

- 1 Question d) WS 16 has been classified as a Treatment facility (Waste Needs Assessment Part 2 Growth Forecasts 2016), of which there are only 3 within Kirklees. The other 2 are electrical and plastic treatment sites. However, this category is shown to have a surplus of capacity within Kirklees, under all 3 growth scenarios. The medium scenario shows a surplus capacity of 81,293 tonnes. Therefore, the site does not need to be safeguarded.
- 2 Proposed modification to delete WS16 from waste allocation.
