19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to none of the eight features assessed. Therefore, a significant negative effect is likely.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation and potential significant negative effects were identified in relation to SA objectives 3: education (part of an overall mixed effect), 6: services (part of an overall mixed effect), 10: sustainable transport, 12: landscape (part of an overall mixed effect) and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H593: Land South of Jill Lane, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 21-25 minutes travel time of the nearest employment node (although an area to the south is within 16-20 minutes travel time); therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are	+?	The availability of school and college places to serve the growing population will depend in part on whether new

SA Objectives	SA Score	Justification
available to all.		<p>places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 11-15 minutes travel time of a primary school and 21-25 minutes travel time of a secondary school (although an area to the south is within 6-10 minutes travel time of a primary school and within 16-20 minutes of a secondary school) so is likely to have a minor positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 16-20 minutes travel time of a GP and within 41-45 minutes of a hospital (although an area to the south of the site is within 11-15 minutes travel time of a GP and 36-40 minutes of a hospital); therefore a negligible effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors within 100m of the south eastern and part of the western site boundaries, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 11-15 minutes travel time of both a local centre and a town/district centre (although an area to the south of the site is within 6-10 minutes travel time of both); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of	++/--?	<p>The northern section of this site is bisected by an existing Public Right of Way, which could be lost as a result of housing development. However this site is also within 600m of a number of areas of open space including two areas of park and gardens located approximately 18m to the east of the site and 172m to the west and an area of</p>

SA Objectives	SA Score	Justification
open space and encourage their usage.		allotments located approximately 204m to the south east. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.07ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (5.07ha) on greenfield land, the majority of which is classed as being of Grade 3 agricultural quality; therefore a significant negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (5.07ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 761m from the Lower Spen Wildlife Area Local Nature Reserve; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation (part of an overall mixed effect), 9: housing, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation (part of an overall mixed effect), 11: land use (part of an overall mixed effect) and 12: landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H594: Land South East of Shillbank View, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 16-20 minutes travel time of the nearest employment node (although an area to the west of the site is within 21-25 minutes travel time); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 6-10 minutes travel time of a primary school (although an area in the west is within 11-15 minutes). Most of the site is within 21-25 minutes of a secondary school (although an area to the north of the site is within 16-20 minutes). Overall, the site is likely to have a minor positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 16-20 minutes travel time of a GP (although a tiny area to the north east of the site is within 11-15 minutes travel time). Most of the site is within 41-45 minutes of a hospital (although an area to the north east is within 36-40 minutes travel time); therefore a negligible effect is likely overall. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties directly adjacent to the eastern and part of the northern boundaries of this site, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 11-15 minutes travel time of a local centre (although an area in the north is within 6-10 minutes travel time). Accessibility to a town/district centre varies across the site. An area to the north east is within 6-10 minutes travel time of a town/district centre; however a small area in the south west is within 16-20 minutes travel time. A mixed effect is therefore likely – minor positive in the north east of the site and negligible in the south west.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals</p>

SA Objectives	SA Score	Justification
		for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site includes an existing outdoor sports facility (football ground), which could be lost as a result of housing development. However the site is also within 600m of a number of other areas of open space that could be used by residents including a public park approximately 12m to the south east and a bowling green approximately 96m to the south east. There is also a National Cycle Route approximately 152m to the south of the site. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.93ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (3.93ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (it is classed as urban).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (3.93ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site mainly lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Castle Hill motte and bailey castle, a Scheduled Monument located approximately 350m from the site. The loss of this area and its subsequent development could harm elements which contribute to the significance of this Scheduled Monument. In addition, the Church of St Mary, located approximately 350m to the south of this site, is a Grade II* Listed Building. There is also a cluster of Grade II Listed Buildings around The Church of St Mary to the south of this site. The loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings.

SA Objectives	SA Score	Justification
		The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 986m from the Lower Spen Wildlife Area Local Nature Reserve and Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation (part of an overall mixed effect), 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 8: leisure and recreation (part of an overall mixed effect). This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H595: Land to the east and west of Hardcastle Lane, Flockton, Wakefield

SA Objectives	SA Score	Justification
1: Increase the number and range	+/0	While the location of housing sites will not influence the number, location or type of employment opportunities

SA Objectives	SA Score	Justification
of employment opportunities available for local people, and ensure that they are accessible.		<p>available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The north of the site is within 36-40 minutes travel time of the nearest employment node and the south-western corner of the site is within 21-25 minutes. However, in between the north and southwest of the site the journey times vary between these two extremes. Therefore a mixed effect on this objective is expected – potentially minor positive for the south of the site and negligible for the north.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site, to the south is within 6-10 minutes travel time of a primary school, with the rest of the site in the northeast being within 11-15 minutes. A small area to the north of the site is within 26-30 minutes of a secondary school and a small area to the south is within 16-20 minutes, the travel time to education facilities from the rest of the site varying between the two extremes. Therefore a mixed effect on this objective could be expected – potentially significantly positive for a small area in the south of the site and potentially minor positive for the rest of the site. Travel times to a further education facility varies from 31-35 minutes in the south to 41-45 minutes in the north</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of the site is within 11-15 minutes travel time of a GP and the north is within 16-20 minutes. Most of the site is also within 51-55 minutes travel time of a hospital with the northeast and northwest areas of the site being within 56-60 minutes. Therefore a mixed effect on this objective is expected –minor positive for most of the site, in the west, south, and east, and a negligible effect in the north of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties surrounding three side of the site, which may be affected by noise during</p>

SA Objectives	SA Score	Justification
		the construction phase. The north side of the site is bordering arable fields. Therefore a minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is within 6-10 minutes travel time of a local centre with a small area in the south being within 5 minutes. The very north of the site is within 41-45 minutes travel time of a town or district centre; the southwest corner is within 26-30 minutes of a town centre and the rest of the site varies in travel time between the extremes in the north and southwest. Therefore a mixed effect on this objective is expected – varying from minor positive for the south of the site to minor negative in the north of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Located within 600m to the west and southwest of the site are four outdoor sports facilities, three semi-natural/natural greenspaces, two cemeteries, an amenity greenspace and allotments. To the southeast are further greenspaces and a network of footpaths run through the area north of the site. Therefore a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.2 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as mostly 'green' for only two of the eight features assessed and the south, west and small part of the eastern edge were also green on one further feature. Therefore a minor positive effect is expected.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (3.2 ha) on greenfield land, classed as Grade 3 agricultural land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the	-?	This is a relatively small site (3.2 ha) on greenfield land; therefore development here could have a minor negative

SA Objectives	SA Score	Justification
character of Kirklees and the quality of the landscape and townscape.		<p>effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 550 m from the Kirkby Wood candidate Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as mostly 'green' in terms of its access to two of the eight features assessed, with a large part of a third site also being classed as green; therefore a minor positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives: 3: Access to Education (as part of a mixed result), 4: Access to Health Facilities (as part of a mixed result), and 8: leisure and recreation; no potential significant negative effects were identified in relation to</p>		

SA Objectives	SA Score	Justification
SA objectives. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H596

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Access to employment nodes vary across the site. The most accessible area is in the south eastern area of the site, which is within 11-15 minutes of an employment mode. The least accessible area is along the north which is within 16-20 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. However overall a significant positive effect is likely.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of this site is within 6-10 minutes travel time to a primary school (aside from a small area in the north of the site which is within 11-15 minutes travel time). The whole site is within 21-25 minutes travel time to a secondary school; therefore, a minor positive effect is likely. The whole site is within 26-30 minutes travel time to a higher education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however, where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Travel times to healthcare facilities vary across the site. The most accessible area is in the far northern area of the site which is within 11-15 minutes travel time to a GP and 36-40 minutes to a hospital. The least accessible area is in the far southern area of the site, which is within 21-25 minutes to a GP and 46-50 minutes to a hospital. In between these two extremes, travel times vary. Therefore, overall a mixed effect is expected- potentially minor positive for the far northern area of the site and negligible for the far southern area of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may</p>

SA Objectives	SA Score	Justification
		<p>result in noise pollution affecting residents in the longer term.</p> <p>There are industrial buildings and activities directly to the east which could cause noise effects over the long term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Travel times to local and town/district centres vary across the site. The most accessible area is in the far north western area which is within 16-20 minutes travel time to a local and town/district centre. The least accessible area is in the far south of the site, which is within 11-15 minutes to a local centre and 36-40 minutes travel time to a town/district centres. In between these two extremes, travel times vary. Therefore, a mixed effect is expected, potentially negligible for the far north western area of the site and a minor negative effect for the far south of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site contains a Public Right of Way (PRoW) which could be lost as a result of development. However this site is also within 600m of more than three recreational and leisure facilities including several PROWs. Greenspace designations nearby include two amenity greenspaces, one park and garden and one area of natural/semi-natural greenspace. Other spaces include four sites containing provision for children and young people and four outdoor sports facilities. However, this area of natural/semi-natural greenspace and the sports facility immediately north of the site are within housing option H198, which could be lost a result of development. Therefore, overall a mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (5.26 ha); therefore, a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient

SA Objectives	SA Score	Justification
use of land.		<p>use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (5.26ha) on mainly greenfield land; therefore, a significant negative effect on this SA objective is likely. The land is designated as grade 3 agricultural quality.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a large site (5.26 ha) mainly on greenfield land, therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects Grade II Listed Thornbush Farm to the east. The effect on this SA objective is therefore uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Clifton Lagoon Local Wildlife Site is the closest of such features but is located approximately 1.7 km to the south-west and as such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is mainly on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is mainly on greenfield land; therefore, a potential minor negative effect is identified.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation and 9: housing. Potential significant negative effects were identified in relation to SA objectives 5: pollution, 8: leisure and recreation, 11: land use and 12: landscape character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H597

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of this site is within 46-50 minutes travel time of the nearest employment node (although an area to the north and west of the site is within 51-55 minutes); therefore a minor negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 6-10 minutes travel time of a primary school (although an area to the east is within 5 minutes of a primary school) and the whole site is within 21-25 minutes of a secondary school. A minor positive effect is therefore likely.</p>

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 16-20 minutes travel time of a GP (although an area to the south of the site is within 11-15 minutes) and the whole site is over an hour travel time from a hospital; therefore a minor negative effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors directly adjacent to the southern site boundary and within 100m of the eastern, northern and western site boundaries, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 11-15 minutes travel time of a local centre and the majority of the site is within 16-20 minutes of a town/district centre (although an area to the east is within 11-15 minutes travel time); therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site is within 600m of a number of areas of open space including a children's playground located approximately 118m to the south west of the site and an area of amenity greenspace located approximately 354m to the north east. In addition there is an existing bridleway directly adjacent to the western site boundary and a Public Right of Way approximately 97m north of the site. A significant positive effect is therefore identified.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	++	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.67ha); therefore a significant positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day</p>

SA Objectives	SA Score	Justification
people to make use of sustainable and active modes of transport.		to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (6.67ha) on greenfield land; therefore a significant negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (6.67ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site mainly lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 562m from the Morton Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. An area to the south west is within 21-25 minutes travel time of a town/district centre; however an area to the east is within 6-10 minutes. In between, travel time varies between these extremes. A mixed effect is therefore likely – minor positive to the east and minor negative to the south west.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new	++/--?	The northern part of this site is bisected by an existing Public Right of Way, which could be lost as a result of housing development. However this site is also within 600m of a number of areas of open space including a

SA Objectives	SA Score	Justification
recreation facilities and areas of open space and encourage their usage.		children's playground located approximately 104m to the south east of the site, a green corridor located approximately 112m to the south of the site and an area of semi natural and natural greenspace located approximately 120m to the south. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (9.23ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (9.23ha) on greenfield land; therefore a significant negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (9.23ha) on greenfield land and is located within approximately 235m of the Peak District National Park; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site lies mainly in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 797m from the South Pennine Moors, a designated SAC, SPA and SSSI; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation (part of an overall mixed effect) and 9: housing, and potential significant negative effects were identified in relation to SA objectives 1: employment (part of an overall mixed effect), 8: leisure and recreation (part of an overall mixed effect), 11: land use and 12: landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H600: Land to the North West of 330 – 342 Leymoor Road, Golcar, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 31-35 minutes travel time of the nearest employment node (with a small section to the north within 36-40 minutes); therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest primary school (with a small section in the south within 5 minutes) and within 36-40 minutes of a secondary school (with an area in the north within 41-45 minutes). Therefore a minor positive effect is expected for this objective. The site is also within 21-25 minutes travel time of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 5 minutes travel time of the nearest GP (with an area in the north within 6-10 minutes) and is within 36-40 minutes of the nearest hospital (with an area in the north within 41-45 minutes). Therefore a minor positive effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the south of the site. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest local centre (with a small section in the south within 5 minutes) and within 11-15 minutes of a town/district centre (with a small area in the south within 6-10 minutes). Therefore a minor positive effect is expected for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++	Within 15m south of the site is a PRow footpath. To the south of the site there is a bridleway approximately 45m away.

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		Approximately 320m north of the site is another PRow footpath however there is a brook running between the site and the footpath which makes it less easily accessible. In addition there is a PRow footpath approximately 105m to the west of the site. Within 120m south east of the site is a private cricket ground. Also, to the south east of the site is a private bowling green approximately 180m away. To the south of the site, approximately 205m away is an area of semi-natural and natural greenspace however this is located within another housing site option. This area of open space is also adjacent to an area of allotments and an area of amenity greenspace. There is an area of school grounds and playing fields approximately 310m south east of the site which is adjacent to an area of public playing fields which includes a children's play area. In addition approximately 505m south west of the site is an area of public playing fields which is adjacent to a private bowling green and an area of amenity greenspace. Approximately 290m south of the site is an area of school grounds and playing fields which is adjacent to a children's play area and an area of park and gardens. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.29ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.29ha) and is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.29ha) and is on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on 338 to 342 Leymoor Road and 278 to 282 Leymoor Road which are Grade II Listed Buildings.

SA Objectives	SA Score	Justification
settings.		The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, 9: affordable housing, 10: sustainable transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 11: use of land and 12: character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H601

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Approximately half of this site is within 21-25 minutes travel time of the nearest employment node while the other half is within 16-20 minutes travel time; therefore a minor positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Approximately half of this this site is within 6-10 minutes travel time to a primary school, while the other half is within 11-15 minutes travel time and the whole site is within 6-10 minutes to a secondary school; therefore it is likely to have a significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 11-15 minutes travel time of a GP, aside from the area along the eastern boundary which is within 6-10 minutes travel time to a GP. Most of this site is within 46-50 minutes travel time to a hospital, aside from the western are of the site which is within 51-55 minutes travel time to a hospital. Therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to the M62 Motorway, which may mean that residents in these parts of the site are affected by road noise. There are also existing residential properties adjacent to the site to the east which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p>

SA Objectives	SA Score	Justification
		Most of this site is within 11-15 minutes travel time of a local centre (aside from a small area in the far western edge of the site, which is within 16-20 minutes). Most of this site is also within 16-20 minutes of a town/district centre (aside from a small area in the far western edge which is within 21-25 minutes travel time); therefore, a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	There is a Public Rights of Way (PRoW) within the site which could be lost as a result of housing development. However, this site is within 600m of more than three other recreational facilities. There are two PRoW, one area of semi-natural and natural green space, one site containing provision for children and young people and two outdoor sports facilities. Therefore, overall a mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (3.33ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.33 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. Most of the site is on land designated as grade 3 agricultural quality, while the eastern boundary of the site is on land designated as urban
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (3.33 ha) mainly on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are

SA Objectives	SA Score	Justification
		spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible but uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Oakwell Park Local Nature Reserve is approximately 990m south of the site and as such, a minor negative effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is mainly on greenfield land and is outside of flood zone 3; therefore given that housing development at this location would increase the area of impermeable surfaces in Kirklees a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor negative effect is identified.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport and 19: Climate change and potential significant negative effects were identified in relation to SA objective 5: local amenity and 8: leisure and recreation. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H602

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located within 16-20 minutes travel time of the nearest employment node. A significant positive effect is therefore expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest primary school (the most southern part of the site is located within 5 minutes travel time of the nearest primary school). The site is also located within 21-25 minutes travel time of the nearest secondary school. A minor positive effect is expected on this SA objective.</p>

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest GP (the western part of the site is located within 11-15 minutes travel time of the nearest GP). The site is also located within 46-50 minutes travel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to the A629 along its eastern edge. It is considered that the close proximity of this major road may result in increased noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of a local centre (the south eastern part of the site is located within 5 minutes travel time of a local centre). The majority of the site is also located within 21-25 minutes travel time of a town/district centre (the south eastern part of the site is located within 16-20 minutes travel time of a town/district centre). Overall a negligible effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are accessible to the north of the site within 215m. A semi-natural and natural greenspace is located within 230m of the site to the north west. Amenity greenspace is located within 385m to the north west of the site on Penistone Road. Allotments can be accessed via Near Bank within 525m of the site to the north east.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.78ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of</p>

SA Objectives	SA Score	Justification
safe transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.78ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.78ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 40m of Gelder Wood which has been identified as a Candidate Local Wildlife Site to the west. The proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	--	This site is located on greenfield land and its northern part is also located within Flood Zone 3; therefore a significant negative effect is likely given that the development of new housing on this greenfield land would increase the number of houses at high risk of flooding in the District as well as increasing the area of impermeable surfaces in Kirklees.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objectives 5: amenity, 14: biodiversity and geodiversity and 16: flood risk. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H603

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within 16-20 minutes travel time of the nearest employment node. A significant positive effect is therefore expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects

SA Objectives	SA Score	Justification
		<p>will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of the nearest primary school. The site is also located within 21-25 minutes travel time of the nearest secondary school. A minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of the nearest GP. The site is also located within 46-50 minutes travel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the south on Penistone Road and to the west on Far Bank. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre. The site is also located within 21-25 minutes travel time of a town/district centre. Overall a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are accessible to the north west of the site within 115m. A semi-natural and natural greenspace is located within 160m of the site also to the north west. Further amenity greenspace is located to the north of the site within 210m. Allotments can be accessed via Near Bank within 450m of the site to the east.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable</p>

SA Objectives	SA Score	Justification
which meets their needs.		housing. This site is relatively small (0.69ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.69ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located mostly on Grade 3 Agricultural Land (a small part of the site to the east is located on Grade 4 Agricultural Land).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.69ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Shelley Methodist Church to the north which is a Grade II Listed Building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 145m of Gelder Wood which has been identified as a Candidate Local Wildlife Site to the west. The proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H604

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is located within 26-30 minutes travel time of the nearest employment node (a small part of the site to north east is located within 31-35 minutes travel time of the nearest employment node). A minor positive effect is therefore expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest primary school (the southern part of the site is located within 5 minute travel time of the nearest primary school). The site is also located within 21-25 minutes travel time of the nearest secondary school. A minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 5 minutes travel time of the nearest GP (the northern part of the site is located within 6-10 minutes travel time of the nearest GP). The site is also located within 41-45 minutes travel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the south on Dirker Drive and to the east on Dirker Bank Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 16-20 minutes travel time of a local centre (the southern part of the site is located within 11-15 minutes travel time of a local centre). The majority of the site is also located within 5 minutes travel time of a town/district centre (the northern part of the site is located within 6-10 minutes travel time of a town/district centre). Overall a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. A small park is accessible to the east of the site within 70m and outdoor sports facilities and a children's playground are also located in this area. A large semi-natural and natural greenspace is located within 15m to the south of the site and outdoor sports facilities are also located in this area. Allotments can be accessed within 225m to the south of the site by Station Road.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.52ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.52ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.52ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Dirker on Spring Head Lane which is a Grade II Listed Building adjacent to the site and Ivy Cottage which is a Grade II Listed Building to the west of the site within 50m.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance	-?	The site is within 665m of South the Pennine Moors which has been designated as an SPA, SSSI and a SPA to the north. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g.

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H605

SA Objectives	SA Score	Justification
1: Increase the number and range of employment	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
opportunities available for local people, and ensure that they are accessible.		The site is located more than 60 minutes travel time from the nearest employment node. A significant negative effect is therefore expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. 11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.21ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on mostly Grade 4 Agricultural Land (a small part of the site to the west is located on Urban Land).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.21ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies across LCA D7: Peak Fringe Upland Pastures and LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees.</p> <p>LCA D7: Peak Fringe Upland Pastures is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.</p> <p>LCA F5: Holme & Hall Dyke (Holmfirth & Meltham) comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>

SA Objectives	SA Score	Justification
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Underbank Conservation Area which is in close proximity to the site. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Morton Wood (a Local Wildlife Site) is the closest of such features but is located 1.13km to the south west and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and potential significant negative effects were identified for this site in relation to SA objectives 1: employment and 4: health. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H606

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people’s ability to access jobs.</p> <p>The majority of the site is located within 21-25 minutes travel time from the nearest employment node (a small part of the site to the north is located within 16-20 minutes travel time of the nearest employment node). A minor positive effect is therefore expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Overall a negligible effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. A children's playground is located within 110m of the site to the east. A cemetery is located to the north of the site within 130m. Allotments are provided to the north east of the site within 220m. A semi-natural and natural greenspace is located within 90m to the west of the site. Shepley Cricket Club is located within 235m also to the west of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.8ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (3.8ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on mostly Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (3.8ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
		The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on 37 Cliffe Road to the north of this area which is a Grade II Listed Building. The site is also adjacent to Shepley Conservation Area and may be impacted upon by development of the site.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 715m of Upper and Lower Stones Wood which has been designated as a Local Wildlife Site and a Local Geological Site to the north west. The relative proximity of the site to this designated biodiversity and geodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure, 10: transport and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>		

H607

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is located within 31-35 minutes travel time of the nearest employment node (a small part of the site to the south east is located within 36-40 minutes travel time of the nearest employment node). A negligible effect is therefore expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest primary school (the eastern part of the site is located within 11-15 minutes of the nearest primary school). The site is also located within 11-15 minutes travel time of the nearest secondary school. A significant positive effect is expected on this SA objective. The majority of the</p>

SA Objectives	SA Score	Justification
		site is also located within 21-25 minutes travel time of the nearest centre for further education (a small part of the site to the north west is located within 16-20 minutes travel time of the nearest centre for further education).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of the nearest GP. The majority of the site is also located within 51-55 minutes travel time of the nearest hospital (the north western part of the site is located within 46-50 minutes travel time of the nearest hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to the A6024 along its western edge. It is considered that the close proximity of this major road may result in increased noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 11-15 minutes travel time of a local centre (the north eastern part of the site is located within 6-10 minutes travel time of a local centre). The site is also located within 11-15 minutes travel time of a town/district centre. Overall a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are located adjacent to the site to the south. Along adjacent to the site to the south is a semi-natural and natural greenspace. A small park is located within 195m to the east of the site. A children's playground is also provided at this location.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.96ha); therefore a minor positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.96ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 3 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.96ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site mainly lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	<p>The site is within 115m of Hagg Wood which has been identified as a Candidate Local Wildlife Site to the north. Brockholes and Round Wood, Brockholes is located within 925m to the north east of the site and has been designated as a Local Geological Site. The proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	<p>This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.</p>

These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H609

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Most of this site is within 16-20 minutes travel time of the nearest employment node (although an area area in the north of the site is within 21-25 minutes); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of this site is within 5 minutes travel time of a primary school (although an area in the north is within 6-10 minutes). The site is also within 21-25 minutes travel time of a secondary school. A minor positive effect is therefore likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of the site is within 11-15 minutes travel time of a GP, with a small area in the southeast within 6-10 minutes. Most of the site is also within 56-60 minutes of a hospital, with the southeast corner being within 51-55 minutes; therefore a minor positive effect on this objective is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to a number of residential properties along the western and eastern boundaries which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is within 0-5 minutes travel time of a local centre (although an area in the northwest is 6-10 minutes). Most of the site is also within 21-25 minutes of a town/district centre (although an area in the north is within 26-30 minutes). Therefore, a minor positive effect is likely on this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site is immediately adjacent to a children's play area, parks and gardens, semi-natural/natural greenspace and outdoor sports facilities. There are also allotments, cemeteries, various footpaths and a byway within 600 m of the site. A significant positive effect is therefore expected on this SA objective given that the provision of these open spaces in close proximity to the site may encourage new residents to make use of them.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.58 ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.58 ha) on greenfield land which is classed as Grade 3 agricultural quality; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.58 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural,</p>

SA Objectives	SA Score	Justification
		occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment; therefore a negligible effect is likely. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 400 m from the Kirkby Wood candidate Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives: 1: employment, 8: leisure and recreation, 10: sustainable transport, and 19: climate change; and no significant negative effects were identified.		

H610

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 31-35 minutes travel time of an employment node; therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 16-20 minutes travel time of a primary school and 31-35 minutes from a secondary school; therefore a negligible effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The whole of this site is within 21-25 minutes travel time of a GP and 41-45 minutes from a hospital; therefore a negligible effect is likely. This site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north- east and west of this site, and residents of these properties could be exposed to noise and light pollution during construction of the site; therefore a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 26-30 minutes travel time of a local centre and 41-45 minutes of a town/district centre. A significant negative effect is therefore likely overall.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by future residents, the closest of which is an outdoor sports facility adjacent to the south. Other recreational facilities and areas of open space include parks and gardens, amenity greenspace, other outdoor sports facilities, semi-natural and natural greenspace and areas for children and young people. There are also a number of PRow footpaths surrounding the site, one of which runs along the southern edge of the site. A significant positive effect is therefore likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.78ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was not classed as entirely or mainly 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.78ha) and on greenfield land which is classed as grade 3 agricultural quality. Therefore a minor negative effect is likely on this SA objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (0.78ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Little Gomersal Conservation Area (the loss of this this and its subsequent development could harm elements which contribute to the significance of this area). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was not classed as entirely or mainly 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely overall.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: recreation and leisure. Potential significant negative effects were identified in relation to SA objectives 6: local services, 10: sustainable transport and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H611

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Access to employment nodes vary across the site. The most accessible area is in the far southern area of the site, which is within 6-10 minutes of an employment mode. The least accessible area is in the far northern area of the site which is within 21-25 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect is likely, potentially significant positive effect the far southern area of the site and minor positive for the far northern area of the site.
2. Achieve an economy better capable of growth through	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

SA Objectives	SA Score	Justification
increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is in the far southern area of the site, which is within 6-10 minutes to a primary and secondary school. The least accessible area is in the far northern area of the site which is within 21-25 minutes travel time to a primary and secondary. In between these two extremes, travel times to education facilities vary. Therefore, a mixed effect is likely, potentially significant positive effect the far southern area of the site and negligible for the far northern area of the site. This site is also within 30 minutes to a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to healthcare varies across the site. The most accessible area is in the far southern area of the site, which is within 11-15 minutes travel time to a GP and 26-30 minutes travel time to a hospital. The least accessible area is in the far northern area of the site which is within 11-15 minutes travel time to a GP and 36-40 minutes travel time to a hospital. In between these two extremes, travel times to healthcare facilities vary. Therefore, a mixed effect is likely, potentially significant positive effect the far southern area of the site and minor positive for the far northern area of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by residential properties and the residents may be affected by noise and light pollution during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local services varies across the site. The most accessible area is in the far southern area of the site, which is within 6-10 minutes travel time to a local centre and 11-15 minutes travel time to a town/district centre. In between these two extremes, travel times to local service facilities</p>

SA Objectives	SA Score	Justification
		vary. Therefore, a mixed effect is likely, potentially minor positive effect the far southern area of the site and minor negative for the far northern area of the site.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is a Public Right of Way (PRoW) within the site, which could be lost as a result of the development. However, this site is within 600m of more than three recreational facilities. There are several PRoW, the closest being a bridleway approximately 135m west of the site, there is also a national cycle route within 600m. Greenspace designations nearby include a green corridor and one park and garden. Other recreational spaces nearby include eight outdoor sports facilities in addition to Spen Peak Physique and Spenborough Pool sports centres and five sites containing provision for children and young people. A mixed effect has therefore been identified (significantly positive and significantly negative) for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.55ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site relatively small (0.55ha) and on brownfield land; therefore a minor positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This site is relatively small (0.55ha) and on brownfield land; therefore, development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.

SA Objectives	SA Score	Justification
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is approximately 2.3km from Sunny Banks Pond Local Nature Reserve; therefore, development here could have a negligible effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is on brownfield land and is outside of flood zone 3; therefore, a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land; therefore, a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment 3: education, 4: health, 8: leisure and recreation, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: pollution and 8: leisure and recreation. These will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H612

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of this site is within 11-15 minutes travel time of the nearest employment node (although an area to the west is within 6-10 minutes travel time); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 11-15 minutes travel time of both a primary and secondary school (although an area to the east is within 6-10 minutes of a primary school and an area to the west is within 6-10 minutes travel time of a secondary school) so is likely to have a significant positive effect. It is also within 10 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The whole site is within 11-15 minutes travel time of a GP. Accessibility to a hospital varies across the site. An area to the west is 16-20 minutes travel time of a hospital; however a large area to the east is within 26-30 minutes. In between, journey times vary between these two extremes. Despite these variances a significant positive effect is likely across the whole site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors directly adjacent to northern, southern and part of the western site boundary, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 11-15 minutes travel time of a local centre (although an area to the east is within 6-10 minutes travel time) and the whole site is within 16-20 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site is within 600m of a number of areas of open space including a large area of semi natural and natural greenspace located directly adjacent to the south eastern boundary, an area of amenity greenspace located directly adjacent to part of the southern boundary, and a children's playground located approximately 52m to the south of the site. In addition there is an existing Public Right of Way located approximately 99m to the west of the site. A significant positive effect is therefore identified.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.06ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.06ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.06ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies mainly in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.</p>
13. Conserve and enhance the	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the</p>

SA Objectives	SA Score	Justification
historic environment, heritage assets and their settings.		development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site not within 1km of any designated biodiversity or geodiversity sites; therefore development here could have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives.		

H613

SA Objectives	SA Score	Justification
---------------	----------	---------------

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Accessibility to employment nodes varies across this site. In this way, the southern end of the site is within 16-20 minutes travel time of an employment node, whereas the north-eastern part of the site is within 6-10 minutes of an employment node. Although accessibility varies between these two extremes, an overall significant positive effect is likely for this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 6-10 minutes travel time of a primary school as well as 11-15 minutes of a secondary school, and the majority of the site is within 6-10 minutes of a further education facility. Therefore, a significant positive effect is likely overall.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	The whole of this site is within 11-15 minutes travel time of a GP and 26-30 minutes from a hospital; therefore a significant positive effect is likely. This site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north, east and west of this site, and residents of these properties could be exposed to noise and light pollution during construction of the site; therefore a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 6-10 minutes travel time of a local centre and the majority of the site is within 26-30 minutes of a town/district centre. A negligible effect is therefore likely overall.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be

SA Objectives	SA Score	Justification
crime.		influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site is on land designated as semi-natural and natural greenspace and it is considered that the development of this site would result in the loss of this area. However, there are a number of other recreational facilities and areas of open space within 600m of the site which could be used by future residents, the closest of which is amenity greenspace and additional semi-natural and natural greenspace which are directly adjacent to the west and south respectively. Other recreational facilities and areas of open space include outdoor sports facilities, additional amenity greenspace, additional semi-natural and natural greenspace and areas for children and young people. There are also a number of PRow footpaths surrounding the site, one of which is directly adjacent to the east. A mixed effect (significantly positive and significantly negative) is therefore likely for this SA objective overall.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.42ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (2.42ha) and on greenfield land. Therefore a minor negative effect is likely on this SA objective. The site is not in an area classed as high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (2.42ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely overall.
<p>Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: recreation and leisure (part of a mixed effect overall), 10: sustainable transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 8: recreation and leisure (part of a mixed effect overall). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H614

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 26-30 minutes travel time of an employment node; therefore a minor positive effect is likely for this SA objective.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 16-20 minutes travel time of a primary school and 26-30 minutes of a secondary school; therefore a negligible effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0/--	Accessibility to healthcare services varies across this site. In this way, the north-eastern part of the site is within 16-20 minutes travel time of a GP and 41-45 minutes from a hospital, whereas the southern part of the site is more than 60 minutes from a GP and hospital. In between these two extremes, accessibility to healthcare varies. Overall a mixed effect is likely – negligible for the north-eastern part and significant negative for the southern part. The site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north-east and south-west of this site, and residents of these properties could be exposed to noise and light pollution during construction of the site. Therefore a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 16-20 minutes travel time of a local centre and town/district centre and therefore a minor negative effect is likely for this SA objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	The site contains a small section of an outdoor sports facility in south eastern area of the site. However there are a number of recreational facilities and areas of open space within 600m of the site which could be used by future residents, the closest of which is an adjacent outdoor sports facility (a small part of which extends into the site). Other recreational facilities and areas of open space include semi-natural and natural greenspace, outdoor sports facilities, amenity greenspace and areas for children and young people. There is also a large network of PRoW footpaths,

SA Objectives	SA Score	Justification
		bridleways and local cycle routes to the north and south. A mixed effect -significantly positive and significantly negative effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.41ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (3.41ha) and on mostly greenfield land which is classed as grade 3 agricultural quality. Therefore a minor negative effect is likely on this SA objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (3.41ha) and on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Grade II Listed Buildings around Broad Oaks (the loss of this site and its subsequent development could harm elements which contribute to the significance of these assets). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--	Whitley Wood approved Local Wildlife Site is directly adjacent to the west of this site and, as a result, a significant negative effect is likely for this SA objective. However, this effect is uncertain as depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on mostly greenfield land and outside flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: recreation and leisure (part of a mixed effect). Potential significant negative effects were identified in relation to SA objectives 4: health (part of a mixed effect overall), 8: recreation and leisure (mixed effect) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H615

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 16-20 minutes travel time of an employment node; therefore a significant positive effect is likely for this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 5 minutes travel time of a primary school and 21-25 minutes of a secondary school;

SA Objectives	SA Score	Justification
		therefore a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The whole of this site is within 5 minutes travel time of a GP and 36-40 minutes of a hospital. A minor positive effect is therefore likely. The site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to the A642 (Wakefield Road) and future residents could be exposed to noise pollution over the long term. A significant negative effect is therefore likely. In addition, there are a number of existing residential properties within 100m north and south of this site, and residents of these properties could be exposed to noise and light pollution during construction of the site. This therefore reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	++	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 5 minutes travel time of a local centre and 11-15 minutes from a town/district centre, and therefore a significant positive effect is likely for this SA objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by future residents, the closest of which is an outdoor sports facility approximately 60m to the south. Other recreational facilities and areas of open space include allotments, areas for children and young people and a park and garden. There are also a number of PRow footpaths to the west and south of the site, and a local cycle route is to the west. A significant positive effect is likely overall.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.54ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely overall.

SA Objectives	SA Score	Justification
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.54ha) and on mostly greenfield land. Therefore a minor negative effect is likely on this SA objective. The site is not in an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.54ha) and on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-	Wakefield Road candidate Local Wildlife Site is approximately 400m north of the site and Gawthorpe Lower Wood approved Local Wildlife Site is approximately 820m north-east of the site. Therefore, a minor negative effect is likely overall. The effect is recorded as uncertain given that new development may allow for the incorporation of biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on mostly greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 6: local services, 8: recreation and leisure, 10: sustainable transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H616

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is within 6-10 minutes travel time of the nearest primary school and within 21-25 minutes travel time of a secondary school and within 21-25 minutes of a further education institute. Therefore a minor positive effect is expected for this objective. The majority of the site is also within 21-25 minutes of a further education institute (with an area in the north within 26-30 minutes).

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 5 minutes travel time of the nearest GP (with an area in the south within 6-10 minutes) and within 31-35 minutes of a hospital (with an area within 36-40 minutes). Therefore a minor positive effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties including a care home within close proximity to the north, east and south of the site. In addition, part of the northern boundary is also adjacent to the A642 (Wakefield Road) which may result in noise pollution affecting residents in the longer-term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 5 minutes travel time of the nearest local centre (with an area in the south within 6-10 minutes) and within 11-15 minutes of a town/district centre (with an area to the north within 6-10 minutes). Therefore a significant positive effect is expected for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>The site contains an area of Green corridor/pedestrian/cycleway which could be lost as a result of housing development. However, there is a bridleway within 80m and a PRoW footpath approximately 150m south west of the site, there is also a PRoW footpath approximately 85m to the south east of the site. Approximately 125m to the south west of the site is an area of semi-natural and natural greenspace which contains a children's play area. To the west of the site approximately 420m away is an area of allotments which is also adjacent to an area of amenity greenspace. In addition, approximately 245m to the north west of the site is an area of semi-natural and natural greenspace. Within 565m south east of the site are five children's play areas. To the north of the site there is an area of semi-natural and natural greenspace approximately 330m away and an area of amenity greenspace approximately 520m away. Therefore a mixed significant positive and significant negative effect is expected for this objective.</p>
9. Ensure all people are able to live in a decent home which	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of</p>

SA Objectives	SA Score	Justification
meets their needs.		affordable housing. This site is relatively small (0.94ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.94ha) and the majority of the site is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.94ha) and the majority is on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.</p> <p>The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is within 140m of Wakefield Road, Lepton Local Wildlife Site, within 625m of Round Wood, Tandem Local Wildlife Site and approximately 910m from Gawthorpe Lower Wood Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of the site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 6: local services and facilities, 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: leisure and recreation (part of a mixed effect) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H617

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 36-40 minutes travel time of an employment node; therefore a negligible effect is likely for this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

SA Objectives	SA Score	Justification
		accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 6-10 minutes travel time of a primary school and the whole of the site is within 31-35 minutes of a secondary school. A minor positive effect is likely overall.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The whole of this site is within 6-10 minutes travel time of a GP and 41-45 minutes of a hospital. A minor positive effect is therefore likely. The site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north, east and south of this site, and residents of these properties could be exposed to noise and light pollution during construction of the site. A minor negative effect is therefore likely for this SA objective.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 6-10 minutes travel time of a local centre and the whole site is within 6-10 minutes travel time of a town/district centre, and therefore a minor positive effect is likely for this SA objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by future residents, the closest of which is a cemetery approximately 100m to the north. Other recreational facilities and areas of open space include amenity greenspace, a park and garden, areas for children and young people, outdoor sports facilities and semi-natural and natural greenspace. There are also a number of PRoW footpaths surrounding the site. A significant positive effect is likely overall.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.64ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is

SA Objectives	SA Score	Justification
		likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.64ha) and on greenfield land. Therefore a minor negative effect is likely on this SA objective. The site is not in an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.64ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Grade II Listed Buildings at 17 to 29 Clay Well and adjoining factory at the northern edge of this area as well as Golcar Conservation Area (the loss of this site and its subsequent development could harm elements which contribute to the significance of these assets). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Huddersfield Narrow Canal candidate Local Wildlife Site is approximately 650m south-east of this site, therefore a minor negative effect is likely. This effect is recorded as uncertain given that development at this location may allow for diversity enhancements depending on its design.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure, 10: sustainable transport and 19: climate change. There were no significant negative effects identified for this site.

The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 11-15 minutes travel time of a primary school and 46-50 minutes from a secondary school. A minor positive effect is likely overall.
4. Improve the health of local people and ensure that they can access the health and	+	The whole of this site is within 6-10 minutes travel time of a GP and the whole of the site is within 41-45 minutes of a hospital. A minor positive effect is therefore likely. The site is not in or adjacent to an AQMA.

SA Objectives	SA Score	Justification
social care they need.		
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north, east and south of this site, and residents of these properties could be exposed to noise and light pollution during construction of the site. A minor negative effect is therefore likely for this SA objective.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 6-10 minutes travel time of a local centre and 11-15 minutes travel time of a town/district centre, and therefore a minor positive effect is likely for this SA objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by future residents, the closest of which is an area of semi-natural and natural greenspace approximately 180m to the north. Other recreational facilities and areas of open space include amenity greenspace, a park and garden, area for children and young people and outdoor sports facilities. There are also a number of PRoW footpaths surrounding the site, one of which is directly adjacent to the site, and a bridleway and local cycle route are to the east. A significant positive effect is likely overall.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.88ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (3.88ha) and on greenfield land. Therefore a minor negative effect is likely on this SA objective. The site is not in an area of high quality agricultural land.

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is relatively small (3.88ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are a number of biodiversity designations within 1km of this site, including Covey Clough Wood approved Local Wildlife Site (approximately 270m north-east), Hutchin Wood candidate Local Wildlife Site (approximately 420m south), Gregory Spring approved Local Wildlife Site (approximately 620m east) and Briery Bank Wood approved Local Wildlife Site (approximately 820m north-east). A minor negative effect is therefore likely for this SA objective. This effect is recorded as uncertain given that development at this location may allow for diversity enhancements depending on its design.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. 12. Protect and enhance the character of Kirklees and the	+?	This site is small (0.49ha) and on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close

SA Objectives	SA Score	Justification
quality of the landscape and townscape.		proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Fulstone Conservation Area (the loss of this site and its subsequent development could harm elements which contribute to the significance of this area). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are a number of biodiversity and geodiversity designations within 1km of this site, including Upper and Lower Stones Wood approved Local Wildlife Site (approximately 390m north-east), Upper and Lower Stones Wood Local Geological Site (approximately 860m north-east) and Holme House Grasslands approved Local Wildlife Site (approximately 950m south). A minor negative effect is therefore likely for this SA objective. This effect is recorded as uncertain given that development at this location may allow for diversity enhancements depending on its design.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is on brownfield land and outside flood zone 3; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land therefore a minor positive effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was not classed as entirely or mainly 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely overall.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 5: amenity. Potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health, 6: local services, 10: sustainable transport and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H620

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 46-50 minutes travel time of an employment node, therefore a minor negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 11-15 minutes travel time of a primary school and 16-20 minutes from a secondary school. Therefore a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and	+	The majority of this site is within 6-10 minutes travel time of a GP and 51-55 minutes from a hospital; therefore a minor positive effect is likely for this SA objective. The site is not in or adjacent to an AQMA.

SA Objectives	SA Score	Justification
social care they need.		
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north, east and west of this site and residents of these properties could be exposed to noise and light pollution during construction, and this results in a minor negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 11-15 minutes travel time from a local centre and 6-10 minutes from a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	Two PRoW footpaths pass through this site, and it is possible that these could be lost or disrupted during construction. However, within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents, the closest of which is an outdoor sports facility directly adjacent to the west. Other recreational facilities and areas of open space include areas for children and young people, areas of semi-natural and natural greenspace, amenity greenspace, a cemetery, allotments and other outdoor sports facilities. There are also a number of other PRoW paths surrounding the site, and a national cycle route is to the west. A mixed effect is therefore likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.62ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to five of eight features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (2.62ha) and on greenfield land. Therefore a minor negative effect is likely on this SA

SA Objectives	SA Score	Justification
		objective. The site is not in an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is relatively small (2.62ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Huddersfield Narrow Canal candidate Local Wildlife Site is approximately 550m north-west of this site; therefore a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to five of eight features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure (part of a mixed effect overall), 10: sustainable transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 8: recreation and leisure (part of a mixed effect overall). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H621

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 46-50 minutes travel time of an employment node; therefore a minor negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Accessibility to education varies across this site. In this way, the northern part of the site is within 11-15 minutes travel time of a primary school and 21-25 minutes of a secondary school, whereas the southern part of the site is within 11-15 minutes of a primary school and 36-40 minutes of a secondary school. Although accessibility varies between these two extremes, a minor positive effect is likely overall due to the site's proximity to a primary school.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The majority of this site is within 16-20 minutes travel time of a GP and the whole site is within 51-55 minutes from a hospital; therefore a negligible effect is likely for this SA objective. The site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north, east and south-west of this site and residents of these properties could be exposed to noise and light pollution during construction, and this results in a minor negative effect.
6. Retain and enhance access to local services and facilities.	+/-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Accessibility to local services varies across this site. In this way, the northern part of the site is within 16-20 minutes travel time of a local centre and 11-15 minutes from a town/district centre, whereas the southern part of the site is within 26-30 minutes of a local centre and 16-20 minutes from a town/district centre. In between these two extremes access to education varies. Overall a mixed effect is likely – minor positive for the northern part and minor negative for the southern part.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents, the closest of which is an area of semi-natural and natural greenspace, approximately 140m to the north. Other recreational facilities and areas of open space include a green corridor, amenity greenspace, a cemetery and an outdoor sports facility. There are also a number of other PRow paths to the south-east and there is a bridleway to the north-west. A significant positive effect is therefore likely overall.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.75ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight features assessed. Therefore, a minor positive effect is likely overall.

SA Objectives	SA Score	Justification
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.75ha) and on greenfield land. Therefore a minor negative effect is likely on this SA objective. The site is not in an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is approximately 160m east of the Peak District National Park; therefore a significant negative effect is likely due to the potential for the site to adversely affect the quality of the landscape. This effect will be uncertain, however, until the design of the development is known. The site is also on greenfield land, which reinforces the negative effect. The site lies mainly in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	South Pennine Moors SAC, Peak District Moors SPA and Dark Peak SSSI are approximately 840m to the west of this site, therefore a minor negative effect is likely for this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: recreation and leisure. A potential significant negative effect was identified in relation to SA objective 12: character and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H622

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 16-20 minutes travel time of the nearest employment node, with the west of the site within 11-15 minutes travel time of the nearest employment node. Therefore, a significant positive effect on this SA objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is within 11-15 minutes of a primary school, within 16-20 minutes travel time of a secondary school, and within 21-25 minutes travel time of a further education institute. Therefore, development of the site could have a significant positive effect on this SA objective.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 11-15 minutes travel time of a GP and within 16-20 minutes travel time of a hospital. The site is not within or adjacent to an AQMA. Therefore, a significant positive effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The west of the site is within 85m of the A629 Halifax Road which may result in noise pollution affecting residents of the development in the longer term. The south and south west of the site are in close proximity (65m) to residential properties, which may be affected by noise during the construction phase. Therefore, a minor negative effect on this SA objective is predicted.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre. The majority of the site is within 6-10 minutes travel time of a town/district centre, with the east of the site within 11-15 minutes travel time of a town/district centre. Therefore, a minor positive effect on this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The west of the site is adjacent to an area of semi-natural and natural greenspace, adjacent to which is a park and garden (45m), two children's playgrounds (70m), and an allotment (65m). To the south of the site is a cemetery (65m). To the north west of the site is an area of amenity greenspace (150m). Approximately 100m to the north east of the site is a local cycle route. There are several PRow within close proximity to the site – 15m to the west, 70m to the north east, and 130m to the south. Therefore, a significant positive effect on this SA objective is predicted.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.45ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to eight of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site of approximately 0.45ha and is mainly on greenfield land (there are small agricultural sheds to the south east and north west of the site). In addition, it is not within an area of high quality agricultural land as it is classed partly as Grade 4 and partly as Urban in the Agricultural Land Classification. Therefore, a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.45ha) on mainly greenfield land which is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'amber' in terms of the potential for effects on the historic environment due to the presence of a Grade II Listed Building. The site is situated 100 meters from the churchyard of the Grade II Listed Church of St Philip the Apostle. The loss of this area and its subsequent development could harm elements which contribute to the significance of this building. The effect on the historic environment of development of this site is uncertain.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is 565m from the Grimescar Wood Local (Approved) Wildlife Site. Therefore, development may have a minor effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is mainly on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is mainly on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to eight of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: leisure and recreation, 10: sustainable transport, and 19: climate change, with no potential significant negative effects. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H623

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 16-20 minutes travel time of the nearest employment node (with an area in the south west within 11-15 minutes); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 11-15 minutes travel time of the nearest primary school. However travel time to the nearest secondary school and further education institute vary through the site. The north eastern part of the site is within 6-10 minutes travel time from a secondary school whereas as the south western part is within 16-20 minutes of a secondary school. In between those areas journey times to education facilities vary in between those two extremes.</p>

SA Objectives	SA Score	Justification
		However, overall a significant positive effect is expected for this objective. Journey times to the nearest further education institute also vary across the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest GP (with an area in the south within 6-10 minutes). However, travel time to the nearest hospital varies through the site. The south western part of the site is within 16-20 minutes of the nearest hospital whereas the north eastern part is within 26-30 minutes. However, overall a significant positive effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity to the north and south of the site. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest local centre (with an area in the north east within 11-15 minutes) and within 6-10 minutes of a town/district centre (with an area in the east within 11-15 minutes). Therefore a minor positive effect is expected for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is adjacent to an area of semi-natural and natural greenspace however this open space is within another housing site option. The site is also adjacent to an area of semi-natural and natural greenspace which in turn is adjacent to an area of park and gardens that contains an area children's play provision and a multiuse games area. Within 125m south west of the site is another area of semi-natural and natural greenspace however, it is located within another housing site option. To the east of the site approximately 385m away is a cricket ground which is adjacent to an area of semi-natural and natural greenspace. Approximately 300m south of the site is an area of semi-natural and natural greenspace. In addition, approximately 550m to the south of the site is an area of park and gardens that contains three areas of children's play provision and approximately 530m away is an area of semi-natural and natural greenspace, however they are both located within other housing site options.</p> <p>Therefore a significant positive effect is expected for this objective.</p>

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.39ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access all eight of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.39ha) and is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.39ha) and is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on 12 and 13 Warren house Lane and the adjacent barn which are Grade II Listed Buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 935m from Old Lindley Moor, Huddersfield Local Geodiversity Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing

SA Objectives	SA Score	Justification
use, recovery and recycling of waste close to source.		buildings and materials although this is uncertain depending on the previous use of the site. The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access all eight of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. No potential significant negative effects identified in relation to any of the SA objectives.		

H624

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to an employment node vary throughout this site. The most accessible part of the site is the eastern part which is within 16-20 minutes travel time of the nearest employment node. The least accessible part of the site is the north western part which is 31-35 minutes from an employment node. In between those areas journey times to an employment node vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significant positive for the eastern part and potentially negligible for the north western part of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/-?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the

SA Objectives	SA Score	Justification
		<p>effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is the eastern part which is within 11-15 minutes of a primary school and within 21-25 minutes travel time of a secondary school and a further education institute. The least accessible part of the site is the south western corner which is within 21-25 minutes from a primary school, within 41-45 minutes of a secondary school and within 36-40 minutes from a further education institute. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective: potentially minor positive for the eastern part of the site and potentially minor negative for the south western corner of the site.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	<p>++/0</p>	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the east which is 11-15 minutes travel time from the nearest GP and within 16-20 minutes of a hospital, whereas the western edge of the site is the least accessible as it is within 21-25 minutes from a GP and within 31-35 minutes of a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; potentially significant positive for the eastern part of the site and potentially negligible for the western part of the site. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	<p>--</p>	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are several existing residential properties within close proximity to the east of the site. In addition, the site is adjacent to the M62 motorway which may result in noise pollution affecting residents in the longer-term. A significant negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	<p>+/-</p>	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The most accessible part of the site is the eastern part, which is 6-10 minutes travel time from both the nearest local centre and town/district centre. The least accessible part of the site is the western edge which is within 26-30 minutes from the nearest local centre and town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; potentially minor positive for the eastern part and potentially minor negative for the western edge of the site.</p>
<p>7. Make our communities safer by reducing crime, anti-social</p>	<p>0</p>	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,</p>

SA Objectives	SA Score	Justification
behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within 35m of an area of semi-natural and natural greenspace however this open space is within another housing site option. Approximately 185m south of the site is an area of semi-natural and natural greenspace however this is also within another housing site option. The site is also within 310m of an area of semi-natural and natural greenspace which in turn is adjacent to an area of park and gardens that contains an area children's play provision and a multiuse games area. In addition, approximately 510m to the south east of the site is an area of semi-natural and natural greenspace. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.83ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.83ha) and the majority is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.83ha) and the majority is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.

SA Objectives	SA Score	Justification
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 635m from Old Lindley Moor, Huddersfield Local Geodiversity Site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of the site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (part of a mixed effect), 4: health (part of a mixed effect), 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives.		

H625

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they	++/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Access to employment nodes vary across the fragmented site. The most accessible part of the site is on the central

SA Objectives	SA Score	Justification
are accessible.		western boundary area, which is within 11-15 minutes of an employment node. The least accessible area is in the central area of the largest fragmented part of the site which is over 60 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore, a mixed effect is likely, potentially significant positive effect the central western boundary area of the site and significant negative for the central area of the largest fragmented part of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across this fragmented site. The most accessible area is central western boundary area, which is within 6-10 minutes to a primary and 11-15 minutes travel time to a secondary school. The least accessible area is in the central area of the largest fragmented part of the site which is over 60 minutes travel time to a primary and secondary school. In between these two extremes, travel times to education facilities vary. Therefore, a mixed effect is likely, potentially significant positive effect the central western boundary area and significant negative for the central area of the largest fragmented part of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to healthcare varies across this fragmented site. The most accessible area is in the north-western part of the site, which is within 11-15 minutes to a GP and 31-35 minutes travel time to a hospital. The least accessible area is in the central area of the largest fragmented part of the site which is over 60 minutes travel time to a GP and hospital. In between these two extremes, travel times to healthcare facilities vary. Therefore, a mixed effect is likely, potentially significant positive effect the central western boundary area and significant negative for the central area of the largest fragmented part of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	0	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by any sensitive receptors; therefore, a negligible effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local services varies across this fragmented site. The most accessible area is in the north-western part of the site, which is within 11-15 minutes to a local centre and 21-25 minutes travel time to a town/district centre. The least accessible area is in the central area of the largest fragmented part of the site which is over 60 minutes travel time to a service centre. In between these two extremes, travel times to local service facilities vary. Therefore, a mixed effect is likely, potentially negligible effect the north-western part of the site and significant negative for the largest fragmented part of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is a Public Right of Way (PRoW) within the site, which could be lost as a result of the development. However, this site is within 600m of more than three recreational facilities. There are several PRoW, the closest being a bridleway immediately adjacent to the site in the east, there is also a national cycle route, within 10m of the site to the east. Greenspace designations nearby include a green corridor and one park and garden and two amenity greenspaces. Other recreational spaces nearby include eight outdoor sports facilities in addition to Spen Peak Physique and Spenborough Pool sports centres and five sites containing provision for children and young people. A mixed effect has therefore been identified (significantly positive and significantly negative) for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.85ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This site relatively small (3.85ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is on land designated as Grade 3 agricultural quality.</p>
12. Protect and enhance the	-?	This site is relatively small (3.85ha) and on greenfield land; therefore, development here could have a minor negative

SA Objectives	SA Score	Justification
character of Kirklees and the quality of the landscape and townscape.		<p>effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.</p> <p>The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is approximately 2.6km from Sunny Banks Pond Local Nature Reserve; therefore, development here could have a negligible effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is on brownfield land and is outside of flood zone 3; therefore, a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore, a minor negative effect is likely.</p>
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or</p>

SA Objectives	SA Score	Justification
		entirely 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment 3: education, 4: health, 8: leisure and recreation. Potential significant negative effects were identified in relation to SA objectives 1: employment 3: education, 4: health, 6: access to local services, 8: leisure and recreation, 10: sustainable transport and 19: climate change. These will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H626

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 56-60 minutes travel time of the nearest employment node; therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is within 6-10 minutes travel time of the nearest primary school (with an area in the west within 11-15 minutes) and is within 21-25 minutes of a secondary school. Therefore a minor positive effect is expected for this objective. The majority of the site is also within 46-50 minutes of a further education institute (with an area to the south within 51-55 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of the site is within 26-30 minutes travel time of the nearest GP (with an area on the southern edge within 31-35 minutes) and the site is over 60 minutes of a hospital. Therefore a minor negative effect is expected for this objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise

SA Objectives	SA Score	Justification
		<p>pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity to the north and east of the site. Therefore a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 21-25 minutes travel time of the nearest local centre and the majority of the site is within 16-20 minutes of a town/district centre (with an area to the south within 21-25 minutes). Therefore a minor negative effect is likely for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>To the north of the site approximately 35m away is the West Yorkshire Cycle Route. Also, a PRoW footpath runs adjacent to the southern boundary of the site. There is another PRoW footpath approximately 200m west of the site. Within 600m north of the site there are a number of PRoW footpaths. Within 25m north east of the site is an area of semi-natural and natural greenspace which is adjacent to an area of park and gardens and an area of public playing fields that contains two areas of children's play provision. However, a section of the semi-natural and natural greenspace is within another housing site option. To the north west of the site approximately 135m away is a cricket ground. In, addition 315m east of the site is an area of school grounds and playing fields. Therefore a significant positive effect is expected for this objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.66ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in one of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.66ha) and is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).</p>

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.66ha) and is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.</p> <p>The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	<p>This site is approximately 55m from Yateholme Reservoirs & Plantations Local Wildlife Site, approximately 205m from Digley Reservoir/Marsden Clough Local Wildlife Site, approximately 825m from Digley Quarries, Holmbridge Local Geological Site, approximately 865m Carr Green Meadows Holmbridge Local Wildlife Site and within 955m of New Laith Fields Holmbridge Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>The site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in one eight of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation and potential significant negative effects were identified in relation to SA objective 1: employment and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H627

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 6-10 minutes travel time of the nearest employment node (with a small area in the south west within 11-15 minutes); therefore a significant positive effect is expected for this objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is within 6-10 minutes travel time of a primary school (with an area in the east within 5 minutes) and within 21-25 minutes of a secondary school (with an area in the north within 16-20 minutes). Therefore a minor positive effect is likely for this objective. The majority of the site is also within 26-30 minutes of a further education institute (with a small area in the south western corner within 31-35 minutes).

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 5 minutes travel time of the nearest GP and within 26-30 minutes of the nearest hospital. Therefore a significant positive effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are several existing residential properties within close proximity to the north and east of the site. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 5 minutes travel time of the nearest local centre (with an area in the west within 6-10 minutes) and is within 6-10 minutes of a town/district centre; therefore a significant positive effect is likely for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>There is a sports centre located approximately 370m to the west of the site. The Central Kirklees Cycling Map route runs within 40m north of the site. Approximately 100m south of the site is a PRoW footpath and another footpath runs approximately 120m south of the site. To the south east of the site approximately 145m away is a PRoW footpath. Approximately 35m east of the site is an area of semi-natural and natural greenspace which lies adjacent to an area of park and gardens. This park and gardens contains three areas of children's play provision, a multiuse games area and a public bowling green. Within 20m north of the site are an area of amenity greenspace and an area of semi-natural and natural greenspace. In addition, there is another area of amenity greenspace approximately 70m north of the site. Approximately 200m north east of the site is an area of school grounds and playing fields. Further to the north east of the site approximately 490m away is an area of allotments. Within 120m south of the site there are two areas of semi-natural and natural greenspace (one is adjacent to an area of amenity greenspace) and 390m south of the site is an area of public playing fields. Therefore a significant positive effect is expected for this objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.73ha); therefore a minor positive effect is likely.</p>

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	+	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.73ha) and the majority is on brownfield land; therefore a minor positive effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This is a relatively small site (0.73ha) and the majority is on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.</p> <p>The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>This site is approximately 595m from Caulms Wood Quarry, Dewsbury Local Geological Site; therefore development here could have a minor negative effect on this SA Objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	<p>The majority of the site is on brownfield land and is outside of flood zones 2 and 3; therefore a negligible effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of	+	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p>

SA Objectives	SA Score	Justification
waste close to source.		The majority of the site is brownfield land; therefore a minor positive effect is likely. The positive effect is uncertain given that the materials currently onsite are unknown at this stage.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 6: local services and facilities, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives.		

H628

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within 26-30 minutes travel time of the nearest employment node. As such a minor positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is located within 11-15 minutes travel time of the nearest primary school (the southern part of the site is located within 6-10 minutes travel time of the nearest primary school). The site is located within 31-35

SA Objectives	SA Score	Justification
		minutes travel time of the nearest secondary school. Overall a minor positive effect is expected on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of the nearest GP. The site is also located within 41-45 minutes travel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the south on Huddersfield Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre. The site is located within 5 minutes travel time of the nearest town/district centre. A minor positive effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	A footpath crosses into the site from the east and as such a potential significant negative effect is expected on this SA objective. The site is however also in close proximity to a number of open spaces which could be used by residents. The site is located within 260m of a green corridor which is to the south west. Within 415m also to the south west of the site a semi natural green space and natural greenspace is located. A cemetery is located within 335m to the south west of the site. Robert Ashton Memorial Park is located within 420m to the south west of the site and a number of allotments, children's playgrounds and outdoor sports facilities are provided at this location. As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them overall a mixed effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.44ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.44ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.44ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site could impact on a designated heritage asset but that its development is unlikely to result in harm to that asset if the development accords with the anticipated Local Plan policies for managing change to the historic environment. The site is in close proximity to Bentley Mill which has been designated as a Grade II Listed Building. A minor negative effect on this SA objective is therefore likely although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 250m of Honley Wood which has been identified as a Candidate Local Wildlife Site to the east. Hall Hayes Wood has been designated as a Local Wildlife Site and is within 255m to the north of the site. The proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure (it should be noted that this score was given as part of an overall mixed effect), 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objectives 8: recreation and leisure (it should be noted that this score was given as part of an overall mixed effect) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H629

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 26-30 minutes travel time of the nearest employment node; however there is a very small area at the northern tip which is within 31-35 and a small area at the south which is greater than 60 minutes. Therefore the overall effect is expected to be a minor positive.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The west half of the site is within 6-10 minutes travel time of a primary school and the east half is within 11-15 minutes. The majority of the site is within 46-50 minutes of a secondary school with very small areas around the edges being within 36-40, 41-40 and greater than 60 minutes. Therefore the overall effect is likely to be minor positive.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 11-15 minutes travel time of a GP and within 51-55 minutes of a hospital. However, the southern tip of the site is greater than 60 minutes of both GP and hospital. Therefore a the overall effect on this objective is expected to be minor positive. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within approximately 20-40 m of a farm and nursery to the west of the site which may mean that residents in that part of the site are affected by operational noise. There are also a small number of residential properties adjacent to the site to the south which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 11-15 minutes travel time of a local centre and 26-30 minutes of a district/town centre, though a small area at the southern tip is greater than 60 minutes to both. The overall effect would therefore be expected to be negligible.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing	++	<p>The site is close to several greenspaces, including four amenity greenspaces, three outdoor sports facilities, three</p>

SA Objectives	SA Score	Justification
and support the provision of new recreation facilities and areas of open space and encourage their usage.		play-parks and two allotments to the northwest, another allotment to the east, though it is on the opposite side of the River Holme. There are also several footpaths to the south and east of the site and a bridleway to the west. Therefore a significant positive effect is identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.43 ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (6.43 ha) on greenfield land; therefore a significant negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (6.43 ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on 24 Bridge Street, which is a Grade II Listed Building. This site also adjoins the boundary of the Honley Conservation Area and forms part of the area of open countryside which contributes to the setting of the Scheduled Monument at Castle Hill. The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area and Scheduled Monument. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance	--?	This site is within 250m of the Spring Wood Honley Wood Local Wildlife Site. It is also within approximately 900m of the Honley Wood candidate Local Wildlife Site and 350m of the Park Wood candidate Local Wildlife Site. Therefore

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as mostly 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives: 8: leisure and recreation, 9: housing requirements, 10: sustainable transport, and 19: climate change; and potential significant negative effects were identified in relation to SA objectives: 5: amenity, 11: efficient land use, and 12: landscape character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H630

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of the site is within 31-35 minutes travel time of the nearest employment node, with the northern area being within 26-30 minutes; therefore a negligible effect on this objective is expected.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of both a primary school. However, the northern area of the site is within 31-35 minutes travel time and the southern area is within 41-45 minutes, with the rest of the site varying in travel times between these two extremes. Therefore a minor positive effect is likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of the site is within 11-15 minutes travel time of a GP, with a small area in the north being 6-10 minutes away. The entire site is within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are two residential cul-de-sacs along the northeast boundary of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is within 11-15 minutes travel time of a local centre, with a small area in the north being within 6-10 minutes. Most of the site is also within 21-25 minutes of a town/district centre, with a small area in the north being within 16-20. Therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is close to several greenspaces, including a large semi-natural/natural greenspace to the south, though access to this area may involve a busy road with no footpath, though there are various footpaths to the south of the site. To the north of the site there are four amenity greenspaces, three outdoor sports facilities, three play-parks and two allotments. Therefore a significant positive effect is identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.28 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.28 ha) on greenfield land (the land is also classed as Grade 3 agricultural land); therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.28 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateaux with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, which may result in a negligible effect. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is adjacent to the Spring Wood Honley Wood Local Wildlife Site (LWS) and within approximately 700m of the Dean Wood LWS. It is also within approximately 350 m of the Honley Wood candidate LWS and 900 m of the Park Wood candidate LWS. Therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives: 8: leisure and recreation, 10: sustainable transport, and 19: climate change; and potential significant negative effects were identified in relation to SA objective 14: biodiversity protection. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H632

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The western part of the site is within 11-15 minutes travel time of the nearest employment node; and the eastern part part of the site is within 16-20 minutes from an employment node. Therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

SA Objectives	SA Score	Justification
increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 11-15 minutes travel time of a primary school, and within 16-20 of a secondary school. The site is also within 16-20 minutes of a further education facility. Therefore a significant positive effect on this objective is expected.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 11-15 minutes travel time of a GP and within 16-20 minutes of a hospital. Therefore a significant positive effect on this objective is expected. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties within 100m of the site to the south and southwest which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The western part of this site is within 0-5 minutes travel time, whilst the eastern part of the site is within 6-10 minutes of a local centre. The majority of the site within is within 11-15 minutes, whilst a small part of the site is within 6-10 minutes of a town/district centre. Therefore a minor positive effect on this objective is expected.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and	++	There is a public footpath running through the centre of this site which could be disrupted as a result of housing development. This site is adjacent to a cemetery on the southern boundary and, is within approximately 200 m of a semi-natural and natural green space, two provisions for children and young people, a park and garden and an

SA Objectives	SA Score	Justification
areas of open space and encourage their usage.		allotment, and is within 600 m of a number of footpaths and bridleways. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.6 ha; therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to all eight of the features assessed. Therefore, significant positive effect on this objective is expected.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.6ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land majority of this land classed as urban, with a small section classed as Grade 4 agricultural quality).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.6ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies across LCA E2: Barkisland-Holywell Green and an area classed as 'urban', as identified in the 2015 Landscape Character Assessment for Kirklees. LCA E2: Barkisland-Holywell Green comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the churchyard of the Grade II Listed Church of St Philip the Apostle, which is 35m away from the site. The loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-	This site is approximately 600m from Grimescar Wood Local Wildlife Site and therefore development here could have a minor negative effect on this SA Objective. This effect is recorded as uncertain given that development at this location may allow for biodiversity enhancements depending on its design.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.		TBC
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is was classed as 'green' in terms of its access to all eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: leisure and recreation, 9: housing, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified.		

H633

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is located within 21-25 minutes travel time of the nearest employment node (a small part of the site to the south west is located within 26-30 minutes travel time of the nearest employment node). As such a minor positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of the nearest primary school. The majority of the site is located within 31-35 minutes travel time of the nearest secondary school (a small part of the site to the north is located within 36-40 minutes travel time of the nearest secondary school). Overall a minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest GP (two smaller parts of the site to the south east and north are located within 5 minutes travel time of the nearest GP). The travel time from the nearest hospital varies across the site. The north and south east parts of the site are located within 21-25 minutes travel time of the nearest hospital while the south west part of the site is located within 31-35 minutes travel time of the nearest hospital. The areas between these extremes are located at variable travel times from the nearest hospital. Overall a mixed effect (significant positive/minor positive) is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to the Cliffe End Business Park along its southern edge. It is considered that the close proximity of this industrial site may result in increased noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of a local centre (a small part of the site to the east is located within 5 minutes travel time of a local centre). The majority of the site is also located within 6-10 minutes travel time of the nearest town/district centre (a small part of the site to the north is located within 11-15 minutes travel time of the nearest town/district centre). A minor positive effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be</p>

SA Objectives	SA Score	Justification
crime.		influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site contains a number of footpaths which run from north to south and from south east to north west. These footpaths could be lost as a result of housing development and therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. The site is within 15m of a semi-natural and natural greenspace to the north. A cemetery is provided within 145m to the west of the site. A small park is located on Crowe Lane within 210m to the south west of the site and provision has also been made at this location for a children's playground. Overall a mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.69ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.69ha) on mostly greenfield land (it is recognised that a small part of the site to the east is located on brownfield land); therefore a minor negative effect on this SA objective is likely. The site is located on land which has been designated as Urban Land in terms of its Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.69ha) on mostly greenfield land (it is recognised that a small part of the site to the east is located on brownfield land); therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on

SA Objectives	SA Score	Justification
		cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 420m of Huddersfield Narrow Canal which has been identified as a Candidate Local Wildlife Site to the south. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on mostly greenfield land (it is recognised that a small part of the site to the east is located on brownfield land) and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of mostly greenfield land (it is recognised that a small part of the site to the east is located on brownfield land) meaning there are likely to be limited opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 4: health (it should be noted that an overall mixed effect was recorded for this SA objective), 8: recreation and leisure (it should be noted that an overall mixed effect was recorded for this SA objective), 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 5: amenity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H634

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located within 31-35 minutes travel time of the nearest employment node. As such a negligible effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 21-25 minutes travel time of the nearest primary school (a small part of the site is located within 16-20 minutes travel time of the nearest primary school). The site is located within 26-30 minutes travel time of the nearest secondary school. Overall a negligible effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 11-15 minutes travel time of the nearest GP. The site is also located more than 60 minutes travel time from a hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to the A636 along its southern edge. It is considered that the close proximity of this major road may result in increased noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 16-20 minutes travel time of a local centre. The site is also located within 16-20 minutes</p>

SA Objectives	SA Score	Justification
		travel time of the nearest town/district centre. A minor negative effect is expected overall for this SA objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is located within 90m of a semi-natural and natural greenspace which is to the west of the site. Within 220m to the north west of the site outdoor sports facilities are provided at the tennis courts on Dearnside Road. A small park is located to the north of the site within 200m.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.01ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.01ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.01ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.</p>
13. Conserve and enhance the	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning

SA Objectives	SA Score	Justification
historic environment, heritage assets and their settings.		that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 980m of Denby Delph which has been identified as a Candidate Local Wildlife Site to the south west. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and potential significant negative effects were identified for this site in relation to SA objective 5: amenity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H635

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is located within 36-40 minutes travel time of the nearest employment node (the southern part of the site is located more than 60 minutes travel time from the nearest employment node). As such a negligible effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest primary school (a small part of the site to the south is located more than 60 minutes travel time from the nearest primary school). The majority of the site is also located within 11-15 minutes travel time of the nearest secondary school (a small part of the site to the south is located more than 60 minutes travel time from the nearest secondary school). Overall a negligible effect is expected on this SA objective. Overall a significant positive effect is expected on this SA objective. The site is located at variable travel times from the nearest centre for further education. The north and west of the site is located within 26-30 minutes travel time of the nearest centre for further education, while the south of the site is located more than 60 minutes from the nearest centre for further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest GP (part of the site to the south is located more than 60 minutes from the nearest GP). The majority of the site is also located within 51-55 minutes travel time of a hospital (a small part of the site to the south is located more than 60 minutes travel time from a hospital). Overall a minor negative effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p>

SA Objectives	SA Score	Justification
		This site is within 80m of existing properties to the south on Reservoir Side Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 11-15 minutes travel time of a local centre (a small part of the site to the south is located more than 60 minutes from a local centre). The majority of the site is also located within 11-15 minutes travel time of the nearest town/district centre (a small part of the site to the south is located more than 60 minutes from a town/district centre). A minor positive effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site contains a footpath which runs from south to north. This footpath could be lost as a result of housing development and therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces and routes which are connected to the public rights of way system, both of which could be used by residents. Another footpath (which connects Black Lane to Arborary Lane) is within 130m to the east of the site. Outdoor sports facilities are located within 435m to the north of the site at the grounds of Colne Valley High School. Further footpath access is provided to the south west of the site within 175m. Overall a mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.84ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.84ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. SA Objectives	SA Score	Justification
		materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure (it should be noted that the overall effect recorded for this SA objective however was mixed), 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 8: recreation and leisure (it should be noted that the overall effect recorded for this SA objective however was mixed). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H636

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The western are of this site is within 16-20 minutes travel time of the nearest employment node and the eastern area is within 26-30 minutes. In between, journey times to employment nodes vary in between those two extremes. Therefore a mixed effect on this objective is expected – significantly positive for the western side and minor positive for the eastern side.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The smallest western tip of this site is within 5 minutes travel time to a primary school and middle of the site is within</p>

SA Objectives	SA Score	Justification
		<p>11-35 minutes, with the other areas of the site to the west and northeast varying between the two extremes. Most of the site is within 26-30 minutes travel time of a secondary school and the west and north-eastern areas are within 21-25 minutes.</p> <p>As the entire site is still within 15 minutes travel time of a primary school and between 20-30 minutes of a secondary school there is likely to be a minor positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP at the western tip and 11-15 minutes for the rest of the site. It is also within 51-55 minutes of a hospital from most of the site, with a small area in the south being 56-60 minutes. Therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to a number of residential properties along the northern boundary which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The western tip of the site is within 5 minutes travel time of a local centre and the centre of the site is within 11-15 minutes with the rest of the site varying in distance between the two extremes. The site is also within 21-25 minutes of a town/district centre for most of the site and 26-30 minutes in the northeast corner; therefore a mixed effect is expected with the western tip expecting a minor positive effect and the rest of the site expecting a negligible effect.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site is within allotments and amenity greenspace (approximately 80 m to the west) and several other open spaces to the northwest and northeast within 400 m, including children's parks, parks and gardens, semi-natural/natural greenspaces, outdoor sports facilities, a couple of cemeteries. There are also various public right of ways and a byway to the south. Therefore a significant positive effect is expected.</p>
9. Ensure all people are able to	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the</p>

SA Objectives	SA Score	Justification
live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.51 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.51 ha) on greenfield land, currently classified as Grade 3 agricultural quality; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.51 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, therefore a negligible effect is likely. The effect on this SA objective is uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 300 m from the Kirkby Wood candidate Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing

SA Objectives	SA Score	Justification
use, recovery and recycling of waste close to source.		buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as mostly 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives: 1: Employment (as part of a mixed result), and 8: leisure and recreation; and no potential significant negative effects were identified in relation to SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H637

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is located within 51-55 minutes travel time of the nearest employment node (the north west part of the site is located within 46-50 minutes travel time from the nearest employment node). As such a significant negative effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The majority of the site is located within 16-20 minutes travel time of the nearest primary school (the north west part of the site is located within 11-15 minutes travel time of the nearest primary school). The majority of the site is also located within 21-25 minutes travel time of the nearest secondary school (the north west part of the site is located within 16-20 minutes travel time of the nearest secondary school) Overall a negligible effect is expected on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of the nearest GP. The majority of the site is also located within 56-60 minutes travel time of a hospital (a small part of the site to the north west within 51-55 minutes travel time of a hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the north on Tudor Street and to the east on Linfit Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 16-20 minutes travel time of a local centre (a small part of the site to the north west is within 11-15 minutes travel time of a local centre). The majority of the site is also located within 11-15 minutes travel time of the nearest town/district centre (a small part of the site to the south east is located within 16-20 minutes of a town/district centre). A minor positive effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site contains a footpath which runs from south east to north west. This footpath could be lost as a result of housing development and therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of open spaces which could be used by residents. Amenity greenspace is located within 65m to the north of the site and beyond this within 85m of the site Linthwaite Hall Bowling Club provides access to outdoor sports facilities. A children's playground is located within 210m of the site to the north west on Gordon Street. Also located to the north west of the site a number of allotments are located within 270m of the site. Overall

SA Objectives	SA Score	Justification
		a mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.85ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.85ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is located on Urban Land (a small part of the site to the south west is located on Grade 4 Agricultural Land).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.85ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 485m of Huddersfield Narrow Canal which has been identified as a Candidate Local Wildlife Site to the north. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure (it should be noted that the overall effect recorded for this SA objective however was mixed) and potential significant negative effects were identified for this site in relation to SA objectives 1: employment and 8: recreation and leisure (it should be noted that the overall effect recorded for this SA objective however was mixed). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H638: Land to the north of Tinker Lane, Lepton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within 26-30 minutes travel time of the nearest employment node. As such a minor positive effect is expected on this SA objective.
2. Achieve an economy better	0	The location of housing sites will not affect the success of the local economy. While housing development may result

SA Objectives	SA Score	Justification
capable of growth through increasing investment, innovation and Entrepreneurship.		in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 11-15 minutes travel time of the nearest primary school. The site is also located within 36-40 minutes travel time of the nearest secondary school. Overall a minor positive is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 11-15 minutes travel time of the nearest GP. 5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the west on Far Croft. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 11-15 minutes travel time of a local centre. The site is also located within 21-25 minutes travel time of the nearest town/district centre. A negligible effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and	++	The site is in close proximity to a number of open spaces and footpaths which could be used by residents. Outdoor sports facilities are provided adjacent to the site at Lepton Highlanders Sports and Social Club to the east. To the west within 380m a cemetery is provided at St. John's Church. Access to a footpath is provided to the south west of the

SA Objectives	SA Score	Justification
areas of open space and encourage their usage.		<p>site within 205m by Pond Lane Farm.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.87ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.87ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on mostly Grade 4 Agricultural Land (a small part of the site to the north west is located on Urban Land).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.87ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies across LCA E6: Holmfirth-Meltham and LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. LCA E6: Holmfirth-Meltham is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley. LCA N1: Emley Moor is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance	-?	The site is within 875m of Lepton Great Wood which has been identified as a Candidate Local Wildlife Site to the south west. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure. No potential significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement which may be achieved through Local Plan policies.		

H639

SA Objectives	SA Score	Justification
1: Increase the number and range of employment	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
opportunities available for local people, and ensure that they are accessible.		The site is located within 11-15 minutes travel time of the nearest employment node. As such a significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 11-15 minutes travel time of the nearest primary school. The site is also located within 21-25 minutes travel time of the nearest secondary school. Overall a minor positive is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 16-20 minutes travel time of the nearest GP. The site is also located within 41-45 minutes travel time of a hospital. Overall a negligible effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the east on Green Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre. The site is also located within 21-25 minutes travel time of the nearest town/district centre. A negligible effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site)

SA Objectives	SA Score	Justification
		and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+	<p>The site is in close proximity to one open space as well as a cycle path which could be used by residents. A National Cycle Route is located adjacent to the site to the south. Access to a semi-natural and natural greenspace is provided within 490m to the east of the site on Bradford Road.</p> <p>As such given that the relative close proximity of this open space and cycle path to the site may encourage new residents to make use of them a minor positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.75ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.75ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Urban Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.75ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance	-?	The site is within 520m of Railway Terrace which has been identified as a Local Nature Reserve to the north west. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g.

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 10: transport and 19: climate change. No potential significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement which may be achieved through Local Plan policies.		

H640

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
people, and ensure that they are accessible.		Most of this site is within 11-15 minutes of the nearest employment mode (aside from an area in the south which is within 16-20 minutes; therefore, significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Travel times to education facilities vary across the site. The most accessible area is in the far north of the site which is within 5 minutes travel time of a primary school and 11-15 minutes of a secondary school. The least accessible area is in the south of the site where it is 6-10 minutes to a primary school and 16-20 minutes to a secondary school. However, overall a significant positive effect is likely for the whole site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however, where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of this site is within 5 minutes travel time of a GP (aside from the northern area of the site which is within 6-10 minutes travel time). Most of the site is also within 41-45 minutes travel time of a hospital (aside from the northern area of the site, which is within 51-55 minutes travel time); therefore a minor positive effect is expected. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The southern boundary of this site is adjacent to the A643 (Westgate Road) which may mean that residents in the south of the site are affected by road noise. There are also existing residential properties adjacent to the site to the north-east which may be affected by noise during the construction phase. There are also industrial buildings and activities directly to the south west which could generate noise over the long term. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 11-15 minutes travel time of a local centre and 6-10 minutes of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be

SA Objectives	SA Score	Justification
		influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site includes an area of semi-natural and natural greenspace which could be lost as a result of housing development. However, the site is also within 600m of a number of recreational and leisure facilities, including several Public Rights of Way and a national cycle route. Open space designations nearby include an amenity greenspace, green corridor, two park and gardens and another semi-natural and natural greenspace to the south of the site. There are also two nearby sites containing provision for children and young people and two outdoor sports facilities, including Whitcliffe Mount Sports Centre. Therefore, overall a mixed (significant positive and potential significant negative) effect is identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.7 ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.7 ha) on mainly brownfield land; therefore, a minor positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (0.7 ha) mainly on brownfield land, therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity sites (Hunsworth Great Wood and Little Wood Candidate Local Wildlife Site is the closest site and is located approximately 1.7 km to the north). As such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new	0	This site is mainly on brownfield land and is outside of flood zone 3; therefore, a negligible effect is likely.

SA Objectives	SA Score	Justification
development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is mainly on brownfield land; therefore, a potential minor positive effect is identified. The positive effect is uncertain given that the materials currently onsite are unknown at this stage.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation (part of a mixed effect overall), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: leisure and recreation (part of a mixed effect overall). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H641

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 6-10 minutes travel time of an employment node; therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment,	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes travel time of a primary school and the majority of the site is within 21-25 minutes of a secondary school; therefore a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	The whole of this site is within 6-10 minutes travel time of a GP and 11-15 minutes from a hospital; therefore a significant positive effect is likely for this SA objective. The site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer-term. This site is adjacent to the A640 (New Hey Road) and future residents could be exposed to noise pollution over the long term resulting in a significant negative effect. In addition, within 100m north, east and south there are a number of existing residential properties and a place of worship is to the west. It is considered possible that these receptors could be exposed to noise and light pollution during construction which reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	++	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 5 minutes travel time of a local centre and 6-10 minutes from a town/district centre; therefore a significant positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents, the closest of which is a cemetery directly adjacent to the west. Other recreational facilities and areas of open space include allotments, outdoor sports facilities, areas for children and young people and areas of semi-natural and natural greenspace. There are also a number of other PRoW paths to the east (one of which runs along the eastern edge of the site) and there is a byway to the south. A significant positive effect is therefore likely overall.
9. Ensure all people are able to live in a decent home which	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of

SA Objectives	SA Score	Justification
meets their needs.		affordable housing. This site is small (0.88ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to seven of eight features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.88ha) and on mostly greenfield land. Therefore a minor negative effect is likely on this SA objective. The site is not in an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.88ha) and on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the nearby Salendine Nook Baptist Chapel Grade II Listed Building (the loss of this site and its subsequent development could harm elements which contribute to the significance of this asset). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Longwood Edge Quarry Local Geological Site is approximately 650m to the west, therefore a minor negative effect is likely for this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on mostly greenfield land outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to seven of eight features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 6: local services, 8: recreation and leisure, 10: sustainable transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H642

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 5 minutes travel time of an employment node; therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Accessibility to education varies across this site. In this way, the northern part of the site is within 11-15 minutes travel time of a primary school, 21-25 minutes of a secondary school and 31-35 minutes from a further education facility whereas the southern part of the site is within 16-20 minutes from a primary school, 21-25 minutes from a secondary school and 41-45 minutes from a further education facility. In between these two extremes, access to education varies. Overall a mixed effect is likely – minor positive for the northern part and negligible for the southern part.
4. Improve the health of local	+/-	The majority of this site is within 11-15 minutes travel time of a GP and 31-35 minutes from a hospital. The site is

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		also within 150m from the AQMA on the A644 (Huddersfield Road) near Scout Hill. It is likely that the A644 will be used to access the site and increased vehicle traffic in this AQMA could compound poor air quality levels in the area. A mixed effect is therefore likely for this SA objective.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is in an industrial area, therefore a significant negative effect is likely as future residents could be exposed to noise pollution over the long term.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 16-20 minutes travel time of a local centre and 21-25 minutes of a town/district centre; therefore a minor negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents, the closest of which is an area of semi-natural and natural greenspace approximately 60m to the west. Other recreational facilities and areas of open space include other areas of semi-natural and natural greenspace, amenity greenspace, outdoor sports facilities, a cemetery, allotments and a park and garden. There are also a number of other PRoW paths to the south and east and a national cycle route is also to the east. A significant positive effect is therefore likely overall.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.72ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to two of eight features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.72ha) and on mostly greenfield land. Therefore a minor negative effect is likely on this SA

SA Objectives	SA Score	Justification
		objective. The site is not in an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (0.72ha) and on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are several biodiversity designations within 1km of this site, including Lower Spenningsdale Wildlife Area Local Nature Reserve and approved Local Wildlife Site (approximately 880m west) and Sparrow Wood Local Nature Reserve and approved Local Wildlife Site (approximately 810m south-west). A minor negative effect is therefore likely for this SA objective.
15. Reduce air, water and soil pollution.	--	The site is within 150m from the AQMA on the A644 (Huddersfield Road) near Scout Hill. It is likely that the A644 will be used to access the site and increased vehicle traffic in this AQMA could compound poor air quality levels in the area. A significant negative effect is therefore likely for this SA objective.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	--	This site is on mostly greenfield land and mostly within flood zone 3; therefore a significant negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to two of eight features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment and 8: recreation and leisure. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 15: pollution and 16: flood risk. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H643

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 41-45 minutes travel time of an employment node; therefore a minor negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 6-10 minutes travel time of a primary school (with an area in the north within 5 minutes) and 31-35 minutes from a secondary school (with an area in the north within 26-30 minutes). Therefore, a minor positive effect is likely for this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care	+	The whole of this site is within 6-10 minutes travel time of a GP and 51-55 minutes from a hospital; therefore a minor positive effect is likely. This site is not in or adjacent to an AQMA.

SA Objectives	SA Score	Justification
they need.		
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties in close proximity to the east and west of the site, and these residents could experience noise and light pollution during construction of the site. In addition, there is an industrial area immediately to the north of the site which may result in noise pollution affecting residents in the longer-term. Therefore a significant negative effect on this SA objective is considered likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 11-15 minutes travel time of a local centre (with an area in the east within 16-20 minutes) and 5 minutes of a town/district centre (with an area in the south within 6-10 minutes); therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is an area of semi-natural and natural greenspace within this site, and it is considered possible that this could be lost as a result of the site being developed. However, 400m to the north east of the site are allotments, an area of school grounds and playing fields and also a park and garden which contains a public bowling green, a multi-use games area and a children's play area. To the north of the site within 545m are an area of amenity greenspace, three areas of allotments, four areas of semi-natural and natural greenspace and private playing fields. There are also a number of other PRoW paths surrounding the site. Therefore a mixed significant negative and significant positive effect is considered likely for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.63ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of eight features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This site is relatively small (4.63ha) and on mostly brownfield land. Therefore a minor positive effect is likely on this SA objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This site is approximately 360m north of the Peak District National Park; therefore a significant negative effect is likely due to the potential for the site to adversely affect the quality of the landscape. This effect will be uncertain, however, until the design of the development is known.</p> <p>The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is approximately 280m from Butterley Cutting, Marsden Local Geological Site, approximately 365m from South Pennine Moors Special Protection Area (SPA)/Special Area of Conservation (SAC)/Site of Special Scientific Interest (SSSI), approximately 530m from Huddersfield Narrow Canal Local Wildlife Site and approximately 905m from Naze Top Wood Local Wildlife Site. Therefore, development here could have a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is on mostly brownfield land and mostly outside flood zone 3; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on mostly brownfield land therefore a minor positive effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of eight features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure (a mixed effect), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 8:recreation and leisure (mixed effect), and 12: character and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H644

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 11-15 minutes travel time of an employment node; therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 6-10 minutes travel time of a primary school, 16-20 minutes of a secondary school and 16-20 minutes of a further education facility. A significant positive effect is therefore likely overall.
4. Improve the health of local people and ensure that they can access the health and social care	+	The majority of this site is within 6-10 minutes travel time of a GP and 41-45 minutes from a hospital; therefore a minor positive effect is likely. This site is not in or adjacent to an AQMA.

SA Objectives	SA Score	Justification
they need.		
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to the A652 (Bradford Road), and future residents could be exposed to noise pollution over the long term, resulting in a significant negative effect. In addition, there are also existing residential properties within 100m to the west, south-east and south, and residents of these properties could be exposed to noise and light pollution during construction which reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 16-20 minutes travel time of a local centre and 6-10 minutes of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents, the closest of which is a park and garden approximately 80m to the north. Other recreational facilities and areas of open space include amenity greenspace, outdoor sports facilities, a cemetery and areas for children and young people. There are also a number of other PRow paths surrounding the site and a bridleway is to the north-east. A significant positive effect is therefore likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.97ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.97ha) and on greenfield land. Therefore a minor negative effect is likely on this SA objective. Most of the site is not in an area of high quality agricultural land.
12. Protect and enhance the	-?	This site is small (0.97ha) and on greenfield land; therefore development here could have a minor negative effect on

SA Objectives	SA Score	Justification
character of Kirklees and the quality of the landscape and townscape.		this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Oakwell Park Local Nature Reserve and approved Local Wildlife Site is approximately 100m north of this site; therefore a significant negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H645

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 36-40 minutes travel time of the nearest employment node. Therefore, a negligible effect on this SA objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is within 6-10 minutes of a primary school, with a small section to the north west within 11-15 minutes travel time of a primary school. The site is within 11-15 minutes travel time of a secondary school and within 31-35 minutes travel time of a further education institute. Therefore, development of the site could have a significant positive effect on this SA objective.
4. Improve the health of local	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 16-20 minutes travel time of a GP. The majority of the site is within 51-55 minutes travel time of a hospital, with a small section to the north west of the site within 46-50 minutes. The site is not within or adjacent to an AQMA. Therefore, a negligible effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The south west of the site is adjacent to the A616 Huddersfield Road which may result in noise pollution affecting residents of the development in the longer term. A large farmhouse is located at the north east of the site (within the site boundary) while the south of the site is within close proximity of an existing residential development. The residents of these properties may be affected by noise during the construction phase. Therefore, a significant negative effect on this SA objective is predicted.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre and within 16-20 minutes travel time of a town/district centre. Therefore, a negligible effect on this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The west and south west of the site are within 50m of semi-natural and natural greenspace, within 65m of a park and garden, and within 160m of a children's playground. There is also a PRoW approximately 20m to the west of the site. Therefore, a significant positive effect on this SA objective is predicted.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.59ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site of approximately 0.59ha. Although there is a farmhouse located within the site boundary to the north east, the site is mainly greenfield land. In addition, it is not within an area of high quality agricultural land as it is classed as Grade 4 in the Agricultural Land Classification. Therefore, a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.59ha) mainly of greenfield land which is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that the development of the site is unlikely to result in harm to any designated heritage asset; therefore a negligible effect on this SA objective is likely.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is 1.2km from the nearest designated site – Holme House Grasslands (Approved) Local Wildlife Site to the south east of the site. Therefore, development may have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is mainly on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is mainly on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.</p>
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education and 8: leisure and recreation, with potential significant negative effects predicted for SA objective 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H646

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 6-10 minutes travel time to the nearest employment node; therefore a significant positive effect is likely.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 5 minutes travel time to a primary school and 6-10 minutes travel time to a secondary school; therefore, a significantly positive effect is likely for this SA objective. This site is also within 20 minutes travel time to a further education institute.</p>
4. Improve the health of local people and ensure that they can	++	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
access the health and social care they need.		This site is within 11-15 minutes travel time to a GP and 26-30minutes travel time to a hospital; therefore, a significant positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are industrial buildings and activities directly to the south which could cause noise effects over the long term. There are existing residential properties adjacent to the site to the north and a Headlands CE primary and infant school to the south which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre and 11-15 minutes travel time to a town/district centre; therefore, a minor positive effect is likely for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities. There are several Public Rights of Way (PRoW), the closest being adjacent to the site in the south and west and a national cycle route. Greenspace designations nearby include a green corridor, two parks and gardens and three natural and semi-natural greenspaces. However, one of these natural and semi-natural spaces is within the housing options site H134 and therefore could be lost as a result of development. Other recreational spaces nearby include nine outdoor sports facilities and four sites containing provision for children and young people. Therefore, a significantly positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.58ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.

SA Objectives	SA Score	Justification
of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to all eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site relatively small (0.58ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. This site is located on land designated as urban quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (0.58ha) and on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0	This site is within 2km of Sunny Banks Pond Local Nature Reserves; therefore, development here could have a negligible effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.

SA Objectives	SA Score	Justification
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to all eight features assessed. Therefore, a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment 3: education, 4: health, 8: leisure and recreation, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity, which will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H647

SA Objectives	SA Score	Justification
1. Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is more than 60 minutes travel time from an employment node; therefore a significant negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is more than 60 minutes travel time from a primary school, secondary school and further education facility; therefore a significant negative effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	The majority of this site is more than 60 minutes travel time from a GP and the whole site is more than 60 minutes from a hospital; therefore a significant negative effect is likely. This site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is directly adjacent to an industrial area, and future residents could be exposed to noise pollution over the</p>

SA Objectives	SA Score	Justification
		long term, resulting in a significant negative effect. In addition, there are also existing residential properties within 100m to the north and south, and residents of these properties could be exposed to noise and light pollution during construction which reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is more than 60 minutes travel time from a local centre and a town/district centre; therefore a significant negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents, the closest of which is a park and garden and area of semi-natural and natural greenspace directly adjacent to the west of the site. Other recreational facilities and areas of open space include amenity greenspace, outdoor sports facilities and allotments. There are also a number of other PRow paths surrounding the site, and a bridleway runs along the southern edge of the site. A significant positive effect is therefore likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.35ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was not classed as entirely or mainly 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.35ha) and on greenfield land which is mostly classed as grade 3 agricultural quality. Therefore a minor negative effect is likely on this SA objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (1.35ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment,

SA Objectives	SA Score	Justification
historic environment, heritage assets and their settings.		meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Tong Moor Local Nature Reserve and approved Local Wildlife Site is directly adjacent to the west of this site; therefore a significant negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was not classed as entirely or mainly 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely overall.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: recreation and leisure. Potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health, 5: amenity, 6: local services, 10: sustainable transport, 14: biodiversity and geodiversity and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H648

SA Objectives	SA Score	Justification
---------------	----------	---------------

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 11-15 minutes travel time of an employment node; therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 5 minutes travel time of a primary school and 21-25 minutes from a secondary school; therefore a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The majority of this site is within 6-10 minutes of a GP and the whole site is within 36-34 minutes from a hospital. A minor positive effect is therefore likely. This site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is surrounded by existing residential properties, and residents of these properties could be exposed to noise and light pollution during construction of the site, resulting in a significant negative effect.
6. Retain and enhance access to local services and facilities.	++	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 5 minutes travel time of a local centre and the whole site is within 11-15 minutes from a town/district centre; therefore a significant positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new	++	Within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents, the closest of which is an area of semi-natural and natural greenspace directly adjacent to the east

SA Objectives	SA Score	Justification
recreation facilities and areas of open space and encourage their usage.		of the site. Other recreational facilities and areas of open space include amenity greenspace, outdoor sports facilities, a park and garden and areas for children and young people. There are also a number of other PRow paths surrounding the site. A significant positive effect is therefore likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.72ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.72ha) and on greenfield land. Therefore a minor negative effect is likely on this SA objective. The site is not in an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.72ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use,	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing

SA Objectives	SA Score	Justification
recovery and recycling of waste close to source.		buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified in relation to SA objectives 1: employment, 6: local services, 8: recreation and leisure, 10: sustainable transport, and 19: climate change. A significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H649

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Access to employment nodes vary across the site. The most accessible area is in the western area of the site, which is within 16-20 minutes of an employment node. The least accessible area is in the north-eastern area of the site which is within 31-35 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore a mixed effect is likely, potentially significant positive effect for the western area of the site and negligible for the north-eastern area of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		Access to education facilities varies throughout the site. The most accessible area is in the western area of the site, which is within 6-10 minutes travel time to a primary school and 11-15 minutes to a secondary school. The least accessible area is in the north-eastern area of the site which is within 11-15 minutes travel time to a primary and secondary school. Travel times to education facilities vary between these two extremes. However overall, a significant positive effect is likely. The whole site is within 30 minutes travel time to a higher education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however, where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Travel times to healthcare facilities vary across the site. The most accessible area is in the western area of the site which is within 6-10 minutes travel time to a GP and 41-45 minutes to a hospital. The least accessible area is in the far northern area of the site, which is within 16-20 minutes to a GP and 56-60 minutes to a hospital. In between these two extremes, travel times vary. Therefore, overall a mixed effect is expected-potentially minor positive for the western area of the site and negligible for the far northern area of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are industrial buildings and activities directly to the east which could cause noise effects over the long term. There are also existing residential properties nearby to the south and west of the site, which could be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely. However, these industrial units are located within housing option site H653 and therefore could be mitigated as a result of development upon this site, which would result in a minor negative effect in relation to this SA objective.</p>
6. Retain and enhance access to local services and facilities.	+/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Travel times to local and town/district centres vary across the site. The most accessible area is the southern area of the site which is within 6-10 minutes travel time to a local and 11-15 minutes travel time to a town/district centre. The least accessible area is in the northern edge of the site, which is within 11-15 minutes to a local centre and 26-30 minutes travel time to a town/district centres. In between these two extremes, travel times vary. Therefore, a mixed effect is expected, potentially minor positive for the southern area of the site and a negligible effect for the far south of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing	++	This site is within 600m of more than three recreational and leisure facilities including several PROW, the closest

SA Objectives	SA Score	Justification
and support the provision of new recreation facilities and areas of open space and encourage their usage.		being adjacent to the site in the east. Greenspace designations nearby include three amenity greenspaces, one park and garden and one area of natural/semi-natural greenspace. Other spaces include seven sites containing provision for children and young people, two allotments sites and eight outdoor sports facilities. Therefore, overall a significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (11.78 ha); therefore, a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (11.78ha) on mainly greenfield land; therefore, a significant negative effect on this SA objective is likely. Most of this site is designated as urban land except for the east of the site which is on designated Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a large site (11.78 ha) mainly on greenfield land, therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is approximately 750m west of Sunny Bank Ponds Local Wildlife Site; therefore a minor negative effect is likely. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new	-	This site is mainly on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.

SA Objectives	SA Score	Justification
development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is mainly on greenfield land; therefore, a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation and 9: housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: pollution, 8: leisure and recreation, 11: land use and 12: landscape character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H650

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 26-30 minutes travel time of an employment node; therefore a minor positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are	+?	The availability of school and college places to serve the growing population will depend in part on whether new

SA Objectives	SA Score	Justification
available to all.		places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 11-15 minutes travel time of a primary school and 36-40 minutes from a secondary school; therefore a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The majority of this site is within 6-10 minutes of a GP and 41-45 minutes from a hospital. A minor positive effect is therefore likely. This site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north, east and south of this site, and residents of these properties could be exposed to noise and light pollution during construction of the site. A minor negative effect is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 6-10 minutes travel time of a local centre and 16-20 minutes from a town/district centre; therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents, the closest of which is a cemetery approximately 120m north-west of the site. Other recreational facilities and areas of open space include outdoor sports facilities and semi-natural and natural greenspace. There are also a number of other PRow paths surrounding the site, one of which runs along the western boundary and there is a local cycle route and bridleway to the north. A significant positive effect is therefore likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.91ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.

SA Objectives	SA Score	Justification
of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (1.91ha) and on greenfield land. Therefore a minor negative effect is likely on this SA objective. The site is not in an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (1.91ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Lepton Great Wood candidate Local Wildlife Site is approximately 560m west and Lepton Great Wood Local Geological Site is approximately 940m south-west. A minor negative effect is therefore likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: A potential significant positive effect was identified in relation to SA objective 8: recreation and leisure. There were no significant negative effects identified for this site.		

H651

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 5 minutes travel time to a primary school and 26-30 minutes travel time to a secondary school; therefore it is likely to have a minor positive effect. It is also within 25 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 21-25 minutes travel time of a GP and 41-45 minutes travel time to a hospital; therefore a

SA Objectives	SA Score	Justification
		negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>Whilst the site is not surrounded by residential properties or other sensitive receptors, there are a number of residential properties to the north and south of the site, and the residents of these may be affected by noise and light pollution during the construction phase. There are also industrial buildings and activities directly to the east which could cause noise effects over the long term. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site IS within 6-10 minutes travel time to a local centre and 21-25 minutes travel time to a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	--?/+ +	This site contains a Public Right of Way (PRoW), which could be lost as a result of development. However the site is within 600m of other recreation and leisure facilities including several PRoW and two areas of semi-natural and natural green space. Therefore, overall a mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.08ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of

SA Objectives	SA Score	Justification
prudent use of land.		land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.08 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The land is designated as grade 3 agricultural land quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (1.08ha) mainly on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies across LCA G11: Batley Fringe Incised Valleys and LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. LCA G11: Batley Fringe Incised Valleys is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads. LCA K1: Thornton-Queensbury comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible but uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Cockleshaw Wood Candidate Wildlife Site and Hanging Wood Local Wildlife/ Candidate Local Wildlife Site are both within 1km of the site to the south and as such, a minor negative effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is mainly on greenfield land and is mainly outside of flood zone 3, aside from a small area along the northern boundary which is within flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor negative effect is identified.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 10: sustainable transport and 19: Climate change and potential significant negative effects were identified in relation to SA objective 8: leisure and recreation. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H652

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Accessibility to employment nodes varies across this site. In this way, the northern part of the site is within 11-15 minutes travel time of an employment node whereas the central to southern part is within 26-30 minutes of an employment node. In between these two extremes, accessibility to employment nodes varies. Overall a mixed effect is likely – significant positive for the northern part and minor positive for the central to southern part.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Accessibility to education varies across this site. In this way, the northern part of the site is within 6-10 minutes of a primary school and 21-25 minutes from a secondary school, whereas the southern part of the site is within 16-20 minutes of a primary school and 21-25 minutes from a secondary school. In between these two extremes, accessibility to education varies. Overall a mixed effect is likely – minor positive for the northern part and negligible

SA Objectives	SA Score	Justification
		for the southern part.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The majority of this site is within 11-15 minutes of a GP and 51-55 minutes from a hospital. A minor positive effect is therefore likely. This site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The A629 (Abbey Road North) is directly adjacent to west of this site, and a rail line is adjacent to the north. In addition, there is also an industrial area directly adjacent to the south. It is therefore considered that future residents could be exposed to noise pollution over the long term, resulting in a significant negative effect. Within 100m west and south of the site, there are a number of existing residential properties, and the residents of these properties could be exposed to noise and light pollution during construction.
6. Retain and enhance access to local services and facilities.	+/-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Accessibility to local services varies across this site. In this way, the northern part of the site is within 5 minutes travel time of a local centre and 21-25 minutes from a town/district centre, whereas the central to southern part of the site is within 11-15 minutes from a local centre and 31-35 minutes from a town/district centre. In between these two extremes, accessibility to local services varies. Overall a mixed effect is likely – minor positive for the northern part and minor negative for the central to southern part.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents, the closest of which is amenity greenspace and semi-natural and natural greenspace approximately 230m west. Other recreational facilities and areas of open space include outdoor sports facilities, a cemetery, allotments and areas for children and young people. There are also a number of other PRow paths surrounding the site, and there is a bridleway to the east. A significant positive effect is therefore likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.71ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.

SA Objectives	SA Score	Justification
of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (3.71ha) and on mostly greenfield land which is classed as being of grade 3 quality. Therefore a minor negative effect is likely on this SA objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (3.71ha) and on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are a number of biodiversity designations within 1km of this site, including Yew Tree Wood approved Local Wildlife Site (approximately 300m south-east), Gelder Wood candidate Local Wildlife Site (approximately 570m north), Shepley Mill Wood candidate Local Wildlife Site (approximately 690m north-west) and Upper and Lower Stones Wood approved Local Wildlife Site (approximately 870m north-west). A minor negative effect is therefore likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on mostly greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified in relation to SA objectives 1: employment and 8: recreation and leisure. A potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H653

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Access to employment nodes vary across the site. The most accessible area is in the north western area of the site, which is within 16-20 minutes of an employment node. The least accessible area is in the eastern area of the site which is within 31-35 minutes travel time to an employment node. In between these two extremes, travel times to an employment node vary. Therefore a mixed effect is likely, potentially significant positive effect for the north western area of the site and negligible for the eastern area of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of the site is within 6-10 minutes travel time to a primary school (aside from a small area in the north, which is within 11-15 minutes travel time). Approximately half of this site is within and 11-15 minutes to a secondary school,

SA Objectives	SA Score	Justification
		while the other half is within 6-10 minutes travel time. Therefore, overall a significant positive effect is likely. The site is within 20 minutes travel time to a higher education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however, where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Travel times to healthcare facilities vary across the site. The most accessible area is in the western area of the site which is within 6-10 minutes travel time to a GP and 41-45 minutes to a hospital. The least accessible area is in the far north-eastern area of the site, which is within 16-20 minutes to a GP and 56-60 minutes to a hospital. In between these two extremes, travel times vary. Therefore, overall a mixed effect is expected-potentially minor positive for the far western area of the site and negligible for the north-eastern area of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are also existing residential properties nearby to the south and west of the site, which could be affected by noise during the construction phase. A significant minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time to a local centre and 11-15 minutes travel time to a town/district centre. Therefore, a minor positive is likely for this SA objective</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational and leisure facilities including several PRoW, the closest being adjacent to the site in the east. Greenspace designations nearby include three amenity greenspaces, one park and garden and one area of natural/semi-natural greenspace. Other spaces include seven sites containing provision for children and young people, two allotments sites and eight outdoor sports facilities. Therefore, overall a significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (9 ha); therefore, a significant positive effect is likely.
10. Secure an effective and safe	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of

SA Objectives	SA Score	Justification
transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	++	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (9ha) on mainly brownfield land; therefore, a significant positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a large site (9 ha) mainly on brownfield land, therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies across LCA K1: Thornton-Queensbury and LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. LCA K1: Thornton-Queensbury comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity. LCA G11: Batley Fringe Incised Valleys is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is approximately 750m west of Sunny Bank Ponds Local Wildlife Site; therefore a minor negative effect is likely. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is mainly on brownfield land and is outside of flood zone 3; therefore, a negligible effect is likely.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is mainly on brownfield land; therefore, a potential minor positive effect is identified. The positive effect is uncertain given that the materials currently onsite are unknown at this stage.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation and 9: housing, 10: sustainable transport, 11: land use and 19: climate change. No potential significant negative effects were identified.		

H654

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 36-40 minutes travel time of an employment node, therefore a negligible effect is likely for this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 11-15 minutes travel time of both a primary school and secondary school, therefore a significant positive effect is likely.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The majority of this site is within 16-20 minutes travel time of a GP and 41-45 minutes from a hospital; therefore a negligible effect is likely. This site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north, east and south-west of this site, and the residents of these properties could be exposed to noise and light pollution during construction. A minor negative effect is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 11-15 minutes travel time of a local centre and the whole of this site is within 16-20 minutes of a town/district centre. A negligible effect is therefore likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents, the closest of which include an outdoor sports facility directly adjacent to the north, and an area of semi-natural and natural greenspace adjacent to the east. Other recreational facilities and areas of open space include allotments, parks and gardens, areas for children and young people and a sports centre. There are also a number of other PRow paths surrounding the site, and there is a bridleway directly adjacent to the south. A significant positive effect is therefore likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.9ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of

SA Objectives	SA Score	Justification
prudent use of land.		land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.9ha) and on greenfield land. Therefore a minor negative effect is likely on this SA objective. The site is not in area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.9ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified in relation to SA objectives 3: education and 8: recreation and leisure. There were no significant negative effects identified for this site.		

H655

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 31-35 minutes travel time of an employment node; therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time to a primary school and 11-15 minutes travel time to a secondary school; therefore, a significant positive effect is likely. This site is also within 26-30 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 11-15 minutes travel time of a GP and most of this site is within 41-45 minutes travel time to a

SA Objectives	SA Score	Justification
they need.		hospital, aside from an area in the south of the site, which is within 46-50 minutes travel time. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to adjacent to the A616 (New Mill Road) which may mean that residents in that part of the site are affected by road noise. There are several properties within 100m to the north and north-west of this site, and these residents could experience noise and light pollution during construction of the site. Therefore, a significant negative effect is likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 5 minutes of a local centre, aside from an area in the south which is within 6-10 minutes travel time. Most of this site is also within 11-15 of a town/district centre, aside from an area in the south which is within 16-20 minutes. Therefore, a significant positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is a Public Right of Way (PRoW) within the proposed site, which could be lost as a result of development. However, this site is within 600m of more than three recreational facilities. There are several additional PRoW in addition to two green corridors, two parks and gardens containing provision for children and young people. seven semi-natural and natural greenspaces, four outdoor sports facilities, Holmfirth Sport Centre and another unnamed indoor facility. However, some of these sites are within other housing option sites and could be lost as a result of development. However, a mixed effect (significantly positive and significantly negative) is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.28ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is</p>

SA Objectives	SA Score	Justification
		likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.28ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is located on land classified as grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (1.28ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Round Wood, Brockholes Wildlife sites, Hagg Wood Candidate Local Wildlife Site and Brockholes and Round Wood, Brockholes Local Geological site are all within 1km of the site, and as such, a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and most of the site is outside the flood zone 3, aside from an area in the lower half of the site along the south western boundary; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 6: access to local services, 8: leisure and recreation, 10; transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives, 5: amenity and 8 leisure and recreation. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H656

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 16-20 minutes travel time of an employment node (aside from the north eastern area which is within 11-15 minutes travel time), therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 11-15 minutes travel time of a primary school (aside from a small area in the south which is 16-20 minutes) and the whole site is within 21-25 minutes of a secondary school. A minor positive effect is therefore likely.</p>
4. Improve the health of local	+	The whole of this site is within 6-10 minutes travel time of a GP and the majority of the site is within 36-40 minutes

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		from a hospital (the southern area is within 41-45 minutes); therefore a minor positive effect is likely. This site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north-east, south and west of this site, and the residents of these properties could be exposed to noise and light pollution during construction. A minor negative effect is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 11-15 minutes travel time of a local centre and 16-20 minutes of a town/district centre. A negligible effect is therefore likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is a bridleway crosses this site, and it is possible that this could be lost or disrupted during construction. However, within 600m of the site there are a number of other recreational facilities and areas of open space that could be used by future residents, the closest of which is amenity greenspace directly adjacent to the north. Other recreational facilities and areas of open space include allotments, outdoor sports facilities, semi-natural and natural greenspace and areas for children and young people. There are also a number of PRoW footpaths, local cycle routes and bridleways surrounding the site. A mixed effect is therefore likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.48ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This site is relatively small (3.48ha) and on greenfield land which is classed as grade 3 agricultural quality. Therefore a minor negative effect is likely on this SA objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is relatively small (3.48ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Jordan Wood and Oliver Wood approved Local Wildlife Site is approximately 830m south-west, therefore a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified in relation to SA objectives 1: employment, 8: recreation and leisure (part of a mixed effect overall), 10: sustainable transport and 19: climate change. A significant negative effect was identified in relation to SA objective 8: recreation and amenity (part of a mixed effect overall). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H657

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 11-15 minutes travel time of an employment node (aside from the central southern area which is 16-20 minutes), therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Accessibility to education facilities varies across this site. The most accessible area is in the dar north eastern part of the site is within 11-15 minutes of a primary school and 16-20 minutes to a secondary school. The least accessible area is in the central southern area which is 16-20 minutes of a primary school and 31-35 minutes from a secondary school. In between these two extremes, accessibility to education facilities varies. Overall a mixed effect is likely – significant positive for the far eastern part and negligible for the section in the centre of the site.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/+	Accessibility to health facilities varies across this site. The most accessible area is the far north eastern corner-which is within 6-10 minutes of a GP and 26-30 minutes from a hospital. The least accessible area is in the central southern area, which is 11-15 minutes travel to a GP and 31-35 minutes of a hospital. In between these two extremes, accessibility to varies. Overall a mixed effect is likely – significant positive for the far north eastern corner and minor positive for the the central southern area. This site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north of this site, and the residents of these properties could be exposed to noise and light pollution during construction. A minor negative effect is therefore likely.
6. Retain and enhance access to local services and facilities.	+/0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Accessibility to local services varies across this site. The most accessible area is in the north-western corner which is 6-10 minutes from a local centre and 11-15 minutes from a town/district centre. The least accessible area is in the central-southern end of the site is within 16-20 minutes of both a local centre and town/district centre. In between these two extremes, accessibility to local services varies. Overall a mixed effect is likely – minor positive for the north-western corner and negligible for the section in the central-southern end.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents, the closest of which are allotments directly adjacent to the east. Other recreational facilities and areas of open space include additional allotments, outdoor sports facilities, semi-natural and natural greenspace and areas for children and young people. There are also a number of PRoW footpaths, local cycle routes and bridleways to the west. A significant positive effect is therefore likely.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (9.8ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or

SA Objectives	SA Score	Justification
		mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (9.8ha) and on greenfield land which is classed as grade 3 agricultural quality. Therefore a significant negative effect is likely on this SA objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is large (9.8ha) and on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Sparrow Wood approved Local Wildlife Site/ Local Nature Reserve is approximately 950m north-east and Jordan Wood and Oliver Wood Local Wildlife Site is approximately 970m south-west. A minor negative effect is therefore likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified in relation to SA objectives 1: employment, 3: education (part of a mixed effect overall), 4; health (part of a mixed effect), 8: recreation and leisure, 9: housing, 10: sustainable transport and 19: climate change. Significant negative effects were identified in relation to SA objectives 11: use of land and 12: character and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H658

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 36-40 minutes travel time of an employment node, therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes of a primary school and secondary school and 26-30 minutes from a further education facility. A significant positive effect is therefore likely.
4. Improve the health of local people and ensure that they can	+	The majority of this site is within 6-10 minutes travel time of a GP (aside from north-eastern area) and the whole site is within 46-50 minutes from a hospital; therefore a minor positive effect is likely. This site is not in or adjacent

SA Objectives	SA Score	Justification
access the health and social care they need.		to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m west and south of this site, and the residents of these properties could be exposed to noise and light pollution during construction. A minor negative effect is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 6-10 minutes travel time of a local centre and 11-15 minutes of a town/district centre; therefore a minor positive effect is likely for this SA objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents, the closest of which is an outdoor sports facility approximately 90m north. Other recreational facilities and areas of open space include a park and garden and area for children and young people. There are also a number of PRoW footpaths to the north-east, south-east and south-west. A significant positive effect is therefore likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.12ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This site is small (1.12ha) and on greenfield land; therefore a minor negative effect is likely. This site is not in an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (1.12ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies across LCA F4: Colne (Slaithwaite, Marsden) and LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. LCA F4: Colne (Slaithwaite, Marsden) is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor. LCA E1: Holmfirth-Meltham is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified in relation to SA objectives 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. There were no significant negative effects identified for this site.		

H659

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is within 6-10 travel time of the nearest primary school and within 16-20 minutes of the nearest secondary school. Therefore a significant positive effect is expected for this objective. The majority of the site is within 16-20 minutes of a further education institute (with an area in the south east within 21-25 minutes).
4. Improve the health of local people and ensure that they can access the health and social care	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
they need.		The site is within 11-15 minutes of a GP and the majority of the site is within 46-50 minutes of a hospital (with an area in the south west within 51-55 minutes). Therefore a minor positive effect is expected for this objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north and north west of the site. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The most accessible area of the site is the north west which is 11-15 minutes travel time from the nearest local centre and within 6-10 minutes of a town/district centre. The least accessible area of the site is the south west which is within 21-25 minutes from the nearest local centre and within 11-15 minutes of a town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. However overall a minor positive effect is expected for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There is a PRoW footpath adjacent to part of the north western boundary of the site. Within 10m north of the site is PRoW footpath however the path runs through another housing site option. The site is adjacent to an area of semi-natural and natural greenspace. Approximately 180m north of the site is an area of school playing grounds and playing fields which is adjacent to an area of semi-natural and natural greenspace and an area of amenity greenspace. In addition, approximately 150m to the west of the site is a Green corridor/pedestrian/cycleway. Approximately 580m to the north west of the site is an area of semi-natural and natural greenspace. Also, approximately 550m south of the site is an area of school grounds and playing fields however this is located within another housing site option. Approximately 520m to the west of the site is a golf course. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.05ha); therefore a significant positive effect is likely.
10. Secure an effective and safe	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of

SA Objectives	SA Score	Justification
transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (6.05ha) and is on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within an area of high quality agricultural land (the land is classed as urban) however an area of in the east of the site is classed as grade 3.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (6.05ha) and is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the area of open countryside which contributes to the setting of the Scheduled Monument at Castle Hill and the adjacent Crow Trees on Rowley Lane which is a Grade II Listed Building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is adjacent to Lepton Great Wood Local Wildlife Site and approximately 140m from Lepton Great Wood Local Geological Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 9: affordable housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 11: use of land, 12: character and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H660

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Most of this site is within 16-30 minutes travel time of the nearest employment node (though an area to the south is within 31-35 minutes); therefore a minor positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary. However the travel time to a secondary school varies between extremes of 46-50 minutes in the south to 26-30 minutes at the north and western tips. So a minor positive effect. The site is also within 30 minutes of a further education facility.</p>
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 11-15 minutes travel time of a GP, with the area in the north being within 6-10 minutes. Most of the site is also within 51-55 minutes of a hospital, with a small area in the north being within 46-50 minutes; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The northern boundary is bordered by residential properties which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 11-15 minutes travel time of a local centre, with the northwest being within 6-10 minutes. The entire site is also within 30 minutes of a town/district centre, with travel times varying between 26-30 minutes in the southeast and 16-20 minutes at the western tip. Therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is close to several greenspaces, including four amenity greenspaces, three outdoor sports facilities, three play-parks and two allotments to the northwest, another allotment to the east, and amenity greenspace to the northeast, though these are on the opposite side of the River Holme. There are also several footpaths to the south and east of the site and a bridleway to the west. Therefore as the relative proximity of these access routes and open spaces to the site may encourage new residents to make use of them a significant positive effect on this SA objective is identified.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.67 ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in</p>

SA Objectives	SA Score	Justification
		terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (4.67 ha) on greenfield land (the land is also classed as Grade 3 agricultural land); therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4.67 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. Development at this location specifically may have uncertain effects on the setting of the Scheduled Monument at Castle Hill, 24 Bridge Street which is a Grade II Listed Building and Honley Conservation Area. The loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is within 250 m of the Spring Wood Honley Wood Local Wildlife Site (LWS). It is also within approximately 850 m of the Honley Wood candidate LWS and 350 m of the Park Wood candidate LWS. Therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives: 8: leisure and recreation, 10: sustainable transport, and 19: climate change; and potential significant negative effects were identified in relation to SA objective 14: biodiversity protection. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H661

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is located within 6-10 minutes travel time of the nearest employment node (a small part of the site to the north is located within 11-15 minutes travel time of the nearest employment node). As such a significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is located within 6-10 minutes travel time of the nearest primary school (a small part of the site to the north west is located within 5 minutes of the nearest primary school). The site is also located within 21-25 minutes travel time of the nearest secondary school. Overall a minor positive is expected on this SA objective.
4. Improve the health of local people and ensure that they can	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
access the health and social care they need.		The majority of the site is located within 11-15 minutes travel time of the nearest GP (the north east part of the site is located within 16-20 minutes travel time of the nearest GP). The site is also located within variable travel times of the nearest hospital. The western part of the site is located within 31-35 minutes travel time of the nearest hospital while the north eastern part of the site is located within 41-45 minutes travel time of the nearest hospital. Between these extremes the central part of the site is located within 36-40 minutes travel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is in close proximity to existing properties to the west on High Street. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+/-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The north part of the site is located within 16-20 minutes travel time of the nearest local centre while the southern part of the site is located within 6-10 minutes travel time of the nearest local centre. The western part of the site is local within 11-15 minutes travel time of the nearest town/district centre while the north eastern part of the site is located within 21-25 minutes travel time of the nearest town/district centre. Areas between these extremes are located at variable travel times from the nearest local centre and town/district centre. A mixed effect (minor positive/minor negative) is expected overall for this SA objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	Two footpaths cross the north western part of the site and given that these access routes may be lost as a result of housing development at this location a potential significant negative effect is identified on this SA objective. The site is also however in close proximity to a number of open spaces which could be used by residents. A cemetery is located within 45m to the west of the site at St Paul's Church. Outdoor sports facilities are located within 55m also to the west at Hanging Heaton Church of England Junior and Infant School. A small park is located within 160m to the east of the site on Leeds Road and outdoor sports facilities and a children's playground are also located here. Given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is also expected on this SA objective. As such a mixed effect is expected on this SA

SA Objectives	SA Score	Justification
		objective overall.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.06ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.06ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Urban Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.06ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Dunn Wood (a Local Wildlife Site) is the closest of such features but is located 1.37km to the north east and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable

SA Objectives	SA Score	Justification
and ensure development does not contribute to increased flood risk for existing property and people.		surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation and leisure (it should be noted that the overall score for this SA objective was mixed), 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 8: recreation and leisure (it should be noted that the overall effect recorded for this SA objective however was mixed). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H662

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to the A643 along its southern eastern edge. It is considered that the close proximity of this major road may result in increased noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest local centre (a small part of the site to the north west is located within 11-15 minutes travel time of the nearest local centre). The majority of the site is also located within 6-10 minutes travel time of the nearest town/district centre (a small part of the site to the north is located within 11-15 minutes travel time of the nearest town/district centre). As such a minor positive effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site contains a footpath which runs from Spen Bank to the north west. This footpath could be lost as a result of housing development and therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are provided within 145m to the east of the site. A number of allotments can be accessed via Valley Road within 215m to the west. A park which provides access to a children's playground is accessible via Spen Bank within 130m of the site to the south west. The cemetery at Saint John the Evangelist is located within 300m of the site to the south west. Overall a mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.33ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	+	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.33ha) on brownfield land; therefore a minor positive effect on this SA objective is likely.</p>
12. Protect and enhance the	+?	This is a relatively small site (2.33ha) on brownfield land; therefore development here is expected to have a minor

SA Objectives	SA Score	Justification
character of Kirklees and the quality of the landscape and townscape.		<p>positive effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies across LCA E8: Batley-Dewsbury Rural Fringes and LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. LCA E8: Batley-Dewsbury Rural Fringes comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition. LCA G11: Batley Fringe Incised Valleys is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	<p>Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site could impact on a designated heritage asset but that its development is unlikely to result in harm to that asset if the development accords with the anticipated Local Plan policies for managing change to the historic environment. In this case the Grade II Listed Buildings of Spen Hall and Cleckheaton Viaduct may be negatively impacted upon by development at this location. A minor negative effect on this SA objective is therefore likely although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	<p>The site is not within close proximity of any designated biodiversity features; Oakwell Park (a Local Wildlife Site and Local Nature Reserve) is the closest of such features but is located 2.08km to the north east and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	<p>This site is located on brownfield land and is not within Flood Zones 2 and 3; therefore a negligible effect is likely given that the development of new housing on this brownfield land would be unlikely to increase the area of impermeable surfaces in the District or increase the overall number of homes at risk of flooding in Kirklees.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>Development at this site would make use of brownfield land meaning there may be opportunities to reuse materials already onsite. A minor positive effect is therefore likely on this SA objective. The positive effect is recorded as uncertain given that the materials already onsite are unknown at this stage.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure (it should be noted that an overall mixed effect was recorded for this SA objective however) , 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objectives 5: amenity and 8: recreation and leisure (it should be noted that the overall effect recorded for this SA objective however was mixed). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H664

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The south-eastern corner of this site is within 21-25 minutes travel time of the nearest employment node; however the western tip of the site is greater than 60 minutes from an employment node. In between, journey times to employment nodes vary in between those two extremes. Therefore a mixed effect on this objective is expected – minor positive for the southeast and significant negative for the western tip.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The south-eastern corner of this site is within 6-10 minutes travel time of both a primary school and a secondary</p>

SA Objectives	SA Score	Justification
		<p>school, as well as being within 11-15 minutes of a further education institute. However, the western tip of the site is greater than 60 minutes of all three education facilities. In between the far south-eastern and western parts of the site, journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significantly positive for the south-eastern corner and potentially significant negative for the western side.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The south-eastern corner of this site is within 6-10 minutes travel time of a GP and within 51-55 minutes of a hospital. However, the western tip of the site is greater than 60 minutes of a GP and a hospital. In between the far south-eastern and western parts of the site, journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected –minor positive for the south-eastern side and significantly negative for the western side. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties along the southern boundary of the site, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	+/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The south-eastern corner of this site is within 11-15 minutes travel time of a local centre and within 6-10 minutes of a town/district centre. However, the western tip of the site is greater than 60 minutes of both a local centre and a town/district centre. In between the far south-eastern and western parts of the site, journey times to local and town/district centres vary in between those two extremes. Therefore a mixed effect on this objective is expected – minor positive for the south-eastern corner and significantly negative for the western side.</p>
<p>7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.</p>	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
<p>8. Protect and enhance existing and support the provision of new recreation facilities and areas of</p>	++	<p>There are numerous footpaths and areas of open space within walking distance (600 m) of the site which could be used by residents for sports and recreation, including at least four outdoor sports facilities, three semi-natural/natural greenspaces, three play-parks, a cemetery and green corridor. There is also a network of footpaths</p>

SA Objectives	SA Score	Justification
open space and encourage their usage.		surrounding the site and a bridleway to the west.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.32 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (4.32 ha) predominantly on greenfield land (the land is also classed as Grade 3 agricultural land); therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4.32 ha) on predominantly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Clitheroe Farmhouse and barn, which are Grade II Listed Buildings. The loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is within 250 m of the Spring Wood Honley Wood Local Wildlife Site (LWS) and the Honley Wood candidate LWS and 900 m of the Park Wood candidate LWS. Therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas	-	This site is on predominantly greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is predominantly on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as mostly 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives: 3: education (as part of a mixed result), and 8: leisure and recreation; and potential significant negative effects were identified in relation to SA objectives: 1: employment (as part of a mixed result), 3: education (as part of a mixed result), 4: health facilities (as part of a mixed result), 6: local services (as part of a mixed result), and 14: biodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H665

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is located within 26-30 minutes travel time of the nearest employment node (the north western part of the site is located within 31-35 minutes travel time of the nearest employment node). A minor positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are	+?	The availability of school and college places to serve the growing population will depend in part on whether new

available to all.		<p>places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of the nearest primary school and within 36-40 minutes travel time of the nearest secondary school. Overall a minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 5 minutes travel time of a GP (a small part of the site to the north is located within 6-10 minutes travel time of a GP). The majority of the site is located within 36-40 minutes travel time of a hospital (the southern part of the site is located within 31-35 minutes travel time of a hospital). Overall a minor positive effect is expected on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties along the southern boundary of the site by Longwood Gate, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre. The majority of the site is located within 16-20 minutes travel time of a town/district centre (a small part of the site to the south is located within 11-15 minutes travel time of a town/district centre). A negligible effect is therefore expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>The site is located on an area of land which has been designated as an amenity greenspace and as such a potential significant negative is likely on this SA objective given that development at this location may result in a loss of this identified open space.</p> <p>The site is also in close proximity of a number of other designated open spaces however and this may encourage</p>

SA Objectives	SA Score	Justification
		their use by new residents in the area. A semi-natural and natural greenspace is adjacent to the site to the north. Allotments are located by Spindle Lane within 150m of the site to the west. A cemetery is located to the south east of the site within 230m. The nearest outdoor sports facilities to the site are those located within 150m of the site to the north by Salendine Nook High School. Overall a mixed effect (significant positive/potential significant negative) is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.47ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.47ha) on greenfield land (the land is classed as Urban Land); therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.47ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not located in close proximity to any identified biodiversity or geodiversity sites (the closest of such sites is Longwood Edge Quarry, Huddersfield which a Local Geological Site within 1.09km to the north west of the site). As such a negligible effect is expected. The effect is recorded as uncertain as new development may potentially allow for green infrastructure and thus promote habitat connectivity.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas	-	This site is on predominantly greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as mostly 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives: 8: recreation and leisure (this score was given as part of an overall mixed effect), 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objective: 18: recreation and leisure (this score was given as part of an overall mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H666

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to an employment node vary throughout this site. The most accessible part of the site is the south which is within 6-10 minutes travel time of the nearest employment node. The least accessible part of the site is an area to the north east of the centre of the site which is within 16-20 minutes from an employment node. In between those areas journey times to an employment node vary in between those two extremes. Overall, a significant positive effect is expected for this objective.
2. Achieve an economy better capable of growth through	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

SA Objectives	SA Score	Justification
increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is the southern edge of the site which has two areas is within 6-10 minutes of a primary school and within 6-10 minutes travel time of a secondary school. The least accessible part of the site is an area in the west which is within 6-10 minutes from a primary school and within 21-25 minutes of a secondary school. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective: potentially significant positive for the southern edge of the site and potentially minor positive for the area to the west of the site. Travel times to the nearest further education institute also vary across the site – 5 minutes in the south and 11-15 minutes in the north east.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the south western part which is within 11-15 minutes travel time from both the nearest GP and hospital. The least accessible part of the site is a small area to the north east of the centre of the site which is within 11-15 minutes from a GP and within 41-45 minutes of a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; potentially significant positive for the south western area and potentially minor positive for the area to the north east of the centre of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by a number of existing properties and a school which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+ / 0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The most accessible part</p>

SA Objectives	SA Score	Justification
		of the site is a small area on the north eastern edge of the site, which is 6-10 minutes travel time from both the nearest local centre and town/district centre. The least accessible part of the site is an area in the centre of the site which is within 11-15 minutes from the nearest local centre and within 16-20 minutes of a town/district centre. In between the far north eastern edge and central part of the site, journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; potentially minor positive for the area on the north eastern edge and potentially negligible for the area to the west of the centre of the site.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are several PRoW footpaths and a bridleway within 300m south of the site and another PRoW footpath runs 185m north of the site. The site is adjacent to a cricket ground, an area of semi-natural and natural greenspace, an area of school grounds and playing fields and an area of amenity greenspace. Approximately 30m to the west of the site is an area of public playing fields. Within 70m north of the site is an area of amenity greenspace that contains a children's play area. In addition, approximately 100m south of the site is an area of school grounds and playing fields. Within 190m south of the site is an area of semi-natural and natural greenspace however several other housing options are located within this open space. To the south West approximately 270m away is an area of amenity greenspace which contains an area of children's play provision. Approximately 30m from the southern boundary is an area of amenity greenspace and further to the south approximately 195m away is a children's play area. To the south east of the site approximately 250m away is an area of amenity greenspace which contains a children's play area and is adjacent to an area of school grounds and playing fields, however areas of this open space area within another housing option. Further to the south west approximately 480m away is an area of allotments. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (24.24ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access all eight of the features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This is a relatively large site (24.24ha) and is on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within an area of high quality agricultural land (the land is classed as urban with an area in the north classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (24.24ha) and is on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies mainly in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.</p> <p>The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is not in close proximity of any biodiversity or geodiversity sites; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and the majority of the site is outside of flood zones 2 and 3 (the southern edge of the site encroaches onto an area of flood zone 3); therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>The site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access in all eight of the features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education (part of a mixed effect), 4: (part of a mixed effect), 8: leisure and recreation, 9: affordable housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H667

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 36-40 minutes travel time of an employment node; therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of this site is within 6-10 minutes travel time to a primary school, aside from an area in the west, which is within 11-15 minutes travel time. This site is within 6-10 minutes to a secondary school; therefore, a significant positive effect is likely.
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of this site is within 6-10 minutes travel time of a GP and 51-55 minutes travel time to a hospital. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are properties within 100m to the south, east and west of this site, and these residents could experience noise and light pollution during construction of the site. Furthermore, there are also industrial units within 100m to the south west of the site, which could cause noise effects over the long term. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 6-10 minutes of a local centre and 11-15 minutes travel time to a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	There is a Public Right of Way (PRoW) within the proposed site, which could be lost as a result of development. However, this site is within 600m of more than three recreational facilities. There are several additional PRoW including a bridleway. Greenspace designations include one park and garden containing provision for children and young people and six semi-natural and natural greenspaces. Other facilities include five outdoor sports facilities, Holmfirth Sport Centre and another unnamed indoor facility. Some of these designations are within other housing site options and could therefore be lost as a result of housing development. However, a mixed effect (significantly positive and significantly negative) is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.57ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.

SA Objectives	SA Score	Justification
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.57ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is located on land classified as grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.57ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Hagg Wood Candidate Local Wildlife Site is within 1km of the site, and as such, a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside the flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives, 5: amenity and 8: leisure and recreation. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H668

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 6-10 minutes travel time of the nearest employment node (with an area in the east within 11-15 minutes); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is within 5 minutes travel time of the nearest primary school and within 26-30 minutes of a secondary school. Therefore a minor positive effect is expected for this objective. The site is also within 16-20 minutes travel time of a further education institute.
4. Improve the health of local people and ensure that they can	++	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
access the health and social care they need.		The majority of the site is within 5 minutes travel time of the nearest GP (with an area in the east within 6-10 minutes) and is within 11-15 minutes of the nearest hospital (with an area in the east within 16-20 minutes). Therefore a significant positive effect is expected for this objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within close proximity of the site to the north, south and east of the site. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	++	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of the site is within 5 minutes travel time of the nearest local centre (with an area to the east within 6-10 minutes) and within 11-15 minutes of a town/district centre. Therefore a significant positive effect is expected for this objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	To the west of the site within 440m is an area of children's play provision however the open space and site are separate by the M62 motorway making it less easily accessible. Approximately 95m to the north of the site is an area of park and gardens that include two children's play areas however it is located within another housing site option. A bridleway runs adjacent to the southern boundary of the site. There are a further three bridleways and a PRoW footpath within 290m of the southern boundary. In addition, approximately 270m south of the site is a golf course. Also, approximately 250m to the east of the site is an area of school grounds and playing fields which is adjacent to an area of private playing fields (a rugby football ground and sports centre). Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.42ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.42ha) and is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban and a small area of grade 4 to the south).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.42ha) and is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 275m from Shaw Wood Local Wildlife Site and approximately 435m from Longwood Edge Quarry, Huddersfield Local Geological Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 6: local services and facilities, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives.</p>		

H670

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Access to employment nodes vary across the site. The most accessible area is in the far western area of the site, which is within 41-45 minutes travel time to an employment node. The least accessible area is in the southern area, which is within 51-55 minutes travel time. In between these two extremes, travel times to employment nodes vary. Therefore, a mixed effect is likely, potentially minor negative for the far western area of the site and a significant negative effect for the far south eastern edge.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/-?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Access to education facilities vary across the site. The most accessible area is in the far north eastern edge of the site, which is within 11-15 minutes travel time to a primary and 21-25 minutes travel time to a secondary school. The least accessible area is in the far southern area of the site which is within 26-30 minutes travel time to a

SA Objectives	SA Score	Justification
		primary school and within 41-45 minutes travel time to a secondary school. In between these two extremes, travel times to education facilities vary. Therefore, a mixed effect is likely, potentially minor positive effect the far north eastern edge of the site and a minor negative effect for the far southern area of the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Access to healthcare varies across the site. The most accessible area is in the far western area of the site, which is within 6-10 minutes travel time to a GP and 56-60 minutes travel time to a hospital. The least accessible area is in the far north eastern of the site which is within 26-30 minutes travel time to a GP 56-60 minutes travel time to a hospital. In between these two extremes, travel times to healthcare facilities vary. Therefore, a mixed effect is expected a potentially minor positive effect for the far western area of the site and a negligible effect for the far north eastern area of the site. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties to the south of the site which may be affected by noise and light pollution during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+/-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Access to local services varies across the site. Most of this site is within 21-25 minutes travel time to a local centre aside from an area in the south, which is within 26-30 minutes travel time. The most accessible area to a town/district centre is in the west, which is within 11-15 minutes travel time, while the least accessible area is in the north east, which is within 26-30 minutes travel time. In between these two extremes, travel times to town/district centres vary. Therefore, a mixed effect is likely, potentially minor positive effect for the western area of the site and a minor negative effect for the north east.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities including several Public Rights of Way (PRoW), the closest being immediately adjacent to the site in the south. There is also access to a national cycle route to the north west and south of the site. Greenspace designations nearby include a green corridor, one amenity greenspace, one semi-natural and natural greenspace and two park and gardens. Other recreational spaces nearby include five outdoor sports facilities, four sites containing provision for children and young people and five allotment sites. A significant positive effect is therefore identified for this SA objective.

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (3.72ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (3.72ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. Most of this site is on land designated as Grade 4 agricultural quality, aside from an area in the south west which is on land designated as urban.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (3.72ha) and on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Folly Dolly Falls Local Geological site is approximately 237m from east of the site and therefore a significant negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.

SA Objectives	SA Score	Justification
and ensure development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation. Potential significant negative effects were identified in relation to SA objectives 1: employment and 14: biodiversity and geodiversity. These will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H671

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 36-40 minutes travel time to the nearest employment node (although a small area in the northern edge is within 41-45 minutes travel time); therefore, a negligible effect is likely in relation to this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are	+	The availability of school and college places to serve the growing population will depend in part on whether new

SA Objectives	SA Score	Justification
available to all.		<p>places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 11-15 minutes travel time to a primary school and 21-25 minutes travel time to a secondary school; therefore, a minor positive effect is likely for this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 11-15 minutes travel time to a GP (although a small area in the north is within 16-20 minutes travel time) and most of this site is within 51-55 minutes travel time to a hospital (although a small area is within 56-60 minutes travel time); therefore a minor positive effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties to the south of the site and a single property adjacent to the site in the north east, which may be affected by noise and light pollution during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 16-20 minutes travel time to a local centre (although a small area in the northern area is within 21-25 minutes travel time). Accesses to town/ district centres vary across the site. Most of the site is within 6-10 minutes travel time to a town / district centre, although there is a small area in the north, which is within 11-15 minutes and the far northern tip is within 16-20 minutes. Overall a minor positive effect is expected because of the proximity of the site to town/ district centres</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new	+ +/--?	<p>This site contains a Public Rights of Way (PRoW), which may be lost as a result of development. However, this site is within 600m of more recreational facilities including other PRoW and a national cycle route. Greenspace</p>

SA Objectives	SA Score	Justification
recreation facilities and areas of open space and encourage their usage.		designations nearby include a green corridor, two semi-natural and natural greenspaces, two amenity greenspaces, and one park and garden. Other recreational spaces nearby includes five outdoor sports facilities, two sites containing provision for children and young people and an allotment site. A mixed effect (significantly positively and significantly negative) effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.9ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.9ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. Most of this site is on land designated as urban land, aside from the north western area which is on land designated as Grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (1.9ha) and on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the Grade II Listed farmhouse and barn 115m to the north of this area. This site is also within 250m of Helme Conservation Area. Therefore it is considered that development could have an uncertain result on these designated heritage assets. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Folly Dolly Falls Local Geological site is approximately 955m from the site; therefore a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation) however, a potential significant negative effect was also identified in relation to SA objective 8: leisure and recreation giving an overall mixed effect. This will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H672

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within variable travel times of the nearest employment node. The western part of the site is located within 16-20 minutes travel time of the nearest employment node while the central part of the site is located more than 60 minutes travel time from the nearest employment node. Overall a mixed effect (significant positive/significant negative) is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately

SA Objectives	SA Score	Justification
and Entrepreneurship.		under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within variable travel times of the nearest primary school and secondary school. The edge of the site is located within 11-15 minutes travel time of a primary school while the central part of the site is located more than 60 minutes travel time from a primary school. The western edge of the site is located within 11-15 minutes travel time of the nearest secondary school while the central part of the site is located more than 60 minutes travel time from the nearest secondary school. Overall a mixed effect (significant positive/significant negative) is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within variable travel times of the nearest GP and hospital. The western edge of the site is located within 6-10 minutes travel time of the nearest GP while the central part of the site is located more than 60 minutes travel time from the nearest GP. The northern part of the site is located within 41-45 minutes travel time of the nearest hospital while the central part of the site is located more than 60 minutes travel time of a hospital. Overall a mixed effect (minor positive/significant negative) is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is adjacent to the A58 to the north west, to the A650 to the north east and to the M62 to the south. The close proximity of these major transport routes may mean that the housing development at this location may be detrimentally impacted upon by noise pollution in the long term and as such a significant negative effect is expected on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	+/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within variable travel times of the nearest local centre and town/district centre. The northern part of the site is located within 16-20 minutes travel time of the nearest local centre while the central part of the site is located more than 60 minutes travel time of the nearest local central. The western part of the site is located within 11-15 minutes travel time of the nearest town/district centre while the central part of the site is located</p>

SA Objectives	SA Score	Justification
		more than 60 minutes travel time of the nearest town/district centre. Overall a mixed effect (minor positive/significant negative) is expected on this SA objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>The site is crossed by a footpath and a bridleway which may be lost if development was to proceed at this location. As such a potential significant negative effect is identified on this SA objective.</p> <p>The site is also located in close proximity of a number of open space which may encourage the use of these facilities by new residents. A large park is located within 80m to the south of the site (beyond the M62). Outdoor sports facilities are located within 320m of the site to the south east by Fieldhead Primary Academy. Amenity greenspace, a children's playground and allotments are located to the west of the site within 190m by Moor Lane. As such a significant positive effect is also identified on this SA objective and overall a mixed effect (significant positive/potential significant negative) is given.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (47.80ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as mainly or entirely 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large (47.80ha) on mostly greenfield land (it is recognised that some of the site mainly to the north has previously been developed); therefore a significant negative effect on this SA objective is likely. The site is located on land which has been identified as being Grade 3 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the	--?	This is a relatively small site (47.80ha) on mostly greenfield land (it is recognised that some of the site mainly to the north has previously been developed); therefore development here could have a minor negative effect on this

quality of the landscape and townscape.		<p>SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies across LCA G11: Batley Fringe Incised Valleys and LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. LCA G11: Batley Fringe Incised Valleys is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads. and LCA E8: Batley-Dewsbury Rural Fringes comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the Registered Battlefield at Adwalton which is within 40m. This site is also within 250m of Helme Conservation Area. Therefore it is considered that development could have an uncertain result on this designated heritage asset.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	<p>This site is approximately 70m away from Oakwell Park Local Wildlife Site and Local Nature Reserve which is to the south; therefore development here could have a significant negative effect on this SA Objective. The effect is recorded as uncertain as new development may allow for the promotion of habitat connectivity through the measures such as the inclusion of green infrastructure.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on mostly greenfield land (some of the site appears to have been previously developed, mainly to the north); therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as mainly or entirely 'green' in terms of its access to any of the eight features assessed; therefore a significant negative effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, and 8: leisure and recreation (it should be noted that these three scores were given as part of an overall mixed effect in each case) and potential significant negative effects were identified for site in relation to SA objectives 1: employment, 3: education, 4: health (it should be noted that these three scores were given as a part of an overall mixed effect in each case), 5: amenity, 6: access to local services, 8: open spaces (it should be noted that these two scores were given as a part of an overall mixed effect in each case), 10: transport, 11: land use, 12: townscape and landscape, 14: biodiversity and geodiversity and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H673

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest employment node (although a section in the south east is within 6-10 minutes); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is approximately 95m from a children's play area to the south, 150m from an area of amenity greenspace to the north, 540m from an area of park and gardens to the north, 385m from school grounds and playing fields to the west and approximately 360m from a children's play area to the south. The site is also within 350m of two areas of amenity green space and an area of private playing fields. In addition, within 500m east of the site are two areas of amenity greenspace. Therefore, a significant positive effect is expected for this objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.25ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to</p>

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.25ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is also within high quality agricultural land (the land is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.25ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 550m away from Oakwell Park Local Wildlife Site and Local Nature Reserve; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: local services, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified for this site. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>		

H674

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+ / ++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Accessibility to the nearest employment node varies across this site. An area to the south is within 21-25 minutes travel time of the nearest employment node; however an area to the north east is within 6-10 minutes travel time. In between, journey times vary between these two extremes. A mixed effect is therefore likely – minor positive to the south of the site and significant positive to the north east.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0? / ++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Accessibility to education facilities varies across the site. An area to the south east is within 16-20 minutes travel time of a primary school and within 21-25 minutes of a secondary school. An area to the north is within 6-10</p>

SA Objectives	SA Score	Justification
		minutes travel time of a primary school and 11-15 minutes travel time of a secondary school. In between, journey times vary between these extremes. A mixed effect is therefore likely – negligible to the south east of the site and significant positive to the north. The site is also within 30 minutes of a further education institute, which will contribute to the significant positive effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 11-15 minutes travel time of a GP (although an area to the south is within 16-20 minutes). Accessibility to a hospital varies across the site; and area to the west is within 16-20 minutes travel time, while an area towards the centre is within 31-35 minutes. In between, travel times vary between these extremes. A mixed effect is therefore likely – significant positive to the west and negligible to the south of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors directly adjacent to northern and southern boundaries, and within 100m of parts of the eastern and western, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Accessibility to local services and facilities varies across this site. Areas to the north and to the west of the site are both within 6-10 minutes travel time of a local centre; however an area to the south is within 21-25 minutes. An area to the north of the site is within 16-20 minutes of a town/district centre, while an area to the south east is within 26-30 minutes. In between, journey times vary between these extremes. A mixed effect is therefore likely – negligible to the north of the site and minor negative to the south.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new	++/--?	This site is wholly within an area of semi-natural and natural greenspace and is also bisected by an existing bridleway, which could be lost as a result of housing development. However this site is within 600m of a number of

SA Objectives	SA Score	Justification
recreation facilities and areas of open space and encourage their usage.		areas of open space including a public playing field located directly adjacent to the eastern site boundary, an area of amenity greenspace located approximately 74m to the north of the site and a Public Right of Way directly adjacent to part of the northern site boundary. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (20.58ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (20.58ha) on greenfield land; therefore a significant negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (20.58ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site not within 1km of any designated biodiversity or geodiversity sites; therefore development here could have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.		TBC
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: leisure and recreation (all part of overall mixed effects), 9: housing, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation (part of an overall mixed effect), 11: land use and 12: landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H675

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Access to employment nodes vary across the site. The most accessible area is in the far west of the site, which is within 16-20 minutes travel time to an employment node. The least accessible area is in the eastern areas of the site, which are within 26-30 minutes travel time. In between these two extremes, travel times to employment nodes vary. Therefore, a mixed effect is likely, potentially significant positive for the far west of the site and minor positive for the eastern areas.
2. Achieve an economy better capable of growth through increasing investment, innovation	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered

SA Objectives	SA Score	Justification
and Entrepreneurship.		separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is in the far eastern area of the site, which is within 6-10 minutes travel time to a primary and secondary school. The least accessible area is in the far north eastern area of the site which is within 16-20 minutes travel time to a primary school and within 26-30 minutes travel time to a secondary school. In between these two extremes, travel times to education facilities vary. Therefore, a mixed effect is likely, potentially significant positive effect the far eastern area of the site and a negligible effect for the far north eastern area of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to healthcare varies across the site. The most accessible area is in the south western edge of the site, which is within 5 minutes travel time to a GP and 46-50 minutes travel time to a hospital. The least accessible area is in the far north-eastern area of the site which is within 11-15 minutes travel time to a GP and over 60 minutes travel time to a hospital. In between these two extremes, travel times to healthcare facilities vary. However overall a potentially minor positive effect this expected for the whole site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The south eastern area of this site is adjacent to the A58 (Whitehall Road), which may mean that residents in that part of the site are affected by road noise. There are also existing residential properties to the north and west of the site which may be affected by noise and light pollution during the construction phase. Furthermore, there are also industrial units to the south-west of the site, which could cause noise effects over the long term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local services varies across the site. The most accessible area is in the far south western edge of the site, which is within 11-15 minutes travel time to a local centre and town/district centre. The least accessible area is in</p>

SA Objectives	SA Score	Justification
		the north-eastern area of the site which is within 31-35 minutes travel time to a local centre and 21-25 minutes travel time to a town/district centre. In between these two extremes, travel times to local service facilities vary. Therefore, a mixed effect is likely, potentially minor negative for the far south western edge of the site and minor negative effects for the north-eastern area of the site.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site includes part of an allotment area which could be lost as a result of development. However, this site is within 600m of more than three recreational facilities including several Public Rights of Way, the closest being 60m from the site to the west. Greenspace designations nearby includes, three amenity greenspaces, one park and garden and one semi-natural and natural greenspace. Other recreational spaces nearby include four outdoor sports facilities and one site containing provision for children and young people. A mixed effect has therefore been identified (significantly positive and significantly negative) for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (20.07ha); therefore, a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (20.07ha) and on greenfield land; therefore a significant negative effect on this SA objective is likely. Most of this site is on land designated on land designated as Grade 3 agricultural quality, aside from the western area which is on land designated as urban.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is relatively large (20.07ha) and on greenfield land; therefore, development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in

SA Objectives	SA Score	Justification
		close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on Adwalton Registered Battlefield, which adjoins the boundary of the site. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Tong Moor Local Nature Reserve is approximately 600m north of the site; therefore, development here could have a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 9: Housing. Potential significant negative effects were identified in relation to SA objectives 5: pollution, 8: leisure and recreation, 11: land use and 12: landscape character. These will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H676

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 26-30 minutes travel time of the nearest employment node; therefore a minor positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?/+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The east of the site is within 5 minutes travel time of the nearest primary school and within 11-15 minutes of a secondary school. The west of the site is within 16-20 minutes travel time of the nearest primary school and within 11-15 minutes of a secondary school. In between those areas, journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective: potentially significant positive for the eastern part of the site and potentially minor positive for the western part of the site. The site is also within 21-25 minutes travel time of the nearest further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of a GP and the majority of the site is within 41-45 minutes of a hospital (with an area to the west within 46-50 minutes); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity to the south and east of the site which may be affected by noise during the construction phase. In addition there is an industrial area immediately to the north west of the site which may result in noise pollution affecting residents in the longer-term. A significant negative effect on this SA</p>

SA Objectives	SA Score	Justification
		objective is therefore likely.
6. Retain and enhance access to local services and facilities.	++/+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The eastern part of the site is within 5 minutes travel time of the nearest local centre and within 6-10 minutes of the nearest town/district centre. The western part of the site is within 11-15 minutes travel time of both the nearest local centre and town/district centre. In between those areas, journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; significant positive for the area on the eastern part and minor positive for the western part of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There are two PRow footpaths that run through the south western part of the site and could be lost or disrupted as a result of housing development. However, a Green corridor/pedestrian/cycleway is adjacent to the north eastern boundary of the site. There are two PRow footpaths within 150m west of the site and another PRow footpath lies with 120m east of the site. To the south east of the site approximately 210m away is an area of park and gardens that contain two areas of children's play provision. In addition, to the east of the site approximately 270m away is an area of school grounds and playing fields. To the north east of the site approximately 90m away is an area of semi-natural and natural greenspace. Also, to the north of the site approximately 100m away is a private bowling green. Within 275m north of the site is an area of semi-natural and natural greenspace however it is within another housing site option. Within 600m south east of the site are four areas of semi-natural and natural greenspace and an area of park and gardens that contains a children's play area, however one of the areas of semi-natural and natural greenspace is within another housing site option. Therefore, a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (7.76ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This is a relatively large site (7.76ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is also within high quality agricultural land (the land is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (7.76ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies across LCA G8: Holme River Valley and LCA E1: Holmfirth–Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees.</p> <p>LCA G8: Holme River Valley is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.</p> <p>LCA E1: Holmfirth–Meltham is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.</p> <p>The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 5m from Hagg Wood Local Wildlife Site, approximately 140m from Brockholes and Round Wood, Brockholes Local Geological Site, within 170m from Cliff Wood Local Wildlife Site and Local Nature Reserve, approximately 830m from Round Wood, Brockholes Local Wildlife Site and approximately 835m from Hey Wood/West Wood Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3 (although the eastern boundary of the site is adjacent to an area of flood zone 3). Therefore a minor negative effect is likely.
17. Increase prevention, re-	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings

SA Objectives	SA Score	Justification
use, recovery and recycling of waste close to source.		and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 6: local services, 8: leisure and recreation which were all part of a mixed effect overall and objectives 9: affordable housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified for SA objectives 5: amenity, 8: leisure and recreation (mixed effect), 11: use of land, 12: character and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H677

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/?	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Access to employment nodes vary across the site. The most accessible area is in the far west of the site, which is within 21-25 minutes travel time to an employment node. The least accessible area is in the north east of the site, which is in 36-40 minutes travel time. In between these two extremes, travel times to employment nodes vary. Therefore, a mixed effect is likely, potentially minor positive for the far west of the site and negligible for the north east area of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+/?/?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties

SA Objectives	SA Score	Justification
		as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Access to education facilities vary across the site. The most accessible area is in the far west, which is within 11-15 minutes travel time to a primary school and 21-25 minutes travel time to a secondary school. The least accessible area is in the far north eastern area of the site which is within 16-20 minutes travel time to a primary school and within 36-40 minutes travel time to a secondary school. In between these two extremes, travel times vary. Therefore, a mixed effect is likely, potentially minor positive effect the far west and a negligible effect for the far north eastern area of the site. Access to the nearest further education institute varies across the site, however overall it is within 30 minutes travel time.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 16-21 minutes travel time to a GP and 41-45 minutes travel time to a hospital; therefore a negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of residential properties to the north-east and east of the site, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Most of this site is within 16-20 minutes travel time of a local centre (aside from a small area in the west which is 11-15 minutes) and a town/district centre; therefore, a minor negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreation facilities and areas of open space. There are several Public Rights of Way (PRoW), the closest being immediately adjacent to the site to the east. Open space designations include one amenity green space, a park and garden and semi-natural and natural green space. There are also two outdoor sports facilities available. Therefore a significant positive effect for this SA objective is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.73ha); therefore, a minor positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural greenfield land. This is a relatively small site (1.73ha) on greenfield land; therefore, a minor negative effect on this SA objective is likely. The site is located on land designated as grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.73ha) on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the Scheduled Monument at Castle Hill and a large group of Grade II Listed Buildings around Hall Bower to the east of this area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 300m from Castle Hill Local Nature Reserve/ Local Wildlife Site, 880m from Park Wood Candidate Local Wildlife Site and Castle Hill and 390m from Huddersfield Local Geological Site; therefore, development here could have a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective, 8: recreation and leisure and no potential significant negative effects were identified.		

H678

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 41-45 minutes travel time of the nearest employment node; therefore a minor negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is within 6-10 minutes travel time of both a primary school and a secondary school so is likely to have a significant positive effect. The site is also within 26-30 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of the site is within 6-10 minutes travel time of a GP (with an area to the east within 11-15 minutes) and within 51-55 minutes of a hospital (with an area to the north within 46-50 minutes); therefore a minor positive

SA Objectives	SA Score	Justification
		effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the east and west which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre and the majority of the site is within 6-10 minutes travel time of a town/district centre (with an area to the north within 11-15 minutes); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	A PRoW footpath runs 100m to the north of the site and approximately 180m to the west of the site is another PRoW footpath however it runs within another housing site option. Also, to the south of the site there is a PRoW footpath approximately 280m away. To the west of the site approximately 40m away is an area of amenity greenspace that contains a children's play area. Approximately 75m to the east of the site is an area of school grounds and playing fields. To the north of the site approximately 280m away is an area of amenity greenspace which is adjacent to an area of allotments. There is another area of allotments approximately 345m to the west of the site and is adjacent to an area of semi-natural and natural greenspace. Approximately 325m north west is an area of park and gardens which contain an area of children's play provision however it is located within another housing option. In addition, within 400m to the west of the site is an area of semi-natural and natural greenspace, two areas of amenity greenspace, a private tennis club and an area of park and gardens (within another housing site option). Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.78ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.78ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.78ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 705m from Low Westwood Pond local Wildlife Site and 800m away from Huddersfield Narrow Canal Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was as entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.</p>
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified for this site.		

H679

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located within 26-30 minutes travel time of the nearest employment node. As such a minor positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest primary school (a small part of the site to the east is located within 6-10 minutes travel time of the nearest primary school). The majority of the site is located within 21-25 minutes travel time of the nearest secondary school (a small part of the site to the east is located within 16-20 minutes travel time of the nearest secondary school). Overall a minor positive is expected on this SA objective.</p>
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest GP (a small part of the site to the west is located within 16-20 minutes travel time of the nearest GP). The south west of the site is located more than 60 minutes from a hospital while the north of the site is located within 51-55 minutes travel time of a hospital. The areas between these extremes are within variable travel times of the nearest hospital. Overall a minor positive effect is expected on this SA objective for the entire site.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to the A629 along its eastern edge. It is considered that the close proximity of this major road may result in increased noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest local centre (a small part of the site to the west is located within 11-15 minutes travel time of the nearest local centre). The majority of the site is also located within 26-30 minutes travel time of the nearest town/district centre (small parts of the site to the south east and to the north are located within 21-25 minutes travel time of the nearest town/district centre). As such a negligible effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. To the north of the site within 300m a children's playground is located on Lane Head Road. Outdoor sports facilities are provided at Shepley First School within 405m to the north east of the site. A cemetery is located within 585 to north of the site at Saint Paul's Church.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the</p>

SA Objectives	SA Score	Justification
live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.42ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.42ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.42ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Shepley Conservation Area which may be affected by development at this location. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 975m of Yew Tree Wood which has been identified as a Local Nature Reserve to the north west. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land may increase the area of impermeable

SA Objectives	SA Score	Justification
and ensure development does not contribute to increased flood risk for existing property and people.		surfaces in the District and thus may result in an increase in the overall risk of flooding in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 5: amenity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H680

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to an employment node vary throughout this site. The north eastern part of the site is within 11-15 minutes travel time of the nearest employment node however the western part of the site is within 21-25 minutes. In between those areas journey times to an employment node vary in between those two extremes. Therefore a mixed effect on this objective is expected –significant positive for the north eastern part of the site and minor positive for the western part of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately

SA Objectives	SA Score	Justification
and Entrepreneurship.		under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of the nearest primary school and the majority of the site is within 11-15 minutes of a secondary school (with a small area in the west within 16-20 minutes) and within 11-15 minutes of a further education institute (with a small area in the west within 16-20 minutes). Therefore a significant positive effect is expected for this objective. This site is also within 20 minutes travel time to the nearest further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest GP (with an area in the west within 11-15 minutes) and the site is within 56-60 minutes from the nearest hospital; therefore a minor positive effect on this objective is expected. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties to the north of the site. In addition the western boundary of the site is adjacent to a railway line and tunnel which may result in noise pollution affecting residents in the longer-term. Therefore a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest local centre (with small areas in the west and south-west within 16-20 minutes) and within 11-15 minutes from the nearest town/district centre (with an area in the west within 16-20 minutes); therefore a minor positive effect on this objective is expected.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There are three PRoW footpaths running through the site and could be lost or disrupted as a result of housing development. However, to the east of the site within 170m is an area of semi-natural and natural greenspace. The site is approximately 45m from an area of park and gardens which contain a children's play area to the east of the site however this is located within another housing site option. To the south west of the site is an area of amenity greenspace which contains a children's play area approximately 110m away. To the north west approximately 10m from the site is a cricket ground. In addition, there are two PRoW footpaths to the south of the site within 310m. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (8.02ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (8.02ha) and is on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (8.02ha) and is on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to	-?	This site approximately 940m from Turpin Hill Local Wildlife Site; therefore development here could have a minor

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation (part of a mixed effect), 9: affordable housing, 10: sustainable transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: leisure and recreation (mixed effect), 11: use of land and 12: character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H681

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 16-20 minutes travel time of the nearest employment node (with an area to the

		west within 11-15 minutes); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of the nearest primary school and within 11-15 minutes of a secondary school. Therefore a significant positive effect is expected for this objective. The site is also within 11-15 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of the nearest GP and within 56-60 minutes from the nearest hospital; therefore a minor positive effect on this objective is expected. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity to the north of the site; therefore a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 11-15 minutes travel time of both the nearest local centre and town/district centre; therefore a minor positive effect on this objective is expected.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing	++/--?	The site contains an area of park and gardens that includes a children's play area and could be as a result of

SA Objectives	SA Score	Justification
and support the provision of new recreation facilities and areas of open space and encourage their usage.		housing development. However, approximately 115m to the east of the site is an area of semi-natural and natural greenspace. To the south west of the site is an area of amenity greenspace which contains a children's play area approximately 325m away. To the north west approximately 325m from the site is a cricket ground. In addition, within 40m west of the site is a PRow footpath. To the north east of the site approximately 450m away is a PRow footpath. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.39ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.39ha) and the majority of the site is on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within an area of high quality agricultural land (the land is classed as grade 4 with an area to the east classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.39ha) and the majority of the site is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity	0?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a negligible effect on this SA Objective.

SA Objectives	SA Score	Justification
and geodiversity.		
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of the site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. A potential significant negative effect was identified in relation to SA objective 8: leisure and recreation (mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H683

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 21-25 minutes travel time to the nearest employment node (aside from the northern area of the site, which is within 26-30 minutes travel time); therefore, a minor positive effect on this objective is expected.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time to a primary school and 16-20 minutes travel time to a secondary school so is likely to have a significant positive effect. This site is also within 25 minutes travel time to a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time to a GP and most of this site is within 51-55 minutes travel time to a hospital (aside from the southern area of the site, which is within 46-50 minutes travel time); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of residential properties to the north and south-eastern areas of the site, which may be affected by noise during the construction phase. There is also an industrial adjacent to the site in the north east, which could cause noise effects over the long term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre and 11-15 minutes travel time to a town/district centre; therefore, a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreation facilities and areas of open space. There are several Public Rights of Way (PRoW), the closest being 120m north of the site. Open space designations include five amenity greenspaces, the closest being immediately adjacent to the site to the west, a semi-natural and natural greenspace and one park and garden. Other recreational spaces nearby include six outdoor sports facilities and four sites containing provision for children and young people. Therefore a significant positive effect for this SA objective is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.17ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural greenfield land. This is a relatively small site (1.17ha) on greenfield land; therefore, a minor negative effect on this SA objective is likely. The site is located on land designated as urban quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.17ha) on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 700m from Sunny Banks Pond Local Nature Reserve; therefore, development here could have a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas	-	This site is greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
and ensure development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education facilities, 8: recreation and leisure, 10: sustainable transport and 19: contribution to climate change. Potential significant negative effects in relation to objective 5: residential amenity. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H684

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within 16-20 minutes travel time of the nearest employment node. As such a significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		<p>The majority of the site is located within 5 minutes travel time of the nearest primary school (a small part of the site to the west is located within 6-10 minutes travel time of the nearest primary school). The site is located within 21-25 minutes travel time of the nearest secondary school. Overall a minor positive effect is expected on this SA objective.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest GP (the eastern part of the site is located within 5 minutes travel time of the nearest GP). The majority of the site is located within 36-40 minutes travel time of the nearest hospital (a small part of the site to the south west is located within 41-45 minutes travel time of the nearest hospital). Overall a minor positive effect is expected on this SA objective.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to the A642 along its north eastern edge. It is considered that the close proximity of this major road may result in increased noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest local centre (a small part of the site to the north east is located within 5 minutes travel time of the nearest local centre). The site is also located within 11-15 minutes travel time of the nearest town/district centre. As such a negligible effect is expected overall for this SA objective.</p>
<p>7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.</p>	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site contains a footpath which runs from east to west from Station Road. This footpath could be lost as a result of housing development and therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities can be accessed within 50m to the east of the site at Lepton Church of England Junior, Infant & Nursery School. A number of allotments are located within 75m of the site also to the east. To the south of the site within 155m a semi-natural and natural greenspace is located. A green corridor is accessible within 110m to the west of the site. Overall a mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.53ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.53ha) on mostly greenfield land (it is noted that a small part of the site to the north east has previously been developed); therefore a minor negative effect on this SA objective is likely. The site is located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.53ha) on mostly greenfield land (it is noted that a small part of the site to the north east has previously been developed); therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.

SA Objectives	SA Score	Justification
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 390m of Wakefield Road, Lepton which has been identified as a Candidate Local Wildlife Site to the north. Gawthorpe Lower Wood (a Local Wildlife Site) is located within 795m of the site to the north east. The site is also within 880m of Almondbury Common which has been designated as a Local Wildlife Site. The relative proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on mostly greenfield land (it is noted that a small part of the site to the north east has previously been developed) and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land may increase the area of impermeable surfaces in the District and thus may result in an increase in the overall risk of flooding in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of mostly greenfield land (it is noted that a small part of the site to the north east has previously been developed) meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation and leisure (it should be noted however that the overall score recorded for this SA objective was mixed), 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objectives 5: amenity and 8: recreation and leisure (it should be noted however that the overall score recorded for this SA objective was mixed). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H685

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of the nearest primary school and within 21-25 minutes of a secondary school so is likely to have a minor positive effect. The site is also within 46-50 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of a GP and within 56-60 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north, east and west which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The whole site is within 6-10 minutes of the nearest local centre. Approximately half of the site is within 11-15 minutes of a town/district centre and the other half 16-20 minutes. Therefore a negligible effect is expected for this site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>There is a PRoW footpath that runs through the site and the southern part of the site encroaches in to an area of park and gardens. Both could be lost or disrupted as a result of housing development. However, a PRoW footpath runs adjacent to the eastern boundary of the site. Within 90m south of the site are two PRoW footpaths and a bridleway runs approximately 130m to the west of the site. The site is adjacent to an area of park and gardens which contain a children's play area and an area of private playing fields which contains a sports ground and pavilion. To the north of the site there is an area of school grounds and playing fields and an area of park and gardens both approximately 410m away. In addition approximately 230m south east of the site is an area of open land associated with a scheduled monument or listed building. Therefore, a mixed significant positive and significant negative effect is expected for this objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.78ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.78ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within an area of high quality agricultural land (the land is classed as grade 4 with an area in the south east classed as grade 3).</p>

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.78ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.</p> <p>The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	<p>This site is not in close proximity of any biodiversity or geodiversity sites; therefore development here could have a negligible effect on this SA Objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was as mostly or entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. A potential significant negative effect was identified for SA objective 8: leisure and recreation (mixed effect). This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H686

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 5 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of the nearest primary school and within 11-15 minutes of a secondary school so is likely to have a significant positive effect. 4. Improve the health of local people and ensure that they can	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
access the health and social care they need.		The site is within 6-10 minutes travel time of a GP and within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The north of the site is adjacent to the A636 (Wakefield Road) which may result in noise pollution affecting residents in the longer-term. There are also a number of existing residential properties within close proximity of the site to the north, east and west which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is within 5 minutes of the nearest local centre (with an area in the east within 6-10 minutes). Approximately half of this site is within 5 minutes travel time to a town/ district centre, while the other half is within 6-10 minutes. Therefore a significant positive effect is expected for this site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	A bridleway runs approximately 105m south of the south and another runs approximately 150m to the west of the site. The site is adjacent to a recreation ground which in turn is adjacent to an area of semi-natural and natural greenspace and an area of children's play provision, however part of the recreation ground and semi-natural and natural greenspace are within another housing site option. Approximately 215m south west of the site is an area of allotments. In addition, approximately 285m south west of the site is an area of children's play provision. Also, approximately 380m south of the site is an area of park and gardens. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.11ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.11ha) and the majority of the site is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is also within an area of high quality agricultural land (the land is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.11ha) and the majority of the site is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 980m from Cliffe Woods Park Quarry, Clayton West Local Geological Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		The majority of the site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was as entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: local services and facilities, 8: leisure and recreation, 10: sustainable transport and 19: climate change. Potential significant negative effect was identified for SA objectives 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H687

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest employment node (with an area in the north west corner within 16-20 minutes); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of both the nearest primary school and secondary school so is likely to have a significant positive effect. The site is also within 6-10 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
access the health and social care they need.		Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the northern part which is within 5 minutes of a GP and within 46-50 minutes of the nearest hospital. The least accessible part of the southern part which is within 6-10 minutes and within 56-60 minutes of the nearest hospital. However, overall a minor positive effect is likely for this objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north, south and east which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of both the nearest local centre and town/district centre (with an area in the south within 11-15 minutes); therefore a minor positive effect is likely for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Approximately 285m to the east of the site is PRoW footpath. To the west of the site approximately 50m away is an area of school grounds and playing fields. To the north east approximately 210m away is an area of amenity greenspace. In addition, within 75m south of the site are two children's play areas. Approximately 355m to the south east of the site is an area of private playing fields. In addition, approximately 345m to the east of the site is a private bowling green. There is another area of school grounds and playing fields approximately 460m to the south east of the site. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.37ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (5.37ha) and the majority of the site is on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is also within an area of high quality agricultural land (the land is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (5.37ha) and the majority of the site is on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 735m from Springs Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of the site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was as entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 9: affordable housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified for SA objectives 11: use of land and 12: character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H688

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest employment node (with an area in the centre within 6-10 minutes); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest primary school (with an area in the north and north west within 5 minutes) and within 6-10 minutes of a secondary school (with an area in the south east and an area in the north within 11-15 minutes) so is likely to have a significant positive effect. The majority of the site is also within 6-10 minutes of a further education institute (with an area in the south east and an area in the</p>

SA Objectives	SA Score	Justification
		north within 11-15 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 6-10 minutes travel time of the nearest GP (with an area in the centre within 5 minutes) and within 51-55 minutes of a hospital. Therefore a minor positive effect is considered likely for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north, south and west which may be affected by noise during the construction phase. In addition there is a school immediately north west of the site which may also be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest local centre (with an area on the north eastern edge within 11-15 minutes) and within 6-10 minutes of a town/district centre; therefore a minor positive effect is likely for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>There is a PRoW footpath that runs north of the site and encroaches onto the northern tip of the site and could be lost or disrupted as a result of housing development. However, there is another PRoW footpath to the north of the site approximately 35m away however it runs through another housing site option. Another PRoW footpath begins within approximately 75m to the south of the site. The site is adjacent to an area of school grounds and playing fields however a small part of the open space is within another housing site option. Approximately 120m south west of the site is an area of park and gardens which contain an area of children's play provision. To the south east of the site approximately 295m away is an area of allotments. In addition to the south west of the site approximately 330m away is another area of school grounds and playing fields. Approximately 460m to the south west is an area of public playing field which contains two areas of children's play provision. Also, to the west of the</p>

SA Objectives	SA Score	Justification
		site is a private bowling green approximately 410m away and an area of amenity greenspace approximately 585m away. Therefore, a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.05ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (5.05ha) and the majority of the site is on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is also within an area of high quality agricultural land (the land is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (5.05ha) and the majority of the site is on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the adjoining Skelmanthorpe Conservation Area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 240m from Blacker Wood Candidate Local Wildlife Site, 605m from Park Gate Dyke Local Wildlife Site and approximately 740m from High Bridge Wood Candidate Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative

SA Objectives	SA Score	Justification
development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of the site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was as entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation (part of a mixed effect), 9: affordable housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified for SA objectives 8: leisure and recreation (mixed effect), 11: use of land, 12: character and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.

However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of	++	<p>There is a PRow footpath to the south of the site approximately 20m away and to the north of the site there is another PRow footpath approximately 10m away. The site is adjacent to an area of semi-natural and natural green space. Within 100m west of the site is a children's play area which is adjacent to an area of amenity greenspace.</p>

SA Objectives	SA Score	Justification
open space and encourage their usage.		Also, approximately 115m south west of the site is another area of semi-natural and natural greenspace. In addition, there are two more areas of semi-natural and natural greenspace located approximately 235m and 255m south of the site. Approximately 140m south of the site is a private tennis club. Approximately 190m south east of the site is an area of park and gardens which contain a children's play area and is adjacent to an area of semi-natural and natural greenspace. To the east of the site approximately 295m away is an area of semi-natural and natural greenspace which is adjacent to a cricket ground. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.18ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.18ha) and is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.18ha) and is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the adjoining Denby Dale Wesleyan Methodist Church which is a Grade II Listed Building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to	0?	This site is not within 1km of any designated biodiversity or geodiversity sites; therefore development here could

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified for any of the SA objectives.		

H690

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 16-20 minutes travel time of the nearest employment node (with an area in the south east within 11-15 minutes); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development.

SA Objectives	SA Score	Justification
increasing investment, innovation and Entrepreneurship.		Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is the south which is within 6-10 minutes travel time of a primary school and within 11-15 minutes of a secondary school. The least accessible part of the site is the north which is within 11-15 minutes of the nearest primary school and within 21-25 minutes of the nearest secondary school. In between those areas, journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; potentially significant positive for the south and potentially minor positive for the north of the site. Travel times to a further education institute also vary across the site - within 11-15 minutes in the south and within 26-30 minutes in the north.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest GP (with an area to the south within 5 minutes) and within 56-60 minutes of a hospital (with an area in the north over 60 minutes). Therefore a minor positive effect is considered likely for this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north, south and east which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest local centre (with an area in the south east within 6-10 minutes) and within 11-15 minutes of a town/district centre (with an area in the south east within 6-10 minutes); therefore a minor positive effect is likely for this objective.</p>
7. Make our communities safer by reducing crime, anti-social	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate

SA Objectives	SA Score	Justification
behaviour and the fear of crime.		lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	A PRoW footpath runs inside the north western boundary of the site and could be lost or disrupted as a result of housing development. This PRoW path adjoins another footpath to the north of the site. However, to the north of the site approximately 135m away is an area of semi-natural and natural greenspace. Approximately 350m to the north east of the site is an area of school grounds and playing fields which are adjacent to an area of park and gardens that contain a children's play area. To the north east of the site approximately 275m away is an area of semi-natural and natural greenspace. Approximately 90m south east of the site is an area of semi-natural and natural greenspace which is adjacent to a cricket ground. In addition, 120m south of the site is an area of park and gardens that contain an area of children's play provision and is adjacent to an area of semi-natural and natural greenspace. Approximately 245m south west of the site is a private tennis club and further to the south east approximately 350m away is an area of semi-natural and natural greenspace. Also, to the south east of the site within 330m from the site area two areas of semi-natural and natural greenspace, an area of amenity greenspace and an area of children's play provision. However, one of the areas of semi-natural and natural greenspace is located within another housing site option. Therefore, a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.44ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.44ha) and is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.44ha) and is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main

SA Objectives	SA Score	Justification
		valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Denby Dale Wesleyan Methodist Church which is a Grade II Listed Building and lies opposite the site.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is not within 1km of any designated biodiversity or geodiversity sites; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was as entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education (part of a mixed effect), 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. A potential significant negative effect was identified for SA objective 8; leisure and recreation (mixed effect). This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H691

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people’s ability to access jobs.</p> <p>Levels of access to an employment node vary throughout this site. The most accessible part of the site is the west which is within 11-15 minutes travel time of the nearest employment node. The least accessible part of the site is the south east which is within 31-35 minutes from an employment node. In between those areas, journey times to an employment node vary in between those two extremes. Therefore a mixed effect is likely for this objective; significant positive for the west and negligible for the south east of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is the west which is within 11-15 minutes travel time of a primary school and within 16-20 minutes of a secondary school. The least accessible part of the site is the south east which is within 16-20 minutes of a primary school and within 26-30 minutes of a secondary school. In between those areas, journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; potentially significant positive for the west and potentially negligible for the south east of the site. Travel times to a further education institute also vary across the site - within 16-20 minutes in the west and within 26-30 minutes in the south east.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents’ health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the west which is within 6-10 minutes travel time of the nearest GP and within 56-60 minutes of a hospital. The least accessible part of the site is the south east which is within 16-20 minutes of a GP and within 51-55 minutes of a hospital. In between those areas, journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect is likely for this objective; minor positive for the west and negligible for the south east. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in</p>

SA Objectives	SA Score	Justification
		<p>noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the south and east which may be affected by noise during the construction phase. In addition, there is an industrial area immediately to the north of the site and the southern boundary of the site is adjacent to the A635 (Barnsley Road) which may result in noise pollution affecting residents in the longer-term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The most accessible part of the site is the west which is within 11-15 minutes of both the nearest local centre and town/district centre. The least accessible part of the site is the south east which is within 21-25 minutes of both the nearest local centre and town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; minor negative for the west and minor positive for the south east.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>A PRow footpath runs through the eastern part of the site and could be lost or disrupted as a result of housing development. However, there are several PRow footpaths to the north east within 80m of the site. There is also a bridleway approximately 15m south east of the site and another RoW footpath approximately 75m to the west of the site. Another two footpaths run within 350m north of the site. The site is adjacent to an area of semi-natural and natural green space. Approximately 140m north of the site is an area of semi-natural and natural greenspace however it is located within another housing site option. Within 285m north east of the site is a children's play area which is adjacent to an area of amenity greenspace. Also, approximately 70m east of the site is another area of semi-natural and natural greenspace. In addition, there are two more areas of semi-natural and natural greenspace located approximately 70m east and 265m north east of the site. Approximately 175m east of the site is a private tennis club. In addition, approximately 440m east of the site is an area of park and gardens which contain a children's play area and is adjacent to an area of semi-natural and natural greenspace. Further to the east of the site approximately 545m away is an area of semi-natural and natural greenspace. Therefore, a mixed significant positive and significant negative effect is expected for this objective.</p>
9. Ensure all people are able to live in a decent home which meets	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of</p>

SA Objectives	SA Score	Justification
their needs.		affordable housing. This site is relatively small (1.94ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.94ha) and the majority of the site is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.94ha) and the majority of the site is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	<p>Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Denby Dale Railway Viaduct and the 3-storey building at Hartcliffe Mills to the east of the reservoir which are Grade II Listed Buildings.</p> <p>The effect on this SA objective is therefore minor negative although this is uncertain. Uncertainty also exists as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 615m from Denby Delph and 675m from Turpin Hill Candidate Local Wildlife Sites; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3 (although a small area on the north western edge of the site encroaches on to an area of flood zone 3). Therefore a minor negative effect is

SA Objectives	SA Score	Justification
and ensure development does not contribute to increased flood risk for existing property and people.		likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of the site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was as mostly entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified for SA objectives 5: amenity and 8: leisure and recreation (mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H692

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 16-20 minutes travel time of the nearest employment node (with an area in the north within 21-25 minutes); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend

SA Objectives	SA Score	Justification
		<p>on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is the south west which is within 6-10 minutes travel time of a primary school and within 21-25 minutes of a secondary school. The least accessible part of the site is the north although it is within 5 minutes of the nearest primary school; it is within 31-35 minutes of a secondary school. In between those areas, journey times to education facilities vary in between those two extremes. However, overall a minor positive effect is expected for this SA objective.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	<p>+/0</p>	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the south west which is within 6-10 minutes travel time of the nearest GP and within 46-50 minutes of a hospital. The least accessible part of the site is the north which is within 16-20 minutes of a GP and within 51-55 minutes of a hospital. In between those areas, journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect is likely for this objective; minor positive for the south west and negligible for the north. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	<p>-</p>	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north, south and west which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	<p>0</p>	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 6-10 minutes of the nearest local centre (with an area in the north within 11-15 minutes). However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	To the south of the site approximately 55m away is a RoW footpath and 65m north of the site is another RoW footpath however it runs through another housing site option. A bridleway runs within 35m south west of the site. Within 35m north west of the site is an area of school grounds and playing fields which is adjacent to an area of semi-natural and natural greenspace and an area of amenity greenspace; however the area of amenity greenspace is within another housing site option. In addition, 190m north of the site is an area of public playing fields which contains an area of children's play provision and is adjacent to an area of park and gardens that contain a children's play area. To the east of the site there is an area of semi-natural and natural greenspace approximately 240m away and an area of allotments approximately 360m away. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.72ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.72ha) and the majority of the site is on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within an area of high quality agricultural land (the land is classed as grade 4 with an area on the western edge classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.72ha) and the majority of the site is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies across LCA E6: Fenay Beck Valley Rural Fringes and LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. LCA E6: Fenay Beck Valley Rural Fringes is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley. LCA G9: Fenay Beck Valley & Tributaries comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due

SA Objectives	SA Score	Justification
		to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Shelley Methodist Church which is a Grade II Listed Building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is within 145m of Gelder Wood Candidate Local Wildlife Site, approximately 495m from Shepley Mill Wood Candidate Local Wildlife Site, approximately 665m from Shelley Wood Candidate Local Wildlife Site, approximately 775m from Upper and Lower Stones Wood Local Wildlife Site and approximately 950m from Allen Wood Local Wildlife Site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3 (with a small area in the south of the site within an area of flood zone 3). Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of the site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was as mostly or entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 10: sustainable transport and 19: climate change. A potential significant negative effects was identified for SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.

5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the south on Westfield Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest local centre (a small part of the site to the west is located within 11-15 minutes travel time of the nearest local centre). The majority of the site is</p>

SA Objectives	SA Score	Justification
		also located within 11-15 minutes travel time of the nearest town/district centre (a small part of the site to the south east is located within 6-10 minutes travel time of the nearest town/district centre). As such a minor positive effect is expected overall for this SA objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is located on land which has been designated as allotments and also contains a footpath which runs from Dale Lane in the south east. These allotments and the footpath could be lost as a result of housing development and therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of open spaces which could be used by residents. Amenity greenspace is located adjacent to the site to the north east. A park is located to the east of the site within 45m and there is provision at this location for out sports facilities, a semi-natural and natural greenspace, and two children's playgrounds. A cemetery is located to the south east of the site within 165m. Overall a mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.63ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to eight of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.63ha) on greenfield land (the site is currently used for allotments); therefore a minor negative effect on this SA objective is likely. The site is located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.63ha) on greenfield land (the site is currently used for allotments); therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment,

SA Objectives	SA Score	Justification
historic environment, heritage assets and their settings.		meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Oakwell Park (a Local Wildlife Site and Local Nature Reserve) is the closest of such features but is located 2.54km to the south west and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land (the site is currently used for allotments) and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land may increase the area of impermeable surfaces in the District and thus may result in an increase in the overall risk of flooding in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land (the site is currently used for allotments) meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to eight of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: recreation and leisure (it should be noted however that the overall score recorded for this SA objective was mixed), 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 8: recreation and leisure (it should be noted however that the overall score recorded for this SA objective was mixed). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H694

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 6-10 minutes travel time to an employment node; therefore, a significant positive effect is likely.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Approximately half of this site is within 5 minutes travel time to a primary school, while the other half is within 6-10 minutes travel time. Most of this site is also within 11-15 minutes travel time to a secondary school, aside from a small area in the south, which is within 21-25 minutes travel time. Therefore, a significant positive effect is likely for this SA objective. This site is also within 25 minutes travel time to a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 6-10 minutes travel time to a GP (aside from an area in the south which is within 15 minutes travel time). This site is also within 31-35 minutes travel time to a hospital; therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties to the north, south and west of the site, which may be affected by noise and light pollution during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 11-15 minutes travel time to a local centre and 6-10 minutes travel time to a town/district</p>

SA Objectives	SA Score	Justification
		centre; therefore, a minor positive effect upon this SA objective is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities including several Public Rights of Way (PRoW), the closest being immediately adjacent to the site to the east and a national cycle route approximately 390m to the north. Greenpeace designations nearby include a green corridor, one semi-natural and natural greenspace and four amenity greenspaces. However the amenity greenspace to the north is within housing site option H1723 and as such could be lost as a result of development. Other recreational spaces nearby include four outdoor sports facilities and one site containing provision for children and young people. A significant positive effect is therefore expected for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.95ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.95ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. Most of this site is on land designated as grade 3 agricultural quality, aside from a small area in the west which is designated as urban land quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (1.95ha) and on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park.

SA Objectives	SA Score	Justification
		The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	Sunny Bank Ponds Local Nature Reserve is approximately 1.6m southwest of the site; therefore, development here is likely to have a negligible effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to all eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified.		

H695

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is located within 31-35 minutes travel time of the nearest employment node (a small part of the site to the north west is located within 36-40 minutes travel time of the nearest employment node). As such a negligible effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest primary school (part of the site to the east is located within 5m minutes travel time of the nearest primary school). The majority of the site is located within 21-25 minutes travel time of the nearest secondary school (a small part of the site to the south is located within 16-20 minutes travel time of the nearest secondary school). Overall a minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 5 minutes travel time of the nearest GP. The majority of the site is located within 41-45 minutes travel time of the nearest hospital (a small part of the site to the west is located within 46-50 minutes travel time of the nearest hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the south on Kaye Lane and to the north on Helted Way. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 16-20 minutes travel time of the nearest local centre. The majority of the site is also located within 6-10 minutes travel time of the nearest town/district centre (a small part of the site to the south is located within 5 minutes travel time of the nearest town/district centre). As such a minor positive effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site contains a footpath which could be lost as a result of housing development and therefore a potential significant negative effect is identified. Outdoor sports facilities are provided adjacent to the site to the east at Almondbury Church Of England Infant and Nursery School. A cemetery is located to the north of the site within 135m. A semi-natural and natural greenspace is located to the north of the site within 80m. To the south of the site a number of allotments are located beyond Kaye Lane. Overall a mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.99ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.99ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.99ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.

SA Objectives	SA Score	Justification
		<p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Scheduled Monument at Castle Hill. This site currently forms part of the area of open countryside which contributes to its setting.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>The site is within 595m of Hey Lane which has been identified as a Candidate Local Wildlife Site to the north west. Arkenley Lane is another Candidate Local Wildlife Site to the south east of the site within 550m. Further to the south east within 965m of the site Almondbury Common has been designated as a Local Wildlife Site. To the south west of the site within 995m Castle Hill has been designated as a Local Nature Reserve and a Local Wildlife Site. The relative proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land may increase the area of impermeable surfaces in the District and thus may result in an increase in the overall risk of flooding in Kirklees.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure (it should be noted however that the overall score recorded for this SA objective was mixed), and potential significant negative effects were identified for this site in relation to SA objective 8: recreation and leisure (it should be noted however that the overall score recorded for this SA objective was mixed). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>

Overall a minor positive effect is</p>

SA Objectives	SA Score	Justification
		expected on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest GP (a small part of the site to the north is located within 16-20 minutes travel time of the nearest GP). The site is located within 41-45 minutes travel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the north on Greenhead Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest local centre (a small part of the site to the north is located within 6-10 minutes travel time of the nearest local centre). The site is also located within 11-15 minutes travel time of the nearest town/district centre. As such a minor positive effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. A semi-natural and natural greenspace is located adjacent to the site. Within 200m to the south of the site Almondbury High School and Language College provides access to outdoor sports facilities. A park which provides access to two children's playgrounds is located within 420m to the west of the site on Almondbury Bank. A number of allotments can be accessed on Senior Street within 480m of the site to the north west.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of</p>

SA Objectives	SA Score	Justification
their needs.		affordable housing. This site is relatively small (0.77ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.77ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.77ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 915m of Round Wood, Tandem which has been identified as a Local Wildlife Site to the north east. Hey Lane is Candidate Local Wildlife Site to the south west of the site within 980m. The relative proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land may increase the area of impermeable surfaces in the District and thus may result in an increase in the overall risk of flooding in Kirklees.
17. Increase prevention, re-use,	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing

SA Objectives	SA Score	Justification
recovery and recycling of waste close to source.		buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure, 10: transport and 19: climate change. No potential significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement which may be achieved through Local Plan policies.		

H697

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 16-20 minutes travel time to an employment node, aside from the southern area which is within 11-15 minutes travel time; therefore, a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of this site is within 5 minutes travel time to a primary school (aside from an area along the northern

SA Objectives	SA Score	Justification
		boundary which is within 6-10 minutes). Most of this site is also within 6-10 minutes travel time to a secondary school (aside from a small area to the north, which is within 11-15 minutes travel time); therefore, a significant positive effect is likely for this SA objective. This site is also within 15 minutes travel time to a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 6-10 minutes travel time to a GP (aside from an area in the north which is within 15 minutes travel time). Most of this site is also within 31-35 minutes travel time to a hospital (aside from an area within the south, which is within 26-30 minutes travel time); therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties to the west and south in addition to Newsome Junior/ High School and Castle Hill School to the north, which may be affected by noise and light pollution during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Approximately half of this site is within 5 minutes travel time to a local centre, while the other half is within 6-10 minutes travel time. Most of the site is also within 11-15 minutes travel time to a town/district centre, aside from the area in the north, which is within 16-20 minutes travel time. Therefore, a significant positive effect upon this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site includes an allotment, which could be lost as a result of development. However, this site is also within 600m of more than three recreational facilities including several Public Rights of Way (PRoW). Greenpeace designations nearby include over a dozen semi-natural and natural greenspace, ten amenity greenspaces and one park and garden. Other recreational spaces nearby include five outdoor sports facilities, three other allotments and one site containing provision for children and young people. Some of these designations are within other housing

SA Objectives	SA Score	Justification
		site options and could therefore be lost as a result of housing development. However, a mixed effect (significantly positive and significantly negative) effect is therefore expected for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.11ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.11ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. This site is on land designated as urban quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (1.11ha) and on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the setting of the Scheduled Monument at Castle Hill. The loss of this area and its subsequent development could harm elements which contribute to the significance of this Scheduled Monument. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Park Wood Candidate Local Wildlife Site is approximately 500m south of the site and Beaumont Park, Huddersfield Local Geological Site is approximately 1km away to the west; therefore, development here could have a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.

SA Objectives	SA Score	Justification
development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to all eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment 3: education, 6: access to local services, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified.		

H698

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within 11-15 minutes travel time of the nearest employment node. As such a significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties

SA Objectives	SA Score	Justification
		<p>as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 5 minutes travel time of the nearest primary school. The site is also located within 5 minutes travel time of the nearest secondary school. Overall a significant positive effect is expected on this SA objective. The site is also located within 6-10 minutes travel time of the nearest centre for further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 5 minutes travel time of the nearest GP. The site is located within 26-30 minutes travel time of the nearest hospital. Overall a significant positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by existing properties on all sides: to the east on Blagden Lane, to the north on Blue Bell Hill (by the Blue Bell Inn), to the west on Bankfield Park Avenue and to the south on Mansion Gardens. These properties may be affected by noise during the construction phase and a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 5 minutes travel time of the nearest local centre. The site is also located within 16-20 minutes travel time of the nearest town/district centre. As such a minor positive effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>The site is on land which contains a footpat and given that this access route could be lost as a result of husing development at this location a potential significant negative is identified for this SA objective. The site is however also in close proximity to a number of open spaces which could be used by residents. It is recognised that a very small part of the semi-natural and natural greenspace to the north east of the site falls within the site's boundaries however this area is judged to be negligible in terms of size. This semi-natural and natural greenspace continues on the other side of Blue Bell Hill and allotments are located within it to the north of the site within 60m of the site.</p>

SA Objectives	SA Score	Justification
		<p>A cemetery is also located to the north of the site within 240m. Amenity greenspace is located within 125m to the west of the site on Fair Lea Road. A children's playground is provided at the same location as this amenity greenspace.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is also expected on this SA objective. Overall a mixed effect (significant positive/potential significant negative) is expected.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.77ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.77ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Urban Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.77ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Taylor Hill Working Men's Club (a Grade II Listed Building) which is located within 90m to the north of the site.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 685m of Beaumont Park, Huddersfield which has been designated as a Local Geological Site to the west. The site is also within 990m of Park Wood which has been identified as a Candidate Local Wildlife Site to the south. The relative proximity of the site to these designated biodiversity and geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air

SA Objectives	SA Score	Justification
		pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land may increase the area of impermeable surfaces in the District and thus may result in an increase in the overall risk of flooding in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 1: employment, 3: education, 4: health, 8: recreation and leisure (it should be noted that the overall score for this SA was recorded as mixed), 10: transport and 19: climate change, and potential significant negative effects were identified for this site in relation to SA objective 5: amenity and 8: recreation and leisure (it should be noted that the overall score for this SA was recorded as mixed). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H699

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities	0/-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
available for local people, and ensure that they are accessible.		The north eastern part of the site is located within 41-45 minutes travel time of the nearest employment node while the southern part of the site is located within 31-35 minutes travel time of the nearest employment node. The area between these extremes is located within 36-40 minutes travel time of the nearest employment node. Overall a mixed effect (negligible/minor negative) is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest primary school (a small part of the site to the north east is located within 11-15 minutes travel time of the nearest primary school). The majority of the site is also located within 6-10 minutes travel time of the nearest secondary school (the north eastern part of the site is located within 11-15 minutes travel time of the nearest secondary school). Overall a significant positive effect is expected on this SA objective. The majority of the site is also located within 21-25 minutes travel time of the nearest centre for further education (a small part of the site to the north east is located within 26-30 minutes travel time of the nearest centre for further education).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest GP (a small part of the site to the south west is located within 6-10 minutes travel time of the nearest GP). The majority of the site is located within 46-50 minutes travel time of the nearest hospital (a part of the site to the south is located within 41-45 minutes travel time of the nearest hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to an existing industrial site to the north east. It is considered that the close proximity of this industrial complex may result in increased noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest local centre (a small part of the site to the north east is located within 11-15 minutes travel time of the nearest local centre). The majority of the site is also located within 11-15 minutes travel time of the nearest town/district centre (a small part of the site to the south west is located within 6-10 minutes travel time of the nearest town/district centre). As such a minor positive effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is adjacent to outdoor sports facilities to the south west. Amenity greenspace is located to the north west of the site within 380m. A small park which includes a children's playground is located to the north of the site within 500m. Further amenity greenspace is located within 550m to the south east of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (12.54ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (12.54ha) on mostly greenfield land (some of the site to the east and to the north has previously been developed); therefore a significant negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural Land.</p>
12. Protect and enhance the	--?	This is a relatively large site (12.54ha) on mostly greenfield land (some of the site to the east and to the north has

SA Objectives	SA Score	Justification
character of Kirklees and the quality of the landscape and townscape.		<p>previously been developed); therefore development here is expected to have a significant negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies mainly in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Crosland Hall (a Grade II* Listed Building) which is located within 150m to the south west of the site.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>Johnson Wellfield Quarries, Crosland Hill is a Local Geological Site located to the south east of the site within 350m. The site is also located within 720m of Delves Wood which has been identified as a Candidate Local Wildlife Site to the south east. The relative proximity of the site to these designated biodiversity and geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land may increase the area of impermeable surfaces in the District and thus may result in an increase in the overall risk of flooding in Kirklees.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 9: housing, 10: transport and 19: climate change, and potential significant negative effects were identified for this site in relation to SA objectives 5: amenity, 11: land use and 12: landscape and townscape. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H700

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The south of the site is located more than 60 minutes travel time from the nearest employment node. The north east of the site is located within 26-30 minutes from the nearest employment node. The areas in between these extremes are located at variable time travels from the nearest employment node. Overall a mixed effect (minor positive/ significant negative) is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The north eastern part of the site is located within 5 minutes ravel time of the nearest primary school while the southern part of the site is located more than 60 minutes travel time of the nearest primary school. The north</p>

SA Objectives	SA Score	Justification
		eastern part of the site is located within 5 minutes travel time of the nearest secondary school while the southern part of the site is located more than 60 minutes travel time of the nearest secondary school. The areas between these extremes are located at variable travel times from the nearest primary school and secondary school. Overall a mixed effect (significant positive/significant negative) is expected on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+ / --	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The southern part of the site is located more than 60 minutes travel time from a GP while the north western and north eastern parts of the site are located within 11-15 minutes travel time of a GP. The southern part of the site is also located more than 60 minutes travel time from a hospital while the north eastern part of the site is located within 31-35 minutes travel time of a hospital. Overall a mixed effect (minor positive/significant negative) is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the east on Balmoral Avenue and Moor Close respectively. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+ + / --	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The north east of the site is located within 5 minutes of a local centre while the south of the site is located more than 60 minutes travel time of a local centre. The north eastern and north western corners of the site are located within 11-15 minutes travel of the nearest town/district centre while the south of the site is located more than 60 minutes travel time from the nearest town/district centre. As such a mixed effect (significant positive/significant negative) is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is located on land which has been designated as amenity greenspace to the south. This greenspace could be lost as a result of housing development and therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are located to the east within 95m. Balmoral Park is located within 295m to the south east of the site. A cemetery is also located to the south west of the site within 445m. Dean Wood is located within 510m to the south of the site and has been designated as a semi-natural and natural greenspace. Overall a mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (13.94ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (13.94ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is located on mostly Grade 4 Agricultural Land (the north eastern part of the site is located on Urban Land).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (13.94ha) on greenfield land; therefore development here is expected to have a significant negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.

SA Objectives	SA Score	Justification
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 55m of Delves Wood which has been identified as a Candidate Local Wildlife Site to the south. Johnson Wellfield Quarries, Crosland Hill is located within 175m to the south west of the site and has been designated as a Local Geological Site. Dean Wood is within 510m of the site to the south and has been designated as a Local Wildlife Site. The proximity of the site to these designated biodiversity and geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land may increase the area of impermeable surfaces in the District and thus may result in an increase in the overall risk of flooding in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 6: access to local services, 8: recreation and leisure (it should be noted that the overall effects for these three SA objectives were recorded as mixed), 9: housing, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 6: access to local services, 8: recreation and leisure (it should be noted that overall mixed effects were recorded for these five SA objectives), 11: land use, 12: landscape and townscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>

8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are located adjacent to the site to the east. A cemetery is provided on the grounds of the Church of St John the Evangelist within 235m to the south east of the site. Golcar Infant and Nursery School provides more outdoor sports facilities within 330m to the east of the site. Another cemetery and an amenity greenspace are located to the north west of the site within 340m at Taylor Lane.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.38ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in</p>

SA Objectives	SA Score	Justification
		terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.38ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The east part of the site is located on Urban Land while the west part of the site is located on Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.38ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Huddersfield Narrow Canal (a Candidate Local Wildlife Site) is the closest of such features but is located 1.20km to the south east and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land may increase the area of impermeable surfaces in the District and thus may result in an increase in the overall risk of flooding in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 6: access to local services, 8: recreation and leisure, 10: transport and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>		

H704

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Most of the site is within 25-30 minutes travel time of the nearest employment node, with areas in the north and southeast being within 21-25 minutes; therefore a minor positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of the site is within 6-10 minutes travel time of a primary school with a small area in a western corner being within minutes. Most of the site is also within 31-35 minutes travel time of a secondary school with the northern area being within 36-40 minutes. So a minor positive effect is likely.</p>
4. Improve the health of local	++/+	The location of housing sites will not affect the number or location of healthcare facilities; however where

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of the site is within 6-10 minutes travel time of a GP, with small pockets in the north, west and southeast being within 5 minutes. Most of this site is also within 31-35 minutes of a hospital within smaller areas in the north and east being within 26-30 minutes and the northeast being within 21-25 minutes. Therefore a mixed effect is likely with the northern and eastern most areas resulting in a significant positive effect and the southern and western area resulting in a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is within approximately 25 m of a railway line along the southern tip. There is a business park with industrial units at the southwest corner of the site. There are also a number of residential properties adjacent to the site to the north, west and southeast, which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 6-10 minutes travel time of a local centre (a small corner in the southeast is within 5 minutes) and most of the site is also within 6-10 minutes of a town/district centre (with the north being within 11-15 minutes and a small corner in the southeast being within 5 minutes); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	A single footpath runs through the north of the site connecting to a wider network of footpaths and byways to the northeast of the site. Given that the use of this access route which connects to the wider countryside may be lost if housing development was to take place at this location a potential significant negative effect is identified. The site is however also surrounded by numerous open and recreational spaces including over five amenity greenspaces, a large semi-natural/natural space, parks and gardens, outdoor sports facilities, provisions for children and cemeteries. As such given that the close proximity of these open spaces may encourage new residents to make use of them a significant positive effect is also expected on this SA objective and overall a mixed score is given.
9. Ensure all people are able to live in a decent home which meets	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of

SA Objectives	SA Score	Justification
their needs.		affordable housing. This site is relatively small (3.8 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.8 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.8 ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Fernleigh and its retaining wall to the west of the site, which are Grade II Listed Buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 430 m from the Huddersfield Narrow Canal candidate Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives: 4: health, 8: leisure and recreation (as part of a mixed result), 10: sustainable transport, and 19: climate change; and potential significant negative effects were identified in relation to SA objectives: 5: amenity and 8: leisure and recreation (as part of a mixed result). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H705

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 16-20 minutes travel time of the nearest employment node (with two small areas in the south and a small area in the east within 11-15 minutes); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		<p>The site is within 11-15 minutes travel time of the nearest primary school. However travel times to the nearest secondary school vary through the site. The northern part of the site is within 6-10 minutes travel time from a secondary school whereas as the south western corner of the site is within 16-20 minutes of a secondary school. In between those areas, journey times to education facilities vary in between those two extremes. However, overall a significant positive effect is expected for this objective. Travel times to a further education institute also vary across the site – 6-10 minutes in the north and 16-20 minutes in the south western corner.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the south west which is within 6-10 minutes of a GP and within 11-15 minutes of hospital. The least accessible part of the site is the north which is within 11-15 minutes of a GP and within 21-25 minutes of the nearest hospital. However, overall a significant positive effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties and a depot within close proximity to the north west and south of the site. In addition, the northern boundary of the site is adjacent to the A629 (Halifax Road) which may result in noise pollution affecting residents in the longer-term. A significant negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	++/+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local services and facilities vary throughout the site. The most accessible part of the site is the east which is within 5 minutes travels time of the nearest local centre and within 6-10 minutes of a town/district centre. The least accessible part of the site is the north which is 11-15 minutes from both a local centre and town/district centre. Therefore a mixed effect is expected for this objective; significant positive for the east and minor positive for the north.</p>
<p>7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.</p>	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There are two PRoW footpaths that run through the western part of the site which could be lost or disrupted as a result of housing development. However, the site is adjacent to an area of semi-natural and natural greenspace however this open space is within another housing site option. The site is also adjacent to an area of semi-natural and natural greenspace which in turn is adjacent to an area of park and gardens that contains an area children's play provision and a multiuse games area. Within 125m south west of the site is another area of semi-natural and natural greenspace however, it is located within another housing site option. To the east of the site approximately 25m away is a cricket ground which is adjacent to an area of semi-natural and natural greenspace. Approximately 300m south of the site is an area of semi-natural and natural greenspace. In addition, approximately 550m to the south of the site is an area of park and gardens that contains three areas of children's play provision and approximately 530m away is an area of semi-natural and natural greenspace, however they are both located within other housing site options. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.42ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access all eight of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.42ha) and is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.42ha) and is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on 12 and 13 Warren house Lane and the adjacent barn which are Grade II Listed Buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will

SA Objectives	SA Score	Justification
		depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 905m from Grimescar Wood Local Wildlife Site and approximately 940m from Old Lindley Moor, Huddersfield Local Geological Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to all eight of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 6: local services and facilities (part of a mixed effect), 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: leisure and recreation (mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H706

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 16-20 minutes travel time of an employment node (although the western and

SA Objectives	SA Score	Justification
ensure that they are accessible.		southern areas are within 11-15 minutes), therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Accessibility to education varies across this site. The most accessible area is in the north eastern area, which is within 11-15 minutes from a primary and secondary school and further education facility. The least accessible area is in the southern part of the site is within 11-15 minutes from a primary school and 21-25 minutes from a secondary school. Overall, a mixed effect is likely – significant positive for north eastern area and minor positive for the southern part of the site. Access to further education facility also varies across the site, varying from 11-15 minutes travel time in the north east to 26-30 minutes in the south.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	The whole of this site is within 11-15 minutes travel time of a GP and the majority of the site is within 16-20 minutes from a hospital (the southern area is within 21-25 minutes); therefore a significant positive effect is likely. This site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to the A629 (Halifax Road), and this could result in future residents being exposed to noise pollution over the long term, giving a significant negative effect. There are also a number of sensitive receptors within 100m north, west and south-east of this site, including existing residential properties and places of worship, and these receptors could be exposed to noise and light pollution during construction which reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Accessibility to local services varies across this site. The most accessible area is the north eastern part of the site which is within 6-10 minutes travel time of a local centre and town/district centre. The least accessible area is in the far southern part which is 5 minutes of a local centre and 21-25 minutes from a town/district centre. Accessibility to local services varies between these two extremes; a minor positive effect is likely overall due to the site's proximity to a local centre.
7. Make our communities safer by	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the

SA Objectives	SA Score	Justification
reducing crime, anti-social behaviour and the fear of crime.		incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	Within this site there are allotments and two PRoW, footpath, and local cycle route. It is considered possible that these features could be lost or disrupted if the site is developed. However, within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents, the closest of which are a cemetery, a park and garden, an area of semi-natural and natural greenspace and an outdoor sports facility directly adjacent to the west. Other recreational facilities and areas of open space include additional semi-natural and natural greenspace, additional outdoor sports facilities, additional cemeteries, amenity greenspace and areas for children and young people. a park and garden and area for children and young people. A mixed effect (significantly positive and significantly negative) is therefore likely.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (17.17ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to all eight features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (17.17ha) and on mostly greenfield land; therefore a significant negative effect is likely. This site is not in an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is large (17.17ha) and on mostly greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on Middle Burn Farmhouse and Lower Burn Farmhouse Grade II Listed Buildings (the loss of this site and its subsequent developed could harm elements that contribute to the significance of these assets). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new

SA Objectives	SA Score	Justification
		development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are two biodiversity designations within 1km of this site, these being Grimescar Wood Local Wildlife Site (approximately 260m east) and Elland Bypass Cutting SSSI (approximately 880m north). A minor negative effect is there likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on mostly greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to all eight features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified in relation to SA objectives 1: employment, 3: education (part of a mixed effect overall), 4: health, 8: recreation and leisure (part of a mixed effect overall), 9: housing, 10: sustainable transport and 19: climate change. Significant negative effects were identified in relation to SA objectives 5: amenity, 8: recreation and leisure (part of a mixed effect overall), 11: use of land and 12: character and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H707

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 6-10 minutes travel time of an employment node, therefore a significant positive effect is likely.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes travel time from a primary school and 11-15 minutes from a further education facility and the majority of the site is within 26-30minutes from a secondary school (aside from a small area in the north which is within 31-35 minutes). A minor positive effect is therefore likely. This site is also within 11-15 minutes travel time of a further education institute,
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	The whole of this site is within 5 minutes travel time from a GP and 11-15 minutes to a hospital, therefore a significant positive effect is likely. This site is not in or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north, east and south of this site, and residents of these properties could be exposed to noise and light pollution during construction resulting in a minor negative effect.
6. Retain and enhance access to local services and facilities.	++	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 5 minutes travel time of a local centre and 6-10 minutes from a town/district centre; therefore a significant positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	Within 600m of the site there are a number of recreational facilities and areas of open space that could be used by future residents, the closest of which is a cemetery directly adjacent to the west. Other recreational facilities and areas of open space include outdoor sports facilities, areas for children and young people, a park and garden, allotments and amenity greenspace. There are also a number of PRoW footpaths to the east, one of which run

SA Objectives	SA Score	Justification
usage.		along the site's eastern side. A significant positive effect is therefore likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.7ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to seven of eight features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.7ha) and on greenfield land; therefore a minor negative effect is likely. This site is not in an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.7ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on Salendine Nook Baptist Chapel Grade II Listed Building (the loss of this site and its subsequent developed could harm elements that contribute to the significance of this asset). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Longwood Edge Quarry Huddersfield Local Geological Site is approximately 630m west of this site; therefore a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to seven of eight features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified in relation to SA objectives 1: employment, 4: health, 6: local services, 8: recreation and leisure, 10: sustainable transport and 19: climate change. No significant negative effect was identified.		

H708: Land at Lower Blacup Farm, Ashbourne Way, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 21-25 minutes of the nearest employment node (with an area in the north within 16-20 minutes); therefore a minor positive effect is likely for this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is within 11-15 minutes travel time of the nearest primary school (with an area in the north within 6-10 minutes) and within 16-20 minutes of a secondary school. Therefore a significant positive effect is likely for this objective. The majority of the site is also within 26-30 minutes of a further education institute (with an area in the north west corner within 31-35 minutes).
4. Improve the health of local people and ensure that they can	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
access the health and social care they need.		The site is within 6-10 minutes travel time of the nearest GP. Travel times to the nearest hospital vary throughout the site; the northern part of the site is within 46-50 minutes of the nearest hospital and the south western corner is within 56-60 minutes of the nearest hospital. However, overall a minor positive effect is expected for this SA objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the east and south which may be affected by noise during the construction phase. In addition, there is an industrial area immediately to the north of the site which may result in noise pollution affecting residents in the longer-term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 16-20 minutes of the nearest local centre and the majority of the site is within 11-15 minutes of the nearest town/district centre (with an area in the north east corner within 6-10 minutes). Therefore a minor positive effect is expected for this objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	There is a PRow footpath that runs through the site and could be lost or disrupted as a result of housing development. However, the site is adjacent to an area of semi-natural and natural greenspace although it is located within another housing site option. There are two children's play areas within 540m south west of the site. Approximately 335m to the east of the site is a football ground. Approximately 495m east of the site is an area of park and gardens. In addition, approximately 340m east of the site is a green corridor which contains a national cycle route. Adjacent to the green corridor approximately 540m from the site is an area of semi-natural and natural greenspace which contains a children's play area. Also, within 500m north of the site are an area of semi-natural and natural greenspace which is located within another housing site option and an area of amenity greenspace. Therefore a mixed significant negative and significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of

SA Objectives	SA Score	Justification
their needs.		affordable housing. This site is relatively small (2.33ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.33ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The majority of the site is within an area of high quality agricultural land (the land is classed as grade 3 with a small area classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.33ha) on greenfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Lower Blacup Farmhouse and 2 and 3 Quaker Lane which are Grade II Listed. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3 (a small section of the northern edge encroaches on an area of flood zone 2); therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 3: education, 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: recreation and leisure (part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H709

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 6-10 minutes travel time to the nearest employment node; therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		This site is within 5 minutes travel time to a primary school and 6-10 minutes travel time to a secondary school; therefore, a significantly positive effect is likely for this SA objective. This site is also within 20 minutes travel time to a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time to a GP and 26-30minutes travel time to a hospital; therefore, a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are industrial buildings and activities directly to the south which could cause noise effects over the long term. There are existing residential properties adjacent to the site to the north and a Headlands CE primary and infant school to the south which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre and 11-15 minutes travel time to a town/district centre; therefore, a minor positive effect is likely for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities. There are several Public Rights of Way (PRoW), the closest being adjacent to the site in the south and west and a national cycle route. Greenspace designations nearby include a green corridor, two parks and gardens and three natural and semi-natural greenspaces. However, one of these natural and semi-natural spaces is within the housing options site H134 and therefore could be lost as a result of development. Other recreational spaces nearby include nine outdoor sports facilities and three sites containing provision for children and young people. Therefore, a significantly positive effect is likely for this SA objective.
9. Ensure all people are able to	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the

SA Objectives	SA Score	Justification
live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.08ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to all eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site relatively small (1.08ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. Most of this site is located on land designated as urban quality; aside from the far north western edge which is designated as grade 3 agricultural quality land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (1.08ha) and on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is within 2km of Sunny Banks Pond Local Nature Reserve; therefore, development here could have a negligible effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to all eight features assessed. Therefore, a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment 3: education, 4: health, 8: leisure and recreation, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity, which will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H710

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 21-25 minutes travel time of an employment node; therefore a minor positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Approximately half of this site is within 5 minutes travel time to a primary school, while the other half is within 6-10 minutes. This site is also within 21-25 minutes travel time to a secondary school; therefore, a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of this site is within 5 minutes travel time to a GP, aside from a small area in the south which is within 6-10

SA Objectives	SA Score	Justification
they need.		minutes travel time. The whole site is within 46-50 minutes travel time to a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are residential properties to the east and south of this site and the residents of these properties may be affected by noise and light pollution during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Most of this site is within 6-10 minutes travel time to a local centre, aside from an area in the south, which is within 11-15 minutes travel time. This site is also within 21-25 minutes travel time to a town/ district centre, ; therefore, a negligible effect is likely for this SA objective
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	This site includes a Public Right of Way (PRoW) to the south and an allotment to the north which could be lost as a result of housing development. However, this site is within 600m of more than three recreational facilities including other PRoW, two other allotment sites, one semi-natural and natural greenspace, a park and garden, which includes provision for children and young people, three amenity greenspaces and four outdoor sports facilities. A mixed effect has therefore been identified (significantly positive and significantly negative) for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.18ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to three of the eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.18ha) and on greenfield land meaning that there is likely to be a minor negative effect on this

SA Objectives	SA Score	Justification
		objective. This site is on land designated as grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (1.18ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.</p> <p>The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	<p>There are no biodiversity or geodiversity designations within 1km of this site; therefore, a negligible effect is likely. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	<p>This site is on greenfield land outside the flood zone 3; therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to three of the eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive and significant negative effects were identified for this site in relation to SA objective 8: leisure and recreation. This will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H711

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to an employment node vary throughout this site. The most accessible part of the site is the north west which is within 41-45 minutes travel time of the nearest employment node. The least accessible part of the site is the north east which is within 51-55 minutes from an employment node. In between those areas journey times to an employment node vary in between those two extremes. Therefore a mixed effect is likely for this objective; minor negative for the north west and significant negative for the north east.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+ +?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Levels of access to education facilities vary throughout this site. The most accessible part of the site is the north west which is within 6-10 minutes of a primary school and within 16-20 minutes travel time of a secondary school. The least accessible part of the site is the north east which is within 16-20 minutes from a primary school and

SA Objectives	SA Score	Justification
		within 21-25 minutes of a secondary. In between those areas journey times to education facilities vary in between those two extremes. Levels of access to further education facilities also vary throughout the site. Therefore a mixed effect is expected for this objective - potentially significant positive for the north west and potentially negligible the north east.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of the nearest GP. However, travel times to the nearest hospital vary throughout the site; the north west is within 46-50 minutes of the nearest hospital and the north east is within 56-60 minutes of the nearest hospital. Overall, a minor positive effect is expected for this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north and south which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+ / 0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The most accessible part of the site is the north west which is within 6-10 minutes travel time from both the nearest local centre and town/district centre. The least accessible part of the site is the eastern edge which is within 16-20 minutes from both the nearest local centre and town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; minor positive for the north west and negligible for the eastern edge.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of	+ + / -- ?	There are two PRoW footpaths that run through the site and could be lost or disrupted as a result of housing development. However, another PRoW footpath runs adjacent to the southern boundary of the site and several more run within 65m south of the site. To the north there are two PRoW footpaths within 225m of the site. A

SA Objectives	SA Score	Justification
open space and encourage their usage.		national cycle route runs approximately 200m to the west of the site. Approximately 80m to the west of the site is an area of public playing fields. To the north west of the site approximately 160m away is an area of semi-natural and natural greenspace however the majority of the open space is within another housing site option. In addition, to the north of the site there is an area of children's play provision approximately 170m away and an area of allotments approximately 215m away however the area of children's play provision is located within another housing site option. Also, to the north of the site is an area of amenity greenspace approximately 60m away which is adjacent to a public bowling green however the majority of the amenity greenspace is within another housing site option. To the north east of the site is an area of park and gardens which contain a children's play area located approximately 420m away. The area of park and gardens is also adjacent to an area of public playing fields. Therefore a mixed significant negative and significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.76ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.76ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the majority of the land is classed as urban with an area classed as grade 4 to the south).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.76ha) on greenfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.

SA Objectives	SA Score	Justification
assets and their settings.		The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 455m from Huddersfield Narrow Canal Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 3: education (part of a mixed effect), 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 1: employment and 8: recreation and leisure which were both part of a mixed effect overall. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H712

SA Objectives	SA Score	Justification
---------------	----------	---------------

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 36-40 minutes travel time of the nearest employment node (with an area to the south within 41-45 minutes); therefore a negligible effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school (with an area in the north within 5 minutes) and within 6-10 minutes of a secondary school so is likely to have a significant positive effect. The majority of the site is also within 26-30 minutes of a further education institute (with an area in the north west within 21-25 minutes).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP (with an area to the east within 11-15 minutes) and within 46-50 minutes of a hospital (with an area to the south within 51-55 minutes); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity to the north, east and west of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of a local centre (with a small area in the south east</p>

SA Objectives	SA Score	Justification
		corner within 11-15 minutes) and within 6-10 minutes travel time of a town/district centre (with an area to the east within 11-15 minutes); therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	A PRow footpath runs adjacent to the northern boundary of the site and approximately 180m to the west of the site is another PRow footpath however it runs within another housing site option. Also, to the south of the site there is a PRow footpath approximately 280m away. To the west of the site approximately 40m away is an area of amenity greenspace that contains a children's play area. Approximately 55m to the east of the site is an area of school grounds and playing fields. To the north of the site approximately 175m away is an area of amenity greenspace which is adjacent to an area of allotments. There is another area of allotments approximately 315m to the west of the site and is adjacent to an area of semi-natural and natural greenspace. Approximately 245m north west is an area of park and gardens which contain an area of children's play provision however it is located within another housing option. In addition, within 400m to the west of the site is an area of semi-natural and natural greenspace, two areas of amenity greenspace, a private tennis club and an area of park and gardens (within another housing site option). Approximately 430m north of the site is an area of semi-natural and natural greenspace, however another housing site option encroaches on the eastern edge of the open space. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.05ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to six of the eight features assessed. Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified for this site.		

H713

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 31-35 minutes travel time of an employment node, aside from a small area in the north west, which is within 36-40 minutes; therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of this site is within 5 minutes travel time to a primary school, aside from the north west which is within 6-10 minutes travel time. This site is also within 21-25 minutes travel time to a secondary school; therefore, a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. A Most of this site is within 5 minutes travel time to a GP, aside from a small area in the north west which is within 6-10 minutes travel time. Approximately half of this site is within 31-35 minutes travel time to a hospital, while the

SA Objectives	SA Score	Justification
		other half is within 41-45 minutes travel time. However overall a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is surrounded by residential properties and the residents of these may be affected by noise and light pollution during the construction phase. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Most of this site is within 11-15 minutes travel time to a local centre, aside from an area in the north west, which is within 16-20 minutes travel time. Most of this site is also within 5 minutes travel time to a town/ district centre, aside from an area in the north west, which is within 6-10 minutes travel time. Therefore, a minor positive effect is likely for this SA objective
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site includes a Public Right of Way (PRoW), which could be lost as a result of development. However, this site is within 600m of more than three recreational facilities including other PRoW and a local cycle route, which is 280m south of the site. Greenspace designations nearby include a six semi-natural and natural greenspaces, one amenity greenspace, two parks and gardens which include provision for children and young people. Other recreational spaces nearby include three outdoor sports facilities and two allotment sites. A mixed effect has therefore been identified (significantly positive and significantly negative) for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.67ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of the eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This site is small (1.67ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. This site is on land designated as grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (1.67ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the Grade II Listed Ivy Cottage on Spring Head Lane adjacent to this site and Grade II Listed Dirker, 50 metres to the east of this area. The loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings. This site also adjoins the boundary of the Marsden Conservation Area. The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area.</p> <p>The effect on this SA objective is therefore likely to be uncertain for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Huddersfield Narrow Canal Candidate Local Wildlife Site is approximately 100m south of this site; therefore a significant negative effect is likely on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land outside the flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of the eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: leisure and recreation and 14: biodiversity and geodiversity. These will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H714

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 36-40 minutes travel time of an employment node, therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of this site is within 11-15 minutes travel time to a primary school, aside from a small area in the south east, which is within 6-10 minutes travel time. Most of this site is also within 16-20 minutes travel time to a secondary school, aside from a small area in the north east which is within 21-25 minutes travel time. Therefore, a significant positive effect is likely. This site is also within 26-30 minutes of a further education facility.
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of this site is within 6-10 minutes travel time of a GP, aside from a small area in the north east which is within 11-15 minutes travel time. Most of this site is also within 46-50 minutes travel time to a hospital, aside from a small area in the north west which is within 51-55 minutes travel time. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are several properties within 100m to the south and west of the site, and these residents could experience noise and light pollution during construction of the site. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Most of this site is within 11-15 minutes of a local centre, aside from a small area in the north east which is within 16-20 minutes travel time. This site is also within 6-10 minutes of a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are more than three recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is a national cycle route, adjacent to the site to the south and four Public Rights of Way. Greenspace designations include one park and garden, one amenity greenspace and three semi-natural and natural greenspaces. Other facilities and areas include two allotment sites, four outdoor sports facilities and two sites containing provision for children and young people. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.28ha); therefore a minor positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This site is small (1.28ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is located on land classified as urban quality.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (1.28ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park.</p> <p>The site lies across LCA D7: Peak Fringe Upland Pastures and LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. LCA D7: Peak Fringe Upland Pastures is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east. LCA F5: Holme & Hall Dyke (Holmfirth & Meltham) comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential uncertain impacts on the Helme Conservation Area (this site forms part of the area which contributes to the significance of this designation). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>Beaumont Park, Huddersfield Local Geological site is approximately 740m east of the site, and as such, a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	<p>This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified.		

H715

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 36-40 minutes travel time of the nearest employment node (with an area in the south west within 31-35 minutes); therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time of a primary school and the majority of the site is within 21-25 minutes

SA Objectives	SA Score	Justification
		travel time of a secondary school (with a small area in the south west corner within 16-20 minutes) so is likely to have a minor positive effect. The majority of the site is also within 26-30 minutes of a further education institute (with an area in the south west within 21-25 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 6-10 minutes travel time of a GP and within 56-60 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within close proximity of the site to the south and east. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The site is within 21-25 minutes travel time of the nearest local centre and within 16-20 minutes travel time of the nearest town/district centre; therefore a minor negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	To the north west of the site approximately 95m away is a PRoW footpath and there are three more footpaths to the south east of the site within 250m of the site. Approximately 10m north of the site is an area of semi-natural and natural greenspace. To the east of the site approximately 240m away is an area of school grounds and playing fields which is adjacent to an area of amenity greenspace that includes a children's play area. In addition, there are two areas of park and gardens which include children's play areas approximately 455m south and 510m north of the site. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.24ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.24ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.24ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the adjoining Netherthong/Deanhouse Conservation Area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 355m from Holmroyd Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.</p>
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation and no potential significant negative effects were identified in relation to any of the SA objectives.		

H716

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 36-40 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school (with an area in the south west within 5 minutes) and within 11-15 minutes of a secondary school (with an area in the south within 6-10 minutes) so is likely to have a significant positive effect. The site is also within 21-25 minutes of a further education institute.</p>

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of a GP and within 41-45 minutes of a hospital (with an area to the south within 46-50 minutes); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the east and south and a business park to the north west which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++/+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The most accessible part of the site is the south west which is within 5 minutes travel time of a local centre and within 6-10 minutes travel time of a town/district centre. The least accessible part is the north west which is within 6-10 minutes of a local centre and within 11-15 minutes of a town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective - significant positive for the south west and minor positive for the north west.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>There is an area of park and gardens which contain a children's play area within this housing site option which could be lost or disrupted as a result of housing development. However, approximately 145m south of the site is a PRoW footpath and another footpath runs approximately 185m north of the site. There is an area of semi-natural and natural greenspace adjacent to the site which in turn is adjacent to an area of allotments. In addition, approximately 40m south east of the site is an area of allotments which is adjacent to an area of amenity greenspace. To the east of the site approximately 265m away is an area of semi-natural and natural greenspace however another housing site option encroaches on to the area of open space. Further to the east of the site approximately 425m away is an area of public playing fields which is adjacent to and area of park and gardens</p>

SA Objectives	SA Score	Justification
		which contain an area children's play provision. Also, to the south east of the site approximately 295m away is an area of school grounds and playing fields. Approximately 245m south of the site is an area of amenity greenspace that contains a children's play area. Therefore, a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.89ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.89ha) and the majority is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.89ha) and the majority is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 160m away from Low Westwood Pond Local Wildlife Site and 260m away from Huddersfield Narrow Canal Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of the site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was as entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 6: local services and facilities (part of a mixed effect), 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified for SA objectives 8: leisure and recreation (mixed effect) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H717

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 41-45 minutes travel time of the nearest employment node (with a small area in the south west within 46-50); therefore a minor negative effect on this objective is expected.
2. Achieve an economy better capable of growth through	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development.

SA Objectives	SA Score	Justification
increasing investment, innovation and Entrepreneurship.		Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school (with an area to the south west within 11-15 minutes) and within 16-20 minutes of a secondary school so is likely to have a significant positive effect. Travel times to a further education institute also vary across the site - within 26-30 minutes in the north west and within 41-45 minutes in the south.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP (with a small area to the south west within 11-15 minutes) and within 41-45 minutes travel time of a hospital (with an area to the east within 51-55 minutes); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity to the north and south of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The north western part of the site is within 6-10 minutes of both a local centre and a town/district centre however the south is within 21-25 minutes from a local centre and within 11-15 minutes of a town/district centre. In between those areas journey times to local and town/district centres vary in between those two extremes. However, overall a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not

SA Objectives	SA Score	Justification
		be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	A PRoW footpath encroaches on to the south western edge of the site and runs along the western boundary of the site. This could be lost or disrupted as a result of housing development. However, the site is adjacent to an area of semi-natural and natural greenspace however it is within another housing site option. Within 75m east of the site there is an area of amenity greenspace which contains a children's play area. Approximately 275m east of the site and approximately 485m to the north of the site are two areas of school playing fields. There is also an area of semi-natural & natural greenspace approximately 540m to the north of the site. Therefore, significant negative is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.15ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.15ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.15ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Lingards Mission Church and Hill Top and its adjacent barn which are Grade II Listed.

SA Objectives	SA Score	Justification
		The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 160m from Huddersfield Narrow Canal Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation (mixed effect) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H718

SA Objectives	SA Score	Justification
1: Increase the number and range	-	While the location of housing sites will not influence the number, location or type of employment opportunities

SA Objectives	SA Score	Justification
of employment opportunities available for local people, and ensure that they are accessible.		<p>available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Most of this site is within 46-50 minutes travel time to an employment centre, aside from the northern area which is within 41-45 minutes travel time. Therefore, a minor negative effect is likely.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of this site is within 6-10 minutes travel time to a primary school aside from a small area in the north-west, which is within 5 minutes travel time. Most of this site is also within 11-15 minutes travel time to a secondary school, aside from the southern area of the site, which is within 16-20 minutes travel time. Therefore, a significant positive effect is likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time to a GP and most of this site is within 56-60 minutes travel time to a hospital, aside from the northern area of the site which is within 51-55 minutes travel time. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties to the north, west and south of the site which may be affected by noise and light pollution during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time to a local centre (aside a small area in the north which is within 5 minutes). This site is also within 6-10 minutes travel time to a town/district centre; therefore, a minor positive effect is likely.</p>

SA Objectives	SA Score	Justification
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities. There are several Public Rights of Way (PRoW), the closest being approximately 110m north-west of the site. There is also a national cycle route, approximately 540m south of the site. Greenspace designations nearby include, five amenity greenspaces, three parks and gardens and two areas of semi-natural and natural greenspaces. Other recreational spaces nearby include four outdoor sports facilities, a site containing provision for children and young people and two allotments. Some of these designations are within other housing site options and could therefore be lost as a result of housing development. However, a significant positive effect is therefore likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.27ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (2.27ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. This site is on land designated as urban quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (2.27ha) and on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.

SA Objectives	SA Score	Justification
assets and their settings.		The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Huddersfield Narrow Canal Candidate Local Wildlife Site is approximately 775m north of the site; therefore, development here could have a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified.		

H719

SA Objectives	SA Score	Justification
1: Increase the number and range	-	While the location of housing sites will not influence the number, location or type of employment opportunities

SA Objectives	SA Score	Justification
of employment opportunities available for local people, and ensure that they are accessible.		available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 46-50 minutes travel time to an employment node, aside from a small area in the north which is within 41-45 minutes travel time. Therefore, a minor negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time to a primary school. Most of this site is also within 36-40 minutes travel time to a secondary school; therefore, a minor positive effect is likely. This site is also within 30 minutes travel time to a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 6-10 minutes travel time to a GP and 51-55 minutes travel time to a hospital; therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are residential properties to the east, south and southwest of this site which may be affected by noise and light pollution during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 11-15 minutes travel time to a local centre. Most of this site is also within 6-10 minutes travel time to a town/district centre, aside from a small area in the southwest which is within 5 minutes. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for

SA Objectives	SA Score	Justification
		each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities. There are several Public Rights of Way (PRoW), the closest is adjacent to the site in the south. Greenspace designations nearby include, four areas of semi-natural and natural greenspaces and two allotment sites. Other recreational spaces nearby include four outdoor sports facilities and a site containing provision for children and young people. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.95ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.95ha) and on greenfield land; therefore a minor negative effect on this SA objective is likely. This site is on land designated as urban quality, aside from the far southern area which is located on land designated as Grade 5 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is relatively small (0.95ha) and on greenfield land. The site is within 280m to the Peak District National Park. Therefore, the effect is likely to be a significant negative effect. The effect on this SA objective is uncertain depending on the design of the development. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.

SA Objectives	SA Score	Justification
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	South Pennine Moors Special Protection Areas approximately 245m west of the site; therefore, development here could have a significant negative effect on this SA Objective. In addition Butterley Cutting, Marsden Local Geological Site is also 390m east of the site. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 12: landscape character and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H720

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and	-/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
ensure that they are accessible.		Access to employment nodes vary across the site. The most accessible area is in the far east of the site, which is within 41-45 minutes travel time to an employment node. The least accessible area is in the far north of the site, which is within 51-55 minutes travel time. In between these two extremes, travel times to employment nodes vary. Therefore, a mixed effect is likely, potentially minor negative for the far east of the site significant negative for the far north of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Approximately half of this site is within 6-10 minutes travel time of a primary school, while the other half is 11-15 minutes travel time. Most of this site is within 36-40 minutes travel time to a secondary school, aside from the eastern part of the site, which is within 31-35 minutes travel time. Overall, a minor positive effect is likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 16-20 minutes travel time of a GP (aside from the eastern area which is within 11-15 minutes travel time) and 51-55 minutes of a hospital (aside from a small area in the far north west, which is within 56-60 minutes travel time). Therefore, a negligible effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is adjacent to an existing residential property to the south, east and west on Mill Moor Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 26-30 minutes of a local centre (aside from the eastern area of the site, which is within 21-25 minutes travel time). Most of this site is also within 16-20 minutes of a town/district centre, (aside from the eastern area of the site, which is within 16-20 minutes). Therefore, a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate

SA Objectives	SA Score	Justification
behaviour and the fear of crime.		lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an area of semi-natural and natural greenspace which is directly adjacent to the north. Other facilities and areas include two Public Rights of Way (PRoW), another area of semi-natural and natural greenspace, a green corridor, amenity greenspace, a site containing provision for children and young people, and an outdoor sports facility. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.79ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.79ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is located on Grade 4 agricultural land quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	The Peak District National Park is approximately 175m south-west of this site; therefore a significant negative effect is likely for this SA objective. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to	-?	South Pennine Moors SAC, Peak District Moors SPA and Dark Peak SSSI are approximately 750m west of this site.

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		Therefore, a minor negative effect is likely. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3 (with the exception of the far north-eastern part of the site, although development in this part may be avoidable); therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure. Potential significant negative effect was identified for SA objectives 1: employment and 12: character and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H721

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 26-30 minutes travel time of an employment node, aside from the north western boundary which is within 31-35 minutes travel time; therefore a minor positive effect is likely.
2. Achieve an economy better	0	The location of housing sites will not affect the success of the local economy. While housing development may

SA Objectives	SA Score	Justification
capable of growth through increasing investment, innovation and Entrepreneurship.		result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of this site is within 6-10 minutes travel time to a primary school, aside from most of the northern boundary area, which is within 11-15 minutes travel time. This site is within 31-40 minutes to a secondary school; therefore, a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of this site is within 6-10 minutes travel time of a GP, aside from an area in the south west, which is within 5 minutes travel time. This site is also within 41-45 minutes travel time to a hospital. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are properties within 100m to the south west of this site, and these residents could experience noise and light pollution during construction of the site. Furthermore, there are also industrial units in the mid-section of the site and further units to the south on the adjacent site of Huddersfield Road, which could cause noise effects over the long term. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Most of this site is within 6-10 minutes of a local centre, aside from an area along the north western boundary, which is within 11-15 minutes travel time. Most of this site is also within 5 minutes travel time to a town/district centre, aside from the area in the north western boundary which is within 6-10 minutes travel time. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new	+ +/--?	There are three Public Rights of Way (PRoW) and a national cycle route within the proposed site, which could be lost as a result of development. However, this site is within 600m of more than three recreational facilities. There

SA Objectives	SA Score	Justification
recreation facilities and areas of open space and encourage their usage.		are several additional PRow including a bridleway. Most of the northern boundary is also adjacent to a national cycling route. Greenspace designations include two green corridors, four semi-natural and natural greenspaces, two park and gardens containing provision for children and young people. Other facilities include six outdoor sports facilities and six allotment sites. Therefore, a mixed effect (significantly positive and significantly negative) is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (5.82ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (5.82ha) and on greenfield land meaning that there is likely to be a significant negative effect on this objective. The site is located on land classified as grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is large (5.82ha) and on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	There are three biodiversity / geodiversity sites within 250m of the site; Folly Dolly Falls Local Geological (35m), Honley Wood Candidate Wildlife Site (190m) and Hall Hayes Wood (220m). Therefore a significant negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and most of it is outside the flood zone 3, aside from the mid southern edges; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, 9: housing, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives, 5: amenity and 8: leisure and recreation, 11: land use, 12: landscape character and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H722

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 31-35 minutes travel time of the nearest employment node. Therefore, a negligible effect on this SA objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 5 minutes of a primary school, with a small section to the west within 6-10 minutes travel time of a primary school. The site is within 6-10 minutes travel time of a secondary school and within 31-35 minutes travel time of a further education institute. Therefore, development of the site could have a significant positive effect on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 11-15 minutes travel time of a GP, with a small section to the north of the site within 6-10 minutes travel time of a GP. The site is within 46-50 minutes travel time of a hospital. The site is not within or adjacent to an AQMA. Therefore, a minor positive effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The north east of the site is adjacent to the A635 New Mill Road which may result in noise pollution affecting residents of the development in the longer term. The south and west of the site are within close proximity of an existing residential development, which may be affected by noise during the construction phase. Therefore, a significant negative effect on this SA objective is predicted.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre and within 11-15 minutes travel time of a town/district centre. Therefore, a minor positive effect on this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new	++	<p>The north of the site is within 20m of several large outdoor sports playing fields, and within 30m of two children's playgrounds. To the north west of the site is an area of semi-natural and natural greenspace (225m). The south of</p>

SA Objectives	SA Score	Justification
recreation facilities and areas of open space and encourage their usage.		the site is within 140m of an area of semi-natural and natural greenspace, within 255m of park and garden, and within 290m of two children's playgrounds. There is also a PRoW approximately 25m to the north east of the site. Therefore, a significant positive effect on this SA objective is predicted.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.42ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site of approximately 0.42ha on greenfield land. In addition, it is not within an area of high quality agricultural land as it is classed as Grade 4 in the Agricultural Land Classification. Therefore, a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.42ha) on greenfield land which is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'amber' in terms of the potential for effects on the historic environment due to the presence of a Grade II Listed Building, the Methodist Free Church, to the south of the site. The loss of this area and its subsequent development could harm elements which contribute to the significance of this building. The effect on the historic environment of development of this site is uncertain.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is 1.02km from the nearest designated site – Kirklees (Candidate) Local Wildlife Site to the north of the site. Therefore, development may have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change, with potential significant negative effects predicted for SA objective 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H723

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 46-50 minutes travel time of the nearest employment node (with an area in the north within 51-55 minutes); therefore a minor negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend

SA Objectives	SA Score	Justification
		<p>on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is a small area in the south east which is within 6-10 minutes of a primary school and within 16-20 minutes travel time of a secondary school. The least accessible part of the site is the north which is within 11-15 minutes from a primary school and within 26-30 minutes of a secondary. In between those areas journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective - potentially significant positive for the south eastern and potentially minor positive for the northern parts of the site. Levels of access to further education facilities also vary throughout the site.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	<p>+/0</p>	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the south which is within 11-15 minutes travel time from the nearest GP and within 56-60 minutes of a hospital. The least accessible part of the site is the north which is within 21-25 minutes from a GP and over 60 minutes from a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; potentially minor positive for the southern and potentially negligible for the northern parts of the site. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	<p>--</p>	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by a number of existing residential properties which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	<p>+/-</p>	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The most accessible part of the site is the south which is within 21-25 minutes travel time of a local centre and within 11-15 minutes travel time of a town/district centre. The least accessible part is the north which is within 26-30 minutes of a local centre and within 16-20 minutes of a town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective - minor positive for the southern part and minor negative for the northern part of the site.</p>
<p>7. Make our communities safer by</p>	<p>0</p>	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the</p>

SA Objectives	SA Score	Justification
reducing crime, anti-social behaviour and the fear of crime.		incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are two PRoW footpaths within 85m north of the site and within 295m west of the site there are five more PRoW footpaths. There is also a national cycle route adjacent to the southern boundary of the site. To the south of the site there are two areas of semi-natural and natural greenspace approximately 40m and 240m away, and an area of school grounds and playing fields approximately 155m away. In addition, to the south of the site is an area of park and gardens which contain two areas of children's play area approximately 515m away and an area of semi-natural and natural greenspace approximately 530m away. Also, to the south east of the site approximately 465m away is an area of semi-natural and natural greenspace and approximately 545m away is an area of amenity greenspace. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.82ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.82ha) and the majority of the site is on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.82ha) and the majority of the site is on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to

SA Objectives	SA Score	Justification
		development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Broad Lane Farmhouse which is a Grade II Listed Building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 625m from Malkin House Wood Local Wildlife Site and approximately 910m from Carr Green Meadows Holmbridge Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of the site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was as mostly or entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education (part of a mixed effect), 8: leisure and recreation, 10: sustainable transport and 19: climate change and a potential significant negative effect was identified for SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H724

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 56-60 minutes travel time of the nearest employment node; therefore a significant negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest primary school (with an area in the east within 6-10 minutes) and is within 21-25 minutes of a secondary school. Therefore a minor positive effect is expected for this objective. The majority of the site is also within 51-55 minutes of a further education institute (with an area to the north within 46-50 minutes).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 26-30 minutes travel time of the nearest GP (with an area on the south eastern edge within 31-35 minutes) and the site is over 60 minutes of a hospital. Therefore a minor negative effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity to the north and west of the site. Therefore a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p>

SA Objectives	SA Score	Justification
		The site is within 21-25 minutes travel time of the nearest local centre and the majority of the site is within 21-25 minutes of a town/district centre (with an area to the north within 16-20 minutes). Therefore a minor negative effect is likely for this objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	To the north of the site approximately 35m away is the West Yorkshire Cycle Route. Also, a PRoW footpath runs adjacent to the southern boundary of the site. There is another PRoW footpath approximately 200m west of the site. Within 600m north of the site there are a number of PRoW footpaths. Within 25m north east of the site is an area of semi-natural and natural greenspace which is adjacent to an area of park and gardens and an area of public playing fields that contains two areas of children's play provision. However, a section of the semi-natural and natural greenspace is within another housing site option. To the north west of the site approximately 135m away is a cricket ground. In, addition 315m east of the site is an area of school grounds and playing fields. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.89ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.89ha) and is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-? encourages people to make use of sustainable and active modes of transport.		day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.79ha) and is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.79ha) and is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 210m from Yateholme Reservoirs & Plantations Local Wildlife Site, approximately 360m from Digley Reservoir/Marsden Clough Local Wildlife Site, approximately 765m Carr Green Meadows Holmbridge Local Wildlife Site, within 800m of Malkin House Wood Local Wildlife Site, within 935m of New Laith Fields Holmbridge Local Wildlife Site and approximately 980m from Digley Quarries, Holmbridge Local Geological Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use,	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing

SA Objectives	SA Score	Justification
recovery and recycling of waste close to source.		buildings and materials although this is uncertain depending on the previous use of the site. The site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in one eight of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation and potential significant negative effects were identified in relation to SA objective 1: employment, 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H726

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 36-40 minutes travel time of the nearest employment node (with an area in the south east corner within 31-35); therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is within 16-20 minutes travel time of the nearest primary school (with small areas in the west and south within 11-15 minutes) and within 11-15 minutes of a secondary school (with an area in the south

SA Objectives	SA Score	Justification
		eastern corner within 6-10 minutes). Therefore a minor positive effect is likely for this objective. The site is also within 26-30 minutes of the nearest further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 5 minutes travel time of the nearest GP (with an area on the northern edge within 6-10 minutes) and within 56-60 minutes of a hospital (with an area on the western edge over 60 minutes) so a minor positive effect is likely for this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties and a hospital and health centre in close proximity to the east and south of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes of the nearest town/district centre (with an area in the north within 11-15 minutes) however levels of access to local services and facilities vary throughout this site. The eastern part of the site is within 11-15 minutes of the nearest local centre however the north western edge is within 26-30 minutes. In between those areas journey times to local services and facilities vary in between those two extremes. Overall, a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is a PRoW footpath that runs through the centre of the site and could be lost or disrupted as a result of housing development. Within 460m west of the site there are three more footpaths however one of the paths runs through another housing site option. To the south of the site approximately 20m away is an area of park and gardens. To the west of the site approximately 190m is an area of park and gardens which contain an area of children's play provision. To the east of the site is an area of semi-natural and natural greenspace approximately 105m away which is adjacent to an area of park and gardens which contain a children's play area, recreation ground which contains an area of children's play provision and a private tennis club, however there is a river which

SA Objectives	SA Score	Justification
		runs between the areas of open space and the site making them less easily accessible. In addition, to the north east of the site within 430m is an area of semi-natural and natural greenspace which contains a sports pavilion and is adjacent to a cricket ground. Therefore, a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.39ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (4.39ha) and the majority is on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4.39ha) and the majority is on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on 191 Huddersfield Road and 179 to 189 Huddersfield Road which are Grade II Listed Buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.

SA Objectives	SA Score	Justification
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 880m from Hagg Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of the site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was as mostly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation (part of a mixed effect), 10: sustainable transport and 19: climate change and a potential significant negative effect was identified for SA objective 8: leisure and recreation (mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H727

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 36-40 minutes travel time of an employment node; therefore a negligible effect is likely.
2. Achieve an economy better	0	The location of housing sites will not affect the success of the local economy. While housing development may

SA Objectives	SA Score	Justification
capable of growth through increasing investment, innovation and Entrepreneurship.		result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of this site is within 6-10 minutes travel time to a primary school, aside from an area in the south west, which is within 11-15 minutes travel time. This site is within 6-10 minutes to a secondary school; therefore, a significant positive effect is likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 6-10 minutes travel time of a GP and 51-55 minutes travel time to a hospital. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are properties within 100m to the south, east and west of this site, and these residents could experience noise and light pollution during construction of the site. Furthermore, there are also industrial units within 100m to the west of the site, which could cause noise effects over the long term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 6-10 minutes of a local centre, aside from an area in the south which is within 11-15 minutes travel time. This site is also within 11-15 of a town/district centre. Therefore, a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is a Public Right of Way (PRoW) within the proposed site, which could be lost as a result of development. However, this site is within 600m of more than three recreational facilities. There are several additional PRoW including a bridleway. Greenspace designations include one park and garden containing provision for children and young people and six semi-natural and natural greenspaces. Other facilities include five outdoor sports facilities, Holmfirth Sport Centre and another unnamed indoor facility. However, semi-natural and natural greenspace is within other housing option site H537 and could be lost as a result of development. Therefore, a mixed effect (significantly positive and significantly negative) is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.28ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.28ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is located on land classified as grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (1.28ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to	-?	Hagg Wood Candidate Local Wildlife Site is within 1km of the site, and as such, a minor negative effect is recorded

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside the flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives, 5: amenity and 8 leisure and recreation. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H728

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within variable travel times of the nearest employment node. The eastern part of the site is located within 46-50 minutes travel time of the nearest employment node while the northern part of the site is

SA Objectives	SA Score	Justification
		located within 31-35 minutes travel time of the nearest employment node. Overall a mixed effect (negligible/minor negative) is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within variable travel times of the nearest primary school. The eastern part of the site is located within 16-20 minutes travel time of the nearest primary school while the northern part of the site is located within 6-10 minutes travel time of the nearest primary school. The site is located within 11-15 minutes travel time of the nearest secondary school. Overall a mixed effect (significant positive/minor positive) is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 11-15 minutes travel time of the nearest GP. The site is located within variable travel times of the nearest hospital. The northern part of the site is located within 41-45 minutes travel time of the nearest hospital while the southern part of the site is located within 56-60 minute stravel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the south west on Stoney Bank Road and to the east on Old Mill Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 11-15 minutes travel time of a local centre (a small part of the site to the north is located within 6-10 minutes travel time of a local centre). The majority of the site is located within 16-20</p>

SA Objectives	SA Score	Justification
		minutes travel time of a town/district centre (the northern part of the site is located within 11-15 minutes travel time of the nearest town/district centre). As such a negligible effect is expected overall for this SA objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is located adjacent to a semi-natural and natural greensapce to the west. Outdoor sports facilities are provided to the south of the site within 30m and also to the south wets of the site at Holmfirth Sports Centre within 135m. A small park which also provides a children's playground is located to the north west of the site within 325m.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.28ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (5.28ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (5.28ha) on greenfield land; therefore development here is expected to have a significant negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies across LCA F5: Holme & Hall Dyke (Holmfirth & Meltham) and LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. LCA F5: Holme & Hall Dyke (Holmfirth & Meltham) comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are</p>

SA Objectives	SA Score	Justification
		contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park. LCA G8: Holme River Valley is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 610m of Hagg Wood which has been identified as a Candidate Local Wildlife Site to the north west. Round Wood, Brockholes is a Local Wildlife Site to the north of the site within 695m. The relative proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and the majority of the site not within Flood Zones 2 and 3 (a small part of the most northerly part of the site falls within Flood Zones 3 and 2); therefore a minor negative effect is likely given that the development of new housing on this greenfield land may increase the area of impermeable surfaces in the District and thus may result in an increase in the overall risk of flooding in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 9: housing, 10: transport and 19: climate change and potential significant negative effects were identified for this site for SA objectives 11: land use and 12: landscape and townscape. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H729

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within 36-40 minutes travel time of the nearest employment node. As such a negligible effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is located within 11-15 minutes travel time of the nearest primary school (the western part of the site is located within 6-10 minutes travel time of the nearest primary school). The majority of the site is located within 11-15 minutes travel time of the nearest secondary school (the western part of the site is located within 6-10 minutes travel time of the nearest secondary school). Overall a significant positive effect is expected on this SA objective. The site is located within 31-35 minutes travel time of the nearest centre for further education.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The west of the site is located within 6-10 minutes travel time of the nearest GP while the east of the site is located within 16-20 minutes travel time of the nearest hospital. Areas between these extremes are located at variable travel times from the nearest GP. The majority of the site is also located within 51-55 minutes travel time of the nearest hospital (the western part of the site is located within 46-50 minutes travel time of the nearest hospital). Overall a mixed effect (minor positive/negligible) is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the south on Sycamore Rise. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of a local centre (a small part of the site to the east is located within 11-15 minutes travel time of a local centre). The majority of the site is located within 16-20 minutes travel time of a town/district centre (the western part of the site is located within 11-15 minutes travel time of the nearest town/district centre). As such a negligible effect is expected overall for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site is crossed by a bridleway which connects to New Mill Road to the south. This access route may be lost as a result of potential housing development at this location and a potential significant negative effect is therefore identified. The site however is also in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are located adjacent to the site to the north and a semi-natural and natural greenspace is located adjacent to the site to the east. Further outdoor sports facilities are located at Holmfirth Sports Centre which is located to the west of the site within 45m. Allotments are located to the south of the site within 420m.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to</p>

SA Objectives	SA Score	Justification
		make use of them a significant positive effect is also expected on this SA objective. Overall a mixed effect is expected.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.64ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.64ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.64ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity	-?	The site is within 860m of Hagg Wood which has been identified as a Candidate Local Wildlife Site to the north. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g.

SA Objectives	SA Score	Justification
and geodiversity.		through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land may increase the area of impermeable surfaces in the District and thus may result in an increase in the overall risk of flooding in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: transport and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H730

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located within 36-40 minutes travel time of the nearest employment node. A negligible effect is

SA Objectives	SA Score	Justification
		expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 5 minutes travel time of the nearest primary school. The site is located within 6-10 minutes travel time of a secondary school. Overall a significant positive effect is expected on this SA objective. The site is located within 31-35 minutes travel time of the nearest centre for further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 16-20 minutes travel time of the nearest GP (part of the site to the south is located within 21-25 minutes travel time of the nearest GP). The site is also located within 51-55 minutes travel time of the nearest hospital. Overall a negligible effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the north on Kirkroyds Lane, to the east on Royds Avenue and to the west on Little Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre. The site is also located within 11-15 minutes travel time of a town/district centre. Overall a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for

SA Objectives	SA Score	Justification
		each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site contains land which has been designated as allotments. This designation could be lost as a result of housing development and therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of open spaces which could be used by residents. A semi-natural and natural greenspace is located adjacent to the site to the west. A small park and children's playground are also located to the west within 65m. Outdoor sport's facilities can be accessed at Kirkroyds Infant School which is located within 15m to the north east of the site. Overall a mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.29ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.29ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.11ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Wooldale Conservation Area. It is recognised that the loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of the Conservation Area.

SA Objectives	SA Score	Justification
		The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Hagg Wood (a Candidate Local Wildlife Site) is the closest of such features but is located 1.22km to the north and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 3: education, 8: recreation and leisure (it should be noted that the overall effect recorded on this SA objective was mixed) 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 8: recreation and leisure (it should be noted that the overall effect recorded on this SA objective was mixed). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>

SA Objectives	SA Score	Justification
---------------	----------	---------------

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 36-40 minutes travel time of the nearest employment node. Therefore, a negligible effect on this SA objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes of a primary school, with a small section to the north west within 11-15 minutes travel time of a primary school. The site is within 11-15 minutes travel time of a secondary school and within 31-35 minutes travel time of a further education institute. Therefore, development of the site could have a significant positive effect on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 16-20 minutes travel time of a GP. The majority of the site is within 51-55 minutes travel time of a hospital, with a small section to the north west of the site within 46-50 minutes. The site is not within or adjacent to an AQMA. Therefore, a negligible effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The south west of the site is adjacent to the A616 Huddersfield Road which may result in noise pollution affecting residents of the development in the longer term. The north east of the site is adjacent to a large farmhouse while the south of the site is within close proximity of an existing residential development. The residents of these properties may be affected by noise during the construction phase. Therefore, a significant negative effect on this SA objective is predicted.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre and within 16-20 minutes travel time of a town/district centre. Therefore, a negligible effect on this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The west and south west of the site are within 50m of semi-natural and natural greenspace, within 65m of a park and garden, and within 160m of a children's playground. There is also a PRoW approximately 20m to the west of the site. Therefore, a significant positive effect on this SA objective is predicted.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.54ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site of approximately 0.54ha on greenfield land. In addition, it is not within an area of high quality agricultural land as it is classed as Grade 4 in the Agricultural Land Classification. Therefore, a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.54ha) on greenfield land which is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and</p>

SA Objectives	SA Score	Justification
		enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that the development of the site is unlikely to result in harm to any designated heritage asset; therefore a negligible effect on this SA objective is likely.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is 1.2km from the nearest designated site – Holme House Grasslands (Approved) Local Wildlife Site to the south east of the site. Therefore, development may have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education and 8: leisure and recreation, with potential significant negative effects predicted for SA objective 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H732

SA Objectives	SA Score	Justification
---------------	----------	---------------

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Levels of access to employment nodes vary throughout this site. The north-western part of the site is within 36-40 minutes travel time of the nearest employment node; however the north-eastern part of the site is 46-50 minutes from an employment node. In the central area in between, it is 41-45 minutes to the nearest employment node. Therefore a mixed effect on this objective is expected – negligible for the north western side and minor negative for the rest of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?/+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to educational facilities vary throughout this site. The most accessible part of the site is in the north-west where it is within 6-10 minutes travel time of both a primary school and a secondary school. The least accessible part of the site is in the north east where it is 16-20 minutes to both a primary school and a secondary school. In between those parts of the site, journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significantly positive for the north western area and potentially minor positive for the rest of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The centre and south of the site is within 11-15 minutes of a GP while a small area in the north east is within 21-25 minutes. The centre of the site is within 51-55 minutes of a hospital while the north and southern tips are between 56-60 minutes. Therefore, a mixed effect on this objective is expected –minor positive for the most accessible area in the centre and negligible for the rest of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a large number of existing residential properties adjacent to the site to the north and south, in addition to a number of houses within the centre of the site, which may be affected by noise during the construction phase.</p>

SA Objectives	SA Score	Justification
		A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district centres vary throughout this site. An area in the west of the site is within 6-10 minutes of both a local centre and a town/district centre, while the eastern side is within 21-25 minutes of a local centre and 16-20 minutes of a town/district centre. In between the far eastern and western parts of the site, journey times to local and town/district centres vary in between those two extremes. Therefore a mixed effect on this objective is expected – minor positive for the western side and minor negative for the eastern side.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site is surrounded by a network of footpaths, as well as bridleways to the north and south and a national cycle route to the south. However one of the footpaths does travel through the centre of the site and this may be disrupted if housing development was to proceed at this location. There are also several areas of semi-natural/natural greenspaces, outdoor sports facilities, parks and gardens, civic and amenity greenspaces and provisions for children located within walking distance (600m) of the site in all directions. A mixed (significant positive and potential significant negative) effect is therefore identified overall.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.26 ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (6.26 ha) predominantly on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not on high quality agricultural land, being classed as mainly urban or Grade 4.</p>
12. Protect and enhance the	--?	This is a relatively large site (6.26 ha) predominantly on greenfield land; therefore development here could have a

SA Objectives	SA Score	Justification
character of Kirklees and the quality of the landscape and townscape.		<p>significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Wingfield, on Cliff Lane at the centre of the site, which is a Grade II Listed Building.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is not within 1 km of any site designated for biodiversity or geodiversity; therefore development here may have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is predominantly on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is predominantly on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mostly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives: 3: education (as part of a mixed result), 8: leisure and recreation (as a mixed result), 9: affordable housing, 10: sustainable transport, and 19: climate change; and potential significant negative effects were identified in relation to SA objectives: 5: amenity, 8: leisure and recreation (as part of a mixed result), 11: efficient use of land and 12: landscape character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H733

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is located within 51-55 minutes travel time of the nearest employment node (a small part of the site to the east is located within 46-50 minutes travel time of the nearest employment node). A significant negative effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of the nearest primary school. The majority of the site is located within 16-20 minutes travel time of a secondary school (a small part of the site to the west is located within 21-25 minutes travel time of the nearest secondary school). Overall a significant positive effect is expected on this SA</p>

SA Objectives	SA Score	Justification
		objective. The site is located within 41-45 minutes travel time of the nearest centre for further education.
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 16-20 minutes travel time of the nearest GP (part of the site to the south is located within 21-25 minutes travel time of the nearest GP). The site is also located more than 60 minutes travel time from the nearest hospital. Overall a minor negative effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the south on Kemp's Way. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of a local centre (a small part of the site to the west is located within 11-15 minutes travel time of a local centre). The site is also located within 16-20 minutes travel time of a town/district centre. Overall a negligible effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>The site is crossed by a footpath from north to south. Given that this route may be lost as a result of housing development a potential significant negative effect is expected on this SA objective. The site is in close proximity to a number of open spaces which could be used by residents. A cemetery is adjacent to the site to the south at Holy Trinity Church. Amenity greenspace is located to the north of the site within 75m. Another cemetery is located within 75m to the north east of the site at Chapel Bank. A semi-natural and natural greenspace is located on Town Gate within 200m to the south of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is also expected on this SA objective. Overall a mixed effect is recorded.</p>
9. Ensure all people are able to	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the

SA Objectives	SA Score	Justification
live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.33ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.33ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.33ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Holy Trinity Church which is a Grade II Listed Building. The site also lies adjacent to the Hepworth Conservation Area. The loss of this open area to development could harm elements which contribute to the significance of this designated area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 280m of Morton Wood which has been identified as a Local Wildlife Site to the south west. Rakes Wood is another Local Wildlife Site which is located within 640m of the site to the south east. The site is also within 950m of Scar Hole Quarry, Jackson Bridge a Local Geological Site to the north east. The relative proximity of the site to these designated biodiversity and geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education and 8: recreation and leisure (this score is part of an overall mixed effect) and potential significant negative effects were identified for this site in relation to SA objectives 1: employment and 8: recreation and leisure (this score is part of an overall mixed effect). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H734

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 11-15 minutes travel time to an employment centre, aside from the far south-eastern area which is within 6-10 minutes travel time. Therefore, a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered

SA Objectives	SA Score	Justification
and Entrepreneurship.		separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is in the far northern edge, which is within 5 minutes to a primary school and 11-15 minutes travel time to a secondary school. The least accessible area is in the south-western area of the site which is within 11-15 minutes travel time to a primary school and within 21-25 minutes travel time to a secondary. In between these two extremes, travel times to education facilities vary. Therefore, a mixed effect is likely, potentially significant positive effect the northern edge of the site and minor positive for the south-western area of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to healthcare varies across the site. The most accessible area is in the far eastern edge of the site, which is within 6-10 minutes travel time to a GP and 26-30 minutes travel time to a hospital. The least accessible area is in the far western area of the site which is within 6-10 minutes travel time to a GP and 41-45 minutes travel time to a hospital. In between these two extremes, travel times to healthcare facilities vary. Therefore, a mixed effect is likely, potentially significant positive effect the far eastern edge of the site and a minor positive effect for the far western area of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are residential properties surrounding the site which may be affected by noise and light pollution during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local services varies across the site. The most accessible area is in the mid-eastern edge of the site, which is within 6-10 minutes travel time to a local centre and 11-15 minutes travel time to a town/district centre. The least accessible area is in the south-western area of the site which is within 6-10 minutes travel time to a local centre and 21-25 minutes travel time to a town/district centre. In between these two extremes, travel times to local service facilities vary. Therefore, a mixed effect is likely, potentially minor positive effect the mid-eastern</p>

SA Objectives	SA Score	Justification
		edge of the site and a negligible effect for south-western area of the site.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site includes Public Rights of Way (PRoW), an area of semi-natural and natural greenspace and an allotment site, which could be lost as a result of development. However, this site is within 600m of more than three recreational facilities. Greenspace designations nearby include, three amenity greenspaces, five parks and gardens, nine areas of semi-natural and natural greenspace and five allotment sites. Other recreational spaces nearby include five outdoor sports facilities and five sites containing provision for children and young people. However many of the local recreational facilities are located within sites considered for housing and therefore could be lost as a result of development. A mixed effect has therefore been identified (significantly positive and significantly negative) for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (9.35ha); therefore, a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (9.35ha) and on greenfield land; therefore a significant negative effect on this SA objective is likely. This site is on land designated as urban quality, aside from the far northern edge which is located on land designated as Grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the	--?	This site is relatively large (9.35ha) and on greenfield land; therefore, development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The

SA Objectives	SA Score	Justification
quality of the landscape and townscape.		site is not within 500m of the Peak District National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees. Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is within 1km of three biodiversity/ geodiversity sites; Lower Fell Greave and Sir John Ramsden Canal Candidate Wildlife Sites and Grimescar Wood Local Wildlife Site; therefore, development here could have a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.

SA Objectives	SA Score	Justification
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment 3: education, 4: health, 8: leisure and recreation, 9: Housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: pollution, 8: leisure and recreation, 11: land use and 12: landscape character. These will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H735

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is located within 11-15 minutes travel time of the nearest employment node (a small part of the site to the east is located within 6-10 minutes travel time of the nearest employment node). A significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is located within 6-10 minutes travel time of the nearest primary school. The site is located within 16-20 minutes travel time of a secondary school. Overall a significant positive effect is expected on this SA objective. The site is located within 21-25 minutes travel time of the nearest centre for further education.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is located within 6-10 minutes travel time of the nearest GP. The site is also located within 36-40 minutes travel time from the nearest hospital. Overall a minor positive effect is expected on this SA objective.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is surrounded by existing properties on all sides: to the east on Cowcliffe Hill Road, to the east and north on Netheroyd Hill Road and to the south on Knaresborough Drive. These properties may be affected by noise

SA Objectives	SA Score	Justification
		during the construction phase and a significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre. The site is also located within 16-20 minutes travel time of a town/district centre. Overall a negligible effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site contains land which has been designated as outdoor sports facilities. This designation could be lost as a result of housing development and therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of open spaces which could be used by residents. Allotments are located within 115m to the east of the site. A park which includes a natural and semi-natural greenspace as well as a children's playground is located within 45m to the north of the site. Amenity greenspace is accessible on Highcliffe Avenue within 160m of the site to the west. Access to further allotments is available on South Cross Road within 110m to the west. Overall a mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.40ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.40ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Urban Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and	-?	This is a relatively small site (2.40ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.

SA Objectives	SA Score	Justification
townscape.		<p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 400m of Grimescar Wood which has been identified as a Local Wildlife Site to the west. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education and 8: recreation and leisure (it should be noted that an overall mixed effect as recorded for this SA objective), 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objectives 5: amenity and 8: recreation and leisure (it should be noted that an overall mixed effect as recorded for this SA objective). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H736

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is located within 31-35 minutes travel time of the nearest employment node (a small part of the site to the west is located within 26-30 minutes travel time of the nearest employment node). A negligible effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of the nearest primary school. The majority of the site is located within 6-10 minutes travel time of a secondary school (small part of the site to the east is located within 11-15</p>

SA Objectives	SA Score	Justification
		minutes travel time of a secondary school). Overall a significant positive effect is expected on this SA objective. The majority of the site is located within 6-10 minutes travel time of the nearest centre for further education (a small part of the site to the west is located within 11-15 minutes travel time of the nearest centre for further education).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest GP (the eastern part of the site is located within 16-20 minutes travel time of the nearest GP). The site is also located within 36-40 minutes travel time from the nearest hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the west on Bradley Mills Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 5 minutes travel time of a local centre (the eastern part of the site is located within 6-10 minutes travel time of the nearest local centre). The majority of the site is also located within 6-10 minutes travel time of a town/district centre (a small part of the site to the east is located within 11-15 minutes travel time of a town/district centre). Overall a significant positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. Amenity greenspace is provided to the south of the site within 10m. A park is also located to the south of the site and a number of children's playgrounds are provided within its boundaries. A small park is provided to the west of the site within 95m at Foxlow Avenue. The grounds of Netherhall Learning Campus provide access to outdoor sports facilities within 200m also to the west.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to</p>

SA Objectives	SA Score	Justification
		make use of them a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (7.36ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (7.36ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (7.36ha) on greenfield land; therefore development here is expected to have a significant negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. This is due to the uncertain potential impacts on nearby Netherhall Barn which is a Scheduled monument and Listed Building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 600m of Dalton Bank which has been identified as a Local Wildlife Site and a Local Nature Reserve to the north east. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 6: access to local services, 8: recreation and leisure, 9: housing, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objectives 11: land use and 12: landscape and townscape. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 36-40 minutes travel time of the nearest employment node, with a small section to the north west within 41-45 minutes travel time; therefore a negligible effect on this objective is expected.
2. Achieve an economy better	0	The location of housing sites will not affect the success of the local economy. While housing development may

SA Objectives	SA Score	Justification
capable of growth through increasing investment, innovation and Entrepreneurship.		result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes of a primary school however, two small areas to the north west and west of the site are within 11-15 minutes of a primary school. The northern half of the site is within 36-40 minutes travel time of a secondary school, while the southern half of the site is within 31-35 minutes travel time of a secondary school. Similarly, the northern half of the site is within 36-40 minutes travel time of a further education institute, while the southern half is within 31-35 minutes travel time of a further education institute.</p> <p>Therefore, development of the site could have a minor positive effect on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Half of the site, to the east and north, is within 6-10 minutes travel time of a GP, while the other half, to the west and south, is within 11-15 minutes travel time of a GP. The majority of the site is within 41-45 minutes travel time to a hospital, however, the northern portion of the site is within 46-50 minutes travel time to a hospital. The site is not within or adjacent to an AQMA. Therefore, a minor positive effect is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The north east of the site is adjacent to an existing residential development along Bankfield Lane and Stead Lane while the south of the site is adjacent to a large farmhouse and steading buildings, which may be affected by noise during the construction phase. The east and south east of the site is within close proximity to existing residential developments, particularly St Peters Crescent, which may also be affected by noise during the construction phase. Therefore, a minor negative effect on this SA objective is likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre. In addition, the majority of the site is within 16-20 minutes of a town/district centre, with a large portion of the south of the site within 11-15 minutes travel time of a town/district centre. Therefore, a negligible effect on this SA objective is predicted.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>To the north of the site, on the opposite side of the Bankfield Lane (within 7m), are 3 amenity greenspaces and a children's playground (40m). To the north east of the site, approximately 365m distance, are allotments and amenity greenspace. To the south west and west of the site, there are several areas of semi-natural and natural greenspace with the closest approximately 445m distance, in addition to amenity greenspace (450m), a green corridor (360m), and a cemetery (240m). The site is adjacent to a footpath along Stead Lane and is also within 25m of a local cycle path (to the east of the site).</p> <p>A significant positive effect is therefore identified.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.5ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>The majority of the site is undeveloped, greenfield land however there are several caravans parked on the south of the site. As these are movable, impermanent objects, the site is considered to comprise of greenfield land. The site is relatively small in size and is approximately 2.5 ha. The site is not within an area of high quality agricultural land as it is classed as Grade 4 in the Agricultural Land Classification. Therefore, a minor negative effect on this SA objective is likely.</p>

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.5ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that the development of the site is unlikely to result in harm to any designated heritage asset; therefore a negligible effect on this SA objective is likely.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within approximately 670 meters of the Dalton Bank Local Nature Reserve and Local Wildlife Site. Therefore, development could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.</p>
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation, with no potential significant negative effects predicted. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H738

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 41-45 minutes of the nearest employment node. Therefore, a minor negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. In addition, the site is within 21-25 minutes of a further education institute. Therefore, development of the site could have a minor positive effect on this SA objective.</p>
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 6-10 minutes travel time of a GP and within 46-50 minutes travel time of a hospital. The site is not within or adjacent to an AQMA. Therefore, a minor positive effect on this SA objective is expected.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The north and south east of the site are adjacent to existing residential properties. The north west and east of the site are in close proximity to existing residential developments, particularly Heathwood Drive, which may be affected by noise during the construction phase. Therefore, a minor negative effect on this SA objective is predicted.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The site is within 6-10 minutes travel time of a local centre and within 11-15 minutes of a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The east of the site is within 295m of outdoor sports facilities and within 320m of amenity greenspace. To the north, there is an area of semi-natural and natural greenspace (260m), a cemetery (280m), a playground (380m), and an area of amenity greenspace (390m). There is also a PRoW adjacent to the west of the site. Therefore, a significant positive effect on this SA objective is predicted.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.79ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in

SA Objectives	SA Score	Justification
		terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site of approximately 0.79ha. Although there are two buildings located within the site boundary to the west, the site is mainly greenfield land. In addition, the site is not within an area of high quality agricultural land as it is classed as Grade 4 in the Agricultural Land Classification. Therefore, a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.79ha) mainly on greenfield land and is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'amber' in terms of the potential for effects on the historic environment due to the presence of Grade II Listed Buildings from 23 to 27A Slades Road, 15 meters to the north-west of the site. The loss of this area and its subsequent development could harm elements which contribute to the significance of this building. The effect on the historic environment of development of this site is uncertain.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is 815m from Clough Head Quarry Local Geological Site. Therefore development of this site may have a minor negative effect.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is mainly on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>The site is mainly on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.</p>
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, 10: sustainable transport and 19: climate change, with no potential significant negative effects predicted. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H739

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of the nearest primary school and within 26-30 minutes of a secondary school. Therefore a minor positive effect is expected for this objective. The majority of the site is within 46-50 minutes travel time of a further education institute (with one small area in the north west and one small area in the south east within 51-55 minutes).</p>
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is within 11-15 minutes travel time of the nearest GP and is within 56-60 minutes of the nearest hospital. Therefore a minor positive effect is expected for this objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within close proximity of the site to the south, east and west of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The site is within 6-10 minutes travel time of the nearest local centre and within 21-25 minutes of a town/district centre. Therefore a minor negative effect is expected for this objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	To the west of the site approximately 160m away is a PRoW footpath which runs adjacent to an area of allotments. Approximately 150m to the east of the site is an area of semi-natural and natural greenspace. In addition, approximately 370m to the east of the site is an area of school grounds and playing fields. Within 470m east of the site is an area of public playing fields which contains a cricket ground, an allotment garden and recreation ground and it is adjacent to an area of semi-natural and natural greenspace. Also, a PRoW footpath runs adjacent to the eastern boundary of the site and within 300m south west of the site there is another PRoW footpath and a PRoW byway. Therefore a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.43ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.43ha) and the majority of the site is on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is also within an area of high quality agricultural land (the land is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.43ha) and the majority of the site is on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 740m from Kirkby Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of the site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives.		

H740

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest employment node (a small part of the site to the north is located within 16-20 minutes travel time of the nearest employment node). A significant positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest primary school (a small part of the site to the north is located within 11-15 minutes travel time of the nearest primary school). The majority of the site is located within 11-15 minutes travel time of a secondary school (small part of the site to the north is located within 16-20 minutes travel time of a secondary school). Overall a significant positive effect is expected on this SA objective. The northern part of the site is located within 21-25 minutes travel time of the nearest centre for further</p>

SA Objectives	SA Score	Justification
		education while the southern part of the site is located within 11-15 minutes travel time of the nearest centre for further education. The areas between these two extremes are located within variable travel times of the nearest centre for further education.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/-0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The northern part of the site is located within 16-20 minutes travel time of the nearest GP while the southern part of the site is located within 5 minutes travel time of the nearest GP. The northern part of the site is located within 51-55 minutes travel time of the nearest hospital while the southern part of the site is located within 41-45 minutes travel time of the nearest hospital. The areas between these extremes are located within variable travel times of the nearest GP and hospital. Overall a mixed effect (minor positive/negligible) is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties on all side: to the north on Burton Acres Lane; to the east on Hallas Road; to the west on Dene Park; and to the south on North Road. These properties may be affected by noise during the construction phase and a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 16-20 minutes travel time of a local centre (the southern part of the site is located within 11-15 minutes travel time of a local centre). The southern part of the site is located within 5 minutes travel time of the nearest town/district centre while the northern part of the site is located within 16-20 minutes travel time of the nearest town/district centre. Areas between these two extremes are located within variable travel times of the nearest town/district centre. Overall a mixed effect (minor positive/minor negative) is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are located adjacent to the site to the north east. Further to the north east within 35m a park is located at Gregory Playing Fields. A children's playground is also provided at this location. Semi-natural and natural greenspace is located adjacent to the site to the south west. A number of allotments are also located to the south west of the site within 95m.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.13ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (4.13ha) on mostly greenfield land (a small part of the site to the south has previously been developed); therefore a minor negative effect on this SA objective is likely. The site is located on Grade 3 Agricultural Land to the west and Grade 4 Agricultural land to the east.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (4.13ha) on mostly greenfield land (a small part of the site to the south has previously been developed); therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. This is due to the uncertain potential impacts on the adjacent Kirkburton Conservation Area which may occur as a result of the development of this site.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will</p>

SA Objectives	SA Score	Justification
		depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 100m of Burton Dean Quarry which has been identified as a Local Geological Site to the west. To the north of the site within 795m Lepton Great Wood has been designated as a Local Geological Site and a Local Wildlife Site. Shelley Wood to the south of the site within 810m has been designated as a Candidate Local Wildlife Site. Thunderbridge has also been designated as a Candidate Local Wildlife Site to the south west within 820m of the site. The proximity of the site to these designated biodiversity and geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on mostly greenfield land (a small part of the site to the south has previously been developed) and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of mostly greenfield land (a small part of the site to the south has previously been developed) meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objectives 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan		

SA Objectives	SA Score	Justification
policies.

The majority of the site is located within 6-10 minutes travel time of the nearest secondary school (a small part of the site to the north west is located within 11-15 minutes travel time of the nearest secondary school). Overall a significant positive effect is expected on this SA objective. The site is also located within 11-15 minutes travel time of the nearest centre for further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest GP (a small part of the site to the south is located within 5 minutes travel time of the nearest GP). The site is located within 46-50 minutes travel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p>

SA Objectives	SA Score	Justification
		This site is in close proximity to existing properties to the west on Hallas Road and to the east on Turnshaw Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 11-15 minutes travel time of a local centre (the southern part of the site is located within 6-10 minutes travel time of a local centre). The site is located within 6-10 minutes travel time of the nearest town/district centre. Overall a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. A semi-natural and natural greenspace is located adjacent to the site to the south. Outdoor sports facilities are also located to the south of the site within 20m at Kirkburton Church of England First School. Kirkburton Middle School provides further access to outdoor sports facilities adjacent to the site to the north. Amenity greenspace is located within 130m to the west of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.8ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.8ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 4 Agricultural Land.</p>

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.8ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies mainly in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. This is due to the uncertain potential impacts on the adjacent Kirkburton Conservation Area which may occur as a result of the development of this site.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>The site is within 395m of Burton Dean Quarry which has been identified as a Local Geological Site to the north west. To the south of the site within 590m Shelley Wood has been designated as a Candidate Local Wildlife Site. Allen Wood to the south west of the site within 700m has been designated as a Candidate Local Wildlife Site. Thunderbridge has also been designated as a Candidate Local Wildlife Site to the south west within 890m of the site. The relative proximity of the site to these designated biodiversity and geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>		

H742

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 46-50 minutes travel time of an employment node, therefore a minor negative effect is likely.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of this site is within 6-10 minutes travel time to a primary school, aside from a small area in the north east, which is within 5 minutes travel time. This site is also within 11-15 minutes travel time to a secondary school; therefore, a significant positive effect is likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
they need.		This site is within 16-20 minutes travel time of a GP and 56-60 minutes travel time to a hospital. Therefore, a negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are several properties within 100m to the west, east and south of the site, and these residents could experience noise and light pollution during construction of the site. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 11-15 minutes of a local centre and a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are more than three recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is a Public Rights of Way, 76m to the west. There is also a semi-natural and natural greenspace, three outdoor sports facilities and one site containing provision for children and young people. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.53ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This site is small (0.53ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is located on land classified as grade 4 agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (0.53ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential uncertain impacts on Thurstonland Conservation Area. The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Lumb House and Round Wood, Brockholes Local Wildlife sites are both within 1km of the site, and as such, a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.</p>
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified.		

H743

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 46-50 minutes travel time of an employment node; therefore a minor negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Approximately half of this site is within 6-10 minutes travel time to a primary school, while the other half is within 5 minutes travel time. This site is within 11-15 minutes travel time to a secondary school; therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is located within 6-10 minutes travel time of the nearest secondary school. Overall a significant positive effect is expected on this SA objective. The site is also located within 6-10 minutes travel time of the nearest centre for further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents’ health.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest GP (a small part of the site to the east is located within 11-15 minutes travel time of the nearest GP). The majority of the site is located within 16-20 minutes travel time of the nearest hospital (a small part of the site to the west and south is located within 21-25 minutes travel time of the nearest hospital). Overall a significant positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the north on Upper Batley Lane and to the west on Upper Batley Low Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of a local centre (the western part of the site is located within 11-15 minutes travel time of a local centre). The site is located within 11-15 minutes travel time of the nearest town/district centre. Overall a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are located adjacent to the site to the south west. A semi-natural and natural greenspace is also located to the south west of the site within 115m. Wilton Park is located to the north west of the site within 400m. Batley Business and Enterprise College provides outdoor sports facilities to the south of the site within 160m.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.29ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to eight of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (3.29ha) on mostly greenfield land (it is noted that some of the site to the south east has previously been developed); therefore a minor negative effect on this SA objective is likely. The site is located on Grade 3 Agricultural Land to the north west and Urban Land to the south east.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and	-?	<p>This is a relatively small site (3.29ha) on mostly greenfield land (it is noted that some of the site to the south east has previously been developed); therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p>

SA Objectives	SA Score	Justification
townscape.		<p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. This is due to the uncertain potential impacts on the adjacent Upper Batley Conservation Area which may occur as a result of the development of this site.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>The site is within 770m of Morley Spring Wood which has been designated as a Local Wildlife Site to the north east. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is located on mostly greenfield land (it is noted that some of the site to the south east has previously been developed) and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>Development at this site would make use of mostly greenfield land (it is noted that some of the site to the south east has previously been developed) meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to eight of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: recreation and leisure, 10: transport and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>		

H745

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located within 11-15 minutes travel time of the nearest employment node. A significant positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest primary school (a part of the site to the east is located within 5 minutes travel time of the nearest primary school). The site is located within 6-10 minutes travel time of the nearest secondary school. Overall a significant positive effect is expected on this SA objective. The site is also located within 16-20 minutes travel time of the nearest centre for further education.</p>
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is located within 11-15 minutes travel time of the nearest GP. The site is located within 46-50 minutes travel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is in close proximity to existing properties to the south on Whitechapel Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The site is located within 6-10 minutes travel time of a local centre. The site is located within 11-15 minutes travel time of the nearest town/district centre. Overall a minor positive effect is expected for this SA objective.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is in close proximity to a number of open spaces which could be used by residents. A cemetery is located adjacent to the site to the south. Outdoor sports facilities are located to the north of the site within 100m. Further outdoor sports facilities are located to the south of the site within 140m on the grounds of Whitcliffe Mount Sports Centre. West End Park is located within 350m to south of the site and provides access to a children's playground. As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.66ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in

SA Objectives	SA Score	Justification
		terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.66ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.66ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. This is due to the uncertain potential impacts on the adjacent Whitechapel Church (a Grade II Listed Building to the south) which the development of the site may have. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity or geodiversity features; Hanging Wood (a Candidate Local Wildlife Site) is the closest of such features but is located 1.20km to the north east and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>		

H746

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 6 - 10 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. The site is also within 16 – 20 minutes of a further education institute. A significant positive effect is therefore expected.</p>
4. Improve the health of local people and ensure that they can	+/0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
access the health and social care they need.		This site is mainly within 16-20 minutes travel time of a GP, while a smaller part is within 11 – 15 minutes. Access to a hospital varies greatly throughout the site, from 21 – 25 minutes in the south-west to 36 – 40 minutes in the north-east. In between these areas, journey times vary in between those two extremes; therefore a mixed effect is likely, minor positive for the south-west and negligible for the rest of the site. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are some residential properties which may be affected by noise during the construction phase, including properties directly adjacent to the western boundary of the site. In addition the site is in close proximity to industrial units. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is mainly within 16 - 20 minutes travel time of a local centre, while a smaller part is within 11 -15 minutes. The site is also within 6-10 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is very well served by recreational facilities. The site is located adjacent to an outdoor sports facility and a Public Rights of Way footpath. In addition, there is a vast park and garden approximately 200m to the south-west and a green corridor approximately 150m to the west of the site. There are also three areas with provision for children and young people within 220m to the north-east and four allotments within 400m to the east/south-east of the site. There is also an area of amenity greenspace approximately 300m to the south-east of the site. The site is not located within any area currently designated as open space and therefore a significant positive effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing.

SA Objectives	SA Score	Justification
		This site is relatively small (2.26ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.26ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Grade 3 Agricultural Land to the north west while the rest of the site is located on Urban Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.26ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is located not in close proximity to the Peak District National Park.</p> <p>The site mainly lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are no sites designated for their biodiversity or geodiversity interest within 1km; therefore development here would have a negligible effect on this SA Objective. The effect is recorded as uncertain considering that depending on the design of the new development opportunities to incorporate biodiversity enhancements may exist.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is mainly on greenfield land but is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: culture and recreation facilities, 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H747

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11 - 15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		This site is within 6 – 10 minutes travel time of a primary. The site is mainly within 11 -15 minutes of a secondary school, while a smaller part is within 6 – 10 minutes. In addition, the site is within 11 -15 minutes of a further education institute and the southern and central part is within 21 -25 part. Overall, there is likely to be a significant positive effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is mainly within 6 - 10 minutes travel time of a GP, while a smaller part is within 11 -15 minutes. The site is also within 11 - 15 minutes of a hospital; therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of residential properties which surround the entire site which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is mainly 11 -15 minutes travel time of a local centre, while a smaller part of the site is within 6 -10 minutes. The site is also within mainly within 11 -15 minutes of a town/district centre, while smaller part of the site is within 6 – 10 minutes; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++/--?	This site is very well served by recreational facilities. This site is located within 250m of amenity greenspace to the south 110m to the west and 430m to the north. The site is also located approx. 300m to the west and 225m to the south-east. In addition, the site has an outdoor recreational facility approx. 320m to the north-west, approx.100m to the north, approx. 170m to the east and four others to the south-east including the closest at approx. 220m.

SA Objectives	SA Score	Justification
usage.		Other facilities within 600m include provision for children and young people, two allotments, natural and semi-natural grassland and a green corridor. However, the site currently includes an area with provision for children and young people which might be lost if. Therefore, a mixed effect is likely overall; significant positive due to the number of recreational facilities in close proximity, but uncertain significant negative due to potential for the space which currently exists within the site to be lost as a result of development.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.93ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to eight of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural greenfield land. This is a relatively small site (1.93ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.93ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site lies well out with the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 670m from the Lower Spen Wildlife Area Local Nature Reserve and approved Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective. The effect is recorded as uncertain considering that depending on the design of the new development opportunities to incorporate biodiversity enhancements make exist.
15. Reduce air, water and soil	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that development at this location would result in an increase in the area of impermeable surfaces within Kirklees and thus an increase in flood risk in the Borough.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to eight of the eight features assessed. Therefore, a significant positive effect is likely
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: culture and recreation facilities (it should be noted that the overall effect recorded for this SA objective was mixed), 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 5: amenity and 8: leisure and recreation facilities (it should be noted that the overall effect recorded for this SA objective was mixed). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H748

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to an employment node vary throughout this site. The most accessible part of the site is the northern part which is within 6-10 minutes travel time of the nearest employment node. The least accessible part of the site is the south western part which is 16-20 minutes from an employment node. In between those areas journey times to an employment node vary in between those two extremes. However, overall a significant positive

SA Objectives	SA Score	Justification
		effect is expected for this objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is the north western part of the site which is within 6-10 minutes of a primary school, within 16-20 minutes travel time of a secondary school and within 21-25 minutes a further education institute. The least accessible part of the site is the south western part which is within 11-15 minutes from a primary school, within 36-40 minutes of a secondary school and within 41-45 minutes from a further education institute. In between those areas, journey times to education facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective: potentially significant positive for the north western part of the site and potentially minor positive for the south western part of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the north western part which is 6-10 minutes travel time from the nearest GP and within 11-15 minutes of a hospital, whereas the southern part of the site is the least accessible as it is within 11-15 minutes from a GP and within 36-40 minutes of a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; significant positive for the eastern part and minor positive for the western part of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are several existing residential properties within close proximity to the east of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++/-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.

SA Objectives	SA Score	Justification
		Levels of access to local and town/district services and facilities vary throughout this site. The most accessible part of the site is the northern part, which is 5 minutes travel time from the nearest local centre and within 6-10 minutes of a town/district centre. The least accessible part of the site is the south western part which is within 16-20 minutes from both the nearest local centre and town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; potentially significant positive for the northern part and potentially minor negative for the south western part of the site.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	A PRoW footpath runs across the centre of the site and could be lost or disrupted as a result of housing development. However, There is a sports centre located approximately 230m to the west of the site. The Central Kirklees Cycling Map route runs within 55m east of the site, approximately 115m south of the site is the Sands Lane Cycle Route and a national cycle route is approximately 365m west of the site. There are two areas of semi-natural and natural greenspace, an area of amenity greenspace and an area of public playing fields adjacent to the southern, eastern and western boundaries of the site. A PRoW footpath runs approximately 15m metres east of the site and there are several other footpaths that run within 155m south of the site. Approximately 35m east of the site is an area of semi-natural and natural greenspace which lies adjacent to an area of park and gardens. This park and gardens contains three areas of children's play provision, a multiuse games area and a public bowling green. Within 20m north of the site are an area of amenity greenspace and an area of semi-natural and natural greenspace. In addition, there is another area of amenity greenspace approximately 70m north of the site. Approximately 200m north east of the site is an area of school grounds and playing fields. To the north of the site within 445m is an area of park and gardens that contains an area of children's play provision and is adjacent to an area of semi-natural and natural greenspace and a golf course; however a section of the golf course is within another housing option. Further to the north east of the site approximately 490m away is an area of allotments. Therefore a mixed significant positive and significant negative effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+ +	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (11.83ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+ +	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in five of the eight features assessed. Therefore, a significant positive effect is likely.

SA Objectives	SA Score	Justification
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (11.83ha) and the majority is on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (11.83ha) and the majority is on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies mainly in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.</p> <p>The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	<p>This site is not within 1km of any biodiversity or geodiversity sites; therefore development here could have a negligible effect on this SA Objective. The effect is recorded as uncertain considering that depending on the design of the new development opportunities to incorporate biodiversity enhancements make exist.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>The majority of the site is on greenfield land and is outside of flood zones 2 and 3 (with the south eastern edge encroaches into a flood zone 3 area); therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>The majority of the site is greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access in five of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education (part of a mixed effect), 4: health (part of a mixed effect), 6: local services and facilities (part of a mixed effect), 8: leisure and recreation (part of a mixed effect), 9: affordable housing, 10: sustainable transport and 19: climate change and potential significant negative effects were identified in relation to SA objective 1: employment, 11: use of land and 12: character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H749

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 11 -15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. The site is also 26 – 30 minutes of a secondary school. The site is also 26 – 30 minutes of a further education institute. Overall, there is likely to be a minor</p>

SA Objectives	SA Score	Justification
		positive effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP. The site is also 41 – 45 minutes of a hospital. Overall, a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of residential properties which surround this site which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6 - 10 minutes travel time of a local centre. The site is also within 16 - 20 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site located adjacent to a green corridor, whilst there is a park and garden with associated provision for children and young people only 25m to the west. Further west there are two outdoor sports facilities 370m and 590m respectively. The site is not located within any area currently designated as open space and therefore a significant positive effect is likely given that the relative proximity of open spaces may encourage new residents to make use of them.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing.</p> <p>This site is relatively small (2.11ha); therefore a minor positive effect is likely.</p>

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.11ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been designated as Urban Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.11ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not close to the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0	<p>There are no sites designated for their biodiversity or geodiversity; therefore development here would have a negligible effect on this SA Objective. The effect is recorded as uncertain considering that depending on the design of the new development opportunities to incorporate biodiversity enhancements make exist.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	<p>This site is on greenfield land outside of flood zones 2 and 3; therefore a minor negative effect is likely given that development at this location would result in an increase in the area of impermeable surfaces within Kirklees and thus an increase in flood risk in the Borough.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is in the far south eastern area of the site, which is within 16-20 minutes travel time to a primary and secondary school. The least accessible area is in the far north western area of the site which is within 26-30 minutes travel time to a primary school and within 36-40 minutes travel time to a secondary school. In between these two extremes, travel times to education facilities vary. Therefore, a mixed effect is likely, potentially minor positive effect the far south eastern area of the site and</p>

SA Objectives	SA Score	Justification
		potentially negligible for the far north western area of the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to healthcare varies across the site. The most accessible area is in the south western area of the site, which is within 11-15 minutes travel time to a GP and 31-35 minutes travel time to a hospital. The least accessible area is in the south eastern area of the site which is within 6-10 minutes travel time to a GP and 41-45 minutes travel time to a hospital. In between these two extremes, travel times to healthcare facilities vary. However overall a potentially minor positive effect is likely for this site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are industrial units adjacent to the site, to the west and north, which could cause noise effects over the long term. There are also residential properties to the south and east of the site, which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 16-20 minutes travel time of a local centre (aside from an area in the south east which is within 11-15 minutes travel time). This site is also within 16-20 minutes travel time to a town/district centre (aside from the south-western area which is within 11-15 minutes); therefore, a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site is within 600m of more than three recreation facilities and areas of open space. There are several Public Rights of Way (PRoW), the closest being 20m to the east of the site and a local cycle route 135m south east of the site and a national cycle route 300m to the north east. Open space designations include amenity green spaces, three semi-natural and natural greenspaces and a green corridor. Other recreational spaces nearby include two allotments and two outdoor sports facilities. However some of these recreational and leisure facilities are within neighbouring housing option sites and could therefore be lost as a result of development. However, overall a significant positive effect for this SA objective is likely.</p>
9. Ensure all people are able to live in a decent home which meets	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of</p>

SA Objectives	SA Score	Justification
their needs.		affordable housing. This site is relatively small (2.63ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural greenfield land. This is a relatively small site (2.63ha) on greenfield land; therefore, a minor negative effect on this SA objective is likely. The site is located on land designated as urban quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.63ha) on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Lower Spen Local Nature Reserve is approximately 820m north of the site, while Sparrow Wood Local Nature Reserve is 980m east of the site; therefore development here could have a minor negative effect on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is greenfield land and most of the site is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use,	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing

SA Objectives	SA Score	Justification
recovery and recycling of waste close to source.		buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment and 8: recreation and leisure. Potential significant negative effects in relation to objective 5: local amenity. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H751

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11 -15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Levels of access to education facilities vary greatly throughout this site. The majority of the site is within 6 – 10 minutes travel time of a primary school, while a smaller part is within 11 -15 minutes. For secondary schools the

SA Objectives	SA Score	Justification
		journey time is between 11-15 minutes in the east and 21 -25 minutes in the west. The eastern part of the site is within 31-35 minutes a further education institute while in the west the journey time is 41 – 45 minutes. On balance, the overall most accessible part of the site is eastern part and the least accessible part is the western part. In between those parts of the site, journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significant positive for the eastern part and potentially minor positive for the rest of the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The majority of this site is within 5 minutes travel time of a GP, while a smaller part is within 6 – 10 minutes. For hospitals, the most accessible parts of the north-eastern of the site are 21 – 25 minutes of a hospital, while the least accessible part in the west of the site is 36 – 40 minutes from a hospital. On balance, the overall most accessible part of the site is the north-eastern part and the least accessible part is the western part. Therefore a mixed effect on this objective is expected – significant positive for the majority of the site and minor positive for western extremities. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties adjacent to the northern edge of the site, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local centres and town/district centres vary throughout this site. The east/north-eastern part of the site is within 5 minutes of a local centre and the western part of the site is within 11 – 15 minutes from a local centre. In between these areas, journey times to local centres vary in between those two extremes. The majority of this site is within 16 -20 minutes of a town/district centre, with a smaller area being between 11 - 15 minutes from a town/district centre. Overall, a mixed effect on this objective is expected with a significant positive effect for the eastern part and a negligible effect in the west of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for

SA Objectives	SA Score	Justification
		each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site lies adjacent to an allotment whilst there are also two more allotments 60m east and 120m north-west. There is also an outdoor sports facility adjacent to the site and a further one 160m to the north of the site. There are also three areas of amenity greenspace to the north at approximately within 150m, 290m and 300m of the site respectively. In addition there is natural and semi-natural greenspace approx. 110m north-west. However, the site also includes an area currently designated as an allotment and as such there is the potential for a loss of open space if housing development occurred at this location. Overall, a mixed effect is likely, significant positive due to the proximity to recreational facilities, but uncertain significant negative due to the potential for the loss of some open space.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (7.37ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was assessed as being entirely or mainly 'green' for six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (7.37ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is on land which is classed as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (7.37ha) on mainly greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to	-?	This site is approximately 690m from Sparrow Wood Local Wildlife Site; therefore development here could have a

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land outside of flood zones 2 and 3; therefore a minor negative effect is likely given that development at this location would result in an increase in the area of impermeable surfaces within Kirklees and thus an increase in flood risk in the Borough.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was assessed as being entirely or mainly 'green' for six of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objectives 1: employment, 3: Education (as part of a mixed effect) 4: health (as part of a mixed effect) 6: local services (as part of a mixed effect) 8: leisure and recreation (as part of a mixed effect), 9: affordable housing and 10: sustainable transport and a potential significant negative effect was identified in relation to SA objectives 11: use of land and 12: character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H752

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is over 60 minutes from an employment node; therefore a significant negative effect on this objective is expected.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. 4. Improve the health of local people and ensure that they can access the health and social care they need.	--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is over 60 minutes from a GP or hospital, therefore a significant negative effect is likely.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are some residential properties around this site which may be affected by noise during the construction phase. In addition, there is a high concentration of industrial activity in the area. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is over 60 minutes of a local or town/district centre; therefore a significant negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing	++	The site is adjacent to a Public Rights of Way footpath. In addition there is also a local nature reserve and area of

SA Objectives	SA Score	Justification
and support the provision of new recreation facilities and areas of open space and encourage their usage.		natural and semi-natural grassland adjacent to the west of the site and an area of amenity greenspace to the south-east. There are two further areas of amenity greenspace within 570m and 670m to the south-west of the site. There is also an outdoor sports facility within 200m to the south-east of the site. Therefore, a significant positive effect is likely due to the number of recreational facilities in close proximity.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is a relatively small site (1.07ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to zero of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.07ha) on greenfield land (it is noted that a small part of the site to the north west has previously been developed); therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.07ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site lies just over 500m from the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is adjacent to Tong Moor approved Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given

SA Objectives	SA Score	Justification
development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people		that development at this location would result in an increase in the area of impermeable surfaces within Kirklees and thus an increase in flood risk in the Borough.
17. Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation facilities, and potential significant negative effects were identified in relation to SA objective 1: employment, 3: education, 4: health, 5: amenity, 6: local services, 10: sustainable transport, 14: biodiversity and geodiversity and 19: climate change . These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H753

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are	+?	The availability of school and college places to serve the growing population will depend in part on whether new

SA Objectives	SA Score	Justification
available to all.		<p>places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 11-15 minutes travel time of the nearest primary school and the majority of the site is within 21-25 minutes of a secondary school (with an area in the east within 26-30 minutes). Therefore a minor positive effect is likely for this objective. The site is also within 26-30 minutes of the nearest further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 16-20 minutes travel time of the nearest GP (with an area in the east within 21-25 minutes) and within 41-45 minutes of a hospital so a negligible effect is likely for this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties in close proximity to the east, north and south of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of the nearest local centre and is within 21-25 minutes of the nearest town/district centre. Therefore a negligible effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>A bridleway and a national cycle route run adjacent to the south western boundary of the site. Within 135m east of the site are three PRoW footpaths. In addition, approximately 240m east of the site is an area of semi-natural and natural greenspace. Therefore, a significant positive effect is expected for this objective.</p>

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.62ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (4.62ha) and the majority is on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4.62ha) and the majority is on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is within approximately 565m of Railway Terrace Local Nature Reserve and approximately 985m from Hanging Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	-	The majority of the site is on greenfield land and is outside of flood zones 2 and 3 (with a small area on the northern edge of the site within a flood zone 3 area). Therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of the site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was as entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives.		

H754

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 21-25 minutes travel time of the nearest employment node, with a small area to the east of the site within 26-30 minutes of the nearest employment node. Therefore, a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The site is within 6-10 minutes of a primary school and within 16-20 minutes of a secondary school. The majority of the site is within 16-20 minutes of a further education institute with a small section to the east of the site within 21-25 minutes travel time to a further education institute. Therefore, development of the site could have a significant positive effect on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP. The majority of the site is within 26-30 minutes travel time of a hospital, with a small portion to the east of the site within 31-35 minutes. The site is not within or adjacent to an AQMA. Therefore, a significant positive effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by existing residential developments which may be affected by noise during the construction phase. In addition, the north west of the site is within 380m of the A629 which may result in noise pollution affecting residents of the development in the longer term. Therefore, a significant negative effect on this SA objective is predicted.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre and a town/district centre. Therefore, a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The east of the site is adjacent to an area of semi-natural and natural greenspace. To the north of the site is an allotment (85m), an area of amenity greenspace (155m), and outdoor sports facilities (155m). To the east is an area of semi natural and natural greenspace (56m), an allotment (156m), and a large park and garden (50m) which includes two children's playgrounds (190m and 210m respectively). To the south, on the opposite side of Forest Road, are several areas of semi-natural and natural greenspace with the closest area less than 10 meters from the site. There is also a PRoW along Kidroyd Lane approximately 40m to the west of the site.

SA Objectives	SA Score	Justification
		Therefore, a significant positive effect on this SA objective is predicted.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.65ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.65ha) on greenfield land and it is not within an area of high quality agricultural land (it is classed as Urban in the Agricultural Land Classification). Therefore, a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.65ha) on greenfield land and is not within close proximity of the Peak District National Park. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that the development of the site is unlikely to result in harm to any designated heritage asset; therefore a negligible effect on this SA objective is likely.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is 760m from the nearest designated site – Hey Lane (Candidate) Local Wildlife Site to the south east of the site. Therefore, development may have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 4: health, 8: leisure and recreation, 10: sustainable transport and 19: climate change, with potential significant negative effects predicted for SA objective 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H755

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 26-30 minutes travel time of the nearest employment node, with the south of the site within 31-35 minutes of the nearest employment node. Therefore, a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The site is within 11-15 minutes of a primary school. The majority of the site is within 21-25 minutes of a secondary school, with the east of the site within 26-30 minutes of a secondary school. In addition, the majority of the site is within 31-35 minutes of a further education institute with the north of the site within 26-30 minutes travel time to a further education institute. Therefore, development of the site could have a minor positive effect on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 11-15 minutes travel time of a GP, with a small section to the north east within 6-10 minutes travel time of a GP. In addition, the majority of the site is within 41-45 minutes travel time of a hospital, with the north of the site within 36-40 minutes. The site is not within or adjacent to an AQMA. Therefore, a minor positive effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by existing residential developments which may be affected by noise during the construction phase. In addition, the north west of the site is within 570m of the A629 which may result in noise pollution affecting residents of the development in the longer term. Therefore, a significant negative effect on this SA objective is predicted.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 11-15 minutes travel time of a local centre, with a small section to the south within 16-20 minutes travel time of a local centre. Similarly, the majority of the site is within 11-15 minutes travel time of a town/district centre, with a small section to the south within 6-10 minutes travel time of a town/district centre. Therefore, a negligible effect on this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of	++	The north of the site is adjacent to a large area of semi-natural and natural greenspace. To the south east of the site is another large area of semi-natural and natural greenspace (10m). To the north of the site is a large park and garden which includes outdoor sports facilities (220m). To the north west of the site is an area of semi-natural and

SA Objectives	SA Score	Justification
open space and encourage their usage.		natural greenspace (120m), an allotment (270m), an area of amenity greenspace (360m), and outdoor sports facilities (340m). To the west is an area of semi natural and natural greenspace (340m), an allotment (390m), and a large park and garden (270m) which includes two children's playgrounds. There is also a PRoW within 50m of the north of the site and another PRoW within 65m of the south of the site. Therefore, a significant positive effect on this SA objective is predicted.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.25ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. Although there was a property situated on the south of the site, adjacent to the existing residential properties on Bank End Lane, this has since been demolished. As the majority of the site has never been developed it is classified as greenfield land. It is a relatively small site (1.25ha) and is not within an area of high quality agricultural land (it is classed as Urban in the Agricultural Land Classification). Therefore, a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.25ha) on greenfield land and is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that the development of the site is unlikely to result in harm to any designated heritage asset; therefore a negligible effect on this SA objective is likely.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is 840m from the nearest designated site – Hey Lane (Candidate) Local Wildlife Site to the south east of the site. Therefore, development may have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, 10: sustainable transport and 19: climate change, with potential significant negative effects predicted for SA objective 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 16-20 minutes travel time to the nearest employment node; therefore, a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend

SA Objectives	SA Score	Justification
		<p>on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time to a primary and 11-15 minutes travel time to a secondary school so is likely to have a significant positive effect. This site is also within 30 minutes travel time to a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 6-10 minutes travel time to a GP (aside from a small area in the north of the site which is within 5 minutes travel time). This site is also within 31-35 minutes travel time to a hospital; therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of residential properties surrounding the site, which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Approximately half of this site is within 6-10 minutes travel time of a local centre while the other half is within 11-15 minutes travel time and the whole site is within 11-15 minutes travel time to a town/district centre; therefore, a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site is within 600m of more than three recreation facilities and areas of open space. There are two Public Rights of Way (PRoW), the closest being adjacent to the site in the west and a national cycle route 85m to the south of the site. Open space designations include five amenity greenspaces, and nine semi-natural and natural greenspace. However, the semi-natural and natural greenspace to the north of the site is within housing option H1676 and therefore could be lost as a result of development. Other recreational spaces nearby include four sites containing provision for children and young people and four outdoor sports facilities, in addition to one indoor</p>

SA Objectives	SA Score	Justification
		facility and Deighton Community Sports Arena. Therefore, overall a significant positive effect for this SA objective is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.64ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural greenfield land. This is a relatively small site (0.64ha) on greenfield land; therefore, a minor negative effect on this SA objective is likely. The site is located on land designated as urban quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.64ha) on greenfield land; therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible but uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 150m from Sir John Ramsden Canal candidate Local Wildlife Site; therefore development here could have a significant negative effect on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use,	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing

SA Objectives	SA Score	Justification
recovery and recycling of waste close to source.		buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education facilities, 8: recreation and leisure, 10: sustainable transport and 19: contribution to climate change. Potential significant negative effects in relation to objectives 5: residential amenity and 14: biodiversity and geo-diversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H757

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/?	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Access to employment nodes vary across the site. The most accessible area is in the far east and west of the site, which is within 21-25 minutes travel time to an employment node. The least accessible area is in the far northern boundaries, which are within 36-40 minutes travel time. In between these two extremes, travel times to employment nodes vary. Therefore, a mixed effect is likely, potentially minor positive for the far east and west of the site and negligible for the far northern boundary areas.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend

SA Objectives	SA Score	Justification
		<p>on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Access to education facilities vary across the site. The most accessible area is in the far eastern area of the site, which is within 6-10 minutes travel time to a primary and secondary school. The least accessible area is in the far western area of the site which is within 16-20 minutes travel time to a primary school and within 11-15 minutes travel time to a secondary school. In between these two extremes, travel times to education facilities vary. Therefore, a mixed effect is likely, potentially significant positive effect the far eastern area of the site and potentially minor positive for the far western area of the site.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	<p>+/0</p>	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Access to healthcare varies across the site. The most accessible area is in the far eastern edge of the site, which is within 6-10 minutes travel time to a GP and 51-55 minutes travel time to a hospital. The least accessible area is in the far western area of the site which is within 26-30 minutes travel time to a GP and 56-60 minutes travel time to a hospital. In between these two extremes, travel times to healthcare facilities vary. Therefore, a mixed effect is likely, potentially minor positive effect the far eastern edge of the site and a negligible effect for the far western area of the site. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	<p>--</p>	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is adjacent to the A6107 (Bradley Road), which may mean that residents in that part of the site are affected by road noise. There are also existing residential properties to the south and east of the site which may be affected by noise and light pollution during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	<p>0/--</p>	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Access to local services varies across the site. The most accessible area is in the far south-eastern edge of the site, which is within 11-15 minutes travel time to a local centre and 26-30 minutes travel time to a town/district centre. The least accessible area is in the north-western area of the site which is within 26-30 minutes travel time to a local centre and 41-45 minutes travel time to a town/district centre. In between these two extremes, travel times to local service facilities vary. Therefore, a mixed effect is likely, negligible for the far south-eastern edge of the site and significant negative for the north-western area of the site.</p>

SA Objectives	SA Score	Justification
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site includes an outdoor sports facility, which could be lost as a result of development. However, this site is within 600m of more than three recreational facilities including several Public Rights of Way and a local cycle route. Greenspace designations nearby includes, two amenity greenspaces, one park and garden, two semi-natural and natural greenspace and one allotment site. Other recreational spaces nearby include five outdoor sports facilities, and indoor sports facility and three sites containing provision for children and young people. Some of these designations are within other housing site options and could therefore be lost as a result of housing development. However, a mixed effect has therefore been identified (significantly positive and significantly negative) for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (12.26ha); therefore, a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (12.26ha) and on greenfield land; therefore a significant negative effect on this SA objective is likely. This majority of this site is on land designated as Grade 3 agricultural quality although a tiny area on the southern edge is classed as urban.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is relatively large (12.26ha) and on greenfield land; therefore, development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies mainly in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.

SA Objectives	SA Score	Justification
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is within 1km of two biodiversity/ geodiversity sites; Clifton lagoon (845m) and Lower Fell Greave Candidate Wildlife Site (605m). Therefore, development here could have a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore, a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore, a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education and 8: leisure and recreation which were both part fo amixed effect overall and objective 9: Housing. Potential significant negative effects were identified in relation to SA objectives 5: pollution, 6: access to services (part of a mixed effect), 8: leisure and recreation (mixed effect), 11: land use and 12: landscape character. These will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H758

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+ +/--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people’s ability to access jobs.</p> <p>Levels of access to an employment node vary throughout this site. The most accessible part of the site is a section in the north which is within 16-20 minutes travel time of the nearest employment node. The least accessible part of the site is a section that runs across the central part of the site which is over 60 minutes from an employment node. In between those areas, journey times to an employment node vary in between those two extremes. Therefore a mixed effect on this objective is expected – significant positive for the northern section and potentially significant negative for the central section of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The most accessible part of the site is a small area in the north which is within 5 minutes of a primary school and within 31-35 minutes of a secondary school. The least accessible part of the site is in the centre where it is more than 60 minutes to a primary school or secondary school. In between those areas, journey times to education facilities vary in between those two extremes. Levels of access to further education facilities also vary throughout the site. Therefore a mixed effect is expected for this objective - potentially minor positive for the northern part of the site and potentially significant negative for the central part of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+ +/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents’ health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the northern part of the site which is 11-15 minutes travel time from the nearest GP and within 26-30 minutes of a hospital, whereas a section that runs across the central part of the site is the least accessible as it is over 60 minutes from both a GP and hospital. In between those areas, journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; significant positive for the north western part of the site and significant negative for the central section of the site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative</p>

SA Objectives	SA Score	Justification
avoiding noise and light pollution.		<p>effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties and a school to the north and west of the site which may be affected by noise during the construction phase. In addition, there is an industrial area immediately to the south east of the site which may result in noise pollution affecting residents in the longer-term. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district services and facilities vary throughout this site. The most accessible part of the site is a section in the north west, which is 16-20 minutes travel time from the nearest local centre and 11-15 minutes from a town/district centre. The least accessible part of the site is a section running across the central part of the site which is over 60 minutes from the nearest local centre and town/district centre. In between those areas, journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect is expected for this objective; potentially minor positive for the north western part and potentially significant negative for the central part of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>There are several Bridleways and PRoW footpaths that run through this site and a children's play area which could be lost or disrupted as a result of housing development. However, the northern boundary of the site is adjacent to an area of school grounds and playing fields. To the south west of the site an area of semi-natural and natural greenspace is adjacent to the site however it is located within another housing option site. Approximately 250m to the west of the site is an area of amenity greenspace which includes a children's play area and is adjacent to a public bowling green. Also, to the west of the site is an area of allotments approximately 440m away. To the south west of the site approximately 270m away is an area of public playing fields which is adjacent to an area of park and gardens that contains two children's play areas and a multiuse games area. To the south east approximately 330m away is an area of outdoor sports facilities. In addition, to the north west of the site approximately 260m away is an area of amenity greenspace which is adjacent to an area of private playing fields, however these areas of open space are within another housing site option. Therefore a mixed (significant positive and potential significant negative) effect is expected for this objective.</p>
9. Ensure all people are able to	+ +	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the</p>

SA Objectives	SA Score	Justification
live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (14.48ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (14.48ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is also within an area of high quality agricultural land (the land is classed as grade 3 with very small areas of urban land to the south).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (14.48ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 620m of Soothill Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk	-	The majority of the site is on greenfield land and it is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. The majority of the site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (mixed effect), 4: health (mixed effect), 8: leisure and recreation (mixed effect) and 9: affordable housing and potential significant negative effects were identified in relation to SA objectives 1: employment (mixed effect), 3: education (mixed effect), 4: health (mixed effect), 5: amenity, 6: local services (mixed effect) and facilities (mixed effect), 8: leisure and recreation (mixed effect), 11: use of land and 12: character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H759

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 6-10 minutes travel time of the nearest employment node. Therefore, a significant positive effect on this SA objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend

SA Objectives	SA Score	Justification
		<p>on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes of a primary school, a secondary school, and a further education institute. Therefore, development of the site could have a significant positive effect on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of a GP and within 11-15 minutes travel time of a hospital. The site is not within or adjacent to an AQMA. Therefore, a significant positive effect on this SA objective is expected.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The south of the site is within 30 meters of the A638 Halifax Road which may result in noise pollution affecting residents of the development in the longer term. The site is surrounded by residential properties, which may be affected by noise during the construction phase. Therefore, a significant negative effect on this SA objective is predicted.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre. The majority of the site is within 16-20 minutes travel time of a town/district centre, with the south of the site within 11-15 minutes travel time of a town/district centre. Therefore, a negligible effect on this SA objective is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The east of the site is in close proximity to two areas of amenity greenspace (35m and 200m) and several outdoor sports facilities (390m). To the south of the site is an outdoor sports facility (270m), a children's playground (315m) and a park and garden (340m). To the east are two outdoor sport facilities (340m and 430m). The east of the site is within 220m of a PRoW. Therefore, a significant positive effect on this SA objective is predicted.</p>
9. Ensure all people are able to	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the</p>

SA Objectives	SA Score	Justification
live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.49ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site of approximately 0.49ha and is mainly on greenfield land (there is a small shed situated at the east of the site). In addition, it is not within an area of high quality agricultural land as it is classed as Urban in the Agricultural Land Classification. Therefore, a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.49ha) on mainly greenfield land which is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees. Therefore, development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that the development of the site is unlikely to result in harm to any designated heritage asset; therefore a negligible effect on this SA objective is likely.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are no designated sites for biodiversity or geodiversity within 2km of the site. Therefore, development may have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	The site is mainly on greenfield land and is outside of flood zones 2 and 3. Therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is mainly on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: leisure and recreation, 10: sustainable transport, and 19: climate change, with potential significant negative effects predicted for SA objective 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H760

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is located within 6-10 minutes travel time of the nearest employment node. A significant positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of the nearest primary school. The site is located within 6-10 minutes travel time of the nearest secondary school. Overall a significant positive effect is expected on this SA objective. The site is also located within 6-10 minutes travel time of the nearest centre for further education.</p>
4. Improve the health of local people and ensure that they can	++	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
access the health and social care they need.		The site is located within 6-10 minutes travel time of the nearest GP. The site is located within 11-15 minutes travel time of the nearest hospital. Overall a significant positive effect is expected on this SA objective.
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to the A638 along its south western edge. It is considered that the close proximity of this major road may result in increased noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 5 minutes travel time of a local centre. The site is located within 16-20 minutes travel time of the nearest town/district centre. Overall a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. A cemetery is located adjacent to the site to the south. The site is located within 65m of amenity greenspace which is provided at Cliffe Street to the north west. Further amenity greenspace is provided to the north east of the site at Bunkers Lane within 85m. Staincliffe Park is located to the south of the site within 130m and provides access to outdoor sports facilities and a children's playground. Another small park is also located to the north of the site within 230m by West Park Road.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.66ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.66ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.66ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity or geodiversity features; Caulms Wood Quarry, Dewsbury (a Local Geological Site) is the closest of such features but is located 2.36km to the south east and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: recreation and leisure, 10: transport and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>		

H761

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is located within 16-20 minutes travel time of the nearest employment node (part of the site to the west is located within 11-15 minutes travel time of the nearest employment node). A significant positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The northern part of the site is located within 5 minutes travel time of the nearest primary school while the southern part of the site is located within 11-15 minutes travel time of the nearest secondary school. Areas located between these extremes are within variable travel times of the nearest primary school. The majority of the site is located within 16-20 minutes travel time of the nearest secondary school (a small part of the site to the west is</p>

SA Objectives	SA Score	Justification
		located within 11-15 minutes travel time of the nearest secondary school). Overall a significant positive effect is expected on this SA objective for the entire site. The majority of the site is located within 16-20 minutes travel time of the nearest centre for further education (it is recognised that a small part of the site to the west is located within 11-15 minutes travel time of the nearest centre for further education).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest GP (it is recognised that the southern part and the western part of the site are located within 6-10minutes ravel time of the nearest GP). The majority of the site is also located within 41-45 minutes travel time of the nearest hospital (it is recognised that the southern part of the site is located within 46-50 minutes travel time of the nearest hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties to the south on High Street and Wesley Close and to the north west on Raikes Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The western part of the site is located within 16-20 minutes travel time of the nearest local centre while the southern part of the site is located within 26-30 minutes travel time of the nearest local centre. Areas between these two extremes are located within variable travel times of the nearest local centre). The majority of the site is located within 11-15 minutes travel time of the nearest town/district centre (part of the site to the west is located within 6-10 minutes travel time of the nearest town/district council). Overall a minor positive effect is expected for this SA objective for the entire site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. A large amenity greenspace is adjacent to the site to the north. A semi-natural and natural greenspace is located to the south east of the site within 105m. A number of allotments are also located to the south east of the site within 120m. Outdoor sports facilities can be accessed within 45m to the west of the site. A large park is also provided on Nova Lane within 185m to the north west of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.35ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.35ha) on mostly greenfield land (a small part of the site to the west has previously been developed); therefore a minor negative effect on this SA objective is likely. The site is located on Urban Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.35ha) on mostly greenfield land (a small part of the site to the west has previously been developed); therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Old Hall which is adjacent to the site and is a Grade II* Listed Building. It is recognised that development of this site and loss of this area could harm elements which contribute to the significance of this building.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity	--?	The site is within 185m of Oakwell Park which has been designated as a Local Wildlife Site and a Local Nature Reserve to the north west. The proximity of the site to this designated biodiversity feature may result in potential

SA Objectives	SA Score	Justification
and geodiversity.		detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of mostly greenfield land (a small part of the site to the west has previously been developed) meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H762

SA Objectives	SA Score	Justification
1: Increase the number and	++	While the location of housing sites will not influence the number, location or type of employment opportunities

SA Objectives	SA Score	Justification
range of employment opportunities available for local people, and ensure that they are accessible.		available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 16-20 minutes travel time of the nearest employment node (aside from a small area along the eastern boundary, which is within 11-15 minutes travel time to a primary and secondary school); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of this site is within 6-10 minutes travel time to a primary and secondary school (aside from an area in the north-east corner of the site which is within 11-15 minutes); therefore, it is likely to have a significant positive effect. It is also within 30 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of his site is within 11-15 minutes travel time of a GP (aside from the lower south-eastern corner, which is within 6-10 minutes travel time). Most of this site is also within 41-45 minutes of a hospital (aside from a small area in the north-east, which is within 46-510 minutes travel time); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is surrounded by residential properties and therefore existing residents may be affected by noise and light pollution during the construction phase. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0/+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Levels of access to local and district/town centres vary throughout the site. The least accessible area is in the north western area of the site, which is a within 6-10 minutes travel time to a local centre and 21-25 minutes travel time to a town/district centre. The most accessible area is in the lower south eastern area of the site, which is within 11-15 travel time to a local centre and 6-10 minutes travel time to a town/district centre. Travel times to local and district/town centres vary between these two extremes. Therefore, a mixed effect on this objective is expected – potentially negligible for the north western area of the site and potentially minor positive for the lower south eastern area.
7. Make our communities safer	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the

SA Objectives	SA Score	Justification
by reducing crime, anti-social behaviour and the fear of crime.		incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreation and leisure facilities including five Public Rights of Way (PRoW) and a footpath. Greenspace designations nearby include one green corridor, immediately to the north east corner of the site, two park and gardens and three amenity greenspaces. There is also a semi-natural and natural greenspace, but this is located within housing option H640, and therefore could be lost as a result of development. Other facilities nearby include one site containing provision for children and young people, Whitcliffe Mount Sports Centre and seven outdoor sports facilities. However, one of the outdoor sports facilities is contained within housing option H640. Therefore, a significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.68 ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.68 ha) on mainly greenfield; therefore a minor negative effect on this SA objective is likely. The land is designated as urban land quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (1.68ha) mainly on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible but uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Hunsworth Great Wood and Little Wood Candidate Local Wildlife Site is the closest of such features but is approximately 1.2km to the north and as such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change and potential significant negative effects were identified in relation to SA objective 5: pollution. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H763

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is located within 46-50 minutes travel time of the nearest employment node (part of the site to the north west is located within 41-45 minutes travel time of the nearest employment node). A minor negative effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are	++?	The availability of school and college places to serve the growing population will depend in part on whether new

SA Objectives	SA Score	Justification
available to all.		<p>places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest primary school (part of the site to the west is located within 6-10 minutes travel time of the nearest primary school). The site is located within 16-20 minutes travel time of the nearest secondary school. Overall a significant positive effect is expected on this SA objective. The majority of the site is located within 31-35 minutes travel time of the nearest centre for further education (part of the site to the west is located within 26-30 minutes travel time of the nearest centre for further education).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of the nearest GP. The majority of the site is located within 51-55 minutes travel time of the nearest hospital (the north western part of the site is located within 46-50 minutes travel time of the nearest hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties on all sides: Gordon Street to the east; Stuart Grove to the south; Hollins Row to the west; and Manchester Road to the north. These properties may be affected by noise during the construction phase and a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest local centre (part of the site to the west is located within 6-10 minutes of the nearest local centre). The majority of the site is located within 11-15 minutes travel time of the nearest town/district centre (part of the site to the west is located within 6-10 minutes travel time of the nearest town/district centre). Overall a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is located on land which has been designated as a children's playground to the south east. This open space could be lost as a result of housing development and therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of open spaces which could be used by residents. A number of allotments are located adjacent to the site to the north. An amenity greenspace is located to the east of the site within 45m at Gordon Street. A semi-natural and natural greenspace is accessible within 55m of the site to the west by Commercial Street. A cemetery is located on Hollin Glen within 110m of the site to the south west. Overall a mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.82ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.82ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.82ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Old Hall which is adjacent to the site and is a Grade II* Listed Building. It is recognised that development of this site and loss of this area could harm elements which contribute to the significance of this building.

SA Objectives	SA Score	Justification
		The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity or geodiversity features; Clough Head Quarry, Slaithwaite (a Local Geological Site) is the closest of such features but is located 1.79km to the north and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure (it should be noted that an overall mixed effect was recorded for this SA objective), 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objectives 5: amenity and 8: recreation and leisure (it should be noted that an overall mixed effect was recorded for this SA objective). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H764

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is located within 26-30 minutes travel time of the nearest employment node (part of the site to the west is located within 21-25 minutes travel time of the nearest employment node). A minor positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest primary school (part of the site to the west is located within 5 minutes travel time of the nearest primary school). The majority of the site is located within 6-10 minutes travel time of the nearest secondary school (a small part of the site to the south is located within 5 minutes travel time of the nearest secondary school). Overall a significant positive effect is expected on this SA objective. The site is located within 16-20 minutes travel time of the nearest centre for further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 5 minutes travel time of the nearest GP (the eastern part of the site is located within 6-10 minutes travel time of the nearest GP). The majority of the site is located within 31-35 minutes travel time of the nearest hospital (the north western part of the site is located within 26-30 minutes travel time of the nearest hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is in close proximity to existing properties on Sunningdale Road to the east. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest local centre (part of the site to the west is located within 5 minutes of the nearest local centre). The majority of the site is located within 16-20 minutes travel time of the nearest town/district centre (part of the site to the west is located within 11-15 minutes travel time of the nearest town/district centre). Overall a minor positive effect is expected for this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is located on land which has been designated as a park and a children's playground to the south. These open space designations could be lost as a result of housing development and therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities are located adjacent to the site to the north at Crosland Moor Junior School. A number of allotments are located to the north west of the site within 335m. Further outdoor sports facilities are provided to the south east of the site within 215m at Moor End Technology College. A cemetery is located within 225m to the north east at Saint Barnabas' Parish Church. Overall a mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.98ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.98ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on Urban Land.</p>
12. Protect and enhance the character of Kirklees and the	-?	This is a relatively small site (0.98ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the

SA Objectives	SA Score	Justification
quality of the landscape and townscape.		development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Dryclough Hotel which is adjacent to the site and is a Grade II Listed Building. It is recognised that development of this site and loss of this area could harm elements which contribute to the significance of this building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 650m of Beaumont Park, Huddersfield which is a Local Geological Site to the south east. The proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not within Flood Zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there are unlikely to be opportunities to reuse materials already onsite. A minor negative effect is therefore likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure (it should be noted that an overall mixed effect was recorded for this SA objective), 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 8: recreation and leisure (it should be noted that an overall mixed effect was recorded for this SA objective). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H765

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Most of the site is within 21-25 minutes travel time of the nearest employment node, though a large area to the east is within 26-30 minutes and a very small corner of the site to the west is 16-20 minutes; therefore a minor positive effect on this objective is expected overall.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary and most of the site is within 26-30 minutes of a secondary school (small corner in the northeast is within 36-40 minutes) so is likely to have a minor positive effect.</p>
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of this site is within 6-10 minutes travel time of a GP, with a small area in the west being within 5 minutes and a very small sliver along the southern site boundary being within 11-15 minutes. Much of this site is also within 36-40 minutes of a hospital with the areas to the southeast being within 41-45 minutes. Therefore the overall effect is expected to be minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The site is surrounded by a number of residential properties adjacent to the site which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Most of the site is within 6-10 minutes travel time of a local centre (a small area to the west being within 5 minutes) and within 11-15 minutes of a town/district centre (with small areas being within 6-10 minutes in the west and north and a tiny sliver in the south being within 16-20 minutes); therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is surrounded by open spaces, sports facilities and rights of way, all within 600 m. These include a large semi-natural/natural greenspace to the west, parks and gardens, provisions for children, allotments, outdoor sports facilities, as well as footpaths, bridleways and a byway running just outwith the southern site boundary. Therefore a significant positive effect is identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.34 ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.34 ha) on greenfield land, though classified as urban; therefore a minor negative effect on this SA objective is likely.
