Audit trail of site codes used for safeguarded sites

- 1.1 Some of the residential site options that were subject to SA, but that have not been taken forward as allocations in the Local Plan, were considered as options for sites to be safeguarded through policy DLP5 for potential future development. The SA matrices for those sites are included in this annex along with the other residential site options.
- 1.2 The code numbers that are used to refer to these sites as safeguarded sites under policy DLP5 are different to the codes used previously when the sites were being considered as options for residential allocations. **Table 1** below lists the sites that are safeguarded and for each safeguarded site provides the previous site code which can be used to identify the corresponding SA matrix in this annex. **Table 2** lists the options for safeguarded sites which were not eventually taken forward under policy DLP5, i.e. options that were considered and rejected for both residential allocations and safeguarded sites.

- Site with a significant negative effect

Map Scale @ A3: 1:105,000

Detailed SA Matrices for the Residential Site Options

H1: Land to the east of Cambridge Chase, Gomersal

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is located 16-20 minutes travel time from the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of a primary school and 11-15 minutes travel time of a secondary school so is likely to have a significant positive effect on this SA objective. The site is located within 21-25 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP and within 41-45 minutes travel time of a hospital; therefore a minor positive effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the east on Summerbridge Crescent and to the west on Cambridge Chase. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre. The majority of the site is located within 11-15 minutes travel time of a town/district centre (a small part of the site to the north east is located within 16-20 minutes travel time of a town/district centre); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within close proximity of a number of designated open spaces which may be used by new residents in the area. Outdoor sports facilities are provided to the south of the site within 190m by Gomersal First School. Amenity greenspace is located to the north of the site within 290m by Richmond Grove. Further amenity greenspace is accessible within 315m to the south west of the site by Reform Street. A cemetery is located within 340m to the west of the site on Latham Lane. As such a significant positive effect is recorded for this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.84ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.84ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on mostly Grade 3 Agricultural Land (the western edge of the site is located on Urban Land).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.84ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.</p>

SA Objectives	SA Score	Justification
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 170m of the Oakwell Park to the north east which has been identified as a Local Wildlife Site and a Local nature Reserve. The close proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objective 14: biodiversity and		

SA Objectives	SA Score	Justification
geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H2: Downshutts, St George's Road, Scholes

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 51-55 minutes travel time of the nearest employment node (a part of the site is within 46-50 minutes travel time of the nearest employment node); as such a significant negative effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is within 6-10 minutes travel time of a primary school and also within 21-25 minutes travel time of a secondary school. A minor positive effect is therefore likely on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of the site is within 21-25 minutes travel time of a GP (a small part of the site to the north is within 26-30 minutes travel time of a GP). The site is more than 60 minutes of a hospital; therefore a minor negative effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is adjacent to existing residential properties to the south on Ryefields. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of a local centre. The site is also within 16-20 minutes travel time of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces. A semi-natural and natural greenspace is provided within 290m to the south of the site. Amenity greenspace is also provided to the south within 380m of the site. Outdoor sports facilities are provided to the south of the site within 385m and also to the east of the site within 530m.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.39ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two out of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.39ha) on mostly greenfield land (it is noted that a small portion of the site has been previously developed); therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Agricultural Grade 4 Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.39ha) on mostly greenfield land (it is noted that a small portion of the site has been previously developed); therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This</p>

SA Objectives	SA Score	Justification
		is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Totties Conservation Area should development proceed at this location due to its close proximity to the site.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 995m of the Morton Wood which has been identified as a Local Wildlife Site to the south. The proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is located on mostly greenfield land (it is noted that a small portion of the site has been previously developed); therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and significant negative effects were identified for this site in relation to SA objective 1: employment. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H3: Land to the south of Oakwell House, Nutter Lane, Birstall, Batley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The southern part of this site is within 11-15 minutes of an employment node whereas the northern part is within 21-25 minutes. In between, journey times to employment opportunities vary between those two extremes. Overall a mixed effect is likely – potentially significant positive for the southern part and minor positive for the northern part.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The south eastern part of this site is within 6-10 minutes of a primary school, and 11-15 minutes of a secondary school and a further education facility, whereas the northern part of the site is within 16-20 minutes of a primary school and 26-30 minutes of a secondary school and further education facility. In between, journey times to education facilities vary between those two extremes. Overall a mixed effect is likely – potentially significant positive for the south-eastern part and negligible for the northern part.
4. Improve the health of local	+/0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		facilities are easily accessible from housing sites there will be positive effects on residents' health. The south eastern part of this site is within 6-10 minutes of a GP and 41-45 minutes of a hospital, whereas the northern part of the site is within 21-25 minutes of a GP and 51-55 minutes of a hospital. In between, journey times to health facilities vary between those two extremes. Overall a mixed effect is likely – minor positive for the south-eastern part and negligible for the northern part. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties and farmsteads within 100m south, east and north of the site. These receptors could be exposed to noise and light pollution during construction, and as a result, a minor negative effect is likely. The A652 (Bradford Road) is also within 100m of the site, and this could result in noise pollution over the longer term, reinforcing the negative effect.
6. Retain and enhance access to local services and facilities.	+/-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The south-eastern part of this site is within 11-15 minutes of a local centre and 6-10 minutes of a town/district centre, whereas the northern part of the site is within 26-30 minutes of a local centre and 16-20 minutes of a town/district centre. In between, journey times to local services vary between those two extremes. Overall a mixed effect is likely – minor positive for the south-eastern part and minor negative for the northern part.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	The site is crossed by a bridleway which could be lost or disrupted as a result of the development of this site. However, there are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is a park and garden directly adjacent to the north of the site. Others include outdoor sports facilities, cemeteries, amenity greenspace and areas for children and young people. In addition, there are a number of PRoW footpaths surrounding the site. Therefore, a mixed effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 13.98ha; therefore a significant positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (13.98ha) and on mostly greenfield land which is classified as being grade 3 agricultural quality; therefore a significant negative effect is likely for this SA objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is large (13.98ha) and on mostly greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Grade I Listed Oakwell House, which is approximately 170m to the north of the site (this site forms part of the area which contributes to the significance of this asset). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Oakwell Park Local Nature Reserve and approved Local Wildlife Site is directly adjacent to the north of this site. Therefore, a significant negative effect is likely for this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on mostly greenfield land, the majority of which is outside of flood zone 3 (although a small part of the south-eastern end of the site falls within flood zone 3 and it may be possible to avoid developing this part). Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (part of a mixed effect overall), 3: education (part of a mixed effect overall), 8: recreation and leisure (part of a mixed effect overall), 9: housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified for SA objectives 8: recreation and leisure (part of a mixed effect overall), 11: use of land (part of a mixed effect overall), 12: character and landscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H4: POL Land to the north west of Woodhouse Farm, Woodhouse Lane, Emley, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is over 60 minutes travel time of the nearest employment node (with an area to the south east within 16-20 minutes); therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is over 60 minutes travel time of the nearest primary school (with a small area in the south east within 16-20 minutes) and over 60 minutes from the nearest secondary school (with an area to the south east within 26-

SA Objectives	SA Score	Justification
		30 minutes); therefore a significant negative effect on this objective is expected. The majority of the site is also over 60 minutes from a further education institute (with a small area in the south east within 26-30 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of the site is over 60 minutes travel time of the nearest GP (with a small area in the south east within 16-20 minutes) and over 60 minutes from the nearest hospital (with an area to the south east within 56-60 minutes); therefore a significant negative effect on this objective is expected. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are several existing residential properties within close proximity of the site to the south of the site. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of the site is over 60 minutes travel time of the nearest local centre (with a small area in the south east within 16-20 minutes) and over 60 minutes from the nearest town/district centre (with an area to the south east within 16-20 minutes); therefore a significant negative effect on this objective is expected.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	There are three PRoW footpaths which run through the site that could be lost as a result of housing development. However, approximately 180m to the south east of the site is an area of open space associated with a scheduled monument. In addition, there are a number of PRoW footpaths through the land surrounding the site. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (24.31ha); therefore a significant positive effect is likely.
10. Secure an effective and	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of

SA Objectives	SA Score	Justification
safe transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as mainly or entirely 'green' in terms of its access in any of the eight features assessed. Therefore, a significant negative effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (24.31ha) mainly on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is also within an area of high quality agricultural land (the land is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (24.31ha) mainly on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the nearby site of a series of medieval ironstone pits which is designated a Scheduled Monument and Thorncliffe Grange Farmhouse which is a Grade II* listed building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings

SA Objectives	SA Score	Justification
use, recovery and recycling of waste close to source.		and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as mainly or entirely 'green' in terms of its access in any of the eight features assessed; therefore a significant negative effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation (mixed effect) and 9: affordable housing, and potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health 5: amenity, 8: leisure and recreation (mixed effect), 10: sustainable transport, 11: use of land, 12: character and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H5: Land between Holt Lane Green Lane and Hightown Lane, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The south western part of the site is located within 56-60 minutes travel time of an employment node. The north eastern part of the site is located within 36-40 minutes travel time of an employment node. The areas of the site between these two extremes are located at variable travel times from an employment node. Overall a mixed effect (negligible/significant negative) is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	++?/?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The south western part of the site is located within 21-25 minutes travel time of a primary school while the eastern part of the site is located within 11-15 minutes travel time of a primary school. The south western part of the site is located within 26-30 minutes travel time of a secondary school while the eastern part of the site is located within 16-20 minutes travel time of a secondary school. The areas of the site between these two extremes are located at variable travel times from a primary school and secondary school. Overall a mixed effect (significant positive/minor positive) is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The south western part of the site is located within 21-25 minutes travel time of a GP while the north eastern part of the site is located within 5 minutes travel time of a GP. The south western part of the site is located more than 60 minutes travel time from a hospital while the eastern part of the site is located within 51-55 minutes travel time of a hospital. The areas of the site between these two extremes are located at variable travel times from a GP and a hospital. Overall a mixed effect (minor positive/minor negative) is expected on this SA objective for the entire site.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the west on Holt Lane and to the east on Hightown Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The north eastern part of the site is located within 11-15 minutes travel time of a local centre while the south western part of the site is located within 31-35 minutes travel time of a local centre. The western part of the site is located within 26-30 minutes travel time of a town/district centre while the eastern part of the site is located within 5 minutes travel time of a town/district centre. The areas of the site between these two extremes are located at variable travel times from a local centre and town/district centre. Overall a mixed effect (minor positive/minor negative) is expected on this SA objective.</p>

SA Objectives	SA Score	Justification
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are located to the north east within 140m. Sands Recreation Area is a small park which also provides access to a children's playground within 440m also to the north east. Victoria Park is located to the south of the site within 140m and can be accessed via Cooper Lane.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.93ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to one out of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.93ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on mostly Urban Land, with a small part of the site to the west on Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.93ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to

SA Objectives	SA Score	Justification
the historic environment, heritage assets and their settings.		<p>uncertain potential impacts which development might have on the landscape setting of the Holmfirth Conservation Area which is located in close proximity. Additionally Hill Farm and 12 to 20 Holt Lane are Grade II Listed Buildings and the loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Malkin House Wood (a Local Wildlife Site) is the closest of such features but is located 1.01km to the south west and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>Development at this site would make use of greenfield land meaning there is likely to be reduced opportunity to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education (although it should be noted that a mixed overall effect was recorded for this SA objective) and 8: recreation and leisure and potential significant negative effects were identified for this site in relation to SA objective 1: employment (although it should be noted that a mixed overall effect was recorded for this SA objective). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H6: Land to the north east of 15-29 Dewsbury Road, Gomersal, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within 16-20 minutes travel time of the nearest employment node. A significant positive effect is therefore expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is located within 6-10 minutes travel time of the nearest primary school. The site is also located within 6-10 minutes travel time of the nearest secondary school. A significant positive effect is expected on this SA objective. The majority of the site is located within 26-30 minutes travel time of the nearest centre for further education (a small part

SA Objectives	SA Score	Justification
		of the site to the north west is located within 21-25 minutes travel time of the nearest centre for further education).
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest GP (the north west corner of the site is located within 6-10 minutes travel time of the nearest GP). The majority of the site is also located within 46-50 minutes travel time of the nearest hospital (the north west corner of the site is located within 41-45 minutes travel time of the nearest hospital). Overall a negligible effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to the A652 along its southern edge. It is considered that the close proximity of this major road may result in increased noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 11-15 minutes travel time of a local centre (the north western corner of the site is located within 6-10 minutes travel time of a local centre). The site is also located within 16-20 minutes travel time of a town/district centre. Overall a negligible effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. An amenity greenspace is accessible to the south east of the site within 210m and a children's playground is also present at this location. To the north within 250m outdoor sports facilities are located. Another children's playground is located within 490m also the north of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.42ha); therefore a minor positive effect is likely.</p>

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.42ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Urban Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.42ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>The site is within 525m of Oakwell Park which has been identified as a Local Wildlife Site and a Local Nature Reserve to the south west. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.</p>
17. Increase prevention, re-	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings</p>

SA Objectives	SA Score	Justification
use, recovery and recycling of waste close to source.		and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 5: amenity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H7: Taylor Hall Farm Little Taylor Hall Lane, Roberttown

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Access to employment nodes vary across the site. The most accessible area is in the north of the site, which is within 16-20 minutes of an employment node. The least accessible area is in the central-southern area of the site which is within 26-30 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore a mixed effect is likely, potentially significant positive effect for the north of the site and minor positive for the central-southern area of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

SA Objectives	SA Score	Justification
		<p>accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout the site. The most accessible area is in the far northern edge of the site which is within 6-10 minutes travel time to a primary and secondary school. The least accessible area is in the far southern edge of the site which is within 26-30 minutes travel time to a primary school and 21-25 minutes to a secondary school. In between journey times, vary between these two extremes. Therefore, a mixed effect on this objective is expected – potentially significantly positive in the far northern edge of the site and potentially negligible for the far southern edge of the site.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout the site. The most accessible area is within the far northern edge of the site which is within 16-20 minutes travel time to a GP and within 41-45 minutes travel time to a hospital. The least accessible area is within the in the far southern edge of the site which is within 31-35 minutes travel time to a GP and within 56-60 minutes of a hospital. Therefore a mixed effect is expected, potentially negligible for the far northern edge of the site and minor negative in the far southern edge of the site. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to the A62 (Leeds Road) which may mean that residents in these parts of the site are affected by road noise. There are also existing residential properties adjacent to the site to the north which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local services vary throughout the site. The most accessible part of the site is within the far northern edge of the site, which is within 5 minutes travel time of a local centre and 21-25 minutes travel time to a town/district centres. The least accessible area is in the far southern edge of the site, which is within 16-20 minutes travel time of a local centre of the site and 31-35 minutes of town/district centres. Journey times in between these two extremes vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the far northern edge of the site and potentially minor negative for the far southern edge of the site.</p>
<p>7. Make our communities safer by reducing crime, anti-</p>	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,</p>

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is a Public Right of Way (PRoW) within the site, which could be lost as a result of development. However this site is within 600m of four recreational facilities. There are four outdoor sports facilities, three amenity green spaces, two parks and gardens and four sites containing provision for children and young people. The close proximity of the site to these open spaces may encourage new residents at this location to make use of them. Overall a mixed effect has therefore been identified (significantly positive and potential significant negative) for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (11.52ha); therefore, a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site relatively large (11.52ha) and on greenfield land; therefore a significant negative effect on this SA objective is likely. This site is also located on land designated as Grade 3 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is relatively small (11.52ha) and on greenfield land; therefore, development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.

SA Objectives	SA Score	Justification
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is within 420m of Sunny Banks Pond Local Nature Reserve; therefore development here could have a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 9: housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity, 8: leisure and recreation, 11: land use and 12: landscape character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H8: Land South of Cross Lane, Scholes, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and	-	While the location of housing sites will not influence the number, location or type of employment opportunities available

range of employment opportunities available for local people, and ensure that they are accessible.		<p>in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 46-50 minutes travel time of the nearest employment node; therefore a minor negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary and 21-25 minutes travel time of a secondary school so is likely to have a minor positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 16-20 minutes travel time of a GP (although an area to the north east is within 11-15 minutes travel time) and the whole site is more than an hour travel time from a hospital; therefore a minor negative effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors directly adjacent to the south eastern site boundary, and within 100m of the north eastern site boundary, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 11-15 minutes travel time of both a local centre and a town/district centre (although a small area to the south west of the site is within 16-20 minutes travel time of both); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of a number of areas of open space including a children's playground located approximately 159m to the north of the site, and two Public Rights of Way located approximately 111m to the north west and a 101m to the east. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.75ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.75ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.75ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 573m from the Morton Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation. No potential significant negative effects were identified in relation to any of the SA objectives.		

H9: Broad Oak Farm, Church Lane, Linthwaite, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 36-40 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of both a primary and secondary school so is likely to have a significant positive effect. It is also within 30 minutes of a further education institute, which will contribute to the significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 6-10 minutes travel time of a GP (although an area to the north is within 11-15 minutes travel time) and the whole site is within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors directly adjacent to the north western and part of the eastern site boundaries, and within 100m of the southern site boundary, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The whole site is within 6-10 minutes travel time of a local centre and the majority is also within 6-10 minutes of a town/district centre (although an area to the north is within 11-15 minutes travel time); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the	++	<p>This site is within 600m of a number of areas of open space including a recreation ground located approximately 24m to the west, a golf course located approximately 20m to the south east and an area of semi natural and natural greenspace</p>

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		located approximately 66m to the west. In addition there is an existing Public Right of Way directly adjacent to the western site boundary. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.25ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (6.25ha) on greenfield land; therefore a significant negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (6.25ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA F4: Colne (Slaitwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Christ Church a Grade II Listed Building to the south west. The loss of this area and its subsequent development could harm elements which contribute to the significance of this building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 497m from the Huddersfield Narrow Canal candidate Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure 9: housing, and recreation, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 11: land use and 12: landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H10: The Folly, Cowlersley Lane, Cowlersley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 36-40 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
better capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 10 minutes travel time of both a primary and secondary school so is likely to have a significant positive effect. It is also within 15 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 10 minutes travel time of a GP and within 41-45 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within approximately 40m of the A62 (Manchester Road) to the north of the site which may mean that residents in that part of the site are affected by road noise. There are also a number of residential properties adjacent to the site to the south which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre and within 11-15 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++/--?	This site is partially within an area of semi-natural and natural greenspace, which could be lost as a result of housing

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		development. However, it is part of a much larger area of greenspace, most of which is outside of the site. In addition, there are two areas of amenity green space within 100m of the site to the south west and south east and two outdoor sports facilities approximately 200m to the east and 500m to the south west. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.51ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.51ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.51ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on 2 - 8 Cowlersley Lane which are Grade II Listed Buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 350m from the Huddersfield Narrow Canal candidate Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
risk areas and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: leisure and recreation. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H11: Land to the north east of Highfield Drive, Birstall

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and 11-15 minutes of a secondary school so is likely to have a significant positive effect. The site is also within 11-15 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 5 minutes travel time of a GP and within 36-40 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the south west on Highfield Drive. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 16-20 minutes travel time of a local centre and is within 6-10 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site is on land which has been identified as a green corridor, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. A large public park is located directly to the west of the site. Also to the west within 230m there are outdoor sports facilities and there is provision for children and young people within 270m to the south west, amongst the amenity greenspace at this location. Further provision for children and young people is made within 250m to the east of the site at the children's playground. A mixed (significant positive and potential significant negative) effect is therefore identified.</p>

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.05ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.05ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.05ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is adjacent to the Oakwell Park Local Nature Reserve which is to the west; therefore development here could have a significant negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation (it should be noted that the overall effect for this SA objective was mixed), 10: transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation (it should be noted that the overall effect for this SA objective was mixed) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H12: Land to the South West of Snelsins Lane, Chain Bar, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The northern part of the site is within 6-10 minutes travel time of the nearest employment node; however the southern part of the site is over an hour travel time from the nearest employment node. A mixed effect on this SA objective is therefore likely – significant positive in the northern part of the site and significant negative in the southern part.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The northern part of the site is within 6-10 minutes travel time of a primary; however the southern part of the site is over</p>

SA Objectives	SA Score	Justification
		an hour travel time from a primary school. The north eastern part of the site is within 11-15 minutes travel time of a secondary school; however the southern part is over an hour travel time from a secondary school. A mixed effect on this SA objective is therefore likely – significant positive in the north east and significant negative in the southern part of the site. The north eastern area is also within 30 minutes of a further education institute, which will contribute to the significant positive effect in this part of the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The northern part of this site is within 11-15 minutes travel time of a GP and within 31-35 minutes of a hospital; however the southern part is over an hour travel time from both a GP and a hospital; therefore a mixed effect on this SA objective is likely – minor positive in the northern part of the site and significant negative in the southern part. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The north west boundary of this site is approximately 20m from a slip road which leads on to the M606 (approximately 50m from the north west boundary of the site) which may mean that residents in that part of the site are affected by road noise. There are also a number of residential properties directly adjacent to the site to the south and north east which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The northern part of this site is within 6-10 minutes travel time of a local centre and within 11-15 minutes travel time of a town/district centre; however the southern part of the site is over an hour from both a local centre and a town/district centre. A mixed effect on this SA objective is likely – minor positive in the northern part of the site and significant negative in the south.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation	++/--?	This site is bisected by an existing Public Right of Way, which could be lost as a result of housing development. However the site is within 600m of a number of areas of open space, including a green corridor approximately 17m to the south west, a public playing field approximately 370m to the south east and a bowling green approximately 146m to the north

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		east. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.07ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access in six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (4.07ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4.07ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as development of this site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 598m from the Hanging Wood candidate Local Wildlife Site, approximately 609m from the Hunsworth great and little Wood candidate Wildlife Site and approximately 699m from the Hanging Wood designated Local Wildlife Site. Therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access in six of the eight features assessed. Therefore, a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation (all of these effects were part of overall mixed effects), 10: sustainable transport, and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health, 6: services and 8: leisure and recreation(all of these effects were part of overall mixed effects) and SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H13 Land South of Grange Cote, Sheffield Road, Jackson Bridge, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 46-50 minutes travel time of the nearest employment node; therefore a minor negative effect on this objective is expected.
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
better capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 11-15 minutes travel time of a primary school and the majority of the site is within 16-20 minutes travel time of a secondary school (although a small section to the north is within 11-15 minutes) so is likely to have a significant positive effect. The majority of the site is also within 41-45 minutes of a further education institute (although a small area in the north is within 36-40 minutes).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 26-30 minutes travel time of a GP and is over 60 minutes travel time of a hospital; therefore a minor negative effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The eastern boundary of the site is adjacent to the A616 (Sheffield Road) which may mean that residents in that part of the site are affected by road noise. There are a number of existing residential properties within close proximity of the site to the north and east which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Almost the entire site is within 6-10 minutes travel time of a local centre (although a tiny are in the north is within 5 minutes) and within 26-30 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is approximately 200m of public playing fields to the north east, approximately 280m from allotments to the east and approximately 400m from a private bowling green to the south. The site is also approximately 380m from semi-natural & natural greenspace and 450m from amenity greenspace however the site and facilities are divided by a river, making them harder to access by foot. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.44ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.44ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within high quality agricultural land (the land the site is on is classed as grade 4 agricultural land). The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.44ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to	-?	This site is approximately 1km from Morton Wood Local Wildlife Site; therefore development here could have a minor

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, and potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H14: Land to the south of Lydgate Drive, Lepton, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
opportunities available for local people, and ensure that they are accessible.		This site is located within 26-30 minutes travel time of the nearest employment node; therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 11-15 minutes travel time of a primary school (a small part of the site to the east is located within 6-10 minutes travel time of a primary school). The site is located within 36-40 minutes travel time of a secondary school. As such a minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is located within 6-10 minutes travel time of a GP and is located within 41-45 minutes travel time of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on Lydgate Drive. These properties may be affected by noise during the construction phase of any proposed development. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre and within 16-20 minutes travel time of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is located within close proximity of a number of open spaces which may encourage new residents to make use of them. A cemetery is adjacent to the site to the north by St. John's Church. Lepton Highlanders Sports and Social Club provides access to outdoor sports facilities to the east of the site within 340m. A large semi-natural and natural greenspace is located within 475m of the site to the south west by Lepton Wood. A Public Rights of Way footpath is located to the south of the site within 100m. Overall a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.67ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.67ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is on land which has mostly been identified as Urban Land (the south westerly corner of the site has been identified as Grade 4 Agricultural Land).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.67ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on 8, 14, 16 and 18 Green Balk Lane and the Church of St John the Evangelist which have been designated as Grade II Listed Buildings (the loss of this site and its subsequent development could harm elements which contribute to these Listed Buildings' significance).

SA Objectives	SA Score	Justification
		The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is located approximately 475m from Lepton Great Wood which has been identified as a Candidate Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that development at this location would increase the area of impermeable surfaces in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation. No potential significant negative effects were identified in relation to any of the SA objectives. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H15: Land to the east of Wheat Royd Lodge, Wheatroyd Lane, Almondbury, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and	0	While the location of housing sites will not influence the number, location or type of employment opportunities available

SA Objectives	SA Score	Justification
range of employment opportunities available for local people, and ensure that they are accessible.		in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 36-40 minutes travel time of an employment node, and therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The northern part of the site is within 5 minutes travel time of a primary school and within 11-15 minutes of a secondary school. However, the central part of the site is within 11-15 minutes of a primary school and within 21-25 minutes of a secondary school. In between, journey times to education vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significant positive for the northern part of the site and minor positive for the central part.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 11-15 minutes travel time of a GP and within 46-50 minutes of a hospital. Therefore, this site is likely to have a minor positive effect. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties within 100m to the north; west and south of the site, and during construction, residents of these properties could experience increased levels of noise and light pollution. Therefore, a minor negative effect is likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The northern part of the site is within 16-20 minutes of a local centre and within 5 minutes of a town/district centre. The central part of the site is within 21-25 minutes of a town centre and 11-15 minutes of a town/district centre. Accessibility</p>

SA Objectives	SA Score	Justification
		therefore varies across the site but overall the whole site scores as minor positive.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are several recreational facilities and areas of open space, the closest of which are allotments directly adjacent to the north of the site. There are also outdoor sports facilities, semi-natural and natural greenspace, and areas for children and young people. The site is also surrounded by a number of PRow footpaths (one of which runs along the western edge of the site). Therefore, a significant positive effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 2.9ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to three of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (2.9ha) and on greenfield land, and therefore, a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (2.9ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to

SA Objectives	SA Score	Justification
the historic environment, heritage assets and their settings.		<p>the uncertain potential impacts on the Scheduled Monument at Castle Hill (the loss of this site and its subsequent development could harm elements which contribute to the asset's significance).</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 1km of a number of biodiversity and geodiversity sites, the closest of which is an approved Local Wildlife Site approximately 680m to the south-east. Other sites include Arthur, Molly Carr and Roaf Woods approved Local Wildlife Site which is approximately 725m south of the site, Castle Hill Local Nature Reserve which is approximately 920m west of the site and Hey Lane candidate Local Wildlife Site which is approximately 700m north-west of the site. Therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land but outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to three of eight of the features assessed. Therefore, a minor positive effect is likely overall.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education (as part of a mixed effect) and 8: recreation and leisure. There were no significant effects identified for this site.</p>		

H16: Bolster Moor, Bolster Moor Road, Golcar

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 46-50 minutes travel time of the nearest employment node; therefore a minor negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school and 36-40 minutes of a secondary school so is likely to have a minor positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time of a GP and within 51-55 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by existing residential properties on Bolster Moor Road, Slades Road and Drummer Lane to the south, north east and north west respectively. These properties may be adversely affected by noise pollution produced during the construction phase of any development proposed. The site is also adjacent to the industrial area which exists at Forland Mills to the north. It is considered that close proximity of this industrial site may result in noise pollution affecting new residents at this location in the longer term and as such a significant negative impact on this SA objective is expected.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes of a local centre and is also within 16-20 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within close proximity of a number of designated open spaces. Outdoor sports facilities are provided to the north west of the site within 360m on Pinfold Lane. Amenity greenspace is accessible on Slades Road within 130m of the site to the south east. A children's playground is also accessible at this location. A footpath can be accessed within 110m to the north east of the site on Heath House Lane. As such a significant positive effect is recorded for this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.13ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four out of the eight features assessed. Therefore, a significant positive effect is likely</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.13ha) and consists of mainly greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.13ha) on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development.</p>

SA Objectives	SA Score	Justification
		Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, given that 70, 72 and 74 Slades Road which are adjacent to the site to the south east and that 2 Bolster Moor Road which is adjacent to the site to the south have been designated as Grade II Listed Buildings.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in close proximity of Clough Head Quarry, Slaithwaite which is located within 355m to the north west of the site. The relative proximity of the site to this designated geological feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is located on mostly greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure, 10: transport and 19: climate change, and potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H17: Park Mill Houses 2 and 4, Wakefield Road, Clayton West, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to an employment node vary throughout this site. The southern part of this site is within 5 minutes travel time of the nearest employment node whereas the northern part is over 60 minutes away from an employment node. In between those areas journey times to an employment node vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significantly positive for the southern part and potentially significant negative for the northern part.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		Levels of access to education facilities vary throughout this site. The southern part of this site is within 6-10 minutes travel time of the nearest primary school and within 11-15 minutes travel time of a secondary school and further education institute whereas the northern part of the site is over 60 minutes away from all education facilities. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significantly positive for the southern part and potentially significant negative for the northern part.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The southern part of this site is within 6-10 minutes travel time of the nearest GP and within 46-50 minutes travel time of a hospital whereas the northern part of the site is over 60 minutes away from all healthcare facilities. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially minor positive for the southern part and potentially significant negative for the northern part. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the south which may be affected by noise during the construction phase. The southern boundary of the site is adjacent to the A636 (Wakefield Road) line which may mean that residents in that part of the site are affected by road noise. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local services and facilities vary throughout this site. The southern part of this site is within 6-10 minutes travel time of both the nearest local and town/district centre whereas the northern part of the site is over 60 minutes away from all local services. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially minor positive for the southern part and potentially significant negative for the northern part of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is approximately 240m from private playing fields and 320m from a children's playground to the south. The site is also approximately 470m from allotments and 540m from a children's playground to the south west. In addition, within 10m north east of the site is a PRow footpath and within 250m south of the site are two bridleways. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1ha) and the majority of the site is on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is also within high quality agricultural land (is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1ha) and the majority of the site is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
soil pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of this site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of this site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Potential significant positive effects were identified for this site in relation to SA objectives 1: employment and 3: education, which are both part of a mixed effect and 8: leisure and recreation, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health and 6: local services which are all part of a mixed effect overall and objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H18: Land at 85 Hartshead Lane, Hartshead, Liversedge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 6-10 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school and 36-40 minutes of a secondary school. A minor positive effect is therefore likely on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 21-25 minutes travel time of a GP and within 41-45 minutes of a hospital; therefore a negligible effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north and the south along Hartshead Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 56-60 minutes travel time of a local centre. The majority of the site is also within 41-45 minutes travel time of a town/district centre; therefore a significant negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the	+ +/--?	The site crossed by a footpath to the north and as such this access route may be lost if housing development was to take place at this location; therefore a potential significant negative is recorded for this SA objective. The site is however also

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		<p>in close proximity to a number of open spaces which may encourage new residents to make use of them. Outdoor sports facilities are located adjacent to the site to north east and additional outdoor sports facilities are located within 60m to the east of the site. A children's playground can also be found at this location. Another additional footpath is accessible within 5m to the west of the site.</p> <p>As such a mixed effect (significant positive/potential significant negative) is recorded overall for this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.41ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two out of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.41ha) on mostly greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 3 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.41ha) on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site could impact on the nearby designated heritage assets of 119 and 121 Hartshead Lane which are Grade II Listed Buildings to the south of the site. It is expected that development at the site is unlikely to result in harm to these assets if the development accords with the anticipated Local Plan policies for managing change to the historic environment. A minor negative effect on this SA objective is therefore likely although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Clifton Lagoon is the closest of such features but is located 1.47km to the south west of the site and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green

SA Objectives	SA Score	Justification
		infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on mostly greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, and 8: recreation and leisure and potential significant negative effects were identified in relation to SA objective 6: local services. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H19: Land off Radcliffe Road, Slaithwaite, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 41-45 minutes travel time of an employment node; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Both components of this site are within 5 minutes travel time of a primary school and 21-25 minutes travel time of a secondary school. Therefore, a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Both components of the site are within 5 minutes travel time of a GP and within 41-45 minutes of a hospital. Therefore, this site is likely to have a minor positive effect. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The site is surrounded by existing residential properties which could be affected by noise and light pollution during construction. Therefore a significant negative effect is likely. The site is also approximately 50m north of an existing railway line which could negatively affect residents in terms of noise pollution over the longer term, reinforcing the negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Both components of this site are within 6-10 minutes travel time of a local centre and within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation	+ +/--?	The site is currently crossed by an existing PRoW footpath and therefore it is possible that this path could be lost to development. However, within 600m of the site there are a number of recreational facilities and areas of open space which could be used by residents, the closest of which is an outdoor sports facility approximately 400m south-east of the

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		site. There are also other outdoor sports facilities, a park and garden, a sports centre, allotments and areas for children and young people, and a number of other PRoW footpaths lie to the north and south of the site. Therefore, a mixed effect is likely overall.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.54ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.54ha) and on greenfield land, and therefore, a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.54ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on nearby buildings 92, 94 and adjacent barn which are Grade II Listed. It is considered that the loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Huddersfield Narrow Canal candidate Local Wildlife Site is approximately 220m south of the site, and therefore development here could have a significant negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	-	This site is on greenfield land but outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure (part of a mixed effect overall), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity, 8: recreation and leisure (part of a mixed effect overall) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H20: Land off, Miller Hill, Denby Dale

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 11-15 minutes travel time of the nearest employment node (a small part of the site to the north east is within 16-20 minutes of the nearest employment node); as such a significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

SA Objectives	SA Score	Justification
		<p>accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 11-15 minutes travel time of a primary school and also within 16-20 minutes travel time of a secondary school. A significant positive effect is therefore likely on this SA objective. The site is also located within 21-25 minutes travel time of a centre for further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 5 minutes travel time of a GP. The majority of the site is however located more than 60minutes from a hospital (a small part of the site to north is within 56-60 minutes of a hospital); therefore a significant negative effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on Revel Garth. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre. The site is also within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces. Semi natural and natural greenspaces are located within 70m to the west, 95m to the north and 235m to the north west. A small park which also includes a children's playground is located to the north west also and is within 260m of the site. Outdoor sports facilities are located within 170m to the north of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.57ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.57ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.57ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 110m of the Huddersfield Narrow Canal which has been identified as a Candidate Local Wildlife Site to the north. The proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	-	This site is located on greenfield land; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change and significant negative effects were identified for this site in relation to SA objectives 4: health and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H21: Land north of Moor Lane, Netherthong

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 31-35 minutes travel time of the nearest employment node; as such a negligible effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	++?	The availability of school and college places to serve the growing population will depend in part on whether new places

The site is also within 21-25 minutes travel time of the nearest further education centre.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of a GP and within 51-55 minutes travel time of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north and east on Holmdale Crescent. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 21-25 minutes travel time of a local centre. The majority of the site is also within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. 190m to the north of the site semi-natural and natural greenspace is provided on Miry Lane. A cemetery is accessible within 250m of the site to the east on New Road. Outdoor sports facilities can be accessed within 350m to the north east of the site on School Street.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the</p>

SA Objectives	SA Score	Justification
to live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.35ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.63ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (0.63ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in close proximity to Holmroyd Wood which has been identified as a Local Wildlife Site to the north west within 370m. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: transport and 19: climate change. No significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H22: Land around Links Lodge, Sands Lane, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Almost this entire site is within 26-30 minutes travel time of the nearest employment node (with very small are on the eastern edge over 60 minutes); therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	0?	The availability of school and college places to serve the growing population will depend in part on whether new places are

SA Objectives	SA Score	Justification
are available to all.		<p>provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Almost this entire site is within 16-20 minutes travel time of a primary school (with a very small area on the eastern edge over 60 minutes) and within 26-30 minutes of a secondary school so is likely to have a negligible effect (with a very small area on the eastern edge over 60 minutes). The majority of site is also within 26-30 minutes of a further education institute (with a very small area on the eastern edge over 60 minutes).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Almost this entire site is within 16-20 minutes travel time of a GP (with a very small area on the eastern edge over 60 minutes) and within 41-45 minutes of a hospital (with a very small area on the eastern edge over 60 minutes); therefore a negligible effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are several existing residential properties surrounding the site to the north which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Almost this entire site is within 16-20 minutes travel time of a local centre (with a very small area on the eastern edge over 60 minutes) and within 16-20 minutes travel time of a town/district centre (with a very small area on the eastern edge over 60 minutes); therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open	++	<p>The south western boundary of the site is adjacent to a golf course. There are also two cycle paths approximately 250m from the site one to the south west and one to the north of the site. There are two more areas of playing field and an area of amenity greenspace within 600m north of the site. There is also an area of semi-natural & natural greenspace approximately 410m to the west of the site however there is a river running between the site and the greenspace which</p>

SA Objectives	SA Score	Justification
space and encourage their usage.		make if less easily accessible by foot. In addition, there are a number of PRow footpaths within 250m south of the site. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.76ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.76ha) on brownfield land. Therefore a minor positive effect on this objective is expected. The site is on land which is classed as grade 3 argicultural land
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (0.76ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 120m from Whitley Wood Local Wildlife Site and 300m Jordan Wood and Oliver Wood Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	0	This site is on brownfield land and is outside of flood zones 2 and 3. Therefore a negligible effect is likely.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, and a potential significant negative effect was identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H24: Holme Barn, Red Deer Park Lane, Bristfield, Dewsbury

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 21-25 minutes travel time of the nearest employment node; therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible

SA Objectives	SA Score	Justification
		<p>existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary and 26-30 minutes travel time of a secondary school (with the exception of a very small area in the south west of the site which is within 21-25 minutes travel time of a secondary school) so is likely to have a minor positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP and within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors within 100m to the west and south of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 11-15 minutes travel time of a local centre and within 21-25 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site is within 600m of a number of areas of open space, including an area of informal open space and allotments, approximately 187m and 257m to the south of the site. There is a further area of allotments located approximately 238m to the south west. In addition a Public Right of Way is directly adjacent to both the northern and eastern site boundaries. A significant positive effect is therefore identified.</p>
9. Ensure all people are	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the</p>

SA Objectives	SA Score	Justification
able to live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.07); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.07ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.07ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is more than 1km from any designated biodiversity sites; therefore development here is likely to have a negligible negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation. No significant negative effects were identified in relation to any of the SA objectives.		

H25: Land west of Hollin Brigg Lane, Holmbridge, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 51-55 minutes travel time of an employment node and therefore a significant negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 5 minutes travel time of a primary school and within 26-30 minutes of a secondary

SA Objectives	SA Score	Justification
		school. Therefore, a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The whole site is within 31-35 minutes of a GP and more than 60 minutes from a hospital. A significant negative effect is therefore likely for this SA objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north and east of the site. These receptors could be exposed to noise and light pollution during construction, and as a result, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 26-30 minutes of a local centre and within 21-25 minutes of a town/district centre. Therefore, a minor negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	There is a PRoW footpath within the site boundary which could be lost or disrupted by the development of this site. However, there are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an outdoor sports facility approximately 80m north of the site. Others include additional outdoor sports facilities, amenity greenspace, semi-natural and natural greenspace, cemeteries and areas for children and young people. In addition, there are a number of other PRoW footpaths to the east and a local cycle route is directly adjacent to the east. Therefore, a mixed effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 1.04ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.

SA Objectives	SA Score	Justification
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.04ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (1.04ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are a number of biodiversity designations within 1km of this site, including Yateholme Reservoirs and Plantations candidate Local Wildlife Site (approximately 340m west), Digley Reservoir/Marseden Clough candidate Local Wildlife Site (approximately 500m north-west of the site), Carr Green Meadows approved Local Wildlife Site (approximately 900m north) and Malkin House Wood approved Local Wildlife Site (approximately 800m north-east). Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure. Potential significant negative effects were identified for SA objectives 1: employment, 4: health and 8: recreation and leisure. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H26: Land between Dunford Road and Dover Lane, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 56-60 minutes travel time of the nearest employment node (a small part of the site to the south is located more than 60 minutes from the nearest employment node); as such a significant negative effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is within 11-15 minutes travel time of the nearest primary school. The majority of the site is also within 31-35 minutes travel time of the nearest secondary school (a small part of the site to the north west is within 26-30 minutes travel time of the nearest secondary school); as such a minor positive effect is expected on this SA objective.
4. Improve the health of local	--	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 36-40 minutes travel time of a GP (a small part of the site to the north west is within 31-35 minutes travel tie of a GP). The site is also located more than 60 minutes travel time of the nearest hospital. Overall a significant negative effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties on Dunford Road to the east and to the north. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 16-20 minutes travel time of the nearest local centre (a mall part of the site to the south west is within 21-25 minutes travel time of a local centre). Additionally the north western part of the site is located within 21-25 minutes travel time of the town/district centre and the south west corner of the site is within 31-35 minutes travel time of the town/district centre. The areas within the site between the highlighted extremes are located within variable travel times from their nearest town/district centre respectively. Overall a mixed effect on this SA objective is expected (ranging between minor negative and significant negative effect).</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is within 100m of a semi-natural and natural which is to the north east. Outdoor sports facilities are provided within 225m to the south east on Dunford Road. St George Parish Church provides access to a cemetery within 285m to the west of the site. A park is accessible on Brockholes Lane within 280m to the west of the site and a children's playground is only provided at this location. A small park including provision for a children's playground is located within 460m to the north east of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable</p>

SA Objectives	SA Score	Justification
which meets their needs.		housing. This site is relatively small (1.56ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to one out of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.56ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.56ha) on greenfield land; therefore development here is expected to have a significant negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Underbank Conservation Area that would result due to development of this open space. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Malkin House Wood (a Local Wildlife Site) is the closest of such features but is located 1.07km to west and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to one of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and potential significant negative effects were identified for this site in relation to SA objectives 1: employment, 4: health and 6: access to local service (although the overall effect on this SA objective was noted to be mixed). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H27: Land to the east of Penistone Road, Fenay Bridge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time to a primary school and within 16-20 minutes to a secondary school; therefore it is likely to have a significant positive effect. It is also within 16-20 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP. Most of this site is within 36-40 minutes of a hospital, although there is an area within the north east, which is within 41-45 minutes; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to the A269 (Penistone Road) and approximately, which may mean that residents in these parts of the site are affected by road noise. There are also existing residential properties adjacent to the site to the north and south which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre and within 11-15 minutes of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	<p>This site is within 600m of more than three recreational facilities. There are several public rights of way (PRoW), and a local cycle route. Open spaces include a green corridor, four semi natural and natural greenspaces and one area of amenity greenspace. Other areas include two outdoor sports facilities, two allotments and five sites which contain provision for children and young people. A significant positive effect is therefore identified.</p>

SA Objectives	SA Score	Justification
usage.		
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.68ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.68 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is designated as urban land quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (0.68 ha) greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible however the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and therefore a degree of uncertainty is also attached.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 1km of five designated biodiversity features; Lepton Great Wood, Wakefield Road, Lepton and Carr Wood Candidate Local Wildlife sites and Gawthorpe Lower Wood and Almondbury Common Local Wildlife sites. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is mainly on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: Climate change and potential significant negative effects were identified in relation to SA objective 5: pollution. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H28: Land between 974A and The Commercial PH, New Hey Road, Outlane, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within variable travel times of the nearest employment node. The south west part of the site is located within 11-15 minutes travel time of the nearest employment node while the north eastern part of the site is located within 26-30 minutes travel time of the nearest employment node. Overall a mixed effect (significant positive/minor positive) is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest primary school (part of the site to the south is located within 6-10 minutes travel time of the nearest primary school). The site is located within variable travel times of the nearest secondary school. The south western part of the site is located within 36-40 minutes travel time of the nearest secondary school while the north eastern part of the site is located within 51-55 minutes travel time of the nearest secondary school. Overall a minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of a GP (part of the site to the south west is located within 16-20 minutes travel time of a GP). The site is located within variable travel times of the nearest hospital. The south western part of the site is located within 16-20 minutes travel time of the nearest hospital while the north eastern part of the site is located within 31-35 minutes travel time of the nearest hospital. Overall a mixed effect (significant positive/minor positive) is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site borders the A640 to the south east. As such new residential properties at this location may be affected by noise pollution in the long term and a significant negative effect is expected on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 11-15 minutes travel time of a local centre (the south western part of the site is within 6-10 minutes travel time of a local centre). The majority of the site is also within 21-25 minutes travel time of a town/district centre (the south western part of the site is within 16-20 minutes of a town/district centre). As such a negligible effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the</p>

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is located within 110m of a cemetery to the north east by Outlane Methodist Church. Outdoor sports facilities are located within 310m of the site to the west at Outlane Golf Club. Access to a byway is provided within 130m of the site to the south on Horse Pond Lane.</p> <p>As such given that development at this location may result in housing being located in close proximity to a number of open spaces which may mean new residents are encouraged to make use of these facilities a significant positive is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.68ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three out of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.68ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located mostly on land which has been identified as Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.68ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to	-?	The site is within 600m of Shaw Wood which has been identified as a Local Wildlife Site to the east. The relative

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 1: employment, 4: health (it should be noted that these two scores were given as part of an overall mixed effect) and 8: recreation and leisure and significant negative effects were identified for this site in relation to SA objective 5: amenity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H29: Land north of Pilling Lane, Skelmanthorpe

SA Objectives	SA Score	Justification
1: Increase the number and	++	While the location of housing sites will not influence the number, location or type of employment opportunities available

SA Objectives	SA Score	Justification
range of employment opportunities available for local people, and ensure that they are accessible.		<p>in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest employment node (a small part of the western side of the site is within 16-20 minutes travel time of the nearest employment node); as such a significant positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The northern part of the site is within 11-15 minutes travel time of the nearest primary school while the southern part of the site is within 5 minutes travel time of the nearest primary school. The area in between these two extremes is within 6-10 minutes travel time of the nearest primary school. The majority of the site is also within 11-15 minutes travel time of the nearest secondary school (a small part of the site to the south west is within 6-10 minutes travel time of the nearest secondary school). Overall a significant positive effect is expected on this SA objective. The majority of the site is also within 11-15 minutes travel time of the nearest further education centre (a same part of the site to the south west is within 6-10 minutes travel time of the nearest further education centre).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP (a small part of the site to the east is within 11-15 minutes travel time of a GP). The majority of the site is also within 51-55 minutes of the nearest hospital (a part of the site to the south is within 46-50 minutes of the nearest hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the west on Saville Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 11-15 minutes travel time of a local centre (the southern part of the site is within 6-10 minutes travel time of a local centre). SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (4.7ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 505m of Park Gate Dyke which has been identified as a Local Wildlife Site to the east. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change. No significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H30: Land south-west of Scar Lane Bridge, Golcar, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 21-25 minutes of an employment node; therefore, a minor positive effect is likely for this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 5 minutes travel time of a primary school (although a small section at the south-western corner is within 6-10 minutes) and 21-25 minutes of a secondary school (although a small section at the south-western corner is within 31-35 minutes). Therefore, there is likely to be a minor positive effect on this SA objective.
4. Improve the health of local people and ensure that they can access the health and	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The whole of this site is within 6-10 minutes of a GP and the majority of the site is within 31-35 minutes of a hospital

SA Objectives	SA Score	Justification
social care they need.		(although a section at the southern end of the site is within 36-40 minutes). Overall a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to a railway line which could result in noise pollution over the longer term on future residents. Therefore a significant negative effect is likely. In addition, there are a number of residential properties within 100m north and east of this site, and these residents could be exposed to noise and light pollution during construction of the site, which reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 6-10 minutes of a local centre and 5 minutes of a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	This site is crossed by a PRoW footpath which could be lost or disrupted as a result of the development of this site. However, there are a number of areas of open space within 600m of the site which could be used by residents, the closest of which is amenity greenspace approximately 160m north-west. Other areas include outdoor sports facilities, additional amenity greenspace, parks and gardens and areas for children and young people. In addition, there are a number of PRoW footpaths to the south and west of the site, and a bridleway is directly adjacent to the south. Therefore, a mixed effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.57ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This site is small (0.57ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (0.57ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Huddersfield Narrow Canal candidate Local Wildlife Site is approximately 170m south of this site, and therefore a significant negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified for SA objectives 5: amenity, 8: recreation and leisure and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H31: Land to the north west of Woodsome Drive, Fenay Bridge, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is completely within 11-15 minutes travel time of an employment node, and therefore, a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes of a primary school and mostly within 11-15 minutes of both a secondary school and further education facility. Therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The whole of this site is within 6-10 minutes of a GP, and within 31-35 minutes of a hospital. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.

SA Objectives	SA Score	Justification
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to the A629 (Penistone Road) and future residents could be exposed to noise pollution over the long term, resulting in a significant negative effect. In addition, there are a number of existing residential properties within 100m south and east of this site, and these receptors could be exposed to noise and light pollution during construction of the site, reinforcing the negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 6-10 minutes of both a local centre and a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is a green corridor which is directly adjacent to the east of the site. Other facilities and areas of open space include areas of semi-natural and natural greenspace, amenity greenspace, outdoor sports facilities and allotments. In addition, there are a number of PRoW footpaths to the north-east and east of this site. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.27ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (2.27ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. This negative effect is reinforced as just under half of the site is within grade 3 agricultural land.

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is relatively small (2.27ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Scheduled Monument at Castle Hill (this site forms part of the area of open countryside which contributes to the setting of the Scheduled Monument). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are a number of biodiversity and geodiversity designations within 1km of this site, including Lepton Great Wood candidate Local Wildlife Site (approximately 630m east of the site), Lepton Great Wood Local Geological Site (approximately 870m south-east), Almondbury Common approved Local Wildlife Site (approximately 850m west) and Carr Wood candidate Local Wildlife Site (approximately 800m south-west). Therefore, this site is likely to have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation, 10: sustainable transport and 19: climate change. A potential significant negative effect was identified for SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H32: Land south of Woodsome Drive, Fenay Bridge, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 6-10 minutes travel time of the nearest employment node (although a small area to the south east is within 11-15 minutes); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time of a primary school and within 11-15 minutes travel time of a secondary school so is likely to have a significant positive effect. The site is also within 11-15 minutes of a further education institute.
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP and within 31-35 minutes travel time of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north and east which may be affected by noise during the construction phase. The western boundary of the site is also adjacent to the A629 (Penistone Road) which may mean that residents in the southern part of the site are affected by road noise. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes of a local centre and within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>A Green corridor/pedestrian/cycleway runs adjacent to the western boundary of the site. Approximately 190m to the west of the site is a golf course. Approximately 570m to the east of the site lies a large area of semi-natural & natural greenspace and approximately 460m to the south lies an area of Local Nature Reserve open space. To the north of there is an area of semi-natural & natural greenspace approximately 440m from the site. In addition, there is a PRow footpath within 30m south east of the site and another footpath runs approximately 305m to the east of the site. Therefore, a significant positive effect is expected for this objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.3ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely</p>

SA Objectives	SA Score	Justification
modes of transport.		'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.3ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within an area of high quality agricultural land (the land is classed as urban) however a small section to the west is classed as grade 3.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.3ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the open countryside which contributes to the setting of the Scheduled Monument at Castle Hill. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 465m from Lepton Great Wood Local Wildlife Site, approximately 570m from Lepton Great Wood Local Geological Site, 785m from Carr Wood Local Wildlife Site and 830m from Almondbury Common Local Wildlife site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change and potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H34: Moorlands Wood Turning Co, Luke Lane, Thongsbridge, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 36-40 minutes travel time of an employment node, therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 11-15 minutes of a primary school, 6-10 minutes of a secondary school and 26-30 minutes of a further education facility. Overall, a significant positive effect is likely.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 11-15 minutes travel time of a GP and 51-55 minutes of a hospital. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m east and south which could experience noise and light pollution during construction of the site. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 6-10 minutes of a local centre and 16-20 minutes of a town/district centre. Therefore, a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is a park and garden approximately 40m south-east. Other facilities and areas include outdoor sports facilities, areas of semi-natural and natural greenspace, areas for children and young people and indoor sports facilities. There are also a number of PRoW footpaths surrounding this site, one of which is directly adjacent to the south. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.66ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.66ha) and on mostly brownfield land meaning that there is likely to be a minor positive effect on this

SA Objectives	SA Score	Justification
		objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This site is small (0.66ha) and on mostly brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Hagg Wood candidate Local Wildlife Site is approximately 120m north of this site, and therefore a significant negative effect is likely. Brockholes and Round Wood, Brockholes Local Geological Site is also approximately 885m north of the site.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mostly brownfield land and a large majority of the site is within flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on mostly brownfield land therefore a minor positive effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.		While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. A potential significant negative effect was identified for SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H35: Land East of Red Deer Park Lane, Bristfield, Dewsbury

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 21-25 minutes travel time of the nearest employment node; therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time of a primary and within 26-30 minutes travel time of a secondary school so is likely to have a minor positive effect.
4. Improve the health of local people and ensure	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
that they can access the health and social care they need.		This whole site is within 6-10 minutes travel time of a GP and the majority is within 46-50 minutes of a hospital (although an area to the east of the site is within 51-55 minutes travel time of a hospital); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is not surrounded by existing residential development; however there are a number of sensitive receptors within 100m of the western site boundary, which may be affected by noise during the construction phase. An existing industrial building already on the site may also be affected. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This whole site is within 11-15 minutes travel time of a local centre and the majority is within 21-25 minutes of a town/district centre (although an area to the east is within 26-30 minutes); therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within 600m of a number of areas of open space, including two areas of amenity greenspace, located approximately 124m and 176m to the south west of the site and an area of allotments located approximately 140m to the south west of the site. In addition there is a Public Right of Way directly adjacent to the western site boundary. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.93ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms

SA Objectives	SA Score	Justification
and active modes of transport.		of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.93ha) on mainly greenfield land (although there is an existing industrial building to the north of the site); therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.93ha) on mainly greenfield land (although there is an existing industrial building to the north of the site); therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset.</p> <p>The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is not within 1km of any designated biodiversity sites; therefore development here could have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mainly greenfield land (although there is an existing industrial building to the north of the site) land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on mainly greenfield land (although there is an existing industrial building to the north of the site); therefore a</p>

SA Objectives	SA Score	Justification
		minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation. No potential significant negative effects were identified in relation to any of the SA objectives.		

H36: Land north of Wellfield Close, Grange Moor, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 21-25 minutes travel time of the nearest employment node; therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time of a primary school and within 21-25 minutes travel time of a secondary school so is likely to have a minor positive effect. The site is also within 36-40 minutes of a further education institute.
4. Improve the health of local people and ensure that they	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
can access the health and social care they need.		This site is within 5 minutes travel time of a GP and within 46-50 minutes travel time of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within close proximity the south of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The site is within 6-10 minutes travel time of the nearest local centre and within 21-25 minutes travel time of the nearest town/district centre; therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	To the east of the site there is an area of semi-natural and natural green space approximately 10m from the site. Approximately 50m south west of the site is an area of allotments however this open space is within another housing site option. To the south of the site there is an area of school playing fields approximately 200m away and an area of park and gardens including a children's play area approximately 300m away. To the south east there is an area of amenity greenspace approximately 185m away which is also adjacent to an area of allotments. In addition, there are several PRoW footpaths within 225m north east of the site and two footpaths within 335m south west of the site; however one of the footpaths is located within another housing site option. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.42ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.

SA Objectives	SA Score	Justification
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.42ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.42ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. 18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.</p>
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment and 8: leisure and recreation. No potential significant negative effects were identified in relation to the SA objectives.		

H37: Land south west of the corner of South View Road and Bradford Road, East Bierley, Bradford

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 5 minutes travel time of a primary school (with a small area to the north within 6-10 minutes) and within 11-15 minutes travel time of a secondary school so is likely to have a significant positive effect. Therefore a significant positive effect is expected for this objective. The majority of the site is also within 16-20 minutes</p>

SA Objectives	SA Score	Justification
		of a further education institute (with a small area to the north within 11-15 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 6-10 minutes travel time of a GP and within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within close proximity of the site to the south. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 16-20 minutes travel time of both the nearest local centre and town/district centre; therefore a minor negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Approximately 180m west of the site is a golf course. Approximately 30m to the south of the site is an area of amenity greenspace and an area of park and gardens which lies adjacent to an area of allotments. Also, to the south approximately 55m away is an area of amenity greenspace and 150m away is an area of park and gardens that includes a children's play area. In addition, approximately 200m south east of the site is an area of private playing fields. To the east of the site approximately 70m away is an area of semi-natural and natural greenspace and 105m away is an area of Local Nature Reserve open space. Therefore a mixed significant negative and significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.39ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.39ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.39ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the adjoining East Brierly Conservation Area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is approximately 100m from Tong Moor Local Nature Reserve and Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H38: POL Ryecroft Lane, Scholes, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 41-45 minutes travel time of the nearest employment node (with an area to the west within 51-55 minutes); therefore a minor negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school (with a small area to the east within 5 minutes) and within 21-25 minutes travel time of a secondary school (with an area to the south west within 26-30</p>

SA Objectives	SA Score	Justification
		minutes). Therefore a minor positive is expected for this objective. The majority of the site is also within 41-45 minutes of a further education institute (with a small area to the east within 36-40 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of the site is within 16-20 minutes travel time of a GP (with an area to the west within 11-15 minutes) and over 60 minutes from a hospital; therefore a minor negative effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within close proximity of the site to the east. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of the site is within 11-15 minutes travel time of the nearest local centre (with an area in the south within 16-20 minutes) and within 16-20 minutes travel time of the nearest town/district centre (with a section in the east within 11-15 minutes); therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	The site contains a children's play area which could be lost as a result of housing development. However, to the east of the site approximately 175m away is an area of private playing fields and approximately 180m away is an area of school playing fields. In addition, approximately 340m south west of the site is an area of private playing fields. To the north east of the site approximately 245m away is an area of semi-natural and natural greenspace however the majority of the open space is within another housing site option. Approximately 360m north east of the site is an area of amenity greenspace. Therefore a mixed significant negative and significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.67ha); therefore a significant positive effect is likely.
10. Secure an effective and	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of

SA Objectives	SA Score	Justification
safe transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (6.67ha) on greenfield land; therefore a significant negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (6.67ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies partially in LCA E1: Holmfirth-Meltham and partially in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. LCA E1 is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park. LCA D7 is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is approximately 585m from Morton Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation (part of a mixed effect) and 9: affordable housing, and potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation (part of a mixed effect), 11: use of land and 12: character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H39: POL Strike Lane, Skelmanthorpe, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 16-20 minutes travel time of the nearest employment node (with an area to the north west within 21-25 minutes); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	++?/+?	The availability of school and college places to serve the growing population will depend in part on whether new places are

SA Objectives	SA Score	Justification
are available to all.		<p>provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The eastern part of the site is within 11-15 minutes travel time of both a primary school and a secondary school. However the north western part of the site is within 21-25 minutes of a primary school and within 16-20 minutes of a secondary school. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significant positive for the eastern part and potentially minor positive for the north western part of the site. Travel times to the nearest further education institute also vary throughout the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The southern part of the site is within 6-10 minutes travel time of a GP and over 56-60 minutes of a hospital. However the north western part of the site is within 16-20 minutes of a GP and over 60 minutes away from a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected –minor positive for the southern part and minor negative for the north western part of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the east and south of the site. There is also a railway and technology park immediately to the north of the site which may result in noise pollution affecting residents in the longer-term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town centre services and facilities vary throughout this site. The eastern part of the site is within 11-15 minutes travel time of the nearest local centre and nearest town/district centre. However the north western part of the site is within 21-25 minutes of the nearest local centre and town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected –minor positive for the eastern part and minor negative for the north western part of the site.</p>
7. Make our communities safer by reducing crime, anti-	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,</p>

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There is an area of other open space immediately to the north of the site. To the south of the site approximately 75m from the site is an area of amenity open space. To the south west there are two children's play areas approximately 390m and 435m from the site. In addition there is an area of park and gardens containing a children's play area approximately 530m to the south east of the site. To the south west of the site approximately 540m away is an area of school grounds and playing fields. Approximately 30m north of the site is a PRoW footpath however this is separated from the site by a railway line and is therefore not easily accessible from the site. This is also the same with several other footpaths and an area of amenity open space containing a children's play area which are located to the north of the site and railway line. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.13ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.13ha) mainly on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is also within an area of high quality agricultural land (the land is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.13ha) mainly on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend

SA Objectives	SA Score	Justification
		on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is approximately 590m from Springs Wood Local Wildlife Site and 780m from Blacker Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is mainly on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is mainly on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation and 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H40: Land to the south west of Sheep Ings Farm, Granny Lane, Mirfield

SA Objectives	SA Score	Justification
---------------	----------	---------------

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Levels of access to an employment node vary throughout this site. The northern part of the site of the site is within 26-30 minutes travel time of the nearest employment node and the southern part of the site is within 16-20 minutes of the nearest employment node. In between those areas journey times to an employment node vary in between those two extremes. Therefore a mixed effect on this objective is expected –minor positive for the northern part and significant positive for the southern part of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 11-15 minutes travel time of the nearest primary school and within 41-45 minutes from the nearest secondary school; therefore a minor positive effect on this objective is expected. The majority of the site is also 41-45 minutes from a further education institute (with a small area in the south within 36-40 minutes).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 16-20 minutes travel time of the nearest GP and within 41-45 minutes from the nearest hospital (with an area to the north within 46-50 minutes); therefore a negligible effect on this objective is expected. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are several existing residential properties within close proximity of the site to the west of the site. In addition, there is an industrial area within close proximity to the east of the site which may result in noise pollution affecting residents in the longer-term. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of

SA Objectives	SA Score	Justification
facilities.		housing sites could affect this objective by influencing people's ability to access existing services and facilities. The site is within 6-10 minutes travel time of the nearest local centre and within 11-15 minutes from the nearest town/district centre; therefore a minor positive effect on this objective is expected.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Approximately 535m to the east of the site is an area of golf course. In addition, within 240m to the south east of the site there is a local cycle route and a PRoW footpath. Within 150m north of the site there are several areas of semi-natural & natural greenspace however, there is a river separating the open space areas from the site making them less easily accessible. Approximately 300m north west of the site is an area of allotments; however, this is located within another housing site option. There are several PRoW footpaths to the west within 150m of the site. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.23ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.23ha) mainly on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within an area of high quality agricultural land (the land is classed as urban), however a small area to the south of the site is classed as grade 3.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.23ha) mainly on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.

SA Objectives	SA Score	Justification
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the adjacent Sheep Ings Farmhouse and its attached barn which are Grade II Listed Buildings.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 170m from Briery Bank Wood Local Wildlife Site (although this is within another housing site option) and approximately 455m from Whitley Wood Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and the majority of the site is outside of flood zones 2 and 3 (with an area to the north within flood zone 2 and 3); therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H41: New Laithe Farm, 190 Denby Lane, Upper Denby, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is more than 60 minutes from an employment node; therefore a significant negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 6-10 minutes travel time of a primary school and more than 60 minutes from a secondary school. Overall, a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	--?	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The whole of this site is more than 60 minutes travel time from a GP and a hospital, therefore a significant negative effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are several properties within 100m east and south-east of the site, and the residents of such could experience noise and light pollution during construction of the site. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is more than 60 minutes travel time from a local centre and town/district centre; therefore a significant negative effect is likely.
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is a PRoW footpath runs across the northern part of this site and a local cycling route runs across the southern part of the site. These routes could be lost or disrupted as a result of the site being developed. However, there are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an area of semi-natural and natural greenspace directly adjacent to the west of this site. Other facilities and areas include outdoor sports facilities, a cemetery, a park and garden and area for children and young people. There are also a number of PRoW footpaths to the north-west, north and north-east, and there is a bridleway to the north-east. Therefore, a mixed effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.4ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (4.4ha) and on mostly greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (4.4ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA D9: Low Common, Royd Moor and Whitley Common, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently rising landform and is open, large scale and exposed. Woodland cover is sparse and there is strong rural character and important relative levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Denby Delph candidate Local Wildlife Site is directly adjacent to the west of this site, and therefore a significant negative effect is likely.
15. Reduce air, water and	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
soil pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on mostly greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: recreation and leisure (part of a mixed effect overall), and potential significant negative effects were identified for SA objectives 1: employment, 4: health, 6: local services, 8: recreation and leisure (part of a mixed effect overall), and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H42: Land west of Helme Lane, Meltham, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 41-45 minutes travel time of an employment node; therefore a minor negative effect is likely.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

SA Objectives	SA Score	Justification
through increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes travel time of a primary school and the majority of the site is within 16-20 minutes of a secondary school. Overall, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The north-western part of this site is within 21-25 minutes of a GP and 51-55 minutes of a hospital, whereas the north-eastern part of the site is within 26-30 minutes of a GP and 51-55 minutes from a hospital. Although accessibility varies across this site, a negligible effect is likely overall. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are several properties within 100m north-west, west, south and east of this site, and the residents of such could experience noise and light pollution during construction of the site. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 16-20 minutes travel time from a local centre and the majority of the site is within 21-25 minutes of town/district centre; therefore a minor negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	There are two PRoW footpaths run through this site, and it is likely that these could be lost or disrupted as a result of the site being developed. However, there are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an outdoor sports facility directly adjacent to the west of the site. Other facilities and areas include additional outdoor sports facilities and an area for children and young people. There are also a number of PRoW footpaths surrounding this site, and there are two bridleways to the north and north-west. Moreover, a national cycle route runs along the eastern edge of the site. Therefore, a mixed effect is likely for this

SA Objectives	SA Score	Justification
		SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.11ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to two of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (4.11ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is relatively small (4.11ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Grade II Listed Christ Church and Helme Conservation Area (the loss and development of this site could harm elements that contribute to the significance of these assets). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are a number of biodiversity and geodiversity designations within 1m of this site, including Folly Dolly Falls Local Geological Site (approximately 540m south-east), Hall Hayes Wood approved Local Wildlife Site (approximately 620m east) and Bank Wood candidate Local Wildlife Site (approximately 960m north-east). Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to two of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 3: education and 8: recreation and leisure (part of a mixed effect overall), and a potential significant negative effect was identified for SA objective 8: recreation and leisure (part of a mixed effect overall). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H43: Land South-East of 2 Clough House Lane, Slaithwaite, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 31-35 minutes travel time of an employment node; therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The majority of this site is within 6-10 minutes travel time of a primary school and 11-15 minutes of a secondary school. Overall, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The whole of this site is within 6-10 minutes of a GP and 41-45 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are several properties within 100m east and west of this site, and the residents of such could experience noise and light pollution during construction of the site. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 11-15 minutes travel time from a local centre and the whole of the site is within 6-10 minutes of town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There are two PRoW footpaths run through this site, and it is likely that these could be lost or disrupted as a result of the site being developed. However, there are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is allotments approximately 210m to the east. Other facilities and areas include outdoor sports facilities, semi-natural and natural greenspace, amenity greenspace and areas for children and young people. There are also a number of PRoW footpaths surrounding this site, and a national cycle route is directly adjacent to the north. Therefore, a mixed effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (2.05ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.

SA Objectives	SA Score	Justification
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (2.05ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (2.05ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Grade II Listed Christ Church and Helme Conservation Area (the loss and development of this site could harm elements that contribute to the significance of these assets). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The only biodiversity or geodiversity designation within 1km is Huddersfield Narrow Canal candidate Local Wildlife Site which is approximately 720m to the south. Therefore, a minor negative effect is likely for this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and mostly outside flood zone 3 (although the centre of the site is within a flood zone 3 area, however development in this area could be avoided); therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure (part of a mixed effect overall), 10: sustainable transport and 19: climate change. A potential significant negative effect was identified for SA objective 8: recreation and leisure (part of a mixed effect overall). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H44: Cross Lane (east), Stockmoor, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 36-40 minutes travel time of an employment node; therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 6-10 minutes travel time of a primary school and 16-20 minutes from a secondary school. Therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they	0	The whole of this site is within 21-25 minutes travel time of a GP and the majority of the site is within 46-50 minutes from a hospital. Overall, a negligible effect is likely. The site is not within or adjacent to an AQMA.

SA Objectives	SA Score	Justification
can access the health and social care they need.		
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north, east and west of this site, and these residents could be exposed to noise and light pollution during construction of the site. A minor negative effect is therefore likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 21-25 minutes travel time of a local centre and the whole of the site is within 21-25 minutes from a town/district centre; therefore a minor negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by future residents, the closest of which are allotments - approximately 160m north of the site. Other recreational facilities and areas of open space include a park and garden and area for children and young people. There is a PRow footpath directly adjacent to the south, and there are other paths to the west. Therefore, a significant positive effect is likely for this SA objective overall.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.63ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to two of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.63ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not in an area of quality agricultural land.
12. Protect and enhance the character of Kirklees and the	-?	This site is small (0.63ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity

SA Objectives	SA Score	Justification
quality of the landscape and townscape.		of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Stocksmoor Grasslands Candidate Wildlife site is approximately 210m north-west of this site; therefore a significant negative effect is likely for this SA objective. Upper and Lower Stones Wood Local Wildlife Site and Local Geological Sites are both 435m south of the site.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to two of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education and 8: recreation and leisure. A potential significant negative effect was identified for SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H45: Land to the north of Still House Farm, Upper Batley Low Lane, Upper Batley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The most northern part and most southern part of the site are within 16-20 minutes of an employment node. The centre of the site is located within 26-30 minutes of an employment node. Areas in between these extremes are located at variable travel times from the nearest employment node. As such a mixed effect (significant positive/minor positive) is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The northern part of the site is within 11-15 minutes travel time of a primary school while the centre part of the site is within 21-25 minutes travel time of a primary school. The northern part of the site is within 6-10 minutes travel time of a secondary school while the centre part of the site is within 21-25 minutes travel time of a secondary school. The areas

SA Objectives	SA Score	Justification
		located between these extremes are within variable travel times of a primary school and secondary school. Overall a mixed effect (minor positive/negligible) is expected on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The northern part of the site is within 11-15 minutes of a GP while the centre of the site is located within 21-25 minutes travel time of a GP. The northern part of the site is also located within 31-35 minutes travel time of a hospital while the centre of the site is located within 46-50 minutes travel time of a hospital. Overall a mixed effect (minor positive/negligible) is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to a number of existing residential properties to the west on Upper Batley Low Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The northern part of the site is located within 11-15 minutes travel time of the nearest local centre while the centre of the site is located within 26-30 minutes travel time of the nearest local centre. The northern part of the site is also located within 11-15 minutes travel time of the nearest town/district centre while the southern part of the site is located within 21-25 minutes travel time of the nearest town/district centre. As such a mixed effect (minor positive/minor negative) is expected overall on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is within 40m of outdoor sports facilities which are provided to the west. Amenity greenspace can also be accessed to the west within 30m. Birstall Cricket Club provides access to more outdoor sports facilities within 525m to the north west of the site. A park is located within 445m to the south west of the site and allotments are also provided at this location.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.85ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two out of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.85ha) on mostly greenfield land (it is acknowledged that small parts of the site to the south and north west have previously been developed); therefore a minor negative effect on this SA objective is likely. The site is located on mostly Grade 3 Agricultural Land (a small part of the site to the north is on Urban Land).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.85ha) on mostly greenfield land (it is acknowledged that small parts of the site to the south and north west have previously been developed); therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on 113 Upper Batley Low Lane which is a Grade II Listed Building in close proximity of the site. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 920m of Morley Spring Wood which has been designated as a Local Wildlife Site to the east. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood	-	This site is located on mostly greenfield land (it is acknowledges that some parts of the site to the south and north west have previously been developed) and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given

SA Objectives	SA Score	Justification
risk areas and ensure development does not contribute to increased flood risk for existing property and people.		that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of mostly greenfield land (it is recognised that a small parts of the site to the south and north west has previously been developed) meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (it should be noted however that the overall effect on this SA objective was recorded as mixed) and 8: recreation and leisure. No potential significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H46: Land to the south west of Dewsbury Rams RLFC Owl Lane, Shaw Cross, Dewsbury

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is located within 16-20 minutes travel time of the nearest employment node (parts of the site to the north and to the south are located within 11-15 minutes travel time of the nearest employment node); as such a significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

The southern part of the site is within 11-15 minutes of a town/district centre and central parts of the site are within 26-30 minutes from a local centre. In between these parts of the site, journey times to employment nodes vary in between</p>

SA Objectives	SA Score	Justification
		those two extremes. Overall, a mixed effect (significant positive/negligible) is expected for this SA objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of footpaths and areas of open space within walking distance (600m) of the site which could be used by residents for sports and recreation. These include a park and garden (to the south west within 425m), outdoor sports facilities (adjacent to the site to the north), an allotment (to the within 250m), amenity greenspace (to the north east within 220m) and provision for children and young people (within 105m to the south east. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (15.6ha); therefore significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three out of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a large site (15.6ha) on mostly greenfield land (a small part of the site to the north east has been used for a car park but the remainder of the site is undeveloped); therefore a significant negative effect on this SA objective is likely. The site is mostly located on land which has been categorised as Grade 3 Agricultural Land (a small part of the site to the south is located on land which is categorised as Urban Land).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a large site (15.6ha) on mostly greenfield land (a small part of the site to the north east has been used for a car park but the remainder of the site is undeveloped); therefore development here is expected to have a significant negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site mainly lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning

SA Objectives	SA Score	Justification
the historic environment, heritage assets and their settings.		that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is located within 865m of Caulms Wood Quarry, Dewsbury which has been designated as a Local Geological Site to the west. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on mostly greenfield land (a small part of the site to the north east has been used for a car park but the remainder of the site is undeveloped) and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 6: access to local services (it should be noted that the overall scores recorded for these three SA objectives were mixed), 8: recreation and leisure, and 9: housing and potential significant negative effects were identified for this site in relation SA objectives 11: land use and 12: landscape and townscape. These issues will need to be		

SA Objectives	SA Score	Justification
		considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.

H47: Vicarage Meadows, Carr Lane, Cinderhills, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is more than an hour travel time from the nearest employment node; therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time of a primary and 26-30 of a secondary school so is likely to have a minor positive effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 31-35 minutes travel time of a GP and more than an hour travel time from a hospital; therefore a significant negative effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is not surrounded by existing residential development; however there are a number of sensitive receptors within 100m to the west and north of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 11-15 minutes travel time of a local centre (although a very small area of the south east corner is within 16-20 minutes travel time) and the whole site is within 21-25 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of a number of areas of open space including a recreation ground and children's playground located approximately 279m to the north of the site and an area of semi natural and natural greenspace located approximately 348m to the north west of the site. In addition there is an existing Public Right of Way located directly adjacent to the eastern site boundary. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.98ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.98ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.98ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies mainly in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character</p>

SA Objectives	SA Score	Justification
		Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is more than 1km from any designated biodiversity sites; therefore development here could have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.

SA Objectives	SA Score	Justification
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation, and potential significant negative effects were identified in relation to SA objectives 1: employment and 4: health. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H48: K Line Travel Station Yard, Station Road, Holney

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 26-30 minutes travel time of an employment node. As such a minor positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is within 6-10 minutes travel time of a primary school. The majority of the site is also located within 5 minutes travel time of a secondary school (a small part of the site to the north is within 6-10 minutes travel time of a secondary school). Overall a significant positive effect is expected on this SA objective. The site is within 21-25 minutes travel time of a centre for further education.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is located within 6-10 minutes travel time of the nearest GP. The site is also located within 36-40 minutes travel time of a hospital. Overall a minor positive effect is expected on this SA objective.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is in close proximity to existing properties to the west on Station Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 11-15 minutes travel time of a local centre. The site is also located within 6-10 minutes travel time of a town/district centre. Overall a minor positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are provided within 65m of the site to the west on Station Road. A green corridor is located within 405m to the north west of the site. Allotments are also located to the north west of the site within 555m.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.42ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six out of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	+	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.42ha) on brownfield land; therefore a minor positive effect on this SA objective is likely. The site is located on Grade 3 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This is a relatively small site (0.42ha) on brownfield; therefore development here is expected to have a minor positive effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.</p>

SA Objectives	SA Score	Justification
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 25m of Honley Station Cutting which has been designated as a SSSI to the north east. Upper Park Wood is located to the north east also within 405m and has been designated as a Local Nature Reserve and a Local Wildlife Site. Hey Wood/West Wood has been identified as a Candidate Local Wildlife Site and is within 485m to the east. The proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is located on brownfield land and is outside of flood zones 2 and 3; development at this location is unlikely to increase the area of impermeable surfaces in Kirklees and therefore a negligible effect is expected on this SA objective.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of brownfield land meaning there is likely to be increased opportunity to reuse material already onsite. A minor positive effect is therefore likely on this SA objective depending on the design of the development.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H49: Land to south of Oddfellows Street, Scholes

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Most of this site is within 11-15 minutes travel time of the nearest employment node, although the area in the south east is within 16-20 minutes travel time; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 11-15 minutes travel time to a primary school. However, levels of access to secondary schools vary throughout the site. The most accessible part of the site is the far northern edge which is within 6-10 minutes while the - the least accessible part is the south east which is within 16-20 minutes travel time to a secondary school. However, overall it is likely to have a significant positive effect.</p>

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout the site. The most accessible area is in the far northern edge of the site, which is within 11-15 minutes travel times to a GP and within 41-45 minutes travel time to a hospital. The least accessible area is in the far south eastern area of the site, which is within 21-25 minutes travel time to a GP and 46-50 minutes travel time to a hospital. Travel times to healthcare facilities vary in between these two extremes. Therefore, overall, a mixed effect is expected- minor positive for the far northern edge and negligible for the far south eastern area of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties adjacent to the site to the south, west and north which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and district/town centres vary throughout the site. The whole site is within 6-10 minutes travel time to a local centre. However, the most accessible area for town/district centres is within the north-western area of the site, which is within 11-15 minutes travel time to a town/district centre, while the least accessible area is in the south eastern area, which is within 21-25 minutes travel time. Travel times to district/town centres vary between these two extremes. Therefore, a mixed effect on this objective is expected – potentially minor positive effect for the north-western area of the site and potentially negligible for the south eastern area.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>The site contains two public rights of way (PRoW), which could be lost as a result of development. However this site is within 600m of more than three recreational and leisure facilities, including several PROWs, two parks and gardens, which include provision for children and young people and one amenity greenspace and one semi-natural and natural green space. Other areas include three outdoor sports facilities and an allotment. Therefore, overall a mixed (significant positive and potential significant negative) effect is therefore identified.</p>
9. Ensure all people are able	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the</p>

SA Objectives	SA Score	Justification
to live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.64ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.64 ha) on mainly greenfield land; therefore a minor negative effect on this SA objective is likely. Approximately half of the site is designated as urban land, whereas the other half is designated as grade 3 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (1.64 ha) mainly on greenfield land, therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Hanging Wood Local Wildlife/ Candidate Local Wildlife Site is the closest of such features but is located approximately 2km to the north east and as such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and	-	This site is mainly on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is mainly on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change and a potential significant negative effect was identified in relation to SA objective 8: leisure and recreation (mixed effect). This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H50: Bridge Mills, New Road, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within 36-40 minutes travel time of an employment node; therefore a negligible effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. 8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are located to the east within 60m of the site. Sands Recreation Area is a small park which also provides access to a children's playground within 150m also to the north east of the site. Victoria Park is located to the south west of the site within 495m and can be accessed via Cooper Lane.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the</p>

SA Objectives	SA Score	Justification
to live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.57ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.57ha) on brownfield land; therefore a minor positive effect on this SA objective is likely. The site is located on mostly Urban Land, with small parts of the site to the west and north on Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (1.57ha) on brownfield land; therefore development here is expected to have a minor positive effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Malkin House Wood (a Local Wildlife Site) is the closest of such features but is located 1.35km to the south west and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	0	This site is located on brownfield land and is outside of flood zones 2 and 3; therefore a negligible effect is likely on this SA objective given that the development of new housing on this brownfield land would not result in an increase in the area of impermeable surfaces in the District. Development at this location would therefore not be likely to increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of brownfield land meaning there is likely to be increased opportunity to reuse materials already onsite. A minor positive effect is therefore likely on this SA objective depending on the design of the development.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 5: amenity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H51: Victoria Yard, Sheffield Road, Hepworth, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is over 60 minutes travel time of the nearest employment node; therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	-?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 16-20 minutes travel time of the nearest primary school (with a small area to the west within 21-25 minutes) and the majority of the site is within 46-50 minutes from the nearest secondary school (with a small area to the west within 51-56 minutes); therefore a minor negative effect on this objective is expected. The site is also 56-60 minutes from a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 31-35 minutes travel time of the nearest GP (with a small area to the west within 36-40 minutes) and the site over 60 minutes from the nearest hospital; therefore a minor negative effect on this objective is expected. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are several existing residential properties within close proximity to the south and west of the site. In addition the eastern boundary of the site is adjacent to the A616 (Sheffield Road) which may result in noise pollution affecting residents in the longer-term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 41-45 minutes travel time of the nearest local centre and the majority of the site is within 26-30 minutes from the nearest town/district centre (with a small section in the west within 31-35 minutes); therefore a minor negative effect on this objective is expected.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the	++	<p>The West Yorkshire Cycle Route runs adjacent to the southern boundary of the site. There is also a bridleway approximately 135m south west of the site and a PRoW footpath approximately 120m west of the site. Another bridleway</p>

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		route is located approximately 170m north east of the site. Within 600m south west of the site there are a further two PRoW footpaths. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.38ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as mainly or entirely 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.38ha) and the majority of the site is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.38ha) and the majority of the site is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 780m from Rakes Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
soil pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of the site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as entirely 'green' in terms of its access to any of the eight features assessed; therefore a significant negative effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation and potential significant negative effects were identified in relation to SA objectives 1: employment, 5: amenity, 10: sustainable transport and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H52: Hebble Mount, Meltham, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is located within 41-45 minutes travel time of the nearest employment node (the northern part of the site is located within 36-40 minutes travel time of the nearest employment node). A minor negative effect is expected on this SA objective.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest primary school (the northern part of the site is located within 5 minutes travel time of the nearest primary school). The site is located within 16-20 minutes travel time of a secondary school. Overall a significant positive effect is expected on this SA objective. The site is also located within 31-35 minutes travel time of a centre for further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of the nearest GP. The site is also located within 51-55 minutes travel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the north east on Hebble Mount. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 16-20 minutes travel time of a local centre. The site is also located within 6-10 minutes travel time of a town/district centre. Overall a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is within 10m of a natural and semi-natural greenspace to the north west. A cemetery and allotments are also provided to the north west of the site within 25m and 150m respectively. Outdoor sports facilities are provided at Meltham Church Of England Primary School within 250m to the north east.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.12ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.12ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on mainly Grade 4 Agricultural Land (the north corner of the site is located on land which has been classified as Urban Land).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively small site (1.12ha) on greenfield land and is also within 170m of the Peak District National Park which is located to the south west. Therefore a significant negative effect is expected on this SA objective given potential effects on this designated landscape. The effect is recorded as uncertain given that the exact design of the development is unknown.</p> <p>The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance	0?	The site is not within close proximity of any designated biodiversity features; Honley Wood (a Candidate Local Wildlife Site) is the closest of such features but is located 1.01km to the north east and as such a negligible effect is recorded on

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 12: landscape and townscape. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H53: Land North East of St Joseph's J&I School, Healds Road, Dewsbury

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

local people, and ensure that they are accessible.		The majority of this site is within 6-10 minutes travel time of the nearest employment node (although an area to the east of the site is within 11-15 minutes); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 6-10 minutes travel time of a primary school (although an area to the north of the site is within 5 minutes travel time). Accessibility to secondary education varies across the site. An area to the east is within 21-25 minutes travel time of a secondary school; however an area to the north west is within 11-15 minutes travel time. In between, journey times vary between these two extremes. A mixed effect is therefore likely – significant positive to the north west and minor positive to the east of the site. The whole site is also within 30 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 11-15 minutes travel time of a GP (although an area to the east is within 16-20 minutes travel time) and within 11-15 minutes of a hospital (although an area to the east is within 16-20 minutes); therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>Part of the eastern site boundary is directly adjacent to the A638 (Halifax Road) which may mean that residents in that part of the site are affected by road noise. There are also a number of residential properties adjacent to the western site boundary and part of the northern and eastern which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 6-10 minutes travel time of a local centre (although an area to the east is within 11-15 minutes) and within 16-20 minutes of a town/district centre (although an area to the west is within 11-15 minutes);</p>

		therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site is wholly within an area of semi-natural and natural greenspace, which could be lost as a result of housing development. However, it is part of a larger area of greenspace, the rest of which is outside of the site. There are number of areas of open space within 600m of the site, including an area of amenity green space located approximately 75m to the north west and a public park approximately 185m to the north east. In addition there are two children's playgrounds, both located to the north west, approximately 117m and 155m from the site. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.01ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.01ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.01ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance	0?	This site is not within 1km of any designated biodiversity sites; therefore development here could have a negligible effect on this SA objective.

biodiversity and geodiversity.		
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education (part of an overall mixed effect), 4: health, 8: leisure and recreation (part of an overall mixed effect), 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 3: education (part of an overall mixed effect), 5: amenity and 8: leisure and recreation (part of an overall mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H54: Former Brook Motors Playing Fields, New Mill Road, Brockholes

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within 26-30 minutes travel time of the nearest employment node. A minor positive effect is expected

SA Objectives	SA Score	Justification
they are accessible.		on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The eastern part of the site is located within 6-10 minutes travel time of the nearest primary school while the western part of the site is within 16-20 minutes travel time of the nearest primary school. The eastern part of the site is located within 5 minutes travel time of the nearest secondary school while the western part of the school is located within 11-15 minutes travel time of the nearest secondary school. Areas between these two extremes are located at variable travel times from the nearest primary school and secondary school. Overall a mixed effect (significant positive/minor positive) is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of the nearest GP. The majority of the site is also located within 46-50 minutes travel time of the nearest hospital (the eastern part of the site is located within 41-45 minutes travel time of the nearest hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to the A616 along its north eastern edge. It is considered that the close proximity of this major road may result in increased noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of a local centre (the north eastern part of the site is located within 5 minutes travel time of a local centre). The majority of the site is also located within 11-15 minutes travel time of a town/district centre (the north eastern part of the site is located within 6-10 minutes travel time of a</p>

SA Objectives	SA Score	Justification
		town/district centre). Overall a minor positive effect is expected for this SA objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	The site is on land which has been designated as a semi-natural and natural greenspace, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. The site is within 225m of Brockholes Bowling Club which is located to the south east and provides access to outdoor sports facilities. A semi-natural and natural greenspace is located within 380m also to the south east of the site. Holmfirth Harriers Athletic Club provides access to further outdoor sports facilities to the north east of the site within 60m. Overall a mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.49ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.49ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.49ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on

SA Objectives	SA Score	Justification
settings.		cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 130m of Cliff Wood which has been identified as a Candidate Local Wildlife Site to the east. To the south of the site within 655m Hagg Wood has been identified as another Candidate Local Wildlife Site. Brockholes and Round Wood, Brockholes is located within 610m of the site to the south east and has been designated as a Local Geological Site. The proximity of the site to these designated biodiversity and geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	--	This site is located on greenfield land and also located within Flood Zone 3; therefore a significant negative effect is likely given that the development of new housing on this greenfield land would increase the number of houses at high risk of flooding in the District as well as increasing the area of impermeable surfaces in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education (it should be noted that an overall mixed effect was recorded for this SA objective) 8: recreation and leisure (it should be noted that an overall mixed effect was recorded for this SA objective),		

SA Objectives	SA Score	Justification
10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objectives 8: recreation and leisure (it should be noted that an overall mixed effect was recorded for this SA objective) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H55: Calder Garage, Ravensthorpe Road, Thornhill Lees, Dewsbury, WF12 9EG

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 6-10 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 21-25 minutes travel time of a primary school and 31-35 minutes travel time of a secondary school so is likely to have a negligible effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 6-10 minutes travel time of a GP and within 31-35 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is within close proximity of industrial buildings to the east and a railway line forms the north-western border of the site which may mean that residents in those parts of the site are affected by industrial and rail noise. A residential street, Ravensthorpe Road, forms the southern boundary which means that residents there may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 16-20 minutes travel time of a local centre and within 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site is within 600 m of at least two bridleways (one extends from the corner of the site) and several open spaces are found to the east (300-500m away), including allotments, sports grounds, and natural and amenity greenspaces. Across the river there are further greenspaces within 600m, though accessibility is through an industrial estate. Therefore a significant positive effect is likely.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.7 ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	+	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.7 ha) on brownfield land (a garage); therefore a minor positive effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This is a relatively small site (0.7 ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies mainly in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme</p>

SA Objectives	SA Score	Justification
		and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 800m from Lower Spen Wildlife Area to the north which is designated as a Local Nature Reserve and Local Wildlife Site. In addition, Jordan Wood and Oliver Wood Local Wildlife Site is approximately 940m to the south west; therefore development at this site could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is on brownfield land and is outside of any flood zones; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment nodes and 8: access to		

SA Objectives	SA Score	Justification
		recreation; and a potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.

H56: Land south of Rose Cottage Farm Bristfield Road, Grange Moor

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 21-25 minutes travel time of the nearest employment node; therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time to a primary school. Most of this site is within 21-25 minutes travel time to a secondary school (aside from the northern area of the site which is within 26-30 minutes); therefore, it is likely to have a minor positive effect. It is also within 36-40 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of this site is within 6-10 minutes travel time to a GP (aside from the northern area of the site which is within 11-15 minutes). The site is also within 51-55 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties adjacent to the site to the north and east which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Most of this site is within 6-10 minutes travel time to a local centre (aside from the northern area which is within 11-15 minutes). Most of this site is also within 21-25 minutes travel time to a town/district centre (aside from a small area in the northeast which is 26-30 minutes); therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities. There are several public rights of way (PRoW). Open greenspaces nearby include, an area of semi natural and natural green space, three areas of amenity greenspaces and one park and garden. Other areas include four outdoor sports facilities, two sites containing provision for children and young people and two allotments, although the allotment to the west of the site is included within the housing option site: H710 and therefore could be lost as a result of housing development. However overall significant positive effect has been identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.77ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.77 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The land is designated Grade 4 Agricultural Quality land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (1.77 ha) mainly on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.

SA Objectives	SA Score	Justification
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Liley Wood Local Wildlife Site is the closest of such features but is located approximately 1.1km to the north-west and as such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation. No potential significant negative effects were identified.		

H57: POL, Robert Lane Bill Lane, Wooldale, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 31-35 minutes travel time of the nearest employment node. Therefore, a negligible effect on this SA objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 5 minutes of a primary school, with a small section to the west within 6-10 minutes travel time of a primary school. The site is within 6-10 minutes travel time of a secondary school and within 31-35 minutes travel time of a further education institute. Therefore, development of the site could have a significant positive effect on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 11-15 minutes travel time of a GP, with a small section to the north of the site within 6-10 minutes travel time of a GP. The site is within 46-50 minutes travel time of a hospital. The site is not within or adjacent to an AQMA. Therefore, a minor positive effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The north east of the site is adjacent to the A635 New Mill Road which may result in noise pollution affecting residents of the development in the longer term. The south and west of the site are within close proximity of an existing residential development, which may be affected by noise during the construction phase. Therefore, a significant negative effect on this SA objective is predicted.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre and within 11-15 minutes travel time of a town/district centre. Therefore, a minor positive effect on this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The north of the site is within 20m of several large outdoor sports playing fields, and within 30m of two children's playgrounds. To the north west of the site is an area of semi-natural and natural greenspace (225m). The south of the site is within 140m of an area of semi-natural and natural greenspace, within 255m of park and garden, and within 290m of two children's playgrounds. There is also a PRoW approximately 25m to the north east of the site. Therefore, a significant positive effect on this SA objective is predicted.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.46ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site of approximately 0.46ha. Although the Methodist Free Church is located to the south east of the site (within the site boundary), the site is mainly greenfield land. In addition, it is not within an area of high quality agricultural land as it is classed as Grade 4 in the Agricultural Land Classification. Therefore, a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.46ha) on mainly greenfield land which is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character</p>

SA Objectives	SA Score	Justification
		Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'amber' in terms of the potential for effects on the historic environment. The site lies within the Wooldale Conservation Area. The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is 1.02km from the nearest designated site – Kirklees (Candidate) Local Wildlife Site to the north of the site. Therefore, development may have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is mainly on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is mainly on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change, with potential significant negative effects predicted for SA objective 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H58: Land to the north of Denby Lane, Grange Moor

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Access to employment nodes vary across the site. The most accessible area is in the far south-western edge, which is within 21-25 minutes of an employment mode. The least accessible area is along the lower eastern boundary of the site which is over 60 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the south-western edge and potentially significantly negative for the lower eastern boundary of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		Access to education facilities vary across the site. The most accessible area is in the far south-western edge, which is within 11-15 minutes travel time to a primary school and 21-25 minutes to a secondary school. The least accessible area is along the lower eastern boundary of the site which is over 60 minutes travel time to a primary and secondary school. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the south-western edge and potentially significantly negative for the lower eastern boundary of the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--?	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to GP and hospital facilities varies across the site. The most accessible area is along the south-western boundary, which is within 6-10 minutes travel time to a GP and 51-55 minutes to hospital. The least accessible area is along the lower eastern boundary of the site which is over 60 minutes travel time to a GP and Hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the south-western edge and potentially significantly negative for the lower eastern boundary of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties adjacent to the site in the north-east and south-east which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local, town/district centre varies across the site. The most accessible area is along the south-western boundary, which is within 11-15 minutes travel time to a local centre and 21-25 minutes to town / district centre. The least accessible area is along the lower eastern boundary of the site which is over 60 minutes travel time to a local, town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially negligible for the south-western edge and potentially significantly negative for the lower eastern boundary of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++	This site is within 600m of more than three recreational facilities. There are several public rights of way (PRoW); the

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		closest is immediately adjacent to the site to the west. There is also a Local Cycle Route. Open greenspaces nearby include, an area of semi natural and natural green space, three areas of amenity greenspaces and one park and garden. Other areas include four outdoor sports facilities, two sites containing provision for children and young people and two allotments, although the allotment to the west of the site is included within the housing option site: H710 and therefore could be lost as a result of housing development. However overall significant positive effect has been identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (5.87 ha); therefore, a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a large site (5.87 ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The land is designated as Grade 4 Agricultural Quality land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a large site (5.87 ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Howroyd Beck Fields Lower Whitley Local Wildlife Sites is the closest of such features and is located approximately 1.1km to the north and as such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives, 8: leisure and recreation, 9: Housing, and potential significant negative effects were identified in relation to SA objectives1: employment, 3: education, 4: health, 6: access to services, 11: land use and 12: landscape character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H59: Land south-east of Moorfield Court, Grange Moor

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Approximately half of this site is within 21-25 minutes travel time of the nearest employment node while the other half is within 26-30 minutes travel time; therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation and 9: Housing, and potential significant negative effects were identified in relation to SA objectives 5: amenity, 11: land use and 12: landscape character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H60: Land West and North-West of the Kaye Arms Public House, Wakefield Road, Grange Moor

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Travel times to an employment node vary across the site. The most accessible area is in the far south western edge which is within 26-30 minutes travel time. The least accessible area is in the eastern part of the site which is within 41-45 minutes travel time to an employment node. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the far south western edge and potentially minor negative for the eastern part of the site.
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
better capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part, on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole site is within 11-15 minutes travel time to a primary school. Most of the site is within 26-30 minutes to a secondary school (aside from a western part of the site which is within 31-35 minutes); therefore it is likely to have a minor positive effect. Most of the site is within 36-40 minutes of a further education institute (aside from the area in the western area which is within 41-45 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of this site is within 16-20 minutes travel time of a GP (aside from the western boundary of the site, which is within 11-15 minutes). Most of the site is over 60 minutes to a hospital (aside from the western boundary area which is 46-50 minutes); therefore a minor negative effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is adjacent to the A642 (Wakefield Road), which may mean that residents in these parts of the site are affected by road noise. There are also existing residential properties adjacent to the site to the east which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	-/--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Access to local, town/district centre varies across the site. The most accessible part of the land is in the far south western edge, which is within 26-30 minutes travel time to a local centre and town / district centre. The least accessible area is along the eastern part of the site which is within 56-60 minutes of a local centre and over 60 minutes travel time to a town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor negative for the south-western edge and potentially significantly negative for the eastern part of the site.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced

SA Objectives	SA Score	Justification
of crime.		by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/ --?	This site includes a public right of way (PRoW) which could be lost as a result of housing development. However, this site is within 600m of more than three recreational and leisure facilities including other PRoW's, the closest is immediately adjacent to the site, to the east. This site is within 600m of a local cycle route and an outdoor sports facility, which contains provision for children and young people. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.95ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.95 ha) on brownfield field land; therefore a minor positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a small site (0.95 ha) mainly on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Howroyd Beck Fields Lower Whitley Local Wildlife Site and Kirkby Wood Candidate Local Wildlife Sites are the closest of such features but are both located approximately 1.7km to the north and south of the site and as such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is on brownfield land and is outside of flood zone 3; therefore, a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor positive effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation and potential significant negative effects were identified in relation to SA objectives 5: pollution, 6: access to services and 8: leisure and recreation. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H61: Land to the south west of 49 Cross Bank Road, Carlinghow, Batley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 6-10 minutes travel time of an employment node; therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

SA Objectives	SA Score	Justification
through increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 5 minutes travel time of a primary school as well as 11-15 minutes from a secondary school, and the majority of the site is within 6-10 minutes of a further education facility. Overall, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The majority of this site is within 6-10 minutes travel time of a GP and 26-30 minutes from a hospital; therefore a minor positive effect is likely. This site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is surrounded by a number of sensitive receptors, including existing residential properties, shops, and a primary school. These receptors could be exposed to noise and light pollution during construction of the site and a significant negative effect is therefore likely. In addition, the site is also adjacent to an industrial area, and this could mean that future residents are exposed to noise over the long term which reinforces the significant negative effect.
6. Retain and enhance access to local services and facilities.	++	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 5 minutes travel time of a local centre and 6-10 minutes of a town/district centre. A significant positive effect is therefore likely overall.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	This site is on land designated as semi-natural and natural greenspace and it is possible that this could be lost if the site was developed. However, there are a number of other recreational facilities and areas of open space within 600m of the site which could be used by future residents, including allotments outdoor sports facilities, amenity greenspace, allotments, a cemetery and areas for children and young people. There are a number of PRoW footpaths to the west (one of which runs along the western side of the site) as well as a bridleway. Overall, a mixed effect (significantly positive and significantly negative) is likely for this SA objective.

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.65ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to all eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.65ha) and on mostly greenfield land. Therefore a minor negative effect is likely on this SA objective. The site is not in an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.65ha) and on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on mostly greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to all eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: local services, 8: recreation and leisure (part of a mixed effect overall), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: leisure and recreation (part of a mixed effect overall). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H62: Land to the South-East of Warehouse and Depot, Union Road, Heckmondwike

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 6-10 minutes travel time of an employment node, therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes travel time of a primary school and the majority of the site is within 6-10 minutes travel time of a secondary school and further education facility. A significant positive effect is therefore likely.
4. Improve the health of local people and ensure that they	++/+	Accessibility to healthcare services varies across this site. In this way, the far northern part of the site is within 5 minutes travel time of a GP and 11-15 minutes from a hospital, whereas the far southern part is within 6-10 minutes of

SA Objectives	SA Score	Justification
can access the health and social care they need.		a GP and 31-35 minutes from a hospital. In between these two extremes, accessibility to healthcare services varies. Overall a mixed effect is likely –significant positive for the far northern part and minor positive for the far southern part. The site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is in an industrial area and this could result in future residents being exposed to noise pollution over the long term giving a significant negative effect. In addition, there are a number of existing residential properties within 100m north, west and south of this site and residents of these properties could be exposed to noise and light pollution during construction which reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 11-15 minutes travel time from a local centre and 6-10 minutes from a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	Part of a local cycle route is within the south-western part of this site, and it is possible that this route could be lost or disrupted during construction of the site. However, within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents including a green corridor which is directly adjacent to the south, outdoor sports facilities, parks and gardens, areas for children and young people, areas of semi-natural and natural greenspace, amenity greenspace and civic space. There are also a number of PRoW paths to the west and south-west, as well as a national cycle route to the south which could be used by future residents. A mixed effect is therefore likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.04ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to all eight features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of

SA Objectives	SA Score	Justification
prudent use of land.		land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (2.04ha) and on brownfield land. Therefore a minor positive effect is likely on this SA objective. The site is not in an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This site is relatively small (2.04ha) and on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'industrial/business parks' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on brownfield land and mostly within flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land therefore a minor positive effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to all eight features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health (part of a mixed effect overall), 8: recreation and leisure (part of a mixed effect overall), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: recreation and leisure (part of a mixed effect overall). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H63: Land south of Bracken Hall Road, Sheepridge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time to the nearest employment node; therefore, a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Approximately half of this site is within 6-10 minutes travel time to a primary school, while the other half is within 5 minutes travel time. Most of the site is within 11-15 minutes travel time to a secondary school (aside from a small area in the east which is within 6-10 minutes travel time) so is likely to have a significant positive effect. This site is also within 30 minutes travel time to a further education institute.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time to a GP. Most of this site is within 26-30 minutes travel time to a hospital (aside from an area in the east which is within 31-35 minutes travel time). Therefore, a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of residential properties surrounding the site, which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 6-10 minutes travel time of a local centre (aside from a small area in the east which is within 5 minutes). Approximately half the site is within 11-15 minutes travel time to a town/district centre, while the other half is within 16-20 minutes travel time; therefore, a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>This site is within an amenity greenspace, which could be lost as a result of development. However this site is within 600m of more than three recreation facilities and areas of open space. There are two Public Rights of Way (PRoW), the closest being adjacent to the site to the south and a national cycle route 530m to the south of the site. Open space designations include a green corridor, four allotments, four amenity greenspaces, and seven semi-natural and natural greenspaces. Other recreational spaces nearby include, Deighton Community Sports Arena, six outdoor sports facilities and nine sites containing provision for children and young people. Some of these designations are located within housing option sites and therefore could be lost as a result of housing development. Therefore, overall a mixed effect (significant positive and significant negative) effect for this SA objective is likely.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.44ha); therefore, a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural greenfield land. This is a relatively small site (0.64ha) on greenfield land; therefore, a minor negative effect on this SA objective is likely. The site is located on land designated as urban quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.44ha) on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 530m from Lower Fell Greave Candidate Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a minor positive effect is likely</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education facilities, 4: health, 8: recreation and leisure, 10: sustainable transport and 19: contribution to climate change. Potential significant negative effects in relation to objectives 5: residential amenity and 8: recreation and leisure. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H64: Land to the South and South-West of the Common, Thornhill

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Travel times to an employment node vary across the site. The most accessible area is in the far north eastern area of the site which is within 6-10 minutes travel time. The least accessible area is in the southern part of the site which is within 16-20 minutes travel time to an employment node. In between these two extremes, travel times vary. However overall a potentially significant positive effect is likely.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Travel times to education facilities vary across the site. The most accessible area is along the western boundary which is within 5 minutes travel time to a primary school and 6-10 minutes to a secondary school. The least accessible area is in</p>

SA Objectives	SA Score	Justification
		the far south-eastern edge of the site, which is within 16-20 minutes to a primary school and 21-25 minutes to a secondary school. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the area along the western boundary of the site and potentially negligible for south-eastern edge of the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Travel times to healthcare facilities vary across the site. The most accessible area is in the north western part of the site which is within 5 minutes travel time to a GP and 26-30minutes of a hospital. The least accessible area is in the far south-eastern edge of the site, which is within 11-15 minutes to a GP and 36-40 minutes to a hospital. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially significant positive for the area in the north western part of the site and minor positive for the far south-eastern edge of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties surrounding the site to the west which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Travel times to healthcare local and town/district centres vary across the site. The most accessible area is along the western boundary of the site which is within 5 minutes travel time to a local centre and 16-20 minutes travel time to a town/district centre. The least accessible area is in the far south-eastern edge of the site, which is within 11-15 minutes travel time to a local centre and 26-30 minutes travel time to a town/district centre. In between these two extremes, travel times vary. Therefore, a mixed effect on this objective is expected – potentially minor positive for the area along the western boundary of the site and negligible for the far south-eastern edge of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	<p>This site is within 600m of more than three other recreational facilities. There are several Public Rights of Way (PRoW), closest being immediately adjacent to the southern boundary of the site. Open greenspaces nearby include two park and gardens, four amenity greenspaces, four semi-natural and natural greenspaces and four allotment sites, although two are located within housing site options at site H544 and H65, which could be lost as a result of development. There are also over 10 sports facilities located nearby, although one is located within housing site option H95, which could be</p>

SA Objectives	SA Score	Justification
usage.		lost as a result of development. Therefore, a significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (10.83 ha); therefore, a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significantly positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is large site (10.83 ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. Most of this land is designated as urban, although there is an area in the north west which is designated as Grade 4 Agricultural Quality land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a large site (10.83 ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Sparrow Wood Local Nature Reserve is located approximately 745m north of the site and as such, a minor negative effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings

SA Objectives	SA Score	Justification
use, recovery and recycling of waste close to source.		and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' for five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: leisure and recreation, 9: Housing, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 5: amenity, 11: land use and 12: landscape character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H65: Land North-East of Rectory View, Thornhill

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 11-15 minutes travel time of the nearest employment node (aside from a small area in the south which is within 16-20 minutes); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		Most of the site is within 16-20 minutes travel time to a primary school, although there is an area in the northern part of the site which is within 11-15 minutes travel time to a primary school. Most of the site is within 21-25 minutes travel time to a secondary school (aside from a small area in the far north-east, which is within 15-20 minutes); therefore, it is likely to have a negligible effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 11-15 minutes travel time of a GP, although the northern area of the site is within 6-10 minutes travel time to a GP. The site is also within 36-40 minutes travel time to a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties adjacent to the site to the west which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 11-15 minutes travel time of a local centre (aside from a small area in the north eastern part of the site which is within 6-10 minutes). Approximately half of this site is within 21-25 minutes and travel time to a town/district centre and the other half is within 26-30 minutes of a; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/ --?	This site includes an allotment and two areas of semi natural and natural green space which could be lost as a result of housing development. However, this site is within 600m of more than three other recreational facilities. There are several Public Rights of Way (PRoW), the closest being immediately adjacent to the northern boundary of the site. Open spaces nearby include one park and garden, three other areas of amenity greenspaces. Other areas include one site containing provision for children and young people and six outdoor sports facilities, although one of the sports facilities is included within housing option site: H95 and therefore could be lost as a result of development. However overall a mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable

SA Objectives	SA Score	Justification
which meets their needs.		housing. This site is small (0.75 ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is small site (0.75 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. Most of the site is on land designated Grade 3 Agricultural quality although a small area to the north west of the site is designated urban land use.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (0.75 ha) on greenfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Sparrow Wood Local Nature Reserve is the closest of such features but is located approximately 1.1km to the north and as such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings

SA Objectives	SA Score	Justification
use, recovery and recycling of waste close to source.		and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, and 8: leisure and recreation, and potential significant negative effects were identified in relation to SA objective 8: leisure and recreation. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H66: Land to the west of Westroyd Avenue, Hunsworth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 21-25 minutes travel time of the nearest employment node (aside from a small area in the south and south-west of the site which are both within 16-20 minutes travel time); therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time to a primary school and within 21-25 minutes to a secondary school; therefore it is likely to have a minor positive effect. It is also within 16-20 minutes of a further education institute.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time of a GP. The site is also within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>Whilst the site is not surrounded by residential properties or other sensitive receptors, there are a number of residential properties to the east and south of the site, and the residents of these may be affected by noise and light pollution during the construction phase. There are also industrial buildings and activities directly to the south which could cause noise effects over the long term. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 51-55 minutes travel time of a local centre and within 41-45 minutes of a town/district centre; therefore a significant negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site is within 600m of other recreation and leisure facilities including several PRoW, the closest being a Bridleway, immediately adjacent to the site to the north. Other facilities include one park and garden, which contains provision for children and young people and two outdoor sports facilities. A potential significant positive effect is therefore identified.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.45ha); therefore, a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>

SA Objectives	SA Score	Justification
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.45 ha) on mainly greenfield; therefore a minor negative effect on this SA objective is likely. Most of the site is designated as urban quality, although there is a small area in the far north western edge which is designated grade 3 agricultural land quality.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a small site (1.45 ha) mainly on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies mainly in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.</p>
13. <p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation and potential significant negative effects were identified in relation to SA objectives 6: access to services and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H67: POL south of Helme Lane, Meltham

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Access to employment nodes vary across the site. The most accessible area is in the mid north west of the site, which is within 31-35 minutes travel time to an employment node. The least accessible area is in the far eastern edge, which is within 46-50 minutes travel time. In between these two extremes, travel times to employment nodes vary. Therefore, a mixed effect is likely, potentially negligible effect for the mid north west of the site and a minor negative effect for the far eastern edge.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is in the far northern area of the site, which</p>

SA Objectives	SA Score	Justification
		is within 6-10 minutes travel time to a primary school and within 16-20 minutes travel time to a secondary school. The least accessible area is in the far south eastern area of the site which is within 21-25 minutes travel time to a primary school and within 36-40 minutes travel time to a secondary school. In between these two extremes, travel times to education facilities vary. Therefore, a mixed effect is likely, potentially significant positive effect the far northern area of the site and a negligible effect for the far south eastern area of the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to healthcare varies across the site. The most accessible area is in the north western area of the site, which is within 6-10 minutes travel time to a GP and 46-50 minutes travel time to a hospital. The least accessible area is in the south eastern area of the site which is within 6-10 minutes travel time to a GP and 56-60 minutes travel time to a hospital. In between these two extremes, travel times to healthcare facilities vary. Therefore, overall a potentially minor positive effect is likely for the whole site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties to the north and south west of the site which may be affected by noise and light pollution during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local services varies across the site. The most accessible area is in the north western area of the site, which is within 11-15 minutes travel time to a local centre and 6-10 minutes travel time to a town/district centre. The least accessible area is in the south-eastern area of the site which is within 21-25 minutes travel time to a local centre and 11-15 minutes travel time to a town/district centre. In between these two extremes, travel times to local service facilities vary. Therefore, overall a minor positive effect is likely for the whole site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation	+ +/--?	This site includes a Public Right of Way (PRoW), which could be lost as a result of development. However, this site is within 600m of more than three recreational facilities including other PRoW and a national cycle route, which is directly adjacent to the site in the north. Greenspace designations nearby include a green corridor, one amenity greenspace,

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		three semi-natural and natural greenspace and two park and gardens. Other recreational spaces nearby include five outdoor sports facilities, four sites containing provision for children and young people and five allotment sites. A mixed effect has therefore been identified (significantly positive and significantly negative) for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.5ha); therefore, a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (5.5ha) and on greenfield land; therefore a significant negative effect on this SA objective is likely. Most of this site is on land designated on land designated as Grade 4 agricultural quality, aside from areas in the far west which are on land designated as urban.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is relatively large (5.5ha) and on greenfield land; therefore, development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site mainly lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the Grade II Listed Craddin Cottage. The loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are three biodiversity / geodiversity sites within 1km of the site; Folly Dolly Falls Local Geological (360m), Honley Wood Candidate Wildlife Site (360m) and Hall Hayes Wood (780m). Therefore a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
soil pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation and 9: Housing. Potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation, 11: land use and 12: landscape character. These will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H68: POL Dunford Road, Hade Edge, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 56-60 minutes travel time of the nearest employment node (within an area to the south over 60 minutes); therefore a significant negative effect on this objective is expected.
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
better capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/-?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is an area in the north west which is within 5 minutes travel time of the nearest primary school and 21-25 minutes of a secondary school. The least accessible part of the site is the south eastern edge which is within 21-25 minutes travel time of the nearest primary school and within 41-45 minutes of a secondary school. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective: potentially minor positive for the north western part and potentially minor negative for the south eastern edge of the site. Travel times to the nearest further education institute also vary across the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	-/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the north west which is within 21-25 minutes travel time of the nearest GP and over 60 minutes from a hospital. The least accessible part of the site is the south eastern edge which is within 31-35 minutes of a GP and over 60 minutes from a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect is likely for this objective; minor negative for the north west and significant negative for the south eastern edge of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity to the north and west of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	-/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The most accessible part of the site is the northern part which is within 16-20 minutes of both the nearest local centre and town/district centre. The least accessible part of the site is the south eastern edge which is within 36-40 minutes of the nearest local centre and within 31-35 minutes of a town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; minor negative for the northern part and significant negative for the south eastern edge of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Approximately 10m south west of the site is a PRoW footpath, and another PRoW footpath lies within 175m south east of the site. To the west of the site there are two PRoW footpaths one within 205m and one within 435m. Within 600m north west of the site there are several more PRoW footpaths. Within 25m north west of the site is an area of park and gardens which contain a children's play area and is adjacent to an area of school grounds and playing fields. In addition, to the east of the site is an area of private playing fields approximately 135m away and an area of outdoor sports facilities approximately 290m away. Approximately 460m to the west of the site is an area of outdoor sports facilities. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.79ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (5.79ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not within high quality agricultural land (the land is classed as grade 4).</p>
12. Protect and enhance the character of Kirklees and the	--?	This is a relatively large site (5.79ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.

SA Objectives	SA Score	Justification
quality of the landscape and townscape.		<p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Hade Edge Methodist Chapel and the adjacent Sunday School which are Grade II Listed Buildings.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>This site is approximately 450m Wild Boar Clough Local Wildlife Site, 805m from Morton Wood Local Wildlife Site and approximately 870m from South Pennine Moors Site of Special Scientific Interest (SSSI), Special Area of Conservation (SAC) and Special Protection Area (SPA); therefore development here could have a minor negative effect on this SA Objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>The majority of the site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>The majority of the site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout the site. The most accessible area is in the lower western boundary area of the site, which is within 6-10 minutes travel times to a primary school and secondary school. The least</p>

SA Objectives	SA Score	Justification
		<p>accessible area is the north of the site, which is over 60 minutes travel time to a primary and secondary school. Travel times to education facilities vary in between these two extremes. Therefore, overall, a mixed effect is expected- significant positive for the lower western boundary area and significant negative effect for the northern area of the site. The southern half of the site is also within 30 minutes of a further education institute; while the northern half is, over 60 minutes travel time.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout the site. The most accessible area is in the lower western boundary area of the site, which is within 6-10 minutes travel times to a GP and within 31-35 minutes travel time to a hospital. The least accessible area is the north of the site, which is over 60 minutes travel time to a GP and hospital. Travel times to healthcare facilities vary in between these two extremes. Therefore, overall, a mixed effect is expected- minor positive for the lower western boundary area and significant negative effect for the northern area of the site. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by residential properties to the north and south of the site and the residents of these may be affected by noise and light pollution during the construction phase. There are also industrial buildings and activities directly to the west which could cause noise effects over the long term. A significant negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	+/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to town, local/district centres vary throughout the site. The most accessible area is in the lower south-eastern area of the site, which is within 6-10 minutes travel times to a local centre and within 11-15 minutes travel time to a town/district centre. The least accessible area is the north of the site, which is over 60 minutes travel time to a town, local/district centre. Travel times to town, local/district centres vary in between these two extremes. Therefore, overall, a mixed effect is expected- minor positive for the lower south-eastern area and significant negative effect for the northern area of the site.</p>
<p>7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.</p>	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site contains a Public Right of Way (PRoW), which could be lost as a result of development. However the site is within 600m of other recreation and leisure facilities including several PRoW, including a Bridleway, to the north of the site. Greenspace designations nearby include one green corridor, two park and gardens, two amenity greenspaces and one semi-natural and natural greenspace. However, the semi-natural and natural greenspace is within housing option H509 and therefore could be lost as a result of development. Other facilities nearby include three sites containing provision for children and young people and six outdoor sports facilities. Therefore, overall a mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (12.16ha); therefore, a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (12.16ha) on mainly greenfield; therefore a significant negative effect on this SA objective is likely. Most of the site is designated as grade 3 agricultural land aside from the south western boundary of the site, which is designated as urban land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a large site (12.16ha) mainly on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Hunsworth Great Wood and Little Wood Candidate Local Wildlife Site and Hanging Wood Local Wildlife/ Candidate Local Wildlife Site are all within 1km north of the site and as such, a minor negative effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation and 9: housing. Potential significant negative effects were identified in relation to SA objectives 3: education, 4: health, 6: access to local services, 8: leisure and recreation, 11: land use and 12: landscape character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H70: Long Lane, Shepley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within 21-25 minutes travel time of the nearest employment node. Overall a minor positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

SA Objectives	SA Score	Justification
through increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of the nearest primary school. The site is also located within 16-20 minutes travel time of the nearest secondary school. Overall a significant positive effect is expected on this SA objective. The majority of the site is located within 26-30 minutes travel time of the nearest centre for further education (a small part of the site to the south is located within 21-25 minutes travel time of the nearest centre for further education).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of the nearest GP and within 46-50 minutes travel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the north and south on Field Head. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest local centre (a small part of the site to the south is located within 5 minutes travel time of the nearest local centre). The majority of the site is also located within 21-25 minutes travel time of the nearest town/district centre (a part of the site to the north is located within 26-30 minutes travel time of the nearest town/district centre). As such a negligible effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. Amenity greenspace is located to the south of the site within 110m. Also to the south of the site within 180m a semi-natural and natural greenspace is located by Abbey Road South. A cemetery is located on the grounds of St Paul's Church within 220m to the south west of the site. Allotments are located within 245m also to the south west of the site. Firth Street provides access to outdoor sports facilities within 275m to the south of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.46ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.46ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 3 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.46ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to	-?	The site is within 635m of Gelder Wood which has been identified as a Candidate Local Wildlife Site to the north. Upper

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		and Lower Stones Wood to the north west of the site within 645m is a Local Wildlife Site and a Local Geological Site. Yew Tree Wood is another Local Wildlife Site within 780m of the site to the east. The relative proximity of the site to these designated biodiversity and geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land may increase the area of impermeable surfaces in the District and thus may result in an increase in the overall risk of flooding in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H71

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Levels of access to an employment node vary throughout this site. The most accessible parts of the site are the south and east which are within 5 minutes travel time of the nearest employment node. The least accessible part of the site is the north west corner which is within 11-15 minutes from an employment node. In between those areas journey times to an employment node vary in between those two extremes. However, overall a significant positive effect is expected for this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest primary school (with an area in the north west within 11-15 minutes) and within 11-15 minutes of a secondary school (with an area in the north west within 16-20). Therefore a significant positive effect is likely for this SA objective. The majority of the site is also within 11-15 minutes of a further education institute (with an area in the north west within 16-20 minutes).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest GP (with an area in the north west within 11-15 minutes) and is within 46-50 minutes of the nearest hospital. Therefore a minor positive effect is considered likely for this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity to the east and south of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	++/+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The most accessible parts of the site are a small area in the east and a small area in the south which are within 5 minutes travel time from both the nearest local centre and town/district centre. The least accessible part of the site the north west corner which is within 11-15 minutes from both the nearest local centre and town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; significant positive for the areas in the east and south and minor positive for the north west corner.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is a PRoW footpath that runs through the site and could be lost or disrupted as a result of housing development. However, a bridleway runs adjacent to the northern boundary of the site. To the east of the site approximately 130m away is a cricket ground and pavilion which is adjacent to an area of semi-natural and natural greenspace and an area of children's play provision, however part of the cricket ground and semi-natural and natural greenspace are located within another housing site option. To the south east of the site there is an area of allotments approximately 215m away and an area of children's play provision approximately 220m away. Further to the south east approximately 390m away is an area of park and gardens. There are two more areas of park and gardens to the south of the site approximately 535m and 595m away with the latter located adjacent to a children's play area. Therefore a mixed significant negative and significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.51ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (3.51ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is also within an area of high quality agricultural land (the land is classed as grade 3).</p>

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (3.51ha) on greenfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.</p> <p>The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>This site is approximately 880m from the Riding Wood Local Wildlife Site and 890m from Cliffe Woods Park Quarry, Clayton West Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is on greenfield land and the majority of the site is outside of flood zones 2 and 3 (an area in the north of the site is within flood zone 2); therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-?	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 1: employment, 3: education, 6: local services and facilities, 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 8: recreation and leisure (part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H72: Land off Station Road, Skelmanthorpe, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 11-15 minutes travel time of the nearest primary school and the majority of the site is within 16-20</p>

SA Objectives	SA Score	Justification
		minutes of a secondary school (with an area in the south east within 21-25 minutes) so is likely to have a significant positive effect. The majority of the site is also within 16-20 minutes of a further education institute (with an area in the south east within 21-25 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is within 11-15 minutes travel time of the nearest GP and within 56-60 of a hospital; therefore a minor positive effect is likely for this SA objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within close proximity of the site to the north and west which may be affected by noise during the construction phase. In addition, the southern boundary of the site is also adjacent to a railway line which may result in noise pollution affecting residents in the longer-term. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The site is within 11-15 minutes travel time of both the nearest local centre and town/district centre; therefore a minor positive effect is likely for this objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	There is a PRoW footpath which runs just in the north eastern boundary of the site and could be lost or disrupted as a result of housing development. However, approximately 40m west of the site is another PRoW footpath and another two footpaths run approximately 75m and 165m north of the site. Approximately 250m north east of the site is a bridleway. The site is adjacent to an area classed as 'other' open space. To the south west of the site approximately 340m away is an area of amenity greenspace and approximately 425m south east of the site is an area of school grounds and playing fields. In addition, to the north of the site approximately 95m away is an area of amenity greenspace which contains a children's play area. Therefore, a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the

SA Objectives	SA Score	Justification
to live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.28ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.28ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is also within an area of high quality agricultural land (the land is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.28ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 485m from Blacker Wood Local Wildlife Site, approximately 850m from Springs Wood Local Wildlife Site and approximately 940m from Park Gate Dyke Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and	-	This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified for SA objectives 5: amenity and 8: leisure and recreation (mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H73: Lower Busker Farm, Busker Lane, Scissett

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is located within 11-15 minutes travel time of the nearest employment node (a small part of the site to the north west is located within 16-20 minutes travel time of the nearest employment node). As such a significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	++?	The availability of school and college places to serve the growing population will depend in part on whether new places

SA Objectives	SA Score	Justification
are available to all.		<p>are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest primary school (the northern part of the site is located within 11-15 minutes travel time of the nearest primary school). The majority of the site is located within 6-10 minutes travel time of the nearest secondary school (the northern part of the site is located within 11-15 minutes travel time of the nearest secondary school). Overall a significant positive effect is expected on this SA objective. The majority of the site is located within 6-10 minutes travel time of the nearest centre for further education (a small part of the site to the north is located within 11-15 minutes travel time of the nearest centre for further education).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 5 minutes travel time of the nearest GP (the northern part of the site is located within 6-10 minutes travel time of the nearest GP). The majority of the site is also located within 51-55 minutes travel time of the nearest hospital (the northern part of the site is located within 56-60 minutes travel time of the nearest hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is located within 50m of existing properties to the south west on Busker Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 5 minutes travel time of a local centre (a small part of the site to the north is located within 6-10 minutes travel time of a local centre). The majority of the site is located within 5 minutes travel time of a town/district centre (the northern part of the site is located within 6-10 minutes travel time of the nearest town/district centre). As such a significant positive effect is expected for this SA objective.</p>
7. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site is crossed by a footpath which runs for the north west to connect with Busker Lane to the south. As such a potential significant negative effect is identified for this SA objective. The site is also however in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are located adjacent to the site to the north at Scissett Middle School. Further outdoor sports facilities are provided to the south of the site within 10m on Busker Lane. A cemetery is located to the west of the site within 50m on the grounds of the Church of Saint Augustine's Scissett.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is also expected on this SA objective. Overall a mixed effect is likely.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.72ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (3.72ha) on mostly greenfield land (a small part of the site to the south has previously been developed upon); therefore a minor negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (3.72ha) on greenfield land (a small part of the site to the south has previously been developed upon); therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the barn to the west of Lower Busker Farmhouse which is a Grade II Listed Building.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>

SA Objectives	SA Score	Justification
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is located within 520m of Park Gate Dyke which has been designated as a Local Wildlife Site to the north west. Also to the north west within 700m Blacker Wood has been identified as a Candidate Local Wildlife Site. High Bridge Wood is located to the south west of the site within 440m and is another Candidate Local Wildlife Site. Cliffe Woods Park Quarry, Clayton West is a Local Geological Site and is located within 1km to the east of the site. Riding Wood is located to the east of the site within 780m and parts of it have been designated as a Candidate local Wildlife Site and as a Local Wildlife Site. The relative proximity of the site to these designated biodiversity and geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land may increase the area of impermeable surfaces in the District and thus may result in an increase in the overall risk of flooding in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of mostly greenfield land (a small part of the site to the south has previously been developed upon) meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: access to local services, 8: recreation and leisure (it should be noted that the overall score on this SA objective was recorded as mixed), 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 8: recreation and leisure (it should be noted that the overall score on this SA objective was recorded as mixed). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H74: Land South of 114 - 132, Fort Ann Road, Soothill

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 16-20 minutes travel time of the nearest employment node (with an area to the east over 60 minutes); therefore a significant positive effect is expected for this objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is within 11-15 minutes travel time of the nearest primary school (with a section in the east over

SA Objectives	SA Score	Justification
		60 minutes), within 31-35 minutes travel time of a secondary school (with an area to the east over 60 minutes) and within 31-35 minutes of a further education institute (with an area to the east over 60 minutes). Therefore a minor positive effect is expected for this objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of the site is within 11-15 minutes travel time of the nearest GP (with an area to the east over 60 minutes) and within 31-35 minutes of a hospital (with an area to the east over 60 minutes). Therefore a minor positive effect is expected for this objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties in close proximity to the north of the site which may be affected by noise during the construction phase. In addition there is an industrial area immediately to the south of the site which may result in noise pollution affecting residents in the longer-term. Therefore a significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of the site is within 16-20 minutes travel time of both the nearest local centre and town/district centre (with an area to the east over 60 minutes). Therefore a minor negative effect is likely for this objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	The site is within an area of semi-natural and natural greenspace which could be lost as a result of housing development. However, within 5m west of the site is a PRow footpath and approximately 140m south of the site is a PRow byway. To the north of the site within 290m are three PRow footpaths and two children's play areas however they are located within another housing site option. There is also a bridleway approximately 70m to the east of the site. Approximately 250m to the west of the site is an area of allotments and 340m to the west is an area of amenity greenspace which contains children's play area. In addition, to the north west of the site approximately 325m away is an area of amenity greenspace which is adjacent to an area of private playing fields, however these areas of open space are within another housing site option. Therefore a mixed significant positive and significant negative effect is expected for this objective.

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.42ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.42ha) and is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.42ha) and is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
of waste close to source.		The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment and 8: leisure and recreation (part of a mixed effect) and potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: leisure and recreation (mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H75: Land to west of Outlane Methodist Church, New Hey Road, Outlane, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 26 -30 minutes travel time of the nearest employment node; therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		This site is within 11 - 15 minutes travel time of a primary school. The site is also 51 – 55 minutes of a secondary school and 36 – 40 minutes of a further education institute. Overall, there is likely to be a minor positive effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11 -15 minutes travel time of a GP. The site is also 31 – 35 minutes of a hospital. Overall, a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties within close proximity to the site which may be affected by noise during the construction phase. In addition, the site is sandwiched between the A640 and the M62. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 11- 15 minutes travel time of a local centre. The site is also within 21 - 25 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is in close proximity to a number of PRow's to the south of the site. In addition, there is an outdoor sports facility approx. 160m west/south-west. There is a small area of natural and semi-natural grassland approximately 350m to the north-west. The site is not located within any area currently designated as open space and therefore a significant positive effect is likely.
9. Ensure all people are able to live in a decent home	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable

SA Objectives	SA Score	Justification
which meets their needs.		housing. This site is relatively small (0.89ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.89ha) on greenfield land with a low agricultural grade (classed as grade 4); therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.89ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not close to the Peak District National Park. The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, As Historic England has been requested to consider extending the boundary of the Scheduled Monument at Slack Roman Fort. If this request was agreed by the Secretary of State, the eastern boundary of the monument would be just 60 metres from this site. The loss of this area and its subsequent development, therefore, could harm elements which contribute to the significance of this Scheduled Monument. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 450m from the Shaw Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective. The site may present opportunities to promote habitat connectivity through measures such as green infrastructure provision and as such the negative effect is recorded as uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people		development of the site will increase the area of impermeable surfaces within the District and thus increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: culture and recreation facilities and a potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H76: Land north of Soothill Lane, Batley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 16-20 minutes of the nearest employment node (with the northern edge of the site within 21-25 minutes); therefore a significant positive effect is expected.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest primary school (with an area to the south west within 5 minutes), within 31-35 minutes of a secondary school (with an area in the north within 36-40 minutes) and within 31-35 minutes of a further education institute (with an area in the north within 36-40 minutes). Therefore a minor positive effect is expected for this objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest GP (with an area in the north within 16-20 minutes) and within 31-35 minutes of a hospital. Therefore a minor positive effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a several existing residential properties within close proximity to the south of the site which may be affected by noise during the construction phase; therefore a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 21-25 minutes travel time of the nearest local centre and within 16-20 minutes of the nearest town/district centre. Therefore a minor negative effect is expected for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the	++/--?	There is a PRoW footpath running through the site on the eastern part which could be lost or disrupted as a result of housing development. However, approximately 315m to the north west of the site is a PRoW footpath. Also

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		approximately 20m south of the site is a bridleway however it runs through another housing site option. In addition, within 125m to the south of the site is an area of school grounds and playing fields. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.68ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (5.68ha) and is on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is also within an area of high quality agricultural land (the land is classed as grade 3 with very small area of urban land to the south).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (5.68ha) and is on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is within 70m of Soothill Wood Local Wildlife Site, approximately 475m from Scargill Wood Local Wildlife Site and approximately 590m from Dunn Wood Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation (part of a mixed effect) and 9: affordable housing and potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation (mixed effect), 11: use of land, 12: character and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H77: Land East of Manor Farm Drive, Soothill, Batley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 16-20 minutes of the nearest employment node (with an area in the north east within 21-25 minutes); therefore a significant positive effect is expected.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to an employment node vary throughout this site. The most accessible part of the site is the south eastern corner which is 5 minutes from a primary school, within 31-35 minutes of a secondary school and within 31-35 minutes of a further education institute. The least accessible part of the site is the north eastern corner which is within 11-15 minutes of a primary school, within 36-40 minutes of a secondary school and within 36-40 minutes of a further education institute. In between those areas, journey times to education facilities vary in between those two extremes. However overall a minor positive effect is expected for this objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the western part of the site which is within 11-15 minutes travel time of the nearest GP and within 26-30 minutes of a hospital. The least accessible part of the site is the north eastern part which is within 16-20 minutes of a GP and within 31-35 minutes of a hospital. Therefore a mixed effect is expected for this objective - potentially significant positive for the western part and potentially negligible effect for the north eastern part of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity to the south and west of the site which may be affected by noise during the construction phase; therefore a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local service and facilities vary throughout this site. The most accessible part of the site is the western</p>

SA Objectives	SA Score	Justification
		part which is within 16-20 minutes travel time of the nearest local centre and within 11-15 minutes of the nearest town/district centre. The least accessible part of the site is eastern part which is within 21-25 minutes of a local centre and within 16-20 minutes of a town/district centre. Therefore a mixed effect is expected for this objective; potentially minor positive for the western part and potentially a minor negative effect for the eastern part of the site.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Approximately 60m to the north west of the site is a PRoW footpath. Also approximately 130m south of the site is another PRoW footpath however it runs through another housing site option. In addition, within 80m to the south of the site is an area of school grounds and playing fields. Within 600m south west to the site are several PRoW footpaths and bridleways, two children's play areas and an area of semi-natural and natural greenspace however these area all within other housing site options. In addition there is a bridleway approximately 310m to the south east of the site that is within another housing site option. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (8.37ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (8.37ha) and is on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is also within an area of high quality agricultural land (the land is classed as grade 3 with very small area of urban land to the south).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (8.37ha) and is on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.

SA Objectives	SA Score	Justification
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is within 520m of Soothill Wood Local Wildlife Site and approximately 965m from Scargill Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: health (part of a mixed effect), 8: leisure and recreation and 9: affordable housing and potential significant negative effects were identified in relation to SA objectives 11: use of land and 12: character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H78: Land west of 809 - 835 Bradford Road, East Bierley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of this site is within 11-15 minutes travel time to a primary school (aside from a small area in the north and south which is within 6-10 minutes). Most of this site is within 6-10 minutes to a secondary school (aside from a small area in the south of the site which is within 11-15 minutes travel time); therefore it is likely to have a significant positive effect. It is also within 15 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP. Most of this site is also within 46-50 minutes of a hospital (aside from a small area in the north, which is within 41-45 minutes travel time); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to the A651 (Bradford Road) and an industrial site to the south west and as such new residents could be effected by noise and light pollution. There are also existing residential properties adjacent to the site to the north and east of the site which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 16-20 minutes travel time of a local centre (aside from a small area in the north, which is within 21-25 minutes travel time). The site is also within 16-20 minutes of a town/district centre (aside from a small area in the north, which is within 21-25 minutes travel time); therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of three recreational facilities. There are several Public Rights of Way (PRoW), three parks and gardens, a semi-natural and natural green space and two amenity green spaces. Other sites nearby include three sports facilities, one allotment and one site containing provision for children and young people. Therefore, a significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.85ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.85 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The land is designated as urban quality.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a small site (0.85 ha) mainly on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies mainly in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for</p>

SA Objectives	SA Score	Justification
		Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Tong Moor Local Nature Reserve is approximately 170m south of the site and as such, a significant negative effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is mainly on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor negative effect is identified.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: Climate change and potential significant negative effects were identified in relation to SA objective 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H79: Land to the west of Abbey Road North, Shepley, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The east of the site is within 11-15 minutes travel time of the nearest employment node, with the west of the site within 16-20 minutes travel time of the nearest employment node. Therefore, a significant positive effect on this SA objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The east of the site is within 5 minutes of a primary school, while the west of the site is within 6-10 minutes travel time of a primary school. The majority of the site is within 21-25 minutes of a secondary school, with the west of the site within

SA Objectives	SA Score	Justification
		26-30 minutes travel time of a secondary school. The east of the site is within 26-30 minutes of a further education institute, with the west of the site within 31-35 minutes travel time of a further education institute. Therefore, development of the site could have a minor positive effect on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of the site is within 6-10 minutes travel time of a GP, with a small section to the south west within 11-15 minutes of a GP. The site is within 46-50 minutes travel time of a hospital. The site is not within or adjacent to an AQMA. Therefore, a minor positive effect on this SA objective is expected.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The east of the site is adjacent to the A629 Abbey Road which may result in noise pollution affecting residents of the development in the longer term. The north and south of the site are in close proximity to residential properties, which may be affected by noise during the construction phase. Therefore, a significant negative effect on this SA objective is predicted.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of the site is within 5 minutes travel time of a local centre, with the west of the site within 6-10 minutes travel time of a local centre. The east of the site is within 16-20 minutes travel time of a town/district centre, with the west of the site within 21-25 minutes travel time of a town/district centre. Therefore, a minor positive effect on this SA objective is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The north of the site is within 410m of an outdoor sports facility, within 430m of an area of semi-natural and natural greenspace, and within 530m of amenity greenspace. The north west of the site is within 480m of two areas of amenity greenspace. The west of the site is within 85m of a PRoW. Therefore, a significant positive effect on this SA objective is predicted.

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.08ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site of approximately 1.08ha and is mainly on greenfield land (there is a small shed to the south east of the site). However, the site is on Grade 3 agricultural land. Therefore, a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.08ha) mainly on greenfield land which is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site lies mainly in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that the development of the site is unlikely to result in harm to any designated heritage asset; therefore a negligible effect on this SA objective is likely.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 175m of a Local (Candidate) Wildlife Site, within 445m of another Local (Candidate) Wildlife Site, and within 700m Local (Approved) Wildlife Site. Therefore, development may have a significant negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	The site is mainly on greenfield land and is outside of flood zones 2 and 3. Therefore, a minor negative effect is likely.

SA Objectives	SA Score	Justification
risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is mainly on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 10: sustainable transport, and 19: climate change, with potential significant negative effects predicted for SA objectives 5: local amenity, and 14: biodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H80: Land South of Grasscroft, Almondbury, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 31-35 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are

SA Objectives	SA Score	Justification
		<p>uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary and 11-15 minutes of a secondary school so is likely to have a significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP and the majority of the site is within 41-45 minutes of a hospital (although a small area to the north of the site is within 36-40 minutes travel time); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors directly adjacent to the north western site boundaries, and within 100m of the eastern and south western site boundaries, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 16-20 minutes travel time of a local centre and within 6-10 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>This site is partially bisected by an existing Public Right of Way, which could be lost as a result of housing development. However, this site is within 600m of a number of areas of open space including an area of allotments located approximately 275m to the west of the site, a bowling green located approximately 234m to the north west, and a children's playground located approximately 277m to the north west. Given that the close proximity of these open spaces to the site may encourage new residents to make regular use of them a significant positive effect is also identified on this objective and overall a mixed (significant positive and potential significant</p>

SA Objectives	SA Score	Justification
		negative) effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.43ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.43ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.43ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts development of this site could have on the current area of open countryside which contributes to the setting of the Scheduled Monument at Castle Hill. The loss of this area and its subsequent development could harm elements which contribute to the significance of this Scheduled Monument. In addition this site lies within the Almondbury Conservation Area. The loss of this currently open area and its subsequent development could harm elements which contribute to the significance of this area.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 303m from the Arkenley Lane candidate Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation (part of an overall mixed effect), 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 8: leisure and recreation (part of an overall mixed effect). This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H81: Hall Ing, Hall Ing Lane, Honley, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Accessibility to the nearest employment node varies across this site. An area to the west is within 41-45 minutes travel time; however two areas to the north and west are over an hour travel time from the nearest employment node. A mixed effect is therefore likely – minor negative in an area to the west and significant negative in the two areas to the west and north of the site.
2. Achieve an economy better	0	The location of housing sites will not affect the success of the local economy. While housing development may

SA Objectives	SA Score	Justification
capable of growth through increasing investment, innovation and Entrepreneurship.		result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Accessibility to education facilities varies across the site. An area to the west is within 11-15 minutes travel time of both a primary school and a secondary school; however two areas to the north and west are over an hour travel time from both the nearest primary and the nearest secondary school. A mixed effect is therefore likely – significant positive to the west of the site and significant negative in two areas to the north and west of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Accessibility to health and social care varies across the site. An area to the west is within 16-20 minutes travel time of a GP; however two areas to the north and west of the site are over an hour travel time from a GP. The majority of the site is also over an hour travel time from a hospital (although an area to the south west of the site is within 41-45 minutes travel time). A minor negative effect is therefore likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors directly adjacent to the northern and south eastern site boundaries, and within 100m of the north eastern site boundary, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Accessibility to local services and facilities varies across this site. An area to the west is within 11-15 minutes travel time of a local centre and 16-20 minutes travel time of a town/district centre. However two areas to the north and west are over an hour travel time from both a local and town/district centre. A mixed effect is therefore</p>

SA Objectives	SA Score	Justification
		likely – negligible to the west and significant negative in the two areas to the west and north of the site.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of a number of areas of open space including a green corridor located approximately 522m to the south west, and two existing Public Right of Ways – one of which is located directly adjacent to the north western site boundary and the other which is located approximately 52m to the south east of the site. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.06ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to none of the eight features assessed. Therefore, a significant negative effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.06 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.06ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying</p>

SA Objectives	SA Score	Justification
		and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on a large group of Grade II Listed Buildings at Hall Ing. The loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 152m from the Hey Wood / West Wood candidate Local Wildlife Site and approximately 236m from the Cliff Wood candidate Local Wildlife Site. In addition it is approximately 670m from the Brockholes and Round Wood Local Geological Site; therefore development here could have a significant negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to none of the eight features assessed. Therefore, a significant negative effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education (part of an overall mixed effect) and 8: leisure and recreation, and potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 6: services (all of which were part of overall mixed effects), 10: sustainable transport, 14: biodiversity and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H82: Land to the east of the electricity substation, Health Road, Linthwaite, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 41-45 minutes travel time of the nearest employment node. Therefore, a negligible effect on this SA objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 16-20 minutes travel time of a primary school and a secondary school. The majority of the site is within 36-40 minutes of a further education institute, with a small section to the south within 31-35 minutes of a further education institute. Therefore, development of the site could have a minor positive effect on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within site 21-25 minutes travel time of a GP, with a small section to the south within 16-20 minutes of a GP. 11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site of approximately 0.99 ha on greenfield land. In addition, it is not within an area of high quality agricultural land as it is classed partly as Grade 4 and partly as Urban in the Agricultural Land Classification. Therefore, a minor negative effect on this SA objective is likely. Therefore, a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.99ha) on greenfield land which is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site lies mainly in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for</p>

SA Objectives	SA Score	Justification
		Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that the development of the site is unlikely to result in harm to any designated heritage asset; therefore a negligible effect on this SA objective is likely.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are no designated sites for biodiversity or geodiversity within 1km of the site. Therefore, development may have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3. Therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to one of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation, with no potential		

SA Objectives	SA Score	Justification
significant negative effects predicted. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H83: Land at junction of Paris and Sandy Gate, Scholes, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 46-50 minutes travel time of the nearest employment node, with the east of the site within 51-55 minutes of the nearest employment node. Therefore, a minor negative effect on this SA objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is within 5 minutes travel time of a primary school, with a small section to the north west within 6-10 minutes of a primary school. The site is within 21-25 minutes of a secondary school and within 41-45 minutes of a further education institute. Therefore, development of the site could have a minor positive effect on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is within 16-20 minutes travel time of a GP and over 60 minutes travel time of a hospital. The site is not within or adjacent to an AQMA. Therefore, a minor negative effect on this SA objective is expected.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The north, south and east of the site are within close proximity to residential properties, which may be affected by noise during the construction phase. Therefore, a minor negative effect on this SA objective is predicted.

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 11-15 minutes of a local centre, with the east of the site within 6-10 minutes travel time of a local centre. The majority of the site is within 16-20 minutes travel time of a town/district centre, with a small section to the south west within 11-15 minutes of a town/district centre. Therefore, a negligible effect on this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The east of the site is within 115m of a semi natural and natural greenspace and within 230m of amenity greenspace. To the south east of the site are two areas classified as outdoor sports facilities (135m and 205m). To the south west is a children's playground (330m). The north of the site is within 60m of a PRow. Therefore, a significant positive effect on this SA objective is predicted.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.08ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site of approximately 1.08 ha on greenfield land. In addition, it is not within an area of high quality agricultural land as it is classed as Grade 4 in the Agricultural Land Classification. Therefore, a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.08ha) on greenfield land which is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is</p>

SA Objectives	SA Score	Justification
		a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that the development of the site is unlikely to result in harm to any designated heritage asset; therefore a negligible effect on this SA objective is likely.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The south of the site is within 650m of a Local (Approved) Wildlife Site. Therefore, development may have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3. Therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation, with no potential		

SA Objectives	SA Score	Justification
significant negative effects predicted. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H84: Land to the west of Swallow Farm, Hodgson Lane, Birkenshaw, Bradford, BD11 2DA

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 21-25 minutes travel time of the nearest employment node, with the north east of the site within 26-30 minutes of the nearest employment node. Therefore, a minor positive effect on this SA objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The western part of the site is within 5 minutes of a primary school and within 21-25 minutes of a secondary school. The eastern part of the site is within 16-20 minutes of a primary school and within 26-30 minutes of a secondary school. In between the western and eastern parts of the site, journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially minor positive for the western side and potentially negligible for the eastern side.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of the site is within 6-10 minutes travel time of a GP, with a small section to the east of the site within 11-15 minutes of a GP. The site is within 56-60 minutes travel time of a hospital. The site is not within or adjacent to an AQMA. Therefore, a minor positive effect on this SA objective is expected.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.

SA Objectives	SA Score	Justification
		The south and north east of the site are adjacent to residential properties, which may be affected by noise during the construction phase. The east of the site is within 375m of the A650, which may result in noise pollution affecting residents of the development in the longer term. Therefore, a minor negative effect on this SA objective is predicted.
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within site is within 26-30 minutes of a local centre, with the north east of the site within 31-35 minutes travel time of a local centre. The majority of the site is within 21-25 minutes travel time of a town/district centre, with the west of the site within 16-20 minutes travel time of a town/district centre. Therefore, a minor negative effect on this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	To the west of the site is an area of amenity greenspace (12m) and an outdoor sports facility (30m). To the south is an allotment (245m). To the north west are several outdoor sports facilities, with the closest 100m from the site. PRow exists 5m to the north of the site, 10m to the west, and border the south eastern edge of the site. Therefore, a significant positive effect on this SA objective is predicted.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.77ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site of approximately 1.77ha on greenfield land. The majority of the site is classed as Urban in the Agricultural Land Classification; however the north east of the site is classed as Grade 3. Therefore, a minor negative effect on this SA objective is likely.</p>

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.77ha) on greenfield land which is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site lies mainly in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	--?	<p>Historic England has rated this site as 'red' in terms of the potential for effects on the historic environment. This site lies within the boundary of the Registered Battlefield at Adwalton. National policy guidance makes it clear that Registered Battlefields are considered to be in the category of designated heritage assets of the highest significance where substantial harm to their significance should be wholly exceptional. The allocation of this site, therefore, is incompatible with the NPPF. As such a significant negative effect is expected on this SA objective. This negative effect is recorded as uncertain given that the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and additionally considering that opportunities may exist to enhance the setting of identified heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>The site is within 380m of the Tong Moor Local Nature Reserve. Therefore, development may have a minor negative effect on this SA objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>The site is on greenfield land outside of flood zones 2 and 3. Therefore, a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation, with potential significant negative effects predicted for SA objective 13: historic environment, and a mixed effect predicted for SA objective 3: education. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H85: Land to the north of 10 Kimberley Street, Thornhill Lees

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 11-15 minutes travel time to the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of this site is within 6-10 minutes travel time to a primary school (aside from an area in the west which is within 11-15 minutes). Approximately half of this site is within 11-15 minutes travel time of a secondary school, while the other half is within 16-20 minutes (although there is a very small area in the north west, within is 21-23 minutes). Therefore, overall this site is likely to have a significant positive effect.</p>

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however, where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 6-10 minutes travel time to a GP, (although the south eastern area is within 5 minutes). Most of this site is also within 26-30 minutes travel time to a hospital (aside from the western area which is within 31-35 minutes travel time). Therefore, overall a significant positive effect is expected. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are also a number of residential properties adjacent to the site to the south and east which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 6-10 minutes travel time to a local centre and 16-20 minutes to a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>Most of the site contains an allotment, however the eastern area includes a semi-natural and natural greenspace, which could be lost as a result of housing development. However this site is within 600m of other existing spaces which support access to recreational facilities and areas of opens space. There are several PROW, including bridleways, and a national and local cycle route 170m north of the site. Open space designations nearby include an area of semi-natural and natural greenspace adjacent to the site to the west and an amenity greenspace immediately adjacent to the site to the east. There is a further amenity greenspaces, and an area of semi-natural and natural greenspace, as well as one green corridor. Other facilities nearby include seven outdoor sports facilities, three allotment sites and two sites containing provision for children and young people. A mixed effect (significantly positive and significantly negative) is therefore expected for this site.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.63ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of</p>

SA Objectives	SA Score	Justification
safe transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely or mostly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.63ha) on brownfield land; therefore a minor positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (0.63ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as development of this site is unlikely to result in harm to any designated heritage asset The effect on this SA objective is therefore negligible but uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 700m from the Sparrow Wood Local Wildlife Site and 710m from Sparrow Wood Local Nature Reserve; therefore development here could have a minor negative effect on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not adjacent to or within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is on mainly brownfield land and is outside of flood zone 3; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on mainly brownfield land; therefore a minor positive effect is likely. The effect is recorded as uncertain

SA Objectives	SA Score	Justification
		given that the design of the development and the materials available onsite are currently unknown.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely or mostly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 8: leisure and recreation (a mixed effect). This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H86: Land between Scholes Moor Road and Oak Scar Lane, Scholes, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 51-55 minutes travel time of the nearest employment node (although an area to the west of the site is within 46-50 minutes travel time); therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 6-10 minutes travel time of a primary school (although an area to the north is

SA Objectives	SA Score	Justification
		within 5 minutes of a primary school) and the whole site is within 21-25 minutes travel time of a secondary school so is likely to have a minor positive effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Accessibility to health and social care varies across this site. An area to the west of the site is within 11-15 minutes travel time of a GP; however an area to the east is within 31-35 minutes travel time of a GP. In between, journey times vary between these extremes. The whole site is over an hour travel time from a hospital. A mixed effect is therefore likely – minor positive to the west of the site and significant negative to the east. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors directly adjacent to the western and part of the northern site boundaries, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 11-15 minutes travel time of a local centre. Accessibility to a town/district centre varies across this site. An area to the west is within 11-15 minutes from a town/district centre; however an area to the west is within 21-25 minutes travel time. A mixed effect is therefore likely – minor positive to the west of the site and negligible to the west.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of a number of areas of open space including a children's playground located approximately 214m to the west of the site and an area of amenity greenspace located approximately 399m to the north east of the site. In addition there is an existing Public Right of Way located directly adjacent to the eastern boundary of the site, and another located approximately 293m to the west. A significant positive effect is therefore identified.
9. Ensure all people are able to live	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the

SA Objectives	SA Score	Justification
in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.33ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (4.33ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (4.33ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset.</p> <p>The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 227m from the Morton Wood Local Wildlife Site; therefore development here could have a significant negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 1: employment, 4: health (part of an overall mixed effect), and 14: biodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H87: Land west of Lower Quarry Road, Bradley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 16-20 minutes travel time to the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		This site is within 11-15 minutes travel time to a primary school and 16-20 minutes to a secondary school so is likely to have a significant positive effect. It is also within 30 minutes of a further education institute, which will contribute to the significant positive effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however, where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 16-20 minutes travel time to a GP and 46-50 minutes of a hospital. Therefore, a minor positive effect is likely in relation to access to healthcare facilities. However, the site also has an AQMA directly adjacent to the southern boundary which could mean that residents' health is affected by poor air quality. A mixed effect (minor positive and minor negative) is therefore likely.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The A6107 (Bradley Road) is approximately 12m to the south and the site is adjacent to a train line, which may mean that residents in that part of the site are affected by road noise. There is also an industrial land use adjacent to the site in the east and south, which could cause noise effects over the long term. Furthermore there are also a number of residential properties adjacent to the site to the south and west which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 11-15 minutes travel time to a local centre and 21-25 minutes to a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of several areas of open space. A public right of way runs approximately 45m from the north east boundary. There are also local footpaths, natural and semi-natural green spaces, two amenity green spaces, a park and garden approximately 125m south west of the site, which includes an area for children and young people. Furthermore, the site is also within 600m of two allotments to the south west and a bowling green approximately 125m to the south east. A significant positive effect is therefore likely.

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.24ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely or mostly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.87ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.87ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as development of this site is unlikely to result in harm to any designated heritage asset The effect on this SA objective is therefore negligible but uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 93m from the Sir John Ramsden Canal candidate Local Wildlife Site; therefore development here could have a significant negative effect on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	--	This site is directly adjacent to an AQMA; therefore a significant effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely or mostly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 5: amenity, 14: biodiversity and 15: air, water and soil pollution. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H88: Land to East of Outlane Methodist Church, New Hey Road, Outlane

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The western part of the site is within 11-15 minutes of the nearest employment node; however the eastern part of the site is within 21-25 minutes from an employment node. In between, journey times to employment nodes vary in between those two extremes. Therefore a mixed effect on this objective is expected – significantly positive for the western side and minor positive for the eastern side.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	++	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The northern part of the site is within 6-10 minutes of a primary school, within 26-30 minutes of a secondary school, as well as being within 21-25 minutes of a further education institute. However, the southern part of the site is within 6-10 minutes of a primary school, within 36-40 minutes of a secondary school, and within 26-30 minutes of a further education institute. In between, journey times to education facilities vary in between those extremes. Overall, a minor positive effect on this SA objective is expected.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The northern part of the site is within 6-10 minutes of a GP and within 16-20 minutes of a hospital. The southern part of the site is within 11-15 minutes of a GP and within 26-30 minutes of a hospital. In between, journey times to healthcare facilities vary in between those two extremes. Overall, a significant positive effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The north of the site is adjacent to the A640 while the southern boundary is within 40m of the M62, which may result in noise pollution affecting residents of the development in the longer term. Therefore, a significant negative effect on this SA objective is predicted.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre. The majority of the site is within 16-20 minutes of a town/district centre, with a small section to the south of the site within 21-25 minutes of a town/district centre. Therefore, a negligible effect on this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 100m south of the site is a large golf course. To the north west of the site is a cemetery (25m) and to the north east of the site is an area of semi natural and natural greenspace (220m). The southern boundary of the site is within 100m of a PRoW running adjacent to the golf course. Therefore, a significant positive effect on this SA objective is predicted.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.6ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site of approximately 0.6ha on greenfield land. In addition, it is not within an area of high quality agricultural land as it is classed as Grade 4 in the Agricultural Land Classification. Therefore, a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.6ha) on greenfield land which is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'amber' in terms of the potential for effects on the historic environment. English Heritage has requested extending the boundary of the Scheduled Monument at Slack Roman Fort. If this request was agreed by the Secretary of State, the monument would extend onto this site. The loss of this area and its subsequent development, therefore, could harm elements which contribute to the significance of this Scheduled Monument. Therefore, the effect on the historic environment of development of this site is uncertain.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The south east of the site is within 385m of Shaw Wood Local (Approved) Wildlife Site. Therefore, development may have a minor negative effect on this SA objective.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3. Therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 4: health, 8: leisure and recreation, 10: sustainable transport, and 19: climate change, with potential significant negative effects predicted for SA objective 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H89: Land South-East of 74 Barnsley Road, Flockton, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this

SA Objectives	SA Score	Justification
they are accessible.		objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 5 minutes travel time of the nearest primary school and within 26-30 minutes of a secondary school. Therefore a minor positive effect is expected for this objective. The site is also within 51-55 minutes travel time of a further education institute</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest GP (with an area in the north within 6-10 minutes) and is within 56-60 minutes of the nearest hospital. Therefore a minor positive effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north, east and west of the site. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 5 minutes travel time of the nearest local centre and within 16-20 minutes of a town/district centre. Therefore a minor positive effect is expected for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 10m north of the site is an area of semi-natural and natural greenspace which has a PRoW footpath running along its eastern boundary. Approximately 135m north east of the site is an area of school grounds and playing fields. In addition, within 60m south west of the site is a PRoW byway. To the east of the site approximately 280m away is an area of amenity greenspace which is adjacent to an area of allotments. To the north east of the site 255m away is an area of playing fields which includes a cricket ground, allotment gardens and recreation ground. This open space is also adjacent to an area of semi-natural and natural greenspace which in turn is adjacent to an area of park and gardens that contains an area of children's play provision. Approximately 100m east of the site is a PRoW footpath and within 300m south of the site there are a three more PRoW footpaths. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.46ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.46ha) and is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is also within an area of high quality agricultural land (the land is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.46ha) and is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 385m from Kirkby Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and the majority of the site is outside of flood zones 2 and 3 9the southern edge of the site encroaches onto an area of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives.		

H90: POL, Thorncliffe Lane, Emley, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 11-15 minutes travel time of the nearest employment node. Therefore, a significant positive effect on this SA objective is expected.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes of a primary school, and within 21-25 minutes of a secondary school. The majority of the site is within 41-45 minutes travel time of a further education institute, with the south and east of the site within 46-50 minutes of a further education institute. Therefore, development of the site could have a minor positive effect on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of a GP and within 55-60 minutes travel time of a hospital. The site is not within or adjacent to an AQMA. Therefore, a minor positive effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The north and west of the site are adjacent to residential properties, with the east of the site within close proximity to Thornfield Grange Cottages and Farm, all of which may be affected by noise during the construction phase. Therefore, a minor negative effect on this SA objective is predicted.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes of a local centre. The majority of the site is within 16-20 minutes travel time of a town/district centre, with a small section to the south west within 11-15 minutes of a town/district centre. Therefore, a negligible effect on this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the

SA Objectives	SA Score	Justification
the fear of crime.		location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The south of the site is within 110m from an outdoor sports facility, within 225m from a park and garden, and within 180m of a cemetery. The north east of the site is within 15m of a PRoW. Therefore, a significant positive effect on this SA objective is predicted.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.44ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site of approximately 1.44 ha on greenfield land. However, it is classified as high quality agricultural land as it is classed as Grade 3 in the Agricultural Land Classification. Therefore, a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.44ha) on greenfield land which is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that the development of the site is unlikely to result in harm to any designated heritage asset; therefore a negligible effect on this SA objective is likely.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The north of the site is within 915m of Kirkby Wood Local (Candidate) Wildlife Site. Therefore, development may have a minor negative effect on this SA objective.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3. Therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 10: sustainable transport, and 19: climate change, with no potential significant negative effects predicted. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H91: Land West of 132 – 168 Foxroyd Lane, Thornhill

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 21-25 minutes travel time of the nearest employment node (aside from the southern area which is within 16-20 minutes); therefore a minor positive effect on this objective is expected.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of this site is within 11-15 minutes travel time to a primary school, aside from the southern area which is within 6-10 minutes. Most of the site is also within 21-25 minutes travel time to a secondary school (aside from the southern area which is within 16-20 minutes); therefore, it is likely to have a minor positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 11-15 minutes travel time of a GP, although the southern area is within 6-10 minutes travel time to a GP. The site is over 60 minutes travel time to a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties adjacent to the site to the east and southern boundaries which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 11-15 minutes travel time of a local centre, aside from the southern area which is within 6-10 minutes. Most of this site is also within 31-35 minutes travel time to a town/ district centre, aside from the southern area of the site which is within 26-30 minutes travel time to a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three other recreational facilities. There are several Public Rights of Way (PRoW) and a local cycle route. Open greenspaces nearby include three semi-natural and natural green spaces immediately south of the site and a green corridor. There are also two sports facilities located nearby; therefore, a significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.33 ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly of entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is small site (1.33 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. Most of the site is designated Grade 4 Agricultural Quality land, aside from a small area in the south east of the site which is designated as urban.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (1.33 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0	The site is not within close proximity of any designated biodiversity features; Howroyd Beck Fields Lower Whitley and Local Wildlife Sites are the closest of such features but is located approximately 1.1km to the north and as such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' for three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation. No potential significant negative effects were identified.		

H92: Land to the north of Crossley Lane

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 21-25 minutes travel time to the nearest employment node; therefore a minor positive effect is likely.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

through increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 11-15 minutes travel time to a primary and secondary school; therefore, a significantly positive effect is likely for this SA objective. This site is also within 15 minutes travel time to a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 11-15 minutes travel time to a GP (aside from the north-eastern edge, which is within 16-20 minutes travel time). Most of this site is also within 46-50 minutes travel time to a hospital (aside from the north-eastern edge, which is within 51-55 minutes travel time). Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties adjacent to the site to the south and west which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre. Approximately half of this site is within 11-15 minutes travel time to a town/district centre, while the other half is within 16-20 minutes travel time. Therefore, overall a negligible effect is likely for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the	++	This site is within 600m of four recreational facilities. There is a Public Right of Way (PRoW) immediately adjacent to the site in the east, in addition to five other PRoW. Other recreational spaces nearby include one park and garden, four

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		outdoor sports facilities and one site containing provision for children and young people. Therefore, a significantly positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.89ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site relatively small (0.89ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. This site is also located on land designated as urban quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (0.89ha) and on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is within 330m of Sunny Banks Pond Local Nature Reserve; therefore, development here could have a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified.		

H93: Rodley Lane, Emley, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 5 minutes travel time of the nearest primary school (an area of the site to the north is located within 6-10 minutes travel time of the nearest primary school) and is located within 21-25 minutes of a secondary school. As such minor positive effect is likely for this objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest GP (part of the site to the south is located within 5 minutes travel time of the nearest GP) and is located within 56-60 minutes of a hospital. Overall a minor positive effect is likely for this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties in close proximity to the north of the site on Thornccliffe Lane which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of the nearest local centre and within 11-15 minutes of the nearest town/district centre. Therefore a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation	++	The site is adjacent to outdoor sports facilities to the south on the grounds of Emley First School. A cemetery is located within 100m of the site to the south west by Emley Methodist Church. A small park is located by Chruch Lane within 130m of the site also to the south west. Given the relative proximity of these open spaces to the site it is anticipated that new

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		residents may be encouraged to make use of them and therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.54ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.54ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is on land which has been classified as Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.54ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not located in close proximity to any designated biodiversity or geodiversity sites. The closest of such features is Kirkby Wood Candidate Local Wildlife Site which is within 1.10km to the north of the site. As such a negligible effect is recorded for this SA objective. The effect is recorded as uncertain given that development at this location may promote habitat connectivity through measures such as the provision of green infrastructure.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood	-	The site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
risk areas and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was as entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 10: transport and 19: climate change. No potential significant negative effects were identified for any of the SA objectives against which this site was assessed. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H94: Land to the west of Henry Frederick Avenue, Netherton, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 26-30 minutes travel time of the nearest employment node (with an area in the north west within 31-35 minutes); therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 5 minutes travel time of the nearest primary school (with an area in the north west within 6-10 minutes) and within 26-30 minutes of a secondary school. Therefore a minor positive effect is likely for this objective. The majority of the site is also within 16-20 minutes of the nearest further education institute (with an area in the north west within 21-25 minutes).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest GP (with an area in the south east within 5 minutes) and within 51-55 minutes of a hospital so a minor positive effect is likely for this SA objective (with an area in the east within 46-50 minutes). The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties in close proximity to the east and south of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest local centre (with an area in the east within 5 minutes) and within 16-20 minutes of the nearest town/district centre (with an area in the south east within 11-15 minutes). Therefore a negligible effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the	++/--?	<p>There is a PRoW footpath that runs through the southern part of the site which could be lost or disrupted as a result of housing development. However, to the north of the site there are two PRoW footpaths, approximately 20m and 185m</p>

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		away and a byway approximately 255m away. The site is adjacent to an area of semi-natural and natural greenspace. In addition, 145m to the east of the site is an area of allotments, approximately 450m away is a private bowling green and 485m away is an area of school grounds and playing fields which contains an area of children's play provision. Also to the east of the site is an area of amenity greenspace approximately 550m away which contains a children's play area. Therefore, a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.88ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.88ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.88ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is adjacent to Dean wood Local Wildlife Site, approximately 625m from Delves Wood Local Wildlife Site, approximately 700m from Spring Wood Honley Local Wildlife Site, approximately 735m from Honley Wood Local Wildlife Site, approximately 770m from Bank Wood Local Wildlife Site and approximately 835m from Johnson Wellfield Quarries, Crosland Hill Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was as entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change and potential significant negative effects were identified for SA objective 8: leisure and recreation (mixed effect) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H95: Land East of the Combs, Hall Lane, Thornhill

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is over 60 minutes travel time to the nearest employment node (aside from a small area in the south

SA Objectives	SA Score	Justification
they are accessible.		west which is within 16-20 minutes); therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of this site is over 60 minutes travel time to the nearest primary and secondary school (aside from a small area in the south west which is within 6-10 minutes); therefore a significant negative effect on this objective is expected.
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of this site is over 60 minutes travel time to a GP, aside from a small area in the south which is within 6-10 minutes. Most of this site is also over 60 minutes to the nearest hospital, aside from a small area which is within 36-40 minutes therefore a significant negative effect on this objective is expected. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties surrounding which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Most of this site is over 60 minutes travel time to a local centre, aside from a small area in the south which is within 6-10 minutes. Most of this site is also over 60 minutes to the nearest town/district, aside from a small area which is within 21-25 minutes therefore a significant negative effect on this objective is expected.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++/ --?	This site is located within an existing sports facility which could be lost as a result of housing development. However,

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		this site is within 600m of more than three other recreational facilities. There are several Public Rights of Way (PRoW), the closest being immediately adjacent to the southern boundary of the site. Open greenspaces nearby include one park and garden, which includes provision for children and young people, and an allotment, although this is located within housing option site: H65 and therefore could be lost as a result of development. There is also three other sports facilities located nearby. However overall a mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.54 ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as entirely 'green' in terms of its access to any of the eight features assessed. Therefore, a significantly negative effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is small site (0.54 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The land is designated as Grade 3 Agricultural Quality land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (0.75 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects upon the Scheduled Monument at Thornhill Hall, a number of Grade II Listed buildings to the south of this site and Thornhill Conservation Area. The effect on this SA objective is therefore uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Sparrow Wood Local Nature Reserve is the closest of such features but is located approximately 1.3km to the north and as such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site has not been classed as mainly or entirely 'green' for any of the eight features assessed; therefore a significant negative effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation. Potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health, 6: access to services, 8: leisure and recreation, 10: sustainable transport and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H96: Land to the north of Quarryfields, Crossley Hill

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 21-25 minutes travel time to the nearest employment node (aside from a eastern area of the site, which is within 26-30 minutes travel time); therefore a minor positive effect is likely.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Approximately half of this site is within 6-10 minutes travel time to a primary school, while the other half is within 11-15 minutes travel time. Most of this site is also within 20 minutes travel time to a secondary school, (aside from a small area along the eastern boundary which is within 21-25 minutes travel time). Therefore, a significantly positive effect is likely for this SA objective. This site is also within 20 minutes travel time to a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 11-15 minutes travel time to a GP (aside from the north-eastern edge, which is within 16-20 minutes travel time). Most of this site is also within 46-50 minutes travel time to a hospital (aside from the north-eastern edge, which is within 51-55 minutes travel time). Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties adjacent to the site to the west which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre. Approximately half of this site is within 11-15 minutes travel time to a town/district centre, while the other half is within 21-25 minutes travel time. Therefore, overall a negligible effect is likely for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of four recreational facilities. There is a Public Right of Way (PRoW) adjacent to the site to the west, in addition to four other PRoW within 600m. Greenspace designations nearby include one park and garden, one area of natural and semi-natural greenspace and one amenity greenspace. Other recreational spaces nearby include four outdoor sports facilities and one site containing provision for children and young people. Therefore, a significantly positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.7ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site relatively small (1.7ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. Most of this site is located on land designated as urban quality; aside from the area in the northeast which is designated as grade 3 agricultural quality land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (1.7ha) and on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is within 450m of Sunny Banks Pond Local Nature Reserve; therefore, development here could have a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified.		

H97: Land at Park House Farm, the Common, Thornhill Lees

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 6-10 minutes travel time to the nearest employment node (aside from the southern area in the south which is within 11-15 minutes); therefore, a significant positive effect on this objective is expected.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time to a primary school (aside from a south-eastern boundary which is within 11-15 minutes). Approximately half of this site is within 11-15 minutes travel time to a secondary school, while the other half is within 16-20 minutes. therefore, it is likely to have a significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 6-10 minutes travel time of a GP, although t there is a small area of land to the west which is within 5 minutes travel time to a GP. However, travel times to hospitals vary across the site. The most accessible area is in the north-west, which is within 26-30 minutes, while the least accessible area is in the southern area, which is within 36-40 minutes to a hospital. Therefore, a mixed effect is expected- potentially significant positive for the north-west and potentially minor positive for the south.</p> <p>The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties adjacent to the site to the west and southern boundaries which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 6-10 minutes travel time of a local centre (aside from a small area in the far southern edge which is within 11-15 minutes). Most of this site is within 21-25 minutes travel time to a town/ district centre while the remainder of the site is within 16-20 minutes; therefore, a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three other recreational facilities. There are several Public Rights of Way (PRoW) and a local and national cycle route. Open greenspaces nearby include two park and gardens, two amenity greenspaces, three semi-natural and natural green spaces. There are also three allotment sites and six outdoor sports facilities located nearby. Some of these designations are within other housing site options and could therefore be lost as a result of housing development. Therefore, a significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (4.19 ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly of entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significantly positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is small site (4.19 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. Half of this land is designated as urban, while the other half is designated as Grade 3 Agricultural Quality land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (4.19 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance	-?	Sparrow Wood Local Nature Reserve is located approximately 645m north-west of the site and as such, a minor negative effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' for five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health (as part of an overall mixed effect), 8: leisure and recreation, 10: sustainable transport and 19: Climate change. No potential significant negative effects were identified.		

H99: Land north of Branksome, Rotcher Lane, Slaithwaite

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within 36-40 minutes travel time of the nearest employment node. A negligible effect is expected on this SA objective.
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
better capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 5 minutes travel time of the nearest primary school. The majority of the site is located within 21-25 minutes travel time of a secondary school (a small part of the site to the south is located within 16-20 minutes travel time of a secondary school). Overall a minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 11-15 minutes travel time of the nearest GP. The site is also located within 46-50 minutes travel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in adjacent to a railway to the north. Given that siting residential development at this location may result in noise pollution affecting residents in the longer term a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 11-15 minutes travel time of a local centre (the northern part of the site is located within 16-20 minutes travel time of a local centre). The site is also located within 6-10 minutes travel time of a town/district centre. Overall a minor positive effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are located to the north west within 150m of the site at Slaithwaite Junior & Infant School. A semi-natural and natural greenspace is located within 115m to the north of the site. A cemetery is located within 250m to the east of the site at Saint James Church. Further outdoor sports facilities can be accessed to the south of the site within 240m at Nields Primary and Nursery School.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.42ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.42ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.42ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance	--?	The site is within 25m of Hanging Wood which has been identified as a Candidate Local Wildlife Site to the south. The proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objectives 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H100: Ravensthorpe Mills, Calder Road, Ravensthorpe, Dewsbury

SA Objectives	SA Score	Justification
1: Increase the number and	++	While the location of housing sites will not influence the number, location or type of employment opportunities available

SA Objectives	SA Score	Justification
range of employment opportunities available for local people, and ensure that they are accessible.		in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and is within 21-25 minutes travel time of a secondary school and further education facility so could have a minor positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time of a GP and is within 31-35 minutes travel time of a hospital so is likely to have a minor positive effect on access to healthcare. However, the site is also adjacent to the AQMA at Scouthill, Dewsbury which could result in a minor negative effect on the health of residents as a result of exposure to poor air quality. Overall, a mixed effect is therefore likely.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>Whilst the site is not surrounded by residential development, it is directly adjacent to the A644 (Huddersfield Road) to the north of the site which may mean that residents in that part of the site are affected by road noise. This results in a significant negative effect. The site is also within 100m of a number of industrial buildings which may cause noise pollution, reinforcing the negative effect.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 11-15 minutes travel time of a local centre and within 6-10 minutes of a town/district centre; therefore a minor positive effect is likely.</p>

SA Objectives	SA Score	Justification
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space surrounding the site and within 600m, the closest of which is an area of semi natural and natural greenspace adjacent to the site. There are also outdoor sports facilities, one Local Nature Reserve, parks and gardens, provisions for children and young people, as well as PRoW footpaths and a National Cycle Route. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.13ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.13ha) on brownfield land; therefore a minor positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This site is relatively small (3.13ha) and on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance	-?	This site is approximately 260m south from the Lower Spenningsdale Wildlife Area Local Nature Reserve/Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		
15. Reduce air, water and soil pollution.	--	This site is directly adjacent to the AQMA at Scouthill, Dewsbury; therefore a significant negative effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on brownfield land and is within flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land; therefore there may be a minor positive effect on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation and leisure (as part of a mixed effect), 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: recreation and leisure (as part of a mixed effect) and 15: pollution. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H101: Jackroyd Lane, Newsome, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The western part of this site is within 5 minutes travel time of the nearest employment node; however the eastern part

SA Objectives	SA Score	Justification
they are accessible.		of the site is 21-25 minutes from an employment node. In between, journey times to employment nodes vary in between those two extremes. Therefore a mixed effect on this objective is expected – significantly positive for the western side and minor positive for the eastern side.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The western part of this site is within 5 minutes travel time of a primary school and within 11-15 minutes of a secondary school, as well as being within 5 minutes of a further education institute. However, the eastern part of the site is within 16-20 minutes of a primary school and 26-30 minutes of a secondary school, and is within 16-20 minutes of a further education institute. In between the far eastern and western parts of the site, journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significantly positive for the western side and potentially minor positive for the eastern side.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The western part of this site is within 5 minutes travel time of a GP and within 11-15 minutes of a hospital. However, the eastern part of the site is within 11-15 minutes of a GP and 36-40 minutes of a hospital. In between the far eastern and western parts of the site, journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected –significantly positive for the western side and minor positive for the eastern side. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties surrounding most of the site, which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	++/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The western part of this site is within 5 minutes travel time of a local centre and within 11-15 minutes of a town/district centre. However, the eastern part of the site is within 11-15 minutes of a local centre and 26-30 minutes of a town/district centre. In between the far eastern and western parts of the site, journey times to local and town/district centres vary in between those two extremes. Therefore a mixed effect on this objective is expected – significantly positive for the western side and negligible for the eastern side.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>There is a public footpath running through the centre of this site which could be disrupted as a result of housing development.</p> <p>However, there are a number of other footpaths and areas of open space within walking distance (600m) of the site which could be used by residents for sports and recreation, including an adjacent recreation ground and area of woodland. A mixed (significant positive and potential significant negative) effect is therefore identified.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.06ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, the western part of this site was classed as mainly or entirely 'green' in terms of its access to five of the features assessed. Therefore, a significant positive effect on this SA objective is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (5.06ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (5.06ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
		The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Scheduled Monument at Castle Hill (this site forms part of the area of open countryside which contributes to the setting of the Scheduled Monument).</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 500m from Castle Hill Local Nature Reserve and Local Wildlife Site and is approximately 600m from Hey Lane candidate Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, the western part of this site was classed as mainly or entirely 'green' in terms of its access to five of the features assessed. Therefore, a significant positive effect on this SA objective is likely.</p>
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 6: access to services and 8: leisure and recreation (in all cases as part of a mixed effect overall) as well as for SA objective s 9: housing, 10: sustainable transport and		

SA Objectives	SA Score	Justification
19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: leisure and recreation (as part of a mixed effect overall), 11: efficient land use and 12: landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H102: Land to the west of Netherton Moor Road, Netherton, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is mostly within 31-35 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The northern part of the site is within 6-10 minutes travel time of a primary school and 21-25 minutes travel time to a secondary school, as well as being within 21-25 minutes of a further education facility. However, the southern part is within 6-10 minutes of a primary school and within 45-50 minutes travel time of a secondary school, as well as being within 21-25 minutes of a further education facility. In between the far northern and southern parts of the site, journey times to secondary education facilities vary in between those two extremes. For the whole site, the effect is likely to be minor positive due to the proximity to a primary school.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time of a GP and within 41-45 minutes travel time of a hospital so is likely to have a minor positive effect on access to healthcare. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>Whilst the site is not surrounded by residential development or other sensitive receptors, there are a number of</p>

SA Objectives	SA Score	Justification
		residential properties to the north and west of the site and Sunnyside Farm is to the east. The residents of these properties may be affected by noise and light pollution during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 11-15 minutes travel time of a local centre and within 16-20 minutes of a town/district centre; therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space surrounding the site and within 600m, the closest of which is an area of amenity greenspace approximately 220m to the west. There are also outdoor sports facilities, areas of semi-natural and natural greenspace, a park and garden, allotments, areas for children and young people and a number of public rights of way (PRoW) to the south. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.53ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.53ha) on greenfield land with an agricultural classification of 3; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.53ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of

SA Objectives	SA Score	Justification
		relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on prehistoric remains at Honley Wood, which are designated as a Scheduled Monument. The effect on this SA objective is therefore uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 70m north of Spring Wood Honley Local Wildlife Site; therefore development here could have a significant negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H103: Saville Business Centre, Wharf Street, Savile Town, Dewsbury

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 6-10 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and within 11-15 minutes travel time of a secondary school. The site is also within 21-25 minutes travel time to higher education facilities which contributes to the significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 5 minutes travel time of a GP and within 21-25 minutes travel time of a hospital so is likely to have a significant positive effect on access to healthcare. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>Whilst the site is not surrounded by residential properties or other sensitive receptors, there are a number of residential properties to the south and west of the site, and the residents of these may be affected by noise and light pollution during the construction phase. There are also industrial buildings and activities directly to the north at the depot and to the east which could cause noise pollution over the long term. A significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre and within 6-10 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>There are many recreational facilities and areas of open space surrounding the site and within 600m, the closest of which is an area of amenity greenspace approximately 100m south and an outdoor sports facility approximately 160m to the west. Other recreational facilities and open space areas include semi-natural and natural greenspace, a park and garden, amenity greenspace, civic space, a sports centre, and areas for children and young people. There are also a number of public rights of way (PRoW), footpaths and two local cycling routes. A significant positive effect is therefore identified.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.27ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to all eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	+	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.27ha) on brownfield land; therefore a minor positive effect on this SA objective is likely. The site is not within an area of high quality agricultural land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This site is relatively small (1.27ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.</p>

SA Objectives	SA Score	Justification
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 700m north of Sparrow Wood Local Nature Reserve and Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on brownfield land and largely within flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land therefore a minor positive effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to all eight of the features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: recreation and leisure, 10: sustainable transport and 19: climate change. There were no potential significant negative effects identified for this site.		

H104: Land to the south of Norristhrope Lane, Norristhorpe, Liversedge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time of a primary school and within 21-25 minutes travel time of a secondary school and further education facility. Therefore, a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 16-20 minutes travel time of a GP and within 41-45 minutes travel time of a hospital so is likely to have a negligible effect on access to healthcare. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of residential properties to the north of the site as well as farms to the east, south and west and it is possible that the residents of these may be affected by noise and light pollution during the construction phase. Given that the site is not completely surrounded by sensitive receptors, a minor negative effect on this SA objective is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 11-15 minutes travel time of a local centre and within 11-15 minutes of a town/district centre; therefore a positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced

SA Objectives	SA Score	Justification
of crime.		by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site, the closest of which are two outdoor sports facilities and a children's play area which are directly adjacent to the site. There is also amenity greenspace, as well as a number of public rights of way (PRoW) footpaths. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (6.64ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (6.64ha) and on greenfield land which is classed as grade 3 agricultural quality; therefore a significant negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is large (6.64ha) and on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies almost entirely within LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land but outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight of the features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation and leisure, 9: housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 11: use of land (part of a mixed effect) and 12: character and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H105: Foldhead Mills, Huddersfield Road, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and within 11-15 minutes travel time of a secondary school and further education facility. Therefore, a significant positive effect is likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 5 minutes travel time of a GP and within 41-45 minutes travel time of a hospital. Therefore this site is likely to have a positive effect on access to healthcare due to the proximity to a GP. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of residential properties to the north-east of the site, and the residents of these may be affected by noise and light pollution during the construction phase. In addition, there are several industrial buildings to the north-east which may result in noise over the long-term, reinforcing the minor negative effect.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 5 minutes travel time of a local centre and within 5 minutes of a town/district centre; therefore a significant positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++/--?	There are many recreational facilities and areas of open space within 600m of the site, the closest of which is an area of

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		semi-natural and natural greenspace 60m to the west and a park and garden approximately 100m north-east. There are also outdoor sports facilities, amenity greenspace, and areas for children and young people. A national cycling route lies to the south of the site, whilst a PRow footpath and a non-PRow footpath borders the site. This may result in a mixed effect on this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.41ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.41ha) and on brownfield land; therefore a minor positive effect on this SA objective is likely. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This site is small (0.41ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site could avoid damage to the Grade II Listed Building located fifty yards south-east of 115 Huddersfield Road provided that proposed Local Plan policies to protect the historic environment are implemented. The effect on this SA objective is therefore likely to be minor negative although this is uncertain. Uncertainty also exists as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is approximately 900m north of Briery Bank Wood Local Wildlife Site; therefore a minor negative effect on this SA objective is most likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on brownfield land but largely within flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land therefore a minor positive effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight of the features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: local services and facilities, 8: recreation and leisure (as part of a mixed effect), 10: sustainable transport and 19: climate change. A potential significant negative effect was identified for this site in relation to SA objective 8: recreation and leisure (as part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H106: Woodhead Road, Holme, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 51-55 minutes travel time of the nearest employment node; therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

SA Objectives	SA Score	Justification
through increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and within 21-25 minutes travel time of a secondary school. Therefore, a minor positive effect is likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 26-30 minutes travel time of a GP but more than 60 minutes travel time of a hospital. Therefore this site is likely to have a minor negative effect on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The A6024 (Woodhead Road) lies directly adjacent to the north of the site which may mean that residents in that part of the site are affected by road noise over the long term. This results in a significant negative effect. There are also a number of residential properties within 100m north-east and south-west of the site, and the residents of these could be adversely affected by noise during construction, and this reinforces the negative effect on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 16-20 minutes travel time of a local centre and within 16-20 minutes of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation	++	Within 600m of the site there is one area of open space (children's playground) which lies to the west of the site. There are also a number of PRoW footpaths. A significant positive effect is therefore identified.

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 1.57ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.57ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	The site is within 500m of the Peak District National Park and therefore a significant negative effect is likely due to the potential for the site to adversely affect the quality of the landscape. This effect will be uncertain, however, until the design of the development is known. The site is also on greenfield land, which reinforces the negative effect. The site lies almost entirely within LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Holme Conservation Area (this site forms part of the area of open countryside which contributes to the significance of this area). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is directly adjacent to Yateholme Reservoirs and Plantations candidate Local Wildlife Site. Rake Dike SSSI is located approximately 170m south of the site, and Digley Quarries Local Geological Site is located approximately 730m to the north. Therefore, a significant negative effect on this SA objective is most likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to one of the eight of the features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure. Potential significant negative effects were identified in relation to SA objectives 1: employment, 5: amenity, 12: character and landscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H107: Land south of Ashbrow Road, Fartown, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	++?	The availability of school and college places to serve the growing population will depend in part on whether new places

SA Objectives	SA Score	Justification
are available to all.		<p>are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school, within 6-10 minutes travel time of a secondary school and within 21-25 minutes of a further education facility. Therefore, a significant positive effect is likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 5 minutes travel time of a GP and within 26-30 minutes travel time of a hospital. Therefore this site is likely to have a significant positive effect on access to healthcare. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by existing residential properties, and the residents of these properties could be adversely affected by noise and light pollution during construction. Therefore, a significant negative effect is likely on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre and within 16-20 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>The site includes an area of semi natural and natural greenspace which could be lost if the site is developed. However, within 600m of the site, there are a number of other recreational facilities and areas of open space, including outdoor sports facilities, other areas of semi-natural and natural greenspace, allotments and amenity greenspace, all of which could be used by residents. There are also a number of PRow footpaths within 600m of the site. The proximity of these areas and paths is likely to have a significant positive effect. Overall, a mixed effect is anticipated.</p>
9. Ensure all people are able to live in a decent home	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable</p>

SA Objectives	SA Score	Justification
which meets their needs.		housing. This site is 0.59ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.59ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.59ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is approximately 520m north of Sir John Ramsden Canal candidate Local Wildlife Site and 750m south of Lower Fell Greave candidate Local Wildlife Site. Therefore, a minor negative effect on this SA objective is most likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight of the features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 1: employment, 3: education, 4: health, 8: recreation and leisure, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: recreation and leisure. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H108: Land to the east of Hawkroyd Bank Road, Honley, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 31-35 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 11-15 minutes travel time of a primary school and 41-45 minutes travel time of a secondary school. Therefore, a minor positive effect is likely due to the proximity to a primary school.
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 11-15 minutes travel time of a GP and within 41-45 minutes travel time of a hospital. Therefore this site is likely to have a minor positive effect on access to healthcare. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The site is not surrounded by residential properties or other sensitive receptors, however there are several properties within 100m to the south and south east, and the residents of such could be potentially affected by noise and light pollution during construction. Therefore, a minor negative effect is likely on this SA objective.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 11-15 minutes travel time of a local centre and within 26-30 minutes of a town/district centre; therefore a minor negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are a number of recreational facilities and areas of open space, the closest of which is an area for children and young people approximately 230m south of the site. There are also outdoor sports facilities, a green corridor, amenity greenspace and allotments. In addition, a number of PRow footpaths are within 600m of the site, one of which is directly adjacent to the north. The proximity of these areas and paths is likely to have a significant positive effect.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 2.3ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of

SA Objectives	SA Score	Justification
prudent use of land.		land than development on brownfield sites or sites of lower quality agricultural land. This site is small (2.3ha) and on greenfield land which has an agricultural land classification of 3. Therefore, a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (2.3ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies almost entirely within LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes. The site lies mainly within an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Honley Conservation Area (this site forms part of the area of open land which contributes to the significance of the area). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is approximately 210m north-east of Spring Wood Honley Local Wildlife Site. Therefore, a significant negative effect on this SA objective is most likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight of the features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H109: Land to the south of 38 Duke Wood Road, Clayton West, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 11-15 minutes travel time of a primary school and 21-25 minutes travel time of a secondary school. Therefore, a minor positive effect is likely due to the proximity to a primary school.
4. Improve the health of local people and ensure that they can access the health and	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
social care they need.		This site is within 11-15 minutes travel time of a GP and within 56-60 minutes travel time of a hospital. Therefore this site is likely to have a minor positive effect on access to healthcare. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The site is not surrounded by residential properties or other sensitive receptors, however there are several properties within 100m to the north and one property to the west, and the residents of these could be potentially affected by noise and light pollution during construction. Therefore, a minor negative effect is likely on this SA objective.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 6-10 minutes travel time of a local centre and within 6-10 minutes of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are a number of recreational facilities and areas of open space, the closest of which is an area of semi-natural and natural greenspace directly adjacent to the east of the site. There are also outdoor sports facilities, parks and gardens, another area of semi-natural and nature greenspace, a sports centre, areas for children and young people and an allotment. In addition, there are a number of PRoW footpaths within 600m of the site, one of which runs along the southern and eastern edges of the site. The proximity of these areas and paths is likely to have a significant positive effect.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.2ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.2ha) and on greenfield land, and therefore, a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land.
12. Protect and enhance the	-?	This site is small (1.2ha) and on greenfield land; therefore development here could have a minor negative effect on this

SA Objectives	SA Score	Justification
character of Kirklees and the quality of the landscape and townscape.		<p>SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is approximately 40m west of Cliffe Woods Park Quarry designated as a local geological site. In addition, Riding Wood additional candidate Local Wildlife Site is approximately 40m west of the site, and Riding Wood approved Local Wildlife Site is approximately 100m south of the site. Therefore, a significant negative effect on this SA objective is most likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight of the features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation and leisure, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H110: Land to the north of Hill Crest, Dobb Lane, Hinchcliffe Mill

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is located 51-55 minutes travel time from the nearest employment node; therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is located within 6-10 minutes travel time of a primary school (a small part of the site to the south west is located within 5 minutes of a primary school) and 16-20 minutes travel time of a secondary school (a small part of the site to the south west is within 21-25 minutes travel time of a secondary school) so is likely to have a significant positive effect on this SA objective. The site is located within 41-45 minutes travel time of a further education institute.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 21-25 minutes travel time of a GP (the south east part of the site is located within 26-30 minutes travel time of a GP) and more than 60 minutes travel time from a hospital; therefore a minor negative effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential units to the north on Woodhead Road and to the south on Dobb Lane. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 16-20 minutes travel time of a local centre (the south west corner of the site is within 21-25 minutes travel times of a local centre) and within 16-20 minutes travel time of a town/district centre (a small part of the site is within 11-15 minutes travel time of a town/district centre); therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>The site is on land which has been identified as semi-natural and natural greenspace, which could be lost as a result of housing development. However, the site is also in close proximity to a number of additional open spaces which could be used by new residents if the site was used for housing. Public playing fields are located within 5m to the west of the site and two children's playgrounds are located within these fields. A small park is located to the west within 120m and a cemetery is located to the north west of the site within 55m. Amenity greenspace is located within 10m to the east of the site on the other side of Dobb Lane. A mixed (significant positive and potential significant negative) effect is therefore identified given the relative proximity of open space to the site.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.14ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of</p>

SA Objectives	SA Score	Justification
safe transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.14ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.14ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on 181 to 191 Woodhead Road which are opposite this site and are Grade II Listed Buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 280m of the Yateholme Reservoirs & Plantations to the south west which have been identified as a Candidate Local Wildlife Site. Digley Reservoir/Marsden Clough has been identified as a Candidate Local Wildlife Site and is located to the west of the site within 390m. The site is within 500m of Malkin House Wood to the north east and this area has been designated as a Local Wildlife Site. Carr Green Meadows Holmbridge is another Local Wildlife Site which is within 620m to the north of the site. The relative proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land and its majority is outside of flood zones 2 and 3 (the River Holmes runs along the

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		northern edge of the site and a very small part of the site to the west is within flood zone 3); therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education and 8: leisure and recreation (it should be noted that the overall effect for this SA objective was mixed), and potential significant negative effects were identified in relation to SA objectives 1: employment and 8: leisure and recreation (it should be noted that the overall effect for this SA objective was mixed). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H111: New Laithe Hill, Newsome

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. 5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within 100m of sensitive noise receptors to the north and east with existing residential properties present at these locations specifically on High lane, New Laithe Hill and New Laithe Road. These properties make be impact upon throughout the period of construction given that they can be identified as sensitive receptors in terms of noise. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is located within 11-15 minutes of a local centre and is also located within 11-15 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open	+ +/--?	<p>The site is on land which has been identified as a park and includes provision for young people and children. This open space could be lost as a result of housing development and as such an uncertain significant negative is therefore identified. However, the site is also located within close proximity of a number of additional open spaces and also provides nearby access to the footpath network which may be used by new residents. A semi-natural and natural</p>

SA Objectives	SA Score	Justification
space and encourage their usage.		greenspace (woodland) is found directly to the north of the site. Amenity greenspace is accessible within 75m of the site to the north and outdoor sports facilities can be accessed within 110m to the west of the site. A mixed (significant positive and potential significant negative) effect is therefore identified overall given the relative proximity of open space to the site.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (10.84ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (10.84ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site has been identified as being located mostly on Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (10.84ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Scheduled Monument at Castle Hill which is located within 250m. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is within 75m of the Hey Lane Local Wildlife Candidate Site which is located to the east. The site is also located within 200m of the Castle Hill Local Nature Reserve which is located to the south. Given the proximity of these features to the site the potential for detrimental impact upon them through habitat disturbance and fragmentation is recognised. As such a significant negative effect is recorded for this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the negative effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation (it should be noted that the overall effect for this SA objective was mixed) 9: housing, 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation (it should be noted that the overall effect for this SA objective was mixed) 11: land use, 12: landscape and townscape, and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H112: Land north of Prospect Road, Longwood

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is located within 26-30 minutes travel time of the nearest employment node; therefore a minor positive effect on this objective is expected.
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
better capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is located within 11-15 minutes travel time of a primary school and 36-40 minutes travel time of a secondary school. A minor positive effect is therefore expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is located within 6-10 minutes travel time of a GP and within 31-35 minutes travel time of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to exiting residential properties on all sides along Longwood Gate, Spindle Lane, Prospect Road and Percival Street given that it is within an established residential area. These properties may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is located within 6-10 minutes travel time of a local centre and is also within 11-15 minutes travel time of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation	+ +/--?	The site is on land which has been identified as an allotment. This open space could be lost as a result of housing development. However, the site is also in close proximity to a number of additional open spaces and also provides nearby access to the footpath network which may be use by new residents. Amenity greenspace is accessible within

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		50m to the north and 20m beyond this is a semi-natural and natural greenspace (woodland). 110m to the west of the site a park including provision for children and young people is accessible. A mixed (significant positive and potential significant negative) effect is therefore identified given the relative proximity of open space to the site.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.48ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.48ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.48ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within close proximity of Longwood Edge Quarry, Huddersfield which has been identified as a Local Geological Site and is 925m to the north west. Given the relative proximity of these features the potential for detrimental impact through habitat disturbance and fragmentation is recognised. As such a minor negative effect is recorded for this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the negative effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation (it should be noted that the overall effect for this SA objective was mixed) 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: leisure and recreation (it should be noted that the overall effect for this SA objective was mixed). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H113: Land east of Birkenshaw Lane and Moor Lane, Birkenshaw

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

SA Objectives	SA Score	Justification
		<p>accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 11-15 minutes travel time of a primary school and 16-20 minutes of a secondary school so is likely to have a significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP and within 56-60 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north west on Moor Lane. Given that these properties are receptors sensitive to noise and may be affected during the construction phase a minor negative effect on this SA objective is likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 16-20 minutes of a local centre and is also within 21-25 minutes of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces and also provides nearby access to the footpath network along its north eastern edge. Amenity greenspace which includes sports facilities and provision for children and young people is accessible within 150m to the north. Allotments can be accessed within 140m to the north west of the site. A public park is accessible 315m to the south east of the site. A significant positive effect is therefore identified given the relative proximity of open space to the site.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.7ha); therefore a minor positive effect is likely.</p>

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.7ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Grade 3 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.7ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>The site is within 315m of Oakwell Park which has been designated as a Local Nature Reserve and a Local Wildlife Site. It is recognised that development at this location could have a minor negative effect on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the negative effect is recorded as uncertain.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: transport and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H114: Land north east of 36 Pike Law Road, Scapegoat Hill

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 41-45 minutes travel time of the nearest employment node; therefore a minor negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time of a primary school and 36-40 minutes of a secondary school so is likely to have a minor positive effect.
4. Improve the health of local people and ensure that they	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
can access the health and social care they need.		This site is within 11-15 minutes travel time of a GP and within 51-55 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is adjacent to existing residential properties to the east and west on Pike Law Road. Given that these properties are receptors sensitive to noise and may be affected during the construction phase a minor negative effect on this SA objective is likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 6-10 minutes of a local centre and is also within 16-20 minutes of a town/district centre; therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	The site is crossed by a footpath, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. The site is also however in close proximity to a number of open spaces which could be used by residents. Amenity greenspace and provision for children and young people is accessible within 250m to the north east of the site. A semi-natural and natural greenspace and cemetery is accessible within 400m also to the north east of the site. The site is within 420m of outdoor sport facilities to the south west. A mixed (significant positive and potential significant negative) overall effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.53ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This is a relatively small site (0.53ha) which consists of mainly greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.53ha) which consists of mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is located within 530m of Clough Head Quarry, Slaithwaite which is a Local Geological Site to the south west. The relative proximity of the site to this designated geodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located mostly on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is mainly located on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, 10: transport and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>		

H115: Land south of 201-287 Whitechapel Road, Scholes, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 11-15 minutes travel time of the nearest employment node; therefore a minor positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and within 5 minutes of a secondary school so is likely to have a significant positive effect on this SA objective. The site is also within 25 minutes of a further education site.</p>
4. Improve the health of local people and ensure that they	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
can access the health and social care they need.		This site is within 6-10 minutes travel time of a GP and within 41-45 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is adjacent to existing residential properties to the north and west on Whitechapel Road and Salisbury Road respectively. Given that these properties are receptors sensitive to noise and may be affected during the construction phase a minor negative effect on this SA objective is likely.
6. Retain and enhance access to local services and facilities.	++	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 5 minutes of a local centre and is also within 6-10 minutes of a town/district centre; therefore a significant positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is crossed by a footpath, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. The site is also however in close proximity to a number of open spaces. Access to outdoor sports facilities are provided adjacent to the site to the east. Further outdoor sports facilities are provided within 335m also to the east. Access to an allotment and a cemetery are provided within 55m to the north of the site. A significant positive effect is therefore identified given the relative proximity of open space to the site. A mixed (significant positive and potential significant negative) overall effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.01ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This is a relatively large site (6.01ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site has been identified as being located mostly on Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (6.01ha) which consists of mostly greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park. The site lies in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated geodiversity or biodiversity sites and as such a negligible is expected on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is recorded as uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located mostly on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is mainly located on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 6: access to services, 8: leisure and recreation, 9: housing, 10: transport, and 19: climate change and potential significant negative effects were identified in relation to SA objectives 11: land use and 12: townscape and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H116: Parkwood Road, Golcar

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 36-40 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 11-15 minutes travel time of a primary school and within 41-45 minutes of a secondary school so is likely to have a minor positive effect on this SA objective.
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time of a GP and within 41-45 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by existing residential development on Parkwood Road, Stoney Lane, Leafield Avenue and Thorpe Green Drive respectively. Given that these properties are receptors sensitive to noise, their proximity to the site and that they may be affected during the construction phase a minor negative effect on this SA objective is likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 16-20 minutes of a local centre and is also within 11-15 minutes of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces and also provides nearby access to the public rights of way network. The public rights of way network can be accessed on the bridleway to the north of the site within 40m on Royles Head Lane. Outdoor sports facilities can be accessed to the south west of the site within 80m at the cricket ground on Leymoor Road. Further outdoor sports facilities can be accessed to the south west of the site within 185m at the bowling green on Intake, as well as at Beech School which is also to the south west of the site within 230m. To the north east of the site within 130m Longwood Rec provides park access and provision for children and young people. A significant positive effect is therefore identified given the relative proximity of open space to the site.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.53ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms</p>

SA Objectives	SA Score	Justification
modes of transport.		of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (4.53ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4.53ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of its potential impact on the surrounding historic environment given that the site adjoins the boundary of the Longwood Edge Conservation Area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is located within 830m Longwood Edge Quarry, Huddersfield which is a Local Geological Site to the north. The relative proximity of the site to this designated geodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, 10: transport, and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>		

H117: Haughs Road, Quarmby, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The north eastern part of this site is within 11-15 minutes travel time of the nearest employment node; however there is an area in the central south west of the site which is between 35-40 minutes from an employment node. In other areas of the site, journey times vary between those two extremes. Therefore a mixed effect on this objective is expected; significantly positive for the north eastern side of the site and negligible for the area in the central south west of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/-?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The eastern and southern edges of this site are within 6-10 minutes of a primary school and are mainly between 35-40 minutes from a secondary school. However, most of the northern and central areas of the site are within</p>

SA Objectives	SA Score	Justification
		16-20 minutes of a primary school and between 46-50 minutes from a secondary school. Therefore a mixed effect on this objective is expected; potentially a minor positive effect for the eastern and southern edges of the site, and a minor negative effect for the northern and central areas.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Travel time to both GPs and hospitals varies widely across different parts of the site. The north western edge of the site is between 26-30 minutes travel time from both a GP and a hospital. However, the eastern edge of the site is 11-15 minutes travel time from both a GP and a hospital. Journey times to healthcare facilities from other parts of the site vary between these two extremes and the most accessible areas for GP services are not the same as the most accessible areas for hospitals. Therefore a mixed effect on this objective is expected; minor positive for the north western edge of the site, and significant positive for the eastern edge of the site.</p> <p>The site is not within close proximity of an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development or other sensitive receptors; however there are a number of residential properties within 100m of the site boundary. A minor negative effect on this SA objective is therefore likely as a result of noise during the construction phase.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The eastern edge of this site is within 6-10 minutes travel time of a local centre and within 11-15 minutes of a town/district centre. However the central western area of the site is within 16-20 minutes of a local centre and 21-25 minutes of a town/district centre. Therefore, a mixed effect on this objective is expected; minor positive for the eastern edge and minor negative for the central western part of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new	++/--?	This site has a public right of way running through it, which could be disrupted as a result of housing development.

SA Objectives	SA Score	Justification
recreation facilities and areas of open space and encourage their usage.		The site is also adjacent to an area of semi-natural and natural greenspace and there are several footpaths within close proximity of the site which could be used by new residents. In addition, there are two areas of amenity green space directly adjacent of the site to the east and south east and an outdoor sports facility directly adjacent to the west. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (17.58ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as being mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (17.58ha) on greenfield land; therefore a significant negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (17.58ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mostly within LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the fact that the site adjoins the boundary of the Quarmby Fields Conservation Area. The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is within approximately 925m of the nearest designated biodiversity site, Huddersfield Narrow Canal Local Wildlife Site and approximately 963m from Longwood Edge Quarry, a Local Geological Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as being mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 8: leisure and recreation, 9: Housing, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation, 11: land use and 12: landscape character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H118: Upper Quarry Road, Bradley, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered

SA Objectives	SA Score	Justification
and Entrepreneurship.		separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 11-15 minutes travel time of a primary school and 16-20 minutes of a secondary school so is likely to have a significant positive effect. It is also within 30 minutes of a further education institute, which will contribute to the significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 11-15 minutes travel time of a GP and the whole site is within 46-50 minutes of a hospital. Therefore, a minor positive effect is likely in relation to access to healthcare facilities. However, the site also has an AQMA directly adjacent to the southern boundary which could mean that residents' health is affected by poor air quality. A mixed effect (minor positive and minor negative) is therefore likely.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The southern part of this site is within approximately 30m of where the A6107 (Bradley Road) to the south, meets the A62 (Leeds Road) which may mean that residents in that part of the site are affected by road noise. There are also a number of residential properties adjacent to the site to the south and west which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 16-20 minutes travel time of a local centre and the whole site is within 21-25 minutes of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of several areas of open space. There is a park to the south west, approximately 125m from the site, with an area for children and young people approximately 165m away. There are also allotments to the south west, approximately 55m from the site. In addition there is a bowling green approximately 125m to the south east, and in the same direction, an area of greenspace approximately 210m from the site. A public right of way runs approximately 45m from the north east boundary. A significant positive effect is therefore likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.24ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely or mostly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.24ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.24ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies almost entirely within an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as development of this site is unlikely to result in harm to any designated heritage asset The effect on this SA objective is therefore negligible but uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 185m from the Sir John Ramsden Canal candidate Local Wildlife Site; therefore development here could have a significant negative effect on this SA objective.
15. Reduce air, water and soil pollution.	--	This site is directly adjacent to an AQMA; therefore a significant effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely or mostly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 5: amenity, 14: biodiversity and 15: air, water and soil pollution. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H119: Carr Top Lane, Golcar, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 36-40 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are	+?	The availability of school and college places to serve the growing population will depend in part on whether new

available to all.		<p>places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is within 10 minutes travel time of a primary school, while the rest is within 15 minutes. The site is 36-40 minutes travel time of a secondary school. A minor positive effect is therefore likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP and within 41-45 minutes of a hospital (a small northern part of the site is 36-40 minutes from a hospital); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The north and east parts of this site are adjacent to existing residential development, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely during the construction phase.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of both a local centre and a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>This site is within an area of greenspace with some existing allotments, which could be lost as a result of housing development. This site also has a public right of way running through it, which could be disrupted as a result of housing development.</p> <p>There numerous areas of open space within close proximity to the site, including an area of amenity greenspace</p>

SA Objectives	SA Score	Justification
		approximately 123m to the north west, a bowling green approximately 171m to the north west and a children's playground approximately 194m to the north east and. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.71ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.71ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.71ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, as there are a number of Grade II Listed buildings to the north and south of this area. The loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings. The site also lies within the Golcar Conservation Area. The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 480m from the Huddersfield Narrow Canal candidate Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 8: leisure and recreation. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H120: Park Farm, Manor Road, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 41-45 minutes travel time of the nearest employment node; therefore a minor negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary and 11-15 minutes travel of a secondary school so is likely to have a significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 11-15 minutes travel time of a GP and the entire site is within 51-55 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of residential properties adjacent to the site to the east, and also several others within 100m of the site, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 16-20 minutes travel time of a local centre and the entire site is within 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site is within 600m of a number of open spaces, including an area of semi-natural and natural greenspace approximately 183m to the north west of the site, a bowling green approximately 206m to the north west, and a public playing field, approximately 585m to the south west of the site. A significant positive effect is therefore identified.</p>

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.56ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	+	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.56ha) on brownfield land; therefore a minor positive effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This is a relatively small site (0.56ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	<p>Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the barn at 18 Manor Road, which is a Grade II Listed Building. The site also lies within the boundary of the Farnley Tyas Conservation Area, and may include buildings which contribute to the character of this area.</p> <p>The effect on this SA objective is therefore minor negative and uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 357m from the Woodview Meadows Farnley Tyas approved Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for	0	This site is on brownfield land and is outside of flood zones 2 and 3; therefore a negligible effect is likely.

SA Objectives	SA Score	Justification
existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to any SA objectives.		

H121: Land North of New Hey Road, Salendine Nook, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		This site is within 11-15 minutes travel time of a primary and within 36-40 minutes travel time of a secondary school so is likely to have a minor positive effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 10 minutes travel time of a GP and within 11-15 minutes of a hospital; therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The southern boundary of this site is directly adjacent to the A640 (New Hey Road) which may mean that residents in that part of the site are affected by road noise. There are also a number of residential properties adjacent to the site to the north, east and west which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of both a local centre and a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new	++	This site is within 600m of a number of areas of open space including (all located to the west of the site) a recreation ground and playground, approximately 80m and 152m from the site, public playing fields

SA Objectives	SA Score	Justification
recreation facilities and areas of open space and encourage their usage.		approximately 460m from the site and allotments approximately 565m from the site. There is also a public footpath approximately 40m to the north east of the site. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.43ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.43ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.43ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as development of this site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is more than 1km from any designated biodiversity sites; therefore a negligible effect on this SA objective is likely.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use,	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing

SA Objectives	SA Score	Justification
recovery and recycling of waste close to source.		buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: Health, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H122: Primrose Lane, Liversedge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to employment nodes vary throughout this site. The central and north eastern part of this site is within 21-25 minutes travel time of the nearest employment node; however the south western part of the site is 6-10 minutes from an employment node. In between, journey times to employment nodes vary in between these two extremes. Therefore a mixed effect on this objective is expected – significant positive for the south western part of the site and minor positive for the centre and north east.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate

SA Objectives	SA Score	Justification
		<p>new pupils.</p> <p>The centre and north eastern part of this site is within 21-25 minutes travel time of a primary school and within 26-30 minutes of a secondary school; however the south western part is within 6-10 minutes travel time of both. In between, journey times vary between these two extremes. Therefore a mixed effect on this objective is expected – significant positive in the south western part of the site and negligible in the centre and north eastern part.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The whole of this site is within 11-15 minutes travel time of a GP; however levels of access to hospitals vary. The north eastern part of the site is within 41-45 minutes travel time of a hospital while the south eastern part is within 31-35 minutes. In between, journey times to hospital vary between these two extremes. However as the whole site is within 15 minutes of a GP a minor positive effect on this objective is likely for the whole site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing houses adjacent to the east and south boundaries of this site, which could mean that residents of those properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district centres vary throughout this site. Almost the entire site is within 11-15 minutes travel time of a local centre although a tiny area in the south west is within 6-10 minutes. The north eastern part of the site is within 31-35 minutes of a town/district centre, while the south western tip of the site is within 11-15 minutes. In between, journey times to town/district centres vary between those two extremes. Therefore a mixed effect on this objective is expected – minor positive for the south western part of the site and minor negative for the north eastern part.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals</p>

SA Objectives	SA Score	Justification
		for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of numerous areas of open space, including three public playing fields to the north and north east of the site (approximately 25m, 175m and 220m from the site), a green corridor including a cycle path which runs adjacent to the northern boundary of the site, and a Public Right of Way which runs adjacent to the western site boundary. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.95ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' for three of the features assessed. A minor positive effect is therefore likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.95ha) on greenfield land, the majority of which is classified as being of Grade 3 agricultural quality; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.95ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies almost entirely within LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as development of this site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is more than 1km from any designated biodiversity sites; therefore development here could have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was mainly or entirely 'green' for three of the features assessed. A minor positive effect is therefore likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (as part of a mixed effect overall), 3: education (as part of a mixed effect overall) and 8: leisure and recreation. No potential significant negative effects were identified for this site in relation to any of the SA objectives.		

H123: Whitcliffe Road, Cleackheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 6-10 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. It is also within 11-15 minutes travel time of a further education institute which would further contribute to a significant positive effect.</p>
4. Improve the health of local people and ensure that they can	++	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

access the health and social care they need.		The south west part of this site is within 5 minutes travel time of a GP, while the remaining north east part is within 6-10 minutes travel time. The whole site is also within 6-10 minutes travel time of a hospital; therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is surrounded by existing residential development, with the exception of a small part of the western boundary, which is directly adjacent to Dewsbury Gate Road. A significant negative effect on this SA objective is therefore likely during the construction phase.
6. Retain and enhance access to local services and facilities.	++	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 5 minutes travel time of a local centre and 11-15 minutes travel time of a town/district centre; therefore a positive significant effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of a variety of areas of open space, including recreation ground approximately 158m to the south west of the site, a public park approximately 193m to the north, an area of amenity greenspace approximately 283m to the west and allotments approximately 362m to the south. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.88ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to eight of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use

use of land.		<p>of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.88ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>
12. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in</p>

terms of its access to eight of the eight features assessed. Therefore, a significant positive effect is likely.

Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 6: local services, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.

H125: Balderstone Hall, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+ / ++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Access to employment nodes varies within this site. The north western part of the site is within 26-30 minutes travel time of the nearest employment node; however an area within the centre of the site is within 16-20 minutes travel time from the nearest employment mode. In between, journey times vary in between these two extremes. Therefore a mixed effect on this objective is expected – minor positive in the north western part of the site and significant positive in the southern part.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+ +? / +?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities varies within this site. Most of the site is within 6-10 minutes travel time of a primary school although an area in the north is within 0-5 minutes. The north western part of the site is 21-25 minutes from a secondary school, while the rest of the site is within 16-20 minutes of a secondary school. The whole site is also within 30 minutes of a further education facility, with most of the site being within 21-25 minutes travel time. A mixed effect on this objective is therefore expected – minor positive in the northern part and significant positive for the rest of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+ / 0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to healthcare facilities varies within this site. The centre and south of the site is within 11-15 minutes travel time of a GP and within 41-45 minutes of a hospital; however the north western part is within 16-20 minutes travel time of a GP and 46-50 minutes from a hospital. A mixed effect on this objective is therefore expected – minor positive in the centre and south of the site and negligible in the north western part. The site is</p>

SA Objectives	SA Score	Justification
		not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential properties; however there are existing residential properties adjacent to the southern and western boundaries of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local and town/district centres varies within this site. Most of the site is within 6-10 minutes travel time of a local centre and within 11-15 minutes of a town/district centre; however the north western part is within 11-15 minutes travel time of a local centre and within 16-20 minutes of a town/district centre. Therefore a mixed effect on this objective is likely – negligible in the north western part and minor positive elsewhere.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site is partially bisected by a Public Right of Way, which could be lost as a result of housing development. However the site is within 600m of a number of open spaces which could be used by residents, including an area of park and garden and a children's playground, both directly adjacent to part of the eastern site boundary and an outdoor sports facility adjacent to the north western site boundary. There is also a public park located approximately 590m to the south east of the site. In addition two existing Public Right of Ways are routed along part of the south western boundary and the eastern site boundary. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.91ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or</p>

SA Objectives	SA Score	Justification
		entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (6.91ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. A small area in the north of the site is Grade 3 agricultural land which would be lost to development; however the remainder of the site is classed as 'urban' land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (6.91ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies across LCA E8: Batley-Dewsbury Rural Fringes and an area classed as 'urban', as identified in the 2015 Landscape Character Assessment for Kirklees. LCA E8: Batley-Dewsbury Rural Fringes comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on a group of Grade II Listed Buildings at Balderstone Hall. The loss of this site and its subsequent development could harm elements which contribute to their significance.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 933m from the Sunny Bank Ponds Local Nature Reserve and Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education and 8: leisure and recreation (all of which are part of a mixed effect overall) as well as for SA objectives 9: housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation (part of a mixed effect overall), 11: land use and 12: landscape character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H126: Upper Batley Lane, Upper Batley, Batley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 6-10 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of both a primary and secondary school so is likely to have a significant</p>

SA Objectives	SA Score	Justification
		positive effect. It is also within 6-10 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 6-10 minutes travel time of a GP and within 21-25 minutes of a hospital; therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within close proximity of the site to the north and south which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 6-10 minutes travel time of a local centre and within 11-15 minutes of a town/district centre; therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 50m of school playing fields which lie to the south of the site. The site is also within 200m of amenity green space to the south and within 600m of another school playing field to the south east, a park and garden and children's playground to the west, playing fields to the north and a green corridor to the south west. There is also a public footpath approximately 75m to the west of the site. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.41ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to all eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.41ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.41ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the adjoining Upper Batley Conservation Area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 900m from Morley Spring Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within or close to an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of all of the eight features assessed; therefore a significant positive effect is likely.</p>
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified for this site.		

H127: North Road, Kirkburton, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Almost the entire site is within 16-20 minutes travel time of the nearest employment node (although a small section to the north is within 11-15 minutes); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school (although a small section to the south west is within 11-15 minutes) and within 11-15 minutes travel time of a secondary school so is likely to have a significant positive effect. The majority of the site is also within 11-15 minutes of a further education institute (although a small</p>

SA Objectives	SA Score	Justification
		section to the south is within 16-20 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Almost the entire site is within 6-10 minutes travel time of a GP (although a small area in the east is within 5 minutes) and the majority of the site is within 41-45 minutes of a hospital (although a small section to the south is within 46-50 minutes); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north, east and south which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 11-15 minutes travel time of a local centre and the majority of the site is within 6-10 minutes of a town/district centre (although a small section to the north east is within 5 minutes); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is adjacent to an area of amenity green space and within 100m of allotments and semi-natural & natural greenspace to the north. The site is also within 200m of private playing fields to the south east and is approximately 300m from two school playing fields to the east. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.73ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.73ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within high quality agricultural land (is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.73ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the adjoining Kirkburton Conservation Area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is within 190m of Burton Dean Quarry, Kirkburton Local Geological site and approximately 700m from the Shelley Wood Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within or close to an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. A potential significant negative effect was identified for objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H128: Denby Lane, Grange Moor, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 21-25 minutes travel time of the nearest employment node; therefore a minor positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school (although a small section to the west is within 5 minutes) and within 21-25 minutes travel time of a secondary school (although a small section to the south east</p>

SA Objectives	SA Score	Justification
		is within 26-30 minutes) so is likely to have a minor positive effect. It is also within 36-40 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 6-10 minutes travel time of a GP and within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within close proximity of the site to the north, east and south which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of the site is within 6-10 minutes travel time of a local centre (although a small section to the south east is within 11-15 minutes) and within 21-25 minutes of a town/district centre; therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	A Public Right of Way footpath runs through the eastern part of the site, which could be lost as a result of housing development. The site is approximately 30m from an area semi-natural & natural greenspace to the north west and 60m from an area of amenity green space to the south. The site is also approximately 110m from allotments and within 300m of public playing fields, a bowling green and children's play areas to the south. The site is also 300m from a park and garden with children's play provision. A mixed (significant positive and potential significant negative) effect is therefore identified for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.65ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.65ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within high quality agricultural land (is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.65ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to 8: leisure and recreation however this objective also identified as having a significant negative effect and therefore a mixed effect overall. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H129: Woodhouse Road, Brockholes, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 26-30 minutes travel time of the nearest employment node; therefore a minor positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary within this site. The eastern part of this site is within 5 minutes travel time of a primary school and within 6-10 minutes of a secondary school, as well as being within 21-25 minutes of a further</p>

SA Objectives	SA Score	Justification
		education institute. However, the western part of the site is within 16-20 minutes of a primary school and 11-15 minutes of a secondary school, and is within 21-25 minutes of a further education institute. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significantly positive for the eastern part and potentially minor positive for the western part.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Almost all of this site is within 6-10 minutes travel time of a GP (although a very small area in the north is within 11-15 minutes). Most of the site is within 46-50 minutes of a hospital although the eastern part is within 41-45 minutes. Therefore, a minor positive effect is likely overall. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties adjacent to and within close proximity of the site to the north, east and south which may be affected by noise during the construction phase. In addition, the site is immediately adjacent to the A6024 which runs down the western boundary, which could mean that residents are affected by road noise in the longer term. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	++/+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Levels of access to local and town/district centres vary within this site. The eastern part of this site is within 5 minutes travel time of a local centre and within 6-10 minutes of a town/district centre. However, the western part of the site is within 11-15 minutes of a local centre and 11-15 minutes of a town/district centre. In between those areas journey times to local and town/district centres vary in between those two extremes. Therefore a mixed effect on this objective is expected – significant positive for the eastern part and minor positive for the western part.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open	++/--?	A green corridor/pedestrian/cycleway runs along the north eastern boundary of the site. The site is within 100m of a private bowling green and area of semi-natural & natural greenspace to the north and approximately 250m from a park and garden including a children's play area to the south. However, there is a river running between the site and the facilities which would increase walking distance and make it less easily accessible by foot. The site is also within 200m of

SA Objectives	SA Score	Justification
space and encourage their usage.		semi-natural & natural greenspace. The site is within 600m of private playing fields to the north west. Therefore, a significant positive effect is expected for this objective. However, there are also footpaths within the site that could be lost as a result of the site being developed; therefore a potential but uncertain significant negative effect is also identified, resulting in a mixed effect overall.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (10.11ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (10.11ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The land is also classed as being of Grade 3 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (10.11ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. Approximately half of the site lies within LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes. The other half of the site lies within LCA E1: Holmfirth-Meltham, which is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The south of the site is across a road from the Hagg Wood Local Wildlife Site, within 145m of Brockholes and Round Wood, Brockholes Local Geological site and approximately 160m from Cliff Wood Local Wildlife Site ; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and	0	This site is not within or close to an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
soil pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and almost entirely outside flood zones 2 and 3 (although tiny areas along the eastern boundary of the site lie very slightly within flood zones 2 and 3); therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 6: local services and 8: leisure and recreation (in all cases as part of a mixed effect overall), as well as for SA objectives 9: affordable housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 11: use of land, 12: character and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H130: Miry Lane, Netherthong, Holmfirth

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is approximately 50m from semi-natural & natural greenspace in the south, approximately 290m from park and gardens with children's play provision to the north and approximately 350m from school playing fields. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.02ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.02ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within high quality agricultural land (is classed as grade 4). The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.02ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment due to the uncertain potential impacts on several Grade II Listed Buildings in Oldfield. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to	--?	This site is approximately 230m from Holmroyd Wood Local Wildlife Site; therefore development here could have a

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education and 8: leisure and recreation, and potential significant negative effects were identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H131 Quarry Road, Crosland Hill, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
opportunities available for local people, and ensure that they are accessible.		Almost all of this site is within 31-35 minutes travel time of the nearest employment node (although an area in the west is within 36-40minutes); therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 6-10 minutes travel time of a primary school (although an area in the west is within 11-15 minutes) and within 6-10 minutes travel time of a secondary school (although an area in the north west is within 11-15 minutes) so is likely to have a significant positive effect. Most of the site is also within 21-25 minutes of a further education institute (with a small area in the north within 16-20 minutes).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Almost all of this site is within 11-15 minutes travel time of a GP (although a small area in the north is within 6-10 minutes) and within 41-45 minutes of a hospital (with a small area in the north within 36-40 minutes); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the east, north and south which may be affected by noise during the construction phase. In addition, there appears to be commercial or industrial units immediately to the west of the site which may result in noise pollution affecting residents in the longer-term. A significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 6-10 minutes travel time of a local centre (with a small area in the west within 11-15 minutes). Levels of access to a town/district centre are very variable throughout the site; however. The south eastern part of the site is 11-15 minutes of a town/district centre however the north western part of the site is 26-30 minutes from a town/district centre. In between those areas journey times to local and town/district centres vary in between those two extremes. Therefore a mixed (minor positive for the south east and negligible for the north west) effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is approximately 70m from amenity greenspace which includes a children's playground in the south, approximately 120m from amenity greenspace and a children's playground to the east. The site is also approximately 190m from a children's playground and 240m from amenity greenspace in the east. The site is approximately 600m from a golf course to the west. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.8ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (3.8ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as non-agricultural).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (3.8ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment due to the uncertain potential impacts on 41, 43, 67 and 69 Crossland Hill Road, Crossland Hall Cottage and the range of farm buildings at Crossland Hall that are Grade II Listed Buildings.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 660m from Johnson Wellfield Quarries, Crossland Hill Local Geological Site, approximately 665m from Huddersfield Narrow Canal and 980m from Delves Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a minor positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport, 19: climate change, and a potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H132: Land south of Gasworks Street, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest employment node (although a small section to the east is within 16-20 minutes); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 16-20 minutes travel time of a primary school (although a small section to the west is within 11-15 minutes) and within 26-30 minutes travel time of a secondary school (although a small section to the west is within 21-25 minutes) so is likely to have a negligible effect. The majority of the site is also within 21-25 minutes of a further education institute (although a section to the west is within 16-20 minutes).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP (although a section to the west is within 5 minutes) and within 26-30 minutes of a hospital (although a section to the west is within 21-25 minutes); therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the east, north and south which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 16-20 minutes travel time of a local centre (although a small section to the west is within 11-15 minutes) and within 6-10 minutes travel time of a town/district centre (although a small section to the west is within 5 minutes); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	There is one public cycle path running through the centre of this site and one cycle path running through the north west corner of the site which could be disrupted as a result of housing development. However, the site is approximately 380m from amenity greenspace which includes a park and garden and a children's playground to the north. The site is also approximately 170m from semi-natural & natural greenspace and a golf course however; the site is separated from these facilities by a river which makes them less easily accessible by foot. Therefore, a mixed significant positive effect and significant negative is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.2ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	+	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (3.2ha) on brownfield land; therefore a minor positive effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This is a relatively small site (3.2ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development.</p>

SA Objectives	SA Score	Justification
		This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is adjacent to Sir John Ramsden Canal Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is on brownfield land and is mainly outside of flood zones 2 and 3. A small section (1825m ²) to the south of the site is within flood zone 3 however it may be possible to avoid developing within that part of the site. Therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation (mixed effect) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation		

SA Objectives	SA Score	Justification
and/or enhancement, which may be achieved through Local Plan policies.		

H133: Land to the north of 20 Shawfield Avenue, Burnlee, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--/-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Levels of access to an employment node vary throughout this site. The eastern edge of the site is within 41-45 minutes travel time of the nearest employment node whereas the western part of the site is within 51-55 minutes; therefore a mixed effect is likely for this objective - minor negative effect for the eastern edge and significant negative for the western part of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The eastern part of this site is within 6-10 minutes travel time of a primary school and within 11-15 minutes of a secondary school. However, the western part of the site is within 16-20 minutes of a primary school and 21-25 minutes of a secondary school. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significantly positive for the eastern part and potentially negligible for the western part. Travel times to the nearest further education institute also vary across the site – within 36-40 minutes in the eastern part and within 46-50 minutes in the western part of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+ /0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to the nearest GP vary throughout this site. The eastern part of the site is 11-15 minutes travel time of a GP whereas the western part is within 26-30 minutes. The site is within 56-60 minutes of a hospital; therefore a mixed effect on this objective is expected –minor positive for the eastern part and negligible for the western part. The site is not within or adjacent to an AQMA.</p>

SA Objectives	SA Score	Justification
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the east, north and south which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 21-25 minutes travel time of a local centre (although a section to the east is within 16-20 minutes) and within 16-20 minutes travel time of a town/district centre (although a section to the east is within 11-15 minutes); therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is approximately 45m from semi-natural & natural greenspace to the south, 60m from semi-natural & natural greenspace to the north and 60m from park and gardens including children's play provision to the south. The site is also approximately 210m from school playing fields to the north. Therefore, a significant positive effect is expected for this objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.27ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.27ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>

SA Objectives	SA Score	Justification
		The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.27ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies mainly within LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.</p> <p>The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 280m from Malkin House Wood Local Wildlife Site and approximately 550m from Carr Green Meadows Holmbridge Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education (part of a mixed effect) and 8: leisure and recreation, and potential significant negative effects were identified in relation to SA objective 1: employment (part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H134: Land east of 11-29 Headlands Road, Liversedge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest employment node (although a small section to the south is within 11-15 minutes); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and within 6-10 minutes travel time of a secondary school so is likely to have a significant positive effect. The site is also within 16-20 minutes of a further education institute.</p>

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time of a GP and within 31-35 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the east, west and south which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre and the majority of the site is within 11-15 minutes travel time of a town/district centre (although a tiny area on the southern edge is within 16-20 minutes); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>This site is partially within an area of semi-natural and natural greenspace, which could be lost as a result of housing development. However, it is part of a much larger area of greenspace, most of which is outside of the site. In addition, the site is approximately 60m from a green corridor/pedestrian/cycleway to the west and there are two areas of school playing fields within 200m of the site. There is also a park and garden approximately 280m from the site which contains a children's playground, a bowling green and tennis court. A mixed (significant positive and potential significant negative) effect is therefore identified.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.58ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely</p>

SA Objectives	SA Score	Justification
modes of transport.		'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.58ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.58ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 8: leisure and recreation (mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H135: Dobb Lane, Hinchcliffe Mill

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 51-55 minutes travel time of the nearest employment node (the southern part of the site is within 56-60 minutes travel time of the nearest employment node); therefore a significant negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 5 minutes travel time of a primary school (a small part of the site to the east is within</p>

SA Objectives	SA Score	Justification
		6-10 minutes travel time of a primary school) and within 21-25 minutes travel time of a secondary school (the most northerly part of the site is within 16-20 minutes travel time of a secondary school) so is likely to have a minor positive effect on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 26-30 minutes travel time of a GP (a small part of the site to the north is within 16-20 minutes travel time of a GP) and is located over 60 minutes travel time from a hospital; therefore a minor negative effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity of existing properties on Water Side Lane to the south. Given that these properties are receptors sensitive to noise, their proximity to the site and that they may be affected during the construction phase a minor negative effect on this SA objective is likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 21-25 minutes travel time of a local centre (a small part of the site to the north is within 16-20 minutes travel time of a local centre) and is also within 16-20 minutes of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	The site is crossed by a cycle path, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However a number of open spaces are in close proximity to the site. Outdoor sports facilities are accessible directly to the south of the site on the grounds of Hinchliffe Mill Junior and Infant School. Amenity greenspace can be accessed within 85m to the north east on Dobb Lane. A semi-natural and natural greenspace is accessible within 25m to the north of the site. A mixed effect (significant positive/potential significant negative) is therefore identified overall for this site.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.61ha); therefore a minor positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.61ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being located on Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.61ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site has been identified as being located on Grade 4 Agricultural Land.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of its potential impact on the surrounding historic environment given that the site adjoins the boundary of the Hinchliffe Mill Conservation Area.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>The site is within 400m of Yateholme Reservoirs & Plantations which is located to the south west and has been identified as a candidate Local Wildlife Site. Digley Reservoir/Marsden Clough is another Candidate Local Wildlife Site within 520m of the site to the west. Malkin House Wood is within 580m to the north east of the site and has been designated as a Local Wildlife Site. To the north west of the site within 640m another Local Wildlife Site Carr Green Meadows Holmbridge is located. Given the relative proximity of these features the potential for detrimental impact upon them through habitat disturbance and fragmentation is recognised. As such a minor negative effect is recorded for this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the negative effect is noted to be uncertain.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood	-	<p>This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and</p>

SA Objectives	SA Score	Justification
risk areas and ensure development does not contribute to increased flood risk for existing property and people.		could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation, and potential significant negative effects were identified in relation to SA objective 1: employment. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H136: Land south of Bowling Green, Woodsome Road, Farnley Tyas

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 41-45 minutes travel time of the nearest employment node; therefore a minor negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and within 11-15 minutes of a secondary school so is likely to have a significant positive effect on this SA objective. The site is within 31-35 minutes travel time of a further education centre.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time of a GP and within 51-55 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing residential properties on Woodsome Road and Field Lane respectively. Given that these properties are receptors sensitive to noise, their extreme proximity to the site and that they may be affected during the construction phase a significant negative effect on this SA objective is likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 11-15 minutes of a local centre and is also within 16-20 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>The site is on land which has been identified as a semi-natural and natural greenspace as well as an outdoor sports facility, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. Further semi-natural and natural greenspace is located 120m to the south of the site, a cemetery is located 110m to the south west of the site and a public playing field 450m to the south west provides access to outdoor sport facilities as well as provision for young people and children. A significant positive effect is therefore identified given the</p>

SA Objectives	SA Score	Justification
		relative proximity of open space to the site. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.96ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.96ha) on mostly greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.96ha) and consists of mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of its potential impact on the surrounding historic environment given it forms part of the open countryside which contributes to the setting of the Scheduled Monument at Castle Hill. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 610m of Woodview Meadows Farnley Tyas to the south east which has been designated as a Local Wildlife Site; 825m of Almondbury Common to the north east which has also been designated as a Local Wildlife Site; and 790m of Hey Wood/West Wood to the south west which has been identified as a Candidate Local Wildlife Site. The relative proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the negative effect is noted to be uncertain.
15. Reduce air, water and	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
soil pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation (it should be noted that the overall effect for this SA objective was mixed), and 10: transport, and 19: climate change and potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: leisure and recreation (it should be noted that the overall effect for this SA objective was mixed). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H137: Land north of Burton Royd Lane, Kirkburton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
better capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and within 6-10 minutes of a secondary school so is likely to have a significant positive effect on this SA objective. The site is also within 16-20 minutes travel time of a further education centre.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP and within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close to a reduced number of existing residential properties on Linfit Lane and Burton Royd Lane respectively. Given that these properties are receptors sensitive to noise, their relative proximity to the site and that they may be affected during the construction phase a minor negative effect on this SA objective is likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 11-15 minutes of a local centre and is also within 11-15 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the	++	The site is located in close proximity to a number of open spaces and also provides access to the public rights of way network within 175m to the west at Lepton Lane. Gregory Playing Fields are located within 415m to the south west of

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		the site and provide access to outdoor sports facilities, designated parkland and a children's playground. Further outdoor sports facilities can be accessed at Kirkburton Middle School which is located within 320m also to the south west of the site. A significant positive effect is therefore identified given the relative proximity of open space to the site.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.17ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.17ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site has been identified as being on Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.17ha) and consists of mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 645m of Lepton Great Wood to the north west which has been identified as a Candidate Local Wildlife Site. The relative proximity of the site to this biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the negative effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, and 10: transport, and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H138: Land south of Mill Street, Birstall

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 6-10 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and within 26-30 minutes of a secondary school so is likely to have a minor positive effect on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time of a GP and within 21-25 minutes of a hospital; therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close to a number of existing residential properties to the north on Mill Street and to the east on Smithies Moor Lane. These properties are receptors sensitive to noise and given their relative proximity to the site it is likely that they may be affected during the construction phase. The site is also directly adjacent to the A62 along its north westerly edge. It is considered that the close proximity of this major road may result in noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is within 16-20 minutes of a local centre and is also within 6-10 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation	++	The site is located in close proximity to a number of open spaces and also provides access to a footpath within 95m to the east on Smithies Moor Rise. The site is located within 230m of amenity greenspace to the north east. To the east of the site within 110m a semi-natural and natural greenspace site and an outdoor sports facilities site are provided on Lea

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		Road. To the south of the site within 110m further outdoor sports facilities are provided. A significant positive effect is therefore identified given the relative proximity of open space to the site.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (7.72ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (7.72ha) on greenfield land; therefore a significant negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (7.72ha) and consists of mostly greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Oakwell Park is the closest of such features but is located 1.07km to the north and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 8: leisure and recreation, 9: housing, 10: transport, and 19: climate change and potential significant negative effects were identified in relation to SA objectives 5: amenity, 11: land use and 12: landscape and townscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H139: Land west of Storthes Hall Lane, Kirkburton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 46-50 minutes travel time of the nearest employment node; therefore a minor negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 11-15 minutes travel time of a primary school and within 31-35 minutes of a secondary school so is likely to have a minor positive effect on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 21-25 minutes travel time of a GP and within 56-60 minutes of a hospital; therefore a negligible effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close to a number of existing residential properties to the north east on Storthes Hall Lane and to the south west on Woodside Lodge. These properties are receptors sensitive to noise and given their relative proximity to the site it is likely that they may be affected during the construction phase. As such a minor negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is within 31-35 minutes of a local centre and is also within 16-20 minutes of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation	++	<p>The site is located in close proximity to a number of open spaces and also provides access to a footpath within 210m to the north off Storthes Hall Lane. The site is located within 270m of the semi-natural and natural greenspace to the east at Myers Wood and the outdoor sports facilities also to the east within 300m. A significant positive effect is therefore</p>

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		identified given the relative proximity of open space to the site.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (0.89ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.89ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.89ha) and consists of mostly greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within close proximity of several designated biodiversity features. Woodview Meadows Farnley Tyas is within 170m to the north west and has been designated as a Local Wildlife Site. Carr Wood is located 350m to the north east of the site and has been identified as a Candidate Local Wildlife Site. To the south of the site within 980m Clough Wood has also been designated as a Local Wildlife Site. Given the proximity of these features the potential for detrimental impact upon them through habitat disturbance and fragmentation is recognised. As such a significant negative effect is recorded for this SA objective. Given that there may be opportunities to promote habitat connectivity through the

SA Objectives	SA Score	Justification
		inclusion of green infrastructure with any development the negative effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation and potential significant negative effects were identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H140: Land to the north west of 3 Two Gates, Slaithwaite

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 31-35 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 5 minutes travel time of a primary school and within 11-15 minutes of a secondary school so is likely to have a significant positive effect on this SA objective. The site is also located within 36-40 minutes of the nearest further education centre.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP and within 41-45 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close to a number of existing residential properties to the east on Holme Lane. These properties are receptors sensitive to noise and given their relative proximity to the site it is likely that they may be affected during the construction phase. As such a minor negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is within 16-20 minutes of a local centre and is also within 6-10 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++/--?	The site is crossed by a cycle path, which could be lost as a result of housing development; therefore a potential

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		significant negative effect is identified. However the site is located in close proximity to a number of open spaces. Allotments are located within 190m to the north of the site. The site is in close proximity to semi-natural and natural greenspace at Bank Gate 290m to the east as well as outdoor sports facilities 30m to the south east. As such a mixed effect (significant positive and uncertain significant negative) is expected on this SA objective given that the site provides access to a number of nearby open spaces but that footpath access may be lost as a result of housing development at this location.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.48ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.48ha) which consists of mostly greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.48ha) and consists of mostly greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within close proximity of Huddersfield Narrow Canal which has been identified as a Candidate Local Wildlife Site and is within 400m to the south east. Given the relative proximity of this feature the potential for detrimental impact through habitat disturbance and fragmentation is recognised. As such a minor negative effect is recorded for this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the negative effect is noted to be uncertain.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located mostly on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located mostly on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: transport, and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H141: Land west of Hunsworth Lane, East Bierley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
better capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and within 16-20 minutes of a secondary school so is likely to have a significant positive effect on this SA objective. The site is also located within 16-20 minutes of the nearest further education centre.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time of a GP and within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close to a number of existing residential properties to the east on Hunsworth Lane. These properties are receptors sensitive to noise and given their relative proximity to the site it is likely that they may be affected during the construction phase. As such a minor negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is within 21-25 minutes of a local centre and is also within 21-25 minutes of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the	++	The site is located within close proximity to a number of open spaces and also provides access to a footpath which is accessible within 60m to the west. The site is in close proximity to outdoor sports facilities at the East Bierley Cricket

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		Club and the East Bierley Golf Club which are both to the north within 5m and 155m respectively. Designated parkland including provision for children and young people is accessible to the east within 60m on Hunsworth Lane and two amenity greenspaces are provided along the same route to the north east within 240m. Further open space is provided at the allotments which are located 370m to the north east on Bierley Marsh. A significant positive effect is therefore identified given the relative proximity of multiple sites of open space to the site.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.54ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.54ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.54ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, given that it lies close to the southern edge of the East Bierly Conservation Area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within close proximity of Tong Moor which has been designated as a Local Wildlife Site and is 660m to the north east. Given the relative proximity of this feature the potential for detrimental impact through habitat disturbance and fragmentation is recognised. As such a minor negative effect is recorded for this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the negative effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located mostly on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located mostly on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: transport, and 19: climate change. No potential significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H142: Land west of Chandler Lane, Honley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--/-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The eastern part of this site is within 41-45 minutes travel time of the nearest employment node; however the western part of the site is 51-55 minutes from an employment node. In between, journey times to employment nodes vary in between those two extremes. Therefore a mixed effect on this objective is expected – a minor negative effect is likely for the eastern side and a significant negative effect is likely for the western side.
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
better capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 16-20 minutes travel time of a primary school. The eastern part of this site is within 21-25 minutes travel time of the nearest secondary school; however the western part of the site is 36-40 minutes from the nearest secondary school. Overall a negligible effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 16-20 minutes travel time of a GP and within 56-60 minutes of a hospital; therefore a negligible effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close to a number of existing residential properties to the north and to the south on Chandler Lane. These properties are receptors sensitive to noise and given their relative proximity to the site it is likely that they may be affected during the construction phase. As such a minor negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is within 31-35 minutes of a local centre and is also within 16-20 minutes of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the	++	The site is located within close proximity to a number of open spaces and also provides access to the public rights of way network at the bridleway which runs adjacent to Chandlers Lane on the site's easterly edge. The site is within 435m of

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		natural and semi-natural greenspace provided at Honley Old Wood which is to the north west. Outdoor sports facilities with inclusion for children's and young people's provision is to the east of the site within 120m. A significant positive effect is therefore identified given the relative proximity of multiple sites of open space to the site.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.71ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site not was classed as 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.71ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The land has been designated as Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.71ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateaux with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, given that it lies adjacent to a group of Grade II Listed weaver's houses on Chandler Lane. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within close proximity of Honley Old Wood which has been identified as a Candidate Local Wildlife Site and is 425m to the north. Spring Wood Honley is within 700m also to the north of the site and has been designated as a Local Wildlife Site. Given the relative proximity of these features the potential for detrimental impact through habitat disturbance and fragmentation is recognised. As such a minor negative effect is recorded for this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the negative effect is noted to be uncertain.
15. Reduce air, water and	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
soil pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located mostly on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located mostly on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is not classed as 'green' in terms of its access to any of the eight features assessed; therefore a significant negative effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation and potential significant negative effects were identified in relation to SA objectives 1: employment (it should be noted that the overall effect for this SA objective was mixed), 10: transport and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H143: Land to the east of Milton Road, Liversedge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 5 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
better capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and within 11-15 minutes of the nearest secondary school. Overall a significant positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP and within 31-35 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is bordered by the Spenborough Industrial Estate beyond the National Cycle Route 66 to the north. Given that siting residential development at this location may result in noise pollution affecting residents in the longer term a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is within 11-15 minutes of a local centre and is also within 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation	++/--?	The site is on land which has been designated as an outdoor sports facility, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. Amenity greenspace borders the site to the south

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		and another undesignated open space borders the site to the east and south east. The northern edge of the site is bordered by National Cycle Route 66 which has been designated as a green corridor. Also to the north within 340m Algernon Firth Park provides facilities for sports and includes public tennis courts, a multiuse games area, a bowling green and a children's playground. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.27ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.27ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The land has been designated as urban land in terms of its agricultural land classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.27ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites and as such a negligible effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	--	This site is located mostly on greenfield land and also mainly within flood zone 3; therefore a significant negative effect is likely given that the site has been identified as being in an area which is at high risk of flooding.

SA Objectives	SA Score	Justification
risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located mostly on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation (it should be noted that the overall effect for this SA objective was mixed) 10; transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 5: amenity, 8 leisure and recreation (it should be noted that the overall effect for this SA objective was mixed), and 16: flooding. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H144: Land south of Hassocks Lane, Honley, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. A section of the south-eastern part of this site is within 26-30 minutes of an employment node, whereas the central to northern part of the site is more than 60 minutes from an employment node. In between the south-eastern part and central to northern parts of the site, journey times to employment nodes vary in between those two extremes. Overall, a mixed effect is likely – minor positive for the section of the south-eastern part of the site, and significant negative for the central to northern part.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	0?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The south-eastern part of this site is within 21-25 minutes of a primary school, 21-25 minutes of a secondary school and 26-30 minutes from a further education facility. The central to northern part of this site is more than 60 minutes travelling time from a primary school, secondary school and further education facility. In between the south-eastern part and central to northern parts of the site, journey times to education facilities vary in between those two extremes. Overall, a mixed effect is likely – negligible for the south-eastern part and significant negative for the central to northern part.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	-/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The south-western end of this site is within 16-20 minutes of a GP and more than 60 minutes from a hospital, whereas the central to northern part of the site is more than 60 minutes from a GP and hospital. In between the south-western part and central to northern parts of the site, journey times to healthcare facilities vary in between those two extremes. Therefore this site is likely to have a mixed effect – potentially minor negative for the south-western end and significant negative for the central to northern end. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is not surrounded by residential properties or other sensitive receptors, however there are several properties within 100m to the north-west, west and south and the residents of such could be potentially affected by noise and light pollution during construction. Therefore, a minor negative effect is likely on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	-/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The south-western part of this site is within 31-35 minutes of a local centre and 16-20 minutes from a town/district centre, whereas the central to northern part is more than 60 minutes from a local centre and town/district centre. In between the south-western part and central to northern parts of the site, journey times to local services vary in between those two extremes. Overall, a mixed effect is likely – minor negative for the south-western part and significant negative for the central to northern part.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance	++	<p>Within 600m of the site there are a number of recreational facilities and areas of greenspace, the closest of which is an</p>

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		area of semi-natural and natural greenspace directly adjacent to the north of the site. Other recreational facilities and areas of open space include outdoor sports facilities and amenity greenspace. There are also a number of PRoW footpaths within 600m of the site, and two bridleways run along the eastern and northern edges of this site. The proximity of these areas and paths is likely to have a significant positive effect.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 4.2ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as 'green' for any of the eight features assessed. Therefore, a significant negative effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (4.2ha) and on greenfield land, and therefore, a minor negative effect on this SA objective is likely. In addition, most of this site is on grade 3 agricultural land, and this reinforces the negative effect.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (4.2ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Scheduled Monument at Honley Wood and Grade II Listed Buildings at Chandler Lane (the loss of this area and its subsequent development could harm elements that contribute to the significance of these assets). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Honley Wood candidate Local Wildlife Site is directly adjacent to the north of this site, and therefore a significant negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is not classed as 'green' for any of the eight of the features assessed; therefore a significant negative effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure. Potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health, 6: local services (part of a mixed effect overall), 10: sustainable transport, 14: biodiversity and geodiversity and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H145: Spensborough Industrial Estate, Parker Street, Liversedge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 5 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school, 5 minutes travel time of a secondary school and 6-10 minutes travel time from a further education facility. Therefore, a significant positive effect is likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 5 minutes travel time of a GP and within 31-35 minutes travel time of a hospital. Therefore this site is likely to have a minor positive effect on access to healthcare. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by existing residential properties. The construction of the site could result in increased noise and light pollution to residents resulting in a significant negative effect. In addition, there are several industrial buildings to the north and east which may result in noise over the long-term, reinforcing the negative effect.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 11-15 minutes travel time of a local centre and within 16-20 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>Within 600m of the site there are many recreational facilities and areas of open space, the closest of which is a green corridor directly adjacent at the southern end of the site. There are also outdoor sports facilities, parks and gardens, amenity greenspace, semi-natural and natural greenspace, areas for children and young people and civic space. In addition, there are a number of PRoW footpaths to the north and south of the site, and a national cycle route runs adjacent to the south. The proximity of these areas and paths is likely to have a significant positive effect.</p>

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.52ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.52ha) and on brownfield land, and therefore, a minor positive effect on this SA objective is likely. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This site is small (0.52ha) and on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'industrial/business parks' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any biodiversity or geodiversity designation, and therefore is likely to have a negligible effect on this SA objective. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, and it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is on brownfield land and outside flood zone 3; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land therefore a minor positive effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to three of the eight of the features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education and 8: recreation. Potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H146: Land north of Linthwaite Sports & Social Club, Linfit Lane, Slaithwaite, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 41-45 minutes travel time of the nearest employment node; therefore a minor negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 11-15 minutes travel time of a primary school and 11-15 minutes travel time of a secondary school. Therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
social care they need.		This site is within 6-10 minutes travel time of a GP and within 51-55 minutes travel time of a hospital. Therefore this site is likely to have a minor positive effect on access to healthcare. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The site is surrounded by existing residential properties and the construction of the site could result in increased noise and light pollution to these residents, resulting in a significant negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 11-15 minutes travel time of a local centre and within 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	The site is on land currently designated as amenity greenspace and an outdoor sports facility and it is possible that these assets could be lost by developing the site. However, within 600m of the site, there are a number of other recreational facilities and areas of open space including other outdoor sports facilities, areas of semi-natural and natural greenspace, allotments, a sports centre and parks and gardens, all of which could be used by residents. There are also a number of PRoW footpaths within 600m of the site, one of which runs along the western edge of the site, and a national cycle route is approximately 300m west of the site. Overall, a mixed effect is anticipated.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.83ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.83ha) and on greenfield land, and therefore, a minor negative effect on this SA objective is likely.

SA Objectives	SA Score	Justification
		The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (0.83ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is approximately 270m south of Huddersfield Narrow Canal candidate Local Wildlife Site, and therefore is likely to have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. <p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: recreation and leisure. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H147: Land to the south of Cliffe Lane, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>A tiny area in the south of the site is within 5 minutes travel time of the nearest employment node and a small area adjacent to that is within 6-10 minutes; however the vast majority of the site is within 16-20 minutes travel time of an employment node. As the whole site is within 20 minutes of an employment node, a significant positive effect is likely.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to schools vary across this site. The south-western part of the site is within 6-10 minutes travel time of a primary school; however the north and centre of the site is within 16-20 minutes of a primary school. Similarly the south west of the site is within 11-15 minutes of a secondary school, while an area in the centre of the site is within 31-35 minutes of a secondary school. Therefore, the most accessible part of the site is the south west and the least</p>

SA Objectives	SA Score	Justification
		accessible area is in the centre. In between those parts of the site, journey times to education facilities vary in between those two extremes. Levels of access to further education facilities also vary. Therefore a mixed effect on this objective is expected – potentially significantly positive for the south-western part and negligible for the central part.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+ / 0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary across this site. The south-western part of this site is within 6-10 minutes travel time of a GP and within 31-35 minutes of a hospital. However, the central to northern part of the site is within 16-20 minutes of a GP and 41-45 minutes of a hospital. In between those parts of the site, journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – minor positive for the south-west part and negligible effect for the central to northern part. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties within 100m to the west, north-west and north of this site, and during construction these residents could experience an increase in noise and light pollution, resulting in a minor negative effect. In addition, there is an industrial building adjacent to the south west of the site which may lead to noise pollution over the longer term, and a significant negative effect is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+ + / 0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district centres vary across this site. The south-west part of this site is within 5 minutes travel time of a local centre and within 6-10 minutes of a town/district centre. However, the central to northern part of the site is within 11-15 minutes of a local centre and 16-20 minutes of a town/district centre. In between those parts of the site, journey times to local and town/district centres vary in between those two extremes. Therefore a mixed effect on this objective is expected – significantly positive for the south-west part and negligible for the central to northern part.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation	+ + / -- ?	There is a PRoW running through the site and this could be lost to development, which could have a significant negative effect on this SA objective although this is uncertain depending on whether it is retained within the design of the site. However, within 600m of the site there are a number of recreational facilities and areas of open space, the closest of

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		which is allotments approximately 190m south of the site. There is also semi-natural and natural greenspace, amenity greenspace, outdoor sports facilities, parks and gardens, civic spaces and areas for children and young people. Other PRoW paths and a national cycle route are in the vicinity. Overall, a mixed effect is therefore likely.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.7ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively large (6.7ha) and is on greenfield land, and therefore a significant negative effect on this SA objective is likely. The site is also partially within grade 3 agricultural land, reinforcing the negative effect.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is relatively large (6.7ha) and on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly within LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any biodiversity or geodiversity designation, and therefore is likely to have a negligible effect on this SA objective. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, and it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	--	This site is on greenfield land and the south western part of the site is within flood zone 3. A significant negative effect is therefore likely.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education (as part of a mixed effect overall), 6: local services and facilities (as part of a mixed effect overall), 8: recreation and leisure (as part of a mixed effect overall) and 9: housing. Potential significant negative effects were identified in relation to SA objectives 5: noise, 8: recreation and leisure (as part of a mixed effect overall), 11: efficient use of land, 12: landscape and 16: flooding. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H148: Land to the south east of Spen Bank Mills, Spen Bank, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The north-western part of this site is within 6-10 minutes travel time of an employment node; however the majority of the site is within 11-15 minutes of an employment node. As the entire site is within 20 minutes of an employment node, a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	++?/+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to schools vary within this site. Areas in the north-west and the far southern tip of the site are within 5 minutes travel time of a primary school and within 11-15 minutes of a secondary school, as well as being within 11-15 minutes of a further education institute. However, the central part of the site is within 6-10 minutes of a primary school, within 16-20 minutes of a secondary school, and is within 16-20 minutes of a further education institute. Therefore a mixed effect on this objective is expected – potentially significant positive for the north-west and far southern parts and minor positive for the central part.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 6-10 minutes of a GP and 26-30 minutes of a hospital (although a small area in the north-western part of the site is within 5 minutes travel time of a GP and within 26-30 minutes of a hospital). Therefore, a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties within 100m to the south, south-west and east of the site and during construction these residents could experience increased noise and light pollution, resulting in a minor negative effect. There are also industrial buildings immediately to the west of the site which could result in noise pollution over the longer term; therefore a significant negative effect is likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre and the majority of the site is within 11-15 minutes travel time of a town/district centre (although an area in the north is within 6-10 minutes). Therefore, a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site)</p>

SA Objectives	SA Score	Justification
		and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are many recreational facilities and areas of open space, the closest of which is a park and garden directly adjacent to the south of the site. There are also other parks and gardens, outdoor sports facilities, two sports centres, amenity greenspace and areas for children and young people. The site is also surrounded by a number of PRoW footpaths (two of which are directly adjacent to the western and eastern edges) and a national cycle route falls within 600m south-east of the site. Therefore, a significant positive effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.78ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to all eight of features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (4.78ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is also partially within grade 3 agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (4.78ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly within LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Little Gomersal Conservation Area (this site forms part of the area of open land which contributes to the significance of the area). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any biodiversity or geodiversity designation, and therefore is likely to have a negligible effect on this SA objective. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, and it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land but outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to all eight of features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education (part of a mixed effect overall), 4, 8: recreation and leisure, 10: sustainable transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 5: noise. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H149: Primrose Farm, Crossley Lane, Northorpe, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 21-25 minutes travel time of an employment node, and therefore a minor positive effect is likely.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of this site is within 11-15 minutes travel time of a primary school and 11-15 minutes travel time of a secondary school. Therefore, a significant positive effect is likely. Most of the site is also within 26-30 minutes of a further education facility.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is within 16-20 minutes travel time of a GP and within 41-45 minutes of a hospital. Therefore, this site is likely to have a negligible effect. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties within 100m to the north, east and south of the site, and during construction those residents could experience increased noise and light pollution. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Most of this site is within 6-10 minutes travel time of a local centre and the whole site is within 11-15 travel time of a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are several recreational facilities and areas of open space, the closest of which is an outdoor sports facility approximately 50m north-east. There are also other outdoor sports facilities, a park and garden, amenity greenspace and areas for children and young people. The site is also surrounded by a number of PRoW footpaths (two of which run along the western and northern edges of the site) and a national cycle route falls within 600m south-east of the site. Therefore, a significant positive effect is likely.

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.91ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as mainly or entirely 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.91ha) and on greenfield land, and therefore, a minor negative effect on this SA objective is likely. The site is also partially within grade 3 agricultural land, but it may be possible to avoid developing this part of the site.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (1.91ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on a group of Grade II Listed buildings at Balderstone Hall (the loss of this site and its subsequent development could harm elements which contribute to their significance). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any biodiversity or geodiversity designation, and therefore is likely to have a negligible effect on this SA objective. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, and it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	This site is on greenfield land but outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as mainly or entirely 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. There were no potential significant negative effects identified for this site.		

H150: Land to north east of 55 Calder Road, Lower Hopton, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 31-35 minutes travel time of an employment node, and therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The south-western part of the site is within 6-10 minutes of a primary school, 21-25 minutes of a secondary school and 21-25 minutes of a further education facility. However, the far south-eastern corner is within 6-10 minutes of a primary school, 31-35 minutes of a secondary school and 31-35 minutes of a further education facility. Although levels of accessibility to education facilities vary across the site, the site scores as minor positive overall due to its proximity to a primary school.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is within 11-15 minutes travel time of a GP and within 31-35 minutes of a hospital. Therefore, this site is likely to have a minor positive effect. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The site is in an industrial area and is adjacent to a number of industrial buildings as well as a railway line which could result in noise pollution over the long term. There are also residential properties within 100m of the south and west of the site, and the residents of these could experience increased noise and light pollution during construction. Overall a significant negative effect is likely.
6. Retain and enhance access to local services and facilities.	++	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 5 minutes travel time of a local centre and within 6-10 minutes of a town/district centre; therefore a significant positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is on land currently used as allotments, and it is possible that this feature could be lost if the site is developed. However, within 600m of the site there are several other recreational facilities and areas of open space that could be used by residents, the closest of which is an area of semi-natural and natural greenspace directly adjacent to the east of the site. There are also outdoor sports facilities, other semi-natural and natural greenspace, amenity greenspace and areas for children and young people. In addition, a number of PRoW footpaths are within the surrounding area and a national cycle route is directly adjacent to the north of the site. Therefore, a mixed effect is likely overall.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 2.07ha; therefore a minor positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (2.07ha) and on greenfield land, and therefore, a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (2.07ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Briery Bank Wood approved Local Wildlife Site which is approximately 300m to the south and Whitley Wood approved Local Wildlife Site is approximately 900m to the east. Therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	--	This site is on greenfield land and within flood zone 3; therefore a significant negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 6: local services and facilities, 8: recreation and leisure (part of a mixed effect overall), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: recreation and leisure (part of a mixed effect overall) and 16: flood risk. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H151: Birkby Plastics Headlands Road, Liversedge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The northern part of the site is within 6-10 minutes travel time of an employment node, whereas the southern part of the site is within 21-25 minutes travel time of an employment node. and within 5 minutes of a town/district centre. In between the northern and southern parts of the site, journey times to employment nodes vary in between those two extremes. Overall a mixed effect is likely – potential significant positive for the northern part of the site and a minor positive effect for the southern part.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time of a primary school, as well as 6-10 minutes of a secondary school and 16-20 minutes of a further education facility. Therefore, a significant positive effect is likely overall.
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		facilities are easily accessible from housing sites there will be positive effects on residents' health. The northern and eastern parts of this site are within 11-15 minutes travel time of a GP and within 31-35 minutes of a hospital. The southern extent of the site is within 16-20 minutes of a GP and within 51-55 minutes travel time of a hospital. In between, journey times to health facilities vary in between those two extremes. Therefore, this site is likely to have a mixed effect overall - a minor positive effect for the northern and eastern parts and negligible effect for the southern part. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The site is directly adjacent to an industrial building which could result in noise over the longer term. In addition, there are a number of residential properties within 100m to the east and south-east and Spen Valley Sports College is within 100m to the south. These receptors could be affected by noise and light pollution during construction. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	++/+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The northern part of this site is within 5 minutes travel time of a local centre and within 11-15 minutes of a town/district centre. The south-west part of this site is within 5 minutes travel time of a local centre and within 21-25 minutes of a town/district centre. In between, journey times to local services and facilities vary in between those two extremes. Therefore, this site is likely to have a mixed effect overall - a significant positive effect for the northern part and a minor positive effect for the south-western part.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	Within the site there is a PRoW footpath which runs along the western and southern edges. This is also designated as a local cycle route. As there is potential that this route could be lost to the development, a significant negative effect is likely although this is uncertain. However, within 600m of the site there are several other recreational facilities and areas of open space that could be used by residents, the closest of which is an outdoor sports facility which is adjacent to the south of the site. There are also other outdoor sports facilities, semi-natural and natural greenspace, amenity greenspace, a green corridor and areas for children and young people. In addition, a number of other PRoW footpaths lie to the north and south-west of the site. Therefore, a mixed effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 6.35ha; therefore a significant positive effect is likely.
10. Secure an effective and	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of

SA Objectives	SA Score	Justification
safe transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	++	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (6.35ha) and on brownfield land, and therefore, a significant positive effect on this SA objective is likely. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This site is large (6.35ha) and on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies mainly within LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any biodiversity or geodiversity designation, and therefore is likely to have a negligible effect on this SA objective. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, and it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is on brownfield land and outside of flood zone 3; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land therefore a minor positive effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: local services and facilities, 8: recreation and leisure (part of a mixed effect overall), 9: housing, 10: sustainable transport, 11: use of land and 19: climate change. A potential significant negative effect was identified for SA objective 8: recreational and leisure (part of a mixed effect overall). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H152: Land South of Batley Frontier, Bradford Road, Batley Carr, Batley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 6-10 minutes travel time of an employment node; therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 11-15 minutes travel time of a primary school, and well as 21-25 minutes travel time of a secondary school. Therefore, a minor positive effect is likely overall.
4. Improve the health of local people and ensure that they can access the health and	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is within 11-15 minutes travel time of a GP and within 31-35 minutes of a hospital. Therefore, this site is likely

SA Objectives	SA Score	Justification
social care they need.		to have a minor positive effect. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The A652 (Bradford Road) is directly adjacent to the west of the site and as a result, a significant negative effect is likely as this has the potential to result in noise pollution over the longer term. In addition, a railway line lies to the east of the site and a number of residential properties are within 100m to the north, west and south-west of the site. Residents of these properties could be affected by noise and light pollution during construction which reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 11-15 minutes travel time of a local centre and within 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space with 600m of the site, the closest of which is an area of semi-natural to natural greenspace directly adjacent to the east of the site. Other areas include green corridors, other areas of semi-natural and natural greenspace, outdoor sports facilities, amenity greenspace and areas for children and young people. There is also a number of other PRoW footpaths to the south-east of the site. Therefore, a significant positive effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.53ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.53ha) and on greenfield land, and therefore, a minor negative effect on this SA objective is likely.

SA Objectives	SA Score	Justification
		The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.53ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Caulms Wood Quarry, Dewsbury Local Geological Site is approximately 860m to the south of this; therefore a minor negative effect on this SA objective is likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, and it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	--	This site is on greenfield land and largely within flood zone 3; therefore a significant negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation and leisure, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 16: flood risk. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H153: Holme Mills, West Slaithwaite Road, Slaithwaite

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 41-45 minutes travel time of the nearest employment node; therefore a minor negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time of a primary school and within 16-20 minutes of the nearest secondary school. The site is also within 26-30 minutes of the nearest further education centre. Overall a significant positive effect is expected on this SA objective.
4. Improve the health of local people and ensure that they	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
can access the health and social care they need.		This site is within 6-10 minutes travel time of a GP and within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is in close to a limited number of existing residential properties to the south on School Lane. These properties are receptors sensitive to noise and given their relative proximity to the site it is likely that they may be affected during the construction phase. As such a minor negative impact on this SA objective is expected
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Most of the site is within 11-15 minutes of a local centre and is also within 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+/--?	The site is not in close proximity to any existing open spaces however the West Yorkshire Cycle Route can be accessed within 350m to the north west and the footpath network passes through the site at its western and eastern edge. As such a mixed effect (minor positive and uncertain significant negative) is expected on this SA objective given that the site provides access to the public rights of way network but that footpath access may be lost as a result of housing development at this location.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.98ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This is a relatively small site (4.98ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The land has been designated as Grade 4 in terms of Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4.98ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is in close proximity of a number of designated biodiversity sites. Huddersfield Narrow Canal is within 25m to the north of the site and has been identified as a Candidate Local Wildlife Site. Drop Clough is within 530m to the west of the site and has been designated as a Local Wildlife Site. The relative proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located mostly on greenfield land and also mainly within flood zone 2; therefore a minor negative effect is likely. Although the site is within an area of reduced likelihood of being flooded, the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located mostly on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation (it should be noted that the overall effect for this SA objective was mixed) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H154: Hay Royds Colliery, Wheatley Hill Lane, Clayton West

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located more than 60 minutes travel time from the nearest employment node. As such a significant negative effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is located more than within 60 minutes travel time of a primary school and located more than 60 minutes travel time from the nearest secondary school. Overall a significant negative effect is expected on this SA objective.
4. Improve the health of local	--	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is located more than 60 minutes travel time from a GP and more than 60 minutes from a hospital; therefore a significant negative effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	0	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The site is not in close proximity to any sensitive receptors or any major roads, railways or industrial areas and as such a negligible effect is recorded for this SA objective.
6. Retain and enhance access to local services and facilities.	--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The site is located more than 60 minutes travel time for a local centre and is also located more than 60 minutes travel time from a town/district centre; therefore a significant negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is located within close proximity to a number of open spaces and also provides access to the public rights of way network at the footpath which runs adjacent to the site's northern edge. The site is within 220m of the outdoor sports facilities which are provided at the golf course to the north east. A semi-natural and natural greenspace is provided 520m to the south east at Deffer Wood. A significant positive effect is therefore identified given the relative proximity of multiple sites of open space to the site.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.07ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This is a relatively small site (1.07ha) on brownfield land; therefore a minor positive effect on this SA objective is likely. The land has been designated as Grade 4 in terms of Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (1.07ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of its potential impact on the surrounding historic environment given it forms part of the open countryside which contributes to the setting of Grade II * Listed Building Wheatley Hill Farmhouse which is located within 375 metres to the north east. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in close proximity of a number of designated biodiversity sites. Deffer Wood has been identified as a Candidate Local Wildlife Site within 520m to the south east of the site. Riding Wood is located to the north east of the site within 730m with a portion of the site being designated as a Local Wildlife Site and another part of it being identified as a Candidate Wildlife Site. High Bridge Wood is located to the north west of the site within 745m and has been identified as a Candidate Local Wildlife Site. The relative proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is located on a colliery and as such is on brownfield land. The site is also within an area of reduced likelihood of being flooded, the development of new housing on this brownfield land would not increase the area of impermeable surfaces and would therefore not result in an increase in the overall flood risk in Kirklees. A negligible effect is therefore expected on this SA objective.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		This site is located on brownfield; therefore a minor positive effect is likely. The effect is recorded as uncertain given that the design of the development and the materials currently onsite are unknown.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is not classed as 'green' in terms of its access to any of the eight features assessed; therefore a significant negative effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health, 6: access to local services, 10: transport and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H155: Land east of Far Common Road, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The western part of this site is within 16-20 minutes travel time of the nearest employment node; however the eastern part of the site is 26-30 minutes from an employment node. In between, journey times to employment nodes vary in between those two extremes. Therefore a mixed effect on this objective is expected – significantly positive for the western side and minor positive for the eastern side.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The western part of this site is within 6-10 minutes travel time of the nearest primary school; however the eastern part of the site is 21-25 minutes from a primary school. The western part of the site is within 11-15 of a secondary school and the eastern part of the site is within 21-25 minutes of a secondary school. In between, journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – significantly positive for the western side and negligible for the eastern side.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0/-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The western part of this site is within 16-20 minutes travel time of the nearest GP; however the eastern part of the site is 31-35 minutes from a GP. The western part of the site is within 41-45 minutes of a hospital and the eastern part of the site is within 56-60 minutes of a hospital. In between, journey times to health care facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – negligible for the western side and minor negative for the eastern side. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to the A62 along its southern edge. It is considered that the close proximity of this major road may result in noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	0/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The western part of this site is within 6-10 minutes travel time of the nearest local centre; however the eastern part of the site is 16-20 minutes from the nearest local centre. Similarly the western part of the site is within 21-25 minutes of the nearest town/district centre and the eastern part of the site is within 31-35 minutes of the nearest town/district centre hospital. In between, journey times to the nearest local or town/district centre vary in between those two extremes. Therefore a mixed effect on this objective is expected – negligible for the western side and significant negative for the eastern side.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the	++	The site is within close proximity of a number of designated open spaces. Outdoor sports facilities are provided adjacent to the site on the western side of Far Common Road within 5m. Further outdoor sports facilities are provided within

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		160m to the south at Slipper Lane. To the north of the site within 340m amenity greenspace is provided on the north and south sides of Far Common Road. A footpath is accessible within 375m to the north of the site at Fall Lane. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.1ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, at least approximately half or more of the site was classed as 'green' in terms of its access to five out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (5.1ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The land has been designated as Grade 3 in terms of Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (5.1ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site could impact on a designated heritage asset but that its development is unlikely to result in harm to that asset if the development accords with the anticipated Local Plan policies for managing change to the historic environment. A minor negative effect on this SA objective is therefore likely although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in close proximity of Sunny Bank Ponds which has been designated as a Local Nature Reserve and Local Wildlife Site and is to the south east within 400m. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located mostly on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. For five out of the eight features assessed in terms of access at least half of the site was identified as being 'green'. Therefore, a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (it should be noted that the overall effect for this SA objective was mixed), 3: education (it should be noted that the overall effect for this SA objective was mixed), 8: recreation and leisure, 9: housing, 10: transport, and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 5: amenity, 11: land use and 12: landscape and townscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H156: Land south of Kinder Avenue, Cowlersley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 36-40 minutes travel time of the nearest employment node; therefore a negligible effect on this

5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on Kinder Avenue. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is within 6-10 minutes of a local centre and is also within 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the	++	The site is within close proximity of a number of designated open spaces. Outdoor sports facilities are provided to the south of the site within 20m at Crosland Heath Golf Club. Amenity greenspace is accessible within 65m to the north of

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		the site on Kinder Avenue and provision is also made for young people and children at this location. Further outdoor sports facilities are provided within 310m to the south west at Broad Oak Cricket Club. A footpath is accessible along the western edge of the site. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.92ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.92ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The land has been designated as Grade 4 in terms of Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.92ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in close proximity of Huddersfield Narrow Canal which has been identified as a Candidate Local Wildlife Site and is to the north west within 600m. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located mostly on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (it should be noted that the overall effect for this SA objective was mixed), 3: education, 8: recreation and leisure, 10: transport, and 19: climate change. No potential significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H157: Land west of Strike Lane, Skelmanthorpe

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.

through increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and 6-10 minutes of a secondary school so is likely to have a significant positive effect. The site is also within 6-10 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP and within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within 30m of existing residential properties to the south east on Huddersfield Road. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is within 6-10 minutes of a local centre and is also within 6-10 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	The site is within close proximity of a number of designated open spaces. Outdoor sports facilities are provided to the west of the site within 20m at the nearby school grounds. Amenity greenspace is accessible within 390m to the east of the site on Strike Lane. There is provision for children and young people on Gardeners Walk and Heather Fold within 425m and 410m to the south east respectively. A footpath is accessible along the north western edge of the site. As such a significant positive effect is recorded for this SA objective.

SA Objectives	SA Score	Justification
usage.		
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.15ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.15ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. Most of the site lies on land which has been identified as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.15ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in close proximity of Springs Wood which has been identified as a Candidate Local Wildlife Site and is to the north within 370m. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located mostly on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education (it should be noted that the overall effect for this SA objective was mixed), 8: recreation and leisure, 10: transport, and 19: climate change. No potential significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>		

H158: Park Riding, Northgate, Honley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 31-35 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school and 6-10 minutes of a secondary school so is likely to have a significant positive effect. The site is also within 26-30 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time of a GP and within 36-40 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is adjacent to the railway line which runs along its south west edge. It is considered that the close proximity of the railway line may result in noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The southern part of this site is within 11-15 minutes travel time of the nearest local centre; however the northern part of the site is 21-25 minutes from the nearest local centre. In between, journey times to the nearest local centre vary in between these two extremes. The majority of the site is within 6-10 travel time of the nearest town centre. Therefore a minor negative effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	+ +/--?	<p>The site is crossed by a footpath towards its north western edge. This access route may be lost if housing development was to proceed at this location and as such a potential significant negative effect is recorded for this SA objective. The site is however also within close proximity of a number of designated open spaces. Outdoor sports facilities are provided to the south of the site within 130m at the nearby school grounds. Upper Park Wood is located within 30m to the north and has been designated as a Local Nature Reserve. Allotments are located within 220m of the site to the north west. A</p>

SA Objectives	SA Score	Justification
usage.		footpath is accessible along the northern edge of the site. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.35ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five out of the eight features assessed. Therefore, a significant positive effect is likely
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (4.35ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. Most of the site lies on land which has been identified as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4.35ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, given that its allocation would bring development up to the curtilage of the Grade II Listed Park Riding. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is in close proximity of a number of areas which have been designated due to their importance in terms of biodiversity. Honley Station Cutting borders the site to the south and has been designated as an SSSI. Upper Park Wood is within 35m to the north of the site and has been designated as a Local Nature Reserve and a Local Wildlife Site. Park Wood and Hey Wood within 235m to the west and within 375m to the east respectively have both been identified as Candidate Local Wildlife Sites. Arthur, Molly Carr and Roaf Woods re within 700m to the north east of the site have been designated as Local Wildlife Sites. The proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
soil pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: transport, and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H159: Netherley, Old Mount Road, Marsden

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 46-50 minutes travel time of the nearest employment node; therefore a minor negative effect on this objective is expected.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

SA Objectives	SA Score	Justification
through increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of a primary school and 36-40 minutes of a secondary school so is likely to have a minor positive effect.</p>
4. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the south east on Netherley Drive. These properties may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 11-15 minutes of a local centre and is also within 5 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	+ +/--?	The site is within close proximity of a number of designated open spaces. Outdoor sports facilities are provided to the south of the site within 70m at Marsden Golf Club. A semi-natural and natural greenspace is accessible within 325m to the north east on Binn Road. Allotments are located within 435m and 470m of the site to the north east on either side of Old Mount Road. A footpath runs through the site from east to west which would currently provide access to the wider public rights of way network. As such a mixed effect (significant positive and uncertain significant negative) is

SA Objectives	SA Score	Justification
usage.		expected on this SA objective given that the site provides access to a number of nearby open spaces but that footpath access may be lost as a result of housing development at this location.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.48ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four out of the eight features assessed. Therefore, a significant positive effect is likely
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.48ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. Most of the site lies on land which has been identified as Grade 5 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively small site (0.48ha) on greenfield land; the site is also within 320m of the Peak District National Park which is located to the south. As such there could be a significant negative effect on this SA objective given that development on greenfield land which is in close proximity to the National Park could have a negative effect on the quality of this important protected landscape. The negative effect is recorded as uncertain as the design of the development is unknown. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, given that Shaw Farmhouse which borders the site to the north west and barn to the west of this area are Grade II Listed Buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 230m of the South Pennine Moors to the west which has been designated as an SAC, SPA and SSSI. Butterley Cutting, Marsden has been designated as a Local Geological Site within 450m to the south east of the site. The proximity of the site to these designated biodiversity and geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc. and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure (it should be noted that the overall effect on this SA objective is mixed), 10: transport, and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 8: recreation and leisure (it should be noted that the overall effect on this SA objective is mixed), 12: townscape and landscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H160: Land east and to the rear of Syke Lane Bradford Road, Oakenshaw

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the	++	The site is within close proximity of a number of designated open spaces and as such new residents may choose to make use of these facilities. Outdoor sports facilities are provided adjacent to the site to the south at Cleckheaton Golf Club.

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		Amenity greenspace is accessible on Bradford Road within 170m of the site to the north. A footpath and national cycle route can be accessed within 15m to the west of the site. As such a significant positive effect is recorded for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (14.96ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four out of the eight features assessed. Therefore, a significant positive effect is likely
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (14.96ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (14.96ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in close proximity of a number of areas which have been designated due to their importance in terms of biodiversity. Hanging Wood has been designated as a Local Wildlife Site and is within 355m to the east. Cockleshaw Wood is within 755m to the north east of the site and has been identified as a Candidate Local Wildlife Site. The relative proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation and leisure, 9: housing, 10: transport, and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 11: land use and 12: townscape and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H161: Former Soothill Cricket Club, Soothill Lane, Batley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
better capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school and 26-30 minutes of a secondary school so is likely to have a minor positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP and within 26-30 minutes of a hospital; therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by existing residential properties on Grace Leather, Lane Gregory Street, Cardigan Close and Soothill Lane to the east, west, north and south respectively. These properties (which are sensitive receptors) may be adversely affected by noise pollution produced during the construction phase of any development proposed. As such a significant negative effect is expected on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 16-20 minutes of a local centre and is also within 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	+ +/--?	The site is on land which has been identified as an outdoor sports facilities area, which could be lost as a result of

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. Amenity greenspace borders the site directly to the south on Soothill Lane. Allotments can be accessed within 135m to the south on Oaks Road. Frances Road provides access to further amenity greenspace, outdoor sports facilities and a children's playground to the south within 120m. The nearest park to the site is accessible on West Street within 125m to the west of the site. A mixed (significant positive and potential significant negative) effect is therefore identified overall.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.45ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six out of the eight features assessed. Therefore, a significant positive effect is likely
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.45ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Urban Land in relation to its Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.45ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Soothill Wood is the closest of such features but is located 1.36km to the east and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 10: transport, and 19: climate change, and potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H162: Cleckheaton Bowling Club, Park View, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 11-15 minutes travel time of a primary school and 16-20 minutes of a secondary school. A significant positive effect is therefore likely on this SA objective. The site is also within 31-35 minutes travel time of a further education centre.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP and within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties on Park View to the east and on Bream Avenue to the south. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 16-20 minutes of a local centre and is also within 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open	++/--?	The site is on Cleckheaton Bowling Club which has been identified as an outdoor sports facilities area, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. The site is bordered to the north by West End Park. A children's playground and further provision for young people can be accessed at this

SA Objectives	SA Score	Justification
space and encourage their usage.		location. Whitcliffe Mount Sports Centre is located within 145m to the north and provides access to outdoor sports facilities. Access to the public footpath network is provided within 5m to the north of the site within West End Park. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.67ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five out of the eight features assessed. Therefore, a significant positive effect is likely
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.67ha) on mostly greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Urban Land in relation to its Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.67ha) on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Hanging Wood is the closest of such features but is located 1.72km to the north and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure (it should be noted that an overall mixed effect was recorded for this SA objective however) 9: housing, 10: transport, and 19: climate change and potential significant negative effects were identified in relation to SA objective 8: recreations and leisure (it should be noted that an overall mixed effect was recorded for this SA objective however). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H163: 538 Hunsworth Lane, East Bierley, Bradford

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and the majority of the site is within 21-25 minutes travel time of a secondary school (although a tiny area in the north is within 16-20 minutes) so is likely to have a minor positive effect. The site is also within 16-20 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time of a GP and within 41-45 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north and west which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	--/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local services and facilities vary throughout this site. The most accessible part of the site is the northern tip which is within 26-30 minutes travel time of both the nearest local centre and town/district centre. The least accessible part is the south which is within 36-40 minutes of both a local centre and town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially minor negative for the northern tip and potentially significant negative for the south of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the	++	<p>The site is approximately 150m from public playing fields to the north east, within 300m of a park and gardens with a children's play area to the north and approximately 330m from a private playing fields to the north. Therefore, a</p>

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.63ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.63ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is also within an area of high quality agricultural land (the land is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.63ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 930m away from Tong Moor Local Nature Reserve; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood	-	This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
risk areas and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objective 6: local services and facilities (part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H164: Church Farm, Church Lane, Gomersal, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 11-15 minutes travel time of the nearest employment node (although a section in the south is within 6-10 minutes); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school (although a small section to the south west is within 5 minutes) and within 11-15 minutes travel time of a secondary school (although a small section to the north is within 16-20 minutes) so is likely to have a significant positive effect. Almost the entire site is also within 11-15 minutes of a further education institute (although a small section to the north is within 16-20 minutes).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 5 minutes travel time of a GP (although a section to the north is within 6-10 minutes) and within 31-35 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the south which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 5 minutes travel time of a local centre (although a small section to the north is within 6-10 minutes) and within 6-10 minutes travel time of a town/district centre (although a small section to the north is within 11-15 minutes); therefore a significant positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++	The site is approximately 30m of a children's play area to the east, 70m from school grounds and playing fields and

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		approximately 120m from a children's play area to the south. The site is also within 485m of an area of amenity green space and an area of private playing fields, an area of semi-natural and natural greenspace and an area of school grounds and playing fields to the south west of the site. In addition, within 585m to the north west of the site are two areas of amenity greenspace (one containing a children's play area) and another area of school grounds and playing fields. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.87ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (4.87ha) and the majority of the site is on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within high quality agricultural land (is classed as urban land) however a section on the eastern part of the site is classed as grade 3.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4.87ha) and the majority of the site is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 630m away from Oakwell Park Local Wildlife Site and Local Nature Reserve; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	The majority of this site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of this site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: local services, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified for this site.		

H165: Land at 10 Oxford Road, Gomersal, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to employment nodes vary throughout this site. The south eastern part of this site is within 16-20 minutes travel time of the nearest employment node whereas the north western part of the site is within 26-30 minutes. In between those areas journey times to an employment node vary in between those two extremes. Therefore a mixed effect on this objective is expected –significantly positive for the south eastern part and minor positive for the north western part of the site.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 16-20 minutes travel time of a primary school (although a tiny area on the northern edge is within 21-25 minutes); however levels of access to secondary schools vary. The eastern part of the site is within 31-35 minutes of a secondary school; however, the western part of the site is within 21-25 minutes of a secondary school. In between those parts of the site, journey times to secondary schools vary in between those two extremes. Levels of access to further education facilities also vary throughout the site. Overall, a potential negligible effect is identified for the whole site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+ / 0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The south western part of this site is within 11-15 minutes travel time of a GP and within 36-40 minutes of a hospital; whereas the eastern part is within 21-25 minutes travel time of a GP and within 41-45 minutes from a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – minor positive for the south western part and negligible for the eastern part of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the west which may be affected by noise during the construction phase. The south western part of the site is also adjacent to the A651 (Oxford Road) which may mean that residents in that part of the site are affected by road noise in the longer term. A significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local services and facilities vary throughout this site. The eastern part of this site is within 11-15 minutes travel time of a local centre and 16-20 minutes of a town/district centre. However, the western part is within 21-25 minutes travel time of a local centre and within 31-35 minutes travel time of a town/district centre. In between those areas journey times to local and town centres vary in between those two extremes. Therefore a mixed effect on this objective is expected –negligible for the eastern part and significant negative for the western part.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is approximately 370m from amenity greenspace to the south east, 400m from a park and garden including a children's play area in the south west, 470m from amenity greenspace in the south west and approximately 530m from a park and garden including a children's play area in the south west. The site is also approximately 400m from a park and garden to the north west and within 600m of several areas of amenity green space to the south east. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.27ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.27ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within high quality agricultural land (is classed as urban land).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.27ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
		The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Stubley Farmhouse to the east of this site and The Bar House to the south-west which are Grade II Listed Buildings.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.</p>
Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (as part of a mixed effect) and 8: leisure and recreation, and potential significant negative effects were identified in relation to SA objectives 5: amenity and 6: local services (as part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H166: 39 Sandy Lane, South Crosland

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 31-35 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of a primary school and the majority of the site is within 31-35 minutes of a secondary school (although a small section in the south is within 26-30 minutes) so is likely to have a minor positive</p>

SA Objectives	SA Score	Justification
		effect. The site is also within 21-25 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP (although a small area in the east is within 11-15 minutes) and within 51-55 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the south which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre and within 21-25 minutes travel time of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is approximately 40m from an area of semi-natural & natural greenspace to the south east. There are two PRoW footpaths adjacent to the southern boundary of the site and approximately 110m to the east of the site is a byway. In addition, there are two PRoW footpaths and four byways within 380m north of the site. Further south of the site approximately 190m away is a bridleway. Therefore, a significant positive effect is expected for this objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.41ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.41ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within high quality agricultural land (is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.41ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the South Crossland Conservation Area and Sunny Bank to the south of this site which is a Grade II Listed Building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 40m from Dean wood Local Wildlife Site, approximately 820m from Delves Wood Local Wildlife Site and approximately 950m of Johnson Wellfield Quarries, Crosland Hill; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H167: Land to the north of Quarry Lane, Lascelles Hall, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to employment nodes vary throughout this site. The southern tip of this site is within 21-25 minutes travel time of the nearest employment node whereas the north of the site is within 36-40 minutes. In between those areas journey times to an employment node vary in between those two extremes. Therefore a mixed effect on this objective is expected – minor positive for the southern tip and negligible for the north of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+/-?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		<p>Levels of access to education facilities vary throughout this site. The most accessible part of this site is the southern tip which is within 11-15 minutes travel time of a primary school and within 26-30 minutes of a secondary school. The least accessible part of the site is the central eastern part which is within 26-30 minutes of a primary school and 41-45 minutes of a secondary school. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially minor positive for the southern tip and potentially minor negative for the central eastern part of the site. Travel times to the nearest further education institute also vary across the site – within 31-35 minutes in the southern tip and within 41-45 minutes in the central eastern part of the site.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	<p>+/0</p>	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the southern tip which is within 11-15 minutes travel time of a GP and within 31-35 minutes of a hospital; whereas the central eastern part is the least accessible as it is within 21-25 minutes travel time of a GP and within 41-45 minutes from a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – minor positive for the southern tip and negligible for the central eastern part of the site. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	<p>-</p>	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the south which may be affected by noise during the construction phase. The site is also within close proximity to the A642 (Wakefield Road) which may result in noise pollution affecting residents in the longer-term. A minor negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	<p>0/-</p>	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local services and facilities vary throughout this site. The most accessible part of the site is the southern tip which is within 11-15 minutes travel time of a local centre and 16-20 minutes of a town/district centre. However, the central eastern part of the site is the least accessible as it is within 21-25 minutes travel time of a local centre and within 26-30 minutes travel time of a town/district centre. In between those areas journey times to local and town centres vary in between those two extremes. Therefore a mixed effect on this objective is expected –negligible for the southern tip and minor negative for the western part.</p>
<p>7. Make our communities</p>	<p>0</p>	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the</p>

SA Objectives	SA Score	Justification
safer by reducing crime, anti-social behaviour and the fear of crime.		incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is approximately 220m from semi-natural & natural greenspace and amenity greenspace and 140m from a Green corridor/pedestrian/cycleway to the north west. The site is also within 300m of two areas of semi-natural & natural greenspace and an area of amenity greenspace to the south west and approximately 160m from a Green corridor/pedestrian/cycleway and 420m from amenity greenspace in the south. In addition, approximately 140m north of the site is a PRow footpath however part of the path is within another housing site option much like a number of the other PRow footpaths to the north of the site. There are also a number of other PRow footpaths within 450m south west of the site. Approximately 435m to the north of the site is a bridleway. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.19ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to none of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.19ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within high quality agricultural land (is classed as grade 4 with a small area in the south classed as urban). Approximately half of this site lies within LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east. The other half of the site lies within LCA E7: Emley Moor Northern Fringes, which is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.19ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.

SA Objectives	SA Score	Justification
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.</p> <p>The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 310m from Round Wood, Tandem Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as 'green' in terms of its access in any of the eight features assessed; therefore a significant negative effect is likely.</p>
Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, and potential significant negative effects were identified in relation to SA objectives 10: sustainability transport and 19 climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H168: Land of Piling Lane, Scisset, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest employment node (with a small area in the north over 60 minutes); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The northern part of the site is over 60 minutes from a primary school, a secondary school and further education institute however the southern part of the site is within 11-15 minutes of a primary school and 16-20 minutes of a secondary school and further education institute. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significant positive for the southern part and potentially significant negative for the northern part.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The northern part of the site is over 60 minutes travel time of a GP and hospital however the southern part of the site is within 11-15 minutes of a GP and within 56-60 minutes of a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially minor positive for the southern part and potentially significant negative for the northern part. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north and south which may</p>

SA Objectives	SA Score	Justification
		be affected by noise during the construction phase. In addition, the northern boundary of the site is adjacent to a railway line which may mean that residents in that part of the site are affected by railway noise. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local services and facilities vary throughout this site. The northern part of this site is over 60 minutes travel time of a local centre and town/district centre. However, the southern part is within 11-15 minutes travel time of a local centre and town/district centre. In between those areas journey times to local and town centres vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially minor positive for the southern part and potentially significant negative for the northern part.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is approximately 270m from school playing fields and 330m from school playing fields including a children's playground to the south. There is also another area of school playing fields in the south within 600m of the site. In addition there is a PRoW footpath that runs adjacent to the southern boundary of the site. Within 530m south west of the site is a sports centre. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.26ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.26ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is also within high quality agricultural land (is classed as grade 3).</p>
12. Protect and enhance the	-?	This is a relatively small site (1.26ha) on greenfield land; therefore development here could have a minor negative effect

SA Objectives	SA Score	Justification
of crime.		by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is adjacent to an area of amenity greenspace and approximately 60m from another area of amenity greenspace to the south. The site is also approximately 320m from semi-natural & natural greenspace and within 600m of an area of private playing fields, a school playing field, public playing fields, a park and garden and two children's play areas all to the east. In addition there is bridleway that runs adjacent to the western boundary of the site and a PRow footpath within 5m of the north western corner of the site. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (11.91ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (11.91ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The majority of the site is also within high quality agricultural land (is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (11.91ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is adjacent to Shelley Wood Local Wildlife Site, approximately 200m from Shepley Mill Wood Local Wildlife Site and approximately 435m from Hartley Bank Quarry, Thunderbridge Local Geological Site; therefore development here could have a significant negative effect on this SA Objective.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 9: affordable housing, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 5: amenity, 6: local services, 11: use of land, 12: heritage and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H170: Land west of Huddersfield Road, Shelley, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
local people, and ensure that they are accessible.		This site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of a primary school and within 6-10 minutes of a secondary school so is likely to have a significant positive effect. The site is also within 6-10 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP and within 41-45 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the south which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 11-15 minutes travel time of a local centre and is almost entirely within 5 minutes travel time of a town/district centre (although a tiny area in the south east is within 6-10 minutes); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is adjacent to a park and gardens which includes a children's playground to the south. The site is also approximately 30m from public playing fields which includes an area of children's play provision and is within 250m of amenity greenspace to the south. There are also two areas of semi-natural & natural greenspace and school playing fields within 450m of the site to the south, as well as a public footpath within 40m to the south. In addition, there are several more paths within 515m south west of the site and a further two footpaths within 560m south east of the site. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.53ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.53ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within high quality agricultural land (it is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.53ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 215m from Shelley Wood Local Wildlife Site; therefore development here could have a significant negative effect on this SA objective. The site is also approximately 750m from Gelder Wood and Shepley Mill Wood Candidate Local Wildlife Sites.
15. Reduce air, water and	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
soil pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zone 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H171: Land to the north of Highmoor Lane, Hartshead Moorside, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 11-15 minutes travel time of a primary school and within 16-20 minutes of a secondary school so is likely to have a significant positive effect. The site is also within 26-30 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP and within 36-40 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the south which may be affected by noise during the construction phase. The western part of the site is also adjacent to the M62 motorway which may mean that residents in that part of the site are affected by road noise. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 16-20 minutes travel time of a local centre and within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is located within an area of school grounds and playing fields which could be lost as a result of housing development. The site is also approximately 125m from amenity open space which includes an area of Children's play provision and approximately 250m from semi-natural & natural greenspace to the east. There are also two areas of semi-natural & natural greenspace and school playing fields within 450m of the site to the south. In addition, approximately 20m south of the site is a PRow footpath and another footpath is located approximately 570m to the south east of the site. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.55ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.55ha) on brownfield land; therefore a minor positive effect on this SA objective is likely. The majority of the site is not within high quality agricultural land (is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (1.55ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is on brownfield land and is outside of flood zones 2 and 3. Therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: leisure and recreation. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H172: Land at West Yorkshire Fire and Rescue Service, Bradford Road, Birkenshaw

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Approximately half of this site is within 21-25 minutes travel time of the nearest employment node while the other half is within 16-20 minutes travel time; therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing
