for this SA objective is expected to be mixed), 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 1: employment (although the overall score for this SA objective is expected to be mixed), 3: education (although the overall score for this SA objective is expected to be mixed), 4: health and well-being (although the overall score for this SA objective is expected to be mixed), 5: amenity, 6: access to local services (although the overall score for this SA objective is expected to be mixed), 8: recreation (although the overall score for this SA objective is expected to be mixed), 11: land use, 12: landscape, and 14: biodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

### SL3346 (not safeguarded in the Publication Draft Local Plan)

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.  The site is within 41-45 minutes travel time from the nearest employment node. A minor negative effect is likely on this SA objective.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is located at variable travel times from the nearest primary school and secondary school. The south west corner of the site is located within 5-10 minutes travel time of the nearest primary school where the majority of the site to the north is located 16-20 minutes travel time; other sections of the site vary in between these two thresholds. The majority of the site is within 16-20 minutes of a secondary school (although a small area of the southern section is within 11-15 minutes travel time of a secondary school). A minor positive effect is therefore likely on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within variable travel times from the nearest GP and hospital. The majority of the site is within 21-25 minutes of a GP surgery (a small section to the south of the site lies within 16-20 minutes travel time from a GP surgery). The majority of the site is located within 56-60 minutes travel time of a hospital (a small section of the site to the south lies within 56-60 minutes travel time). A negligible effect is therefore likely on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is located within close proximity of a number of residential properties to the south by High Close which is within 55m; this may result in increased noise and light pollution affecting these properties, particularly during the construction phase of the development. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site lies within 16-20 minutes of a local centre and 21-25 minutes from a town/district centre (a small proportion of the site to the south lies within 11-15 minutes of a local centre and 16-20 minutes of a town/district centre). A minor negative effect is therefore likely on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the</p>

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. The site is located within 20m of an outdoor sports facility to the west and within 190m of another outdoor sports facility to the north east. The closest PRow to the site is a footpath which runs along the northern boundary. As such the site would provide new residents with a good level of access to existing areas of open space and PRowS and therefore a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.78 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.  In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as moderately 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.  This is a relatively small site (2.78 ha) which is located on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on mostly Grade 4 Agricultural Land (the most northerly part of the site is identified as Urban Land).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.78 ha) which is located on greenfield; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.  The site is not within close proximity of the Peak District National Park.  The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance	-?	The site is located within 920m of Low Westwood Pond Candidate Local Wildlife Site which is to the north west. As such a minor negative effect is recorded for this SA objective given that the relatively close proximity of the site to these

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		biodiversity features may mean there is potential habitat disturbance or fragmentation. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within or adjacent to an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is located outside of Flood Zones 2 and 3; therefore a minor negative effect is likely on this SA objective given that the development of new housing at this location would result in an increase in the area of impermeable surfaces in Kirklees
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.  This site is located on greenfield land; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.  This site is classed as moderately 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
<p><b>Summary of SA findings:</b> Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation. No potential significant negative effects were identified for any of SA objectives. The potential significant positive effects identified in relation to this residential site will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>
